In Hannibal Mr. How had a considerably more difficult subject to deal with. After all, whatever view we take of Nicias, whether as statesman or general, the facts about him have been set down once for all by Thucydides, and on those facts our judgment must be based. But with Hannibal this is not so. To all the Roman writers now available to us, beginning with Livy himself, Hannibal is a legend; he is the incarnation of "Punic faith," a monster of cruelty, his very name a bogey for mothers to frighten their babies with. And it is not only that his character in Roman literature is a fiction. The very facts of his career are constantly an occasion of controversy. Saguntum, the passage of the Alps, Trasimene, Cannæ—what two writers agree in all points in their views on these matters? It must suffice to say that Mr. How, avoiding controversy, has followed good authorities on every one of these and other points of difficulty; and that, in the case of Trasimene, he has visited the ground himself. The narrative he gives is plain and business-like: he omits all those anecdotes of doubtful authenticity that throw a glamour over the career of the "dire" Hannibal—the dream at Cadiz, for example, with the vision of the *rastitas Italiae*, and the melting of the rocks, and the pleasures of Capua are the invention of "a rhetorical moralist." In fact the author has endeavoured to steer a middle course between the extreme plainness of Polybius and the twopenny coloured style of Livy; and, though the result scarcely affords exhilarating reading,

we have as compensation a trustworthy and impartial narrative; and, if Mr. How's style does not bear comparison with Mommsen and Arnold, he at least is vastly superior to the ordinary school historian. There is much, too, in his volume that will be of service to candidates for the higher examinations, notably the historical parallels of which Mr. How is fond. At the end there is useful comparison, in the orthodox manner, between Hannibal, Alexander, Cæsar, and Napoleon.

WINCHESTER COLLEGE.

A History of Winchester College. By Arthur F. Leach, M.A., F.S.A. (Duckworth & Co.)

The flow of school and college histories is so great that a reviewer may often be hard put to it to find the *aliquid novi* to say about each. Among the many such series of histories, Messrs. Duckworth & Co. are fortunate enough to be publishers of one of the most interesting, and Mr. Leach, the author of the book before us, is even more fortunate in having to deal with the "mother of schools"—the foundation of William of Wykeham, "a community," as Mr. Leach says, "which for five hundred years has stood in the front rank of English institutions." Nor can it be said that he does not make use of his opportunity, for he has succeeded in producing a volume which is worth the attention of a larger public than the Wykehamists to whom it is primarily addressed.

The early part of the book is properly devoted to the traces of previous schools at Winchester, and to the work done by William of Wykeham. Mr. Leach, it may be noted, disclaims the idea that the founder introduced any startling innovation in the system of education. His work was one of development.

Winchester College, while no novelty in itself, either in being a foundation for secular clerks, and not for monks, or in being a collegiate church with a grammar school attached, or in being a preparatory school for a University college, or even in its designed numbers, or the admission of commoners and those of the higher ranks, was yet, by virtue of its combination of all these characteristics, on a grander scale than had yet been seen, a new departure, and the first of public schools as that term is now understood.

As to this term, "public school," by the way, Mr. Leach has some remarks in his first chapter. It does not mean a school supported out of public funds—this description would only apply to public elementary schools; nor a school under public control—this would exclude, for instance, Cheltenham and Marlborough Colleges; nor a school included in the Act of 1867—this would include only seven schools. The only working definition, thinks Mr. Leach, is that a public school is

an aristocratic or plutocratic school which is wholly, or almost wholly, a boarding-school, is under some form of more or less public control, and is, in the hideous jargon of the late Royal Commission on Secondary Education, "non-local."

But the great success of St. Paul's and Merchant Taylors' is tending, he admits, to alter the connotation of the term so as to admit day schools in the capital. We should rather say that it has already so altered this connotation.

After discussing the foundation, Mr. Leach proceeds to the school building, the oldest in England and the "only ancient school building of the fourteenth century now existing." Then he continues with the history of the early days of the college—under its first wardens and headmasters, the foundation from Winchester of Eton, the reign of "Grocyu the Grecian," the escape from the fate which overtook so many institutions under Henry VIII., the temporary turning-out under James I., "the troubles" during the Revolution—the City of Winchester was particularly unfortunate at this time, as the mutilations in the cathedral bear witness—and the more peaceful records (not, however, unmarked by occasional internal discords) down to the present day.

Not the least interesting chapter is the twenty-eighth, "In my time"—i.e., Mr. Leach's own school-days at Winchester. A comparison can be made by those who care between his account of the work done in his days and the work of the school in 1550, given in chapter xx. "Classics," says Mr. Leach, "were the be-all and the end-all of our education"; and the same was the case in 1550. But the hours of 1860 were more humane than those of the earlier date, when the boys had to rise at 5 a.m., breakfasting at 9; in 1860 it was chapel at 7, breakfast at 8 or a little later. Of the Winchester of to-day, Mr. Leach has a good deal to say that is worthy of consideration; and he does not hesitate to touch on one or two controversial points. These, however, it would scarcely profit to discuss here. The author is

convinced that "nowhere in all the world can boyhood be passed under happier auspices than at Winchester to-day." Who will not pardon him for his patriotism? In any case he is deserving of thanks for giving outsiders so good a picture of his old school. The illustrations call for a word or two. The photographs are excellent, and Mr. Percy Wadham's drawings are charming. Messrs. Duckworth have published a very well finished volume in every sense.

JAPANESE LETTERS.

"Literatures of the World." Edited by Edmund Gosse.—*A History of Japanese Literature.* By W. G. Aston, C.M.G., D.Lit. (Heinemann.)

It has been said, probably many times, that no nation can excel in more than one, or be among the first in many, arts. The truth of this is sufficiently to be seen in the European nations; and a critic of cosmopolitan education and sympathies could, with little hesitation, assign to each art its most productive country. Outside Europe he could certainly point to Japan as the home of that art which may be called loosely "graphic." Naturally, therefore, he would not expect a pre-eminence in literature in the nation which has taught so much to modern graphic artists. And this is what Mr. Aston (whose intimate acquaintance with Japan gives him the best right to speak authoritatively) has to say on the subject of Japanese literature:

It is the literature of a brave, courteous, light-hearted, pleasure-loving people, sentimental rather than passionate, witty and humorous, of nimble apprehension, but not profound; ingenious and inventive, but hardly capable of high intellectual achievement; of receptive minds endowed with a voracious appetite for knowledge; with a turn for neatness and elegance of expression, but seldom or never rising to sublimity.

A native originality of character, however, he claims for this literature, for the Japanese, he says, are never content with simple borrowing, whether it be in matters of art, of politics, or of religion. Curiously, too, in the very earliest remains definite proof of Chinese influence is lacking. It is readily to be found as Japan's literature developed.

Mr. Aston traces this development through the different periods which have been assigned to Japanese literary history; but here, of course, we cannot go into his analysis step by step. It is sufficient to say that the gradual changes are lucidly marked, and the special characteristics of each epoch carefully defined. One of the most interesting chapters in the book is the second, which deals with "Japanese Poetry Generally." Of this, Mr. Aston says that it is

confined to lyrics and what, for want of a better word, may be called epigrams. It is primarily an expression of emotion. We have amatory verse, poems of longing for home and absent dear ones, praise of love and wine, elegies on the dead, laments over the uncertainty of life. A chief place is given to the beauties of external nature. . . . If we add some courtly and patriotic effusions, a vast number of conceits more or less pretty, and a very few poems of a religious cast, the enumeration is tolerably complete. But, as Mr. Chamberlain has observed, there are curious omissions. Sunsets and starry skies, for example, do not appear to have attracted attention. War songs, strange to say, are almost wholly absent. Fighting and bloodshed are apparently not considered fit themes for poetry.

How different is the present-day English view, in this last particular!

On the manner and mechanism of Japanese poetry Mr. Aston is very enlightening; but into the subtleties of *Tanka*, *Naga-uta*, &c., it is not here proposed to follow him. He publishes some excellent translations by himself from Japanese poets, which should give a fair idea of the special characteristics of their verse. The difficulties of such translation are not to be rated low. To take only a comparatively small point: "What," he asks, "is the translator to do with the names of flowers as familiar to the Japanese as daffodil or daisy to ourselves, but for which he can offer no better equivalents than such clumsy inventions as *Lespedeza*, *Platyodon grandiflorum*, and *Deutzia scabra*?"

With regard to the future of Japanese literature, Mr. Aston says:

Thirty years is far too short a period for the seed sown at the Revolution of 1867 to grow up and ripen literary fruit. . . . No doubt things move more rapidly in the present day, but it seems reasonable to believe that what we now witness is only the beginning of a new and important development.

He thinks, moreover, that ultimately the Christian religion must have some effect on the Japanese, though "probably, as was the

case with Buddhism, it will not be received without some modification"—in the direction of a more rationalistic form of belief, he suggests.

Too little, perhaps, has been said in this notice of Japanese literature in general, especially of Japanese prose literature. But it is better to quote here Mr. Aston's words concerning the method adopted by him in the book than to set down any individual judgment. "Comparatively little space in this volume," he says, "has been devoted to what is necessarily a record of personal impressions and opinion. . . . It seemed preferable to allot ample room to translated extracts and to such biographical notices as are necessary to show what manner of men the authors were." With this method we have no fault to find, except that through it we desire to make large quotations, and refrain from an obvious reason. But we can strongly recommend the reader to take up Mr. Aston's "History," and shall not be surprised if he finds it the most interesting of Mr. Heinemann's useful series of handbooks to "Literatures of the World." It certainly has the advantage of dealing with an unbackneyed subject, and it deals with it in a very satisfactory way.

THE DANTE-CHAUCER CENTURY.

"Periods of European Literature." Edited by George Saintsbury.—*The Fourteenth Century.* By F. J. Snell. (Blackwood.)

Mr. Snell's preface is too ingenuous; he would have done better to dispense with three-quarters of it. He entered on his task "with some amount of misapprehension"—as he well might; but, "when at last the real nature of the enterprise dawned upon him, he was already too deeply committed to withdraw from it." It sounds awkward. Mr. Snell can scarcely mean that he was far advanced in his work before he had a true notion of what he had to do and how he was to do it. He is simply over-apologetic—even to the length of telling us that he is exceedingly backward in Icelandic, that his Welsh is almost non-existent, and that he "once knew a little Swedish"—as if one really needed Swedish for such literature as Sweden had in the fourteenth century. We should not be carping in this way if we had not come across several recent instances of writers for series departing from, or undervaluing, the ideas conceived by the editors of the series. We mentioned a few months ago a notable example of this in one of the volumes of an historical series; but we should, probably, not have returned to the matter now if Mr. Snell had not insisted on taking himself to task. What he had to do was to give us a comparative view of European literature in the fourteenth century; and he has done it with sufficient thoroughness for a popular volume.

The old court poetry, the cyclic poems and romances, the "matter" of France and the epic of Germany, decayed with the decline of chivalry; newer and more lyrical forms set in; the new proses of modern Europe began to take shape and literary mould. What we call "the revival of learning"—in other words, the acquisition of old learning by the young nationalities—quickened the germs of intellect in the races of Western and Northern Europe; imitation of ancient models gave birth to a neo-classical spirit; and then the time was ripe for Dante, Petrarch, and Boccaccio, for Villani, Marco Polo, and Froissart, for Chaucer and Gower, for "Maundeville" and Wyclif. The most intelligent of the schoolmen were stimulated to become a little revolutionary, and the most intelligent of the Churchmen shrank unconsciously from the oppression of obscurant authority into the solace of mysticism; whilst the untrammelled men of letters and of the world, who are to be looked for in this age in Italy and England rather than in France, were already steeped in the morning glow of the Renaissance. Mr. Snell, we think, is disposed to be somewhat pedantic and quibbling in his estimate of the period with which he deals.

It was marked by no strong general tendency, except in the direction of symbolism, which, in spite of Dante, can hardly be accounted a merit. Were I in love with paradox, I should say of the fourteenth century that it was not, as regards literature, a great age, but that it was an age of great men. In order to be great an epoch must be solid, homogeneous; and the fourteenth century is a bundle of contradictions. But the greatness of individual writers—Dante, Petrarch, Boccaccio, Froissart, Chaucer—is beyond the reach of cavil and controversy, being, indeed, all the more appreciable by reason of the mediocrity, or less, that serves them for a background.

To protest that the fourteenth century was not solid or homogeneous, to affirm that it was a bundle of contradictions, and to say that it would not be a great epoch if you took out its greatest men, is to conceal judgment and knowledge under the guise of a truism.

We do not always find ourselves in sympathy with Mr. Snell's literary estimates. He carps needlessly, as it seems to us, at the good faith of Petrarch. Petrarch has been suspected of being envious of Dante.

In a letter to Boccaccio, he denies the imputation, remarking that, when a young man, he had purposely abstained from reading poetry in the vernacular, lest he should be betrayed into imitation. It is extremely unfortunate, but no less indisputably true, that no reliance can be placed on this and little on any other of Petrarch's assertions, however deliberate. Thus, in his sonnet, "S'io avessi pensato," he declares that he sought

"Pur di sfogare il doloroso core
In qualche modo, non d'acquistar fama;
Pianger cercai, non già del pianto onore";

whereas, in his "Poetical Epistles," he affirms the contrary—that he had written his Italian verses for the sake of glory. So also, with regard to his professed ignorance of Romance poetry, the statement cannot be received implicitly. It may be that he did not possess a wide acquaintance with modern productions; but it is simply incredible that he should have lived at Avignon, yet know nothing of Provençal letters; and equally so that he should have obtained such a mastery of Italian verse without a novitiate in the art.

But, in spite of this, and of a few instances in which parallel ideas and expressions have been noted in Petrarch's works and in those of his immediate predecessors, Mr. Snell admits that Petrarch is, in essence, original, and that coincidences such as he points out do not count for much. On the whole, his literary judgments are fair and even acute. He does not seem to have satisfied himself over the riddle of the fourteenth century, and, therefore, he can scarcely have hoped to satisfy his readers. But his book is full of interest and attraction on particular points.

THREE HUNDRED IMMORTALS.

"British Anthologies." Edited by Prof. Edward Arber.—4. *The Shakespeare Anthology*. 5. *The Jonson Anthology*. 6. *The Milton Anthology*. (Henry Frowde.)

The only intelligible objection which can be made to anthologies by a general reader who is not a scholar or an advanced student is that he has to acquiesce in some one else's selection, though he may have an uneasy feeling that his own choice of pieces might have been different. The only way of curing that is to become an expert, and devote a great deal of time to the complete works of a large number of authors—which a "general" reader certainly cannot do. We have had of late more than a few good anthologies of English verse, but none of them is quite so full and comprehensive as the ten volumes contemplated by Prof. Arber promise to be. The finished series will contain about 2,500 entire poems and songs, written by some three hundred poets, all arranged in chronological order, whilst the ten volumes will go by the names of Dunbar, Surrey and Wyatt, Spenser, Shakespeare, Jonson, Milton, Dryden, Pope, Goldsmith, and Cowper.

The editor is perhaps a trifle too ambitious in his plan, or at any rate in his prospectus, of the work. He tells us that it is to include "the largest collection ever printed of the most exquisite love lyrics in our language, some serious poems, many notable ballads, some political verse, a few prison songs, also naval and military songs, drinking songs, mad songs, satires, &c.; together with poems in praise of the country life and its various pleasures, hunting, hawking, fishing, &c." After this inviting programme, Prof. Arber goes on to say that "most of this poetry will be quite new to the general reader." Surely that assumes a little too much; it implies either that the general reader (of poetry) has never read most of the best poems of most of the best authors, or else that the editor has passed over many exquisite poems in order to make room for hundreds of the second-best. Possibly the latter suggestion is justified, for, if some of these poems may be found in every anthology, very many of them have rarely or never been printed apart from the rest of their authors' work. In any case, these volumes are full of gems which will be new to the great majority of readers. Few, we imagine, have met with the poems of Richard Verstegan, printed at Antwerp in 1601. We cannot resist the desire to quote four stanzas from "Our Blessed Lady's Lullaby":—

Upon my lap my Sovereign sits,
And sucks upon my breast;
Meanwhile his love sustains my life,
And gives my body rest.
Sing lullaby, my little boy!
Sing lullaby, my life's joy!

When thou hast taken thy repast,
Repose, my babe, on me!
So may thy Mother and thy Nurse
Thy Cradle also be!
Sing lullaby, my little boy! &c. . . .
My babe, my bliss, my child, my choice,
My fruit, my flower and bud;
My Jesus and my only joy!
The sum of all my good!
Sing lullaby, my little boy! &c. . . .
Grow up, good fruit! Be nourished by
These fountains two of me,
That only flow with maiden's milk,
The only meat for thee!
Sing lullaby, my little boy! &c.

Undoubtedly the charm of this new Anthology is that it contains so many pieces which will strike the reader with the joy of a sudden discovery and surprise. In an age of forcible mediocrity, or, at best, of superabundant talent, this is no slight cause of satisfaction, and our warmest thanks are due to Prof. Arber for his discriminating and successful labour. What would Waller have said to this fair company of three hundred immortals, which so thoroughly belies his desponding prediction?—

Poets may boast (as safely vain)
Their work shall with the world remain!
Both, bound together, live or die,
The verses and the prophecy!
But who can hope his Lines should long
Last in a daily changing tongue?
While they are new, envy prevails;
And, as that dies, our language fails. . . .
Poets that lasting marble seek
Must carve in Latin or in Greek!
We write in sand! Our language grows;
And (like our tide) ours overflows!

GENERAL NOTICES.

CLASSICS.

Tales of Early Rome, adapted from the Text of Livy, by J. B. Allen (Clarendon Press), is an elementary class-book constructed on the same plan as the editor's "Lives from Nepos," which was noticed in this column some months ago. The text has been so altered and rearranged as to provide progressive lessons, and is only based on the actual words of Livy. In the notes references are given to the same editor's "Elementary Latin Grammar." Then there are a Latin-English vocabulary, a series of exercises for translation into Latin, and an English-Latin vocabulary. The exercises are designed to illustrate some definite rule of syntax; and this is a plan too seldom followed by editors. On the whole, the book is designed with considerable ingenuity, and exhibits the practical good sense of a discerning teacher.

Thucydides, Book II: a Translation, by J. F. Clive.—The translator has come with credit through the difficult task of rendering this book of Thucydides literally. He acknowledges the assistance he has received from Mr. Marchant, of whose edition he has made good use, and of others; and it is evident that his work is the result of considerable labour. The version should prove of great service to those for whose use it is designed.

Not less to be commended is an edition of *Plato, Ion*, by J. Thompson and T. R. Mills (Clive). Everything that can possibly be required by the student is here to be found—an introduction which, though crowded with solid information, is not uninteresting, and exhaustive and helpful notes. The series to which this volume belongs has been brought to a high level of efficiency.

Cæsar: Invasion of Britain, being De Bello Gallico, IV. 20, to V. 23, by A. H. Allcroft and T. R. Mills (Clive), is intended for Matriculation candidates. It has, therefore, none of the added delights—pictures, exercises, and what not—that one expects nowadays in editions of Cæsar; and, therefore, it may not be found suitable for ordinary class-reading. But it is most completely edited, and—from the point of view of those who will use it—leaves nothing to be desired.

MATHEMATICS.

Mechanics applied to Engineering, by Prof. John Goodman, of Leeds (Longmans), is intended for engineers and technical students who have a fair knowledge of theoretical mechanics to begin with, and it is very well calculated to introduce them to the extended principles and problems of practical engineering. Proceeding from what may be described as a matriculation test of mechanics, and carefully graduating its difficulties through some six hundred pages, it comprises as much

as is necessary for the Institution of Civil Engineers, the B.Sc. Examinations, the Honour stages of the Science and Art Examinations, and the City and Guilds Institute. Prof. Goodman has done well, we think, to begin with a comparatively simple introduction, and with chapters on mensuration and moments. There is a large number of good diagrams and classified examples. This text-book is admirably concise and clear, and we very confidently recommend its adoption.

Captain E. H. Atkinson, R.E. is responsible for a thoroughly sound and systematic *Text-Book of Practical Solid Geometry*, &c. (Spon). It is intended primarily for the use of the Royal Military Academy, Woolwich, where the author is Instructor of Fortification; but sufficient stress has been laid on the earlier sections on methods of projection, plan and elevation drawing, and the projection of regular solids, to make the book serviceable for the entrance examinations of the Academy, and for other students in a corresponding stage. It is provided with sixteen folded plates of seventy-seven figures.

From Messrs. Cassell & Co. we have a new and enlarged edition of the Rev. J. Warren's revision of Dr. Houghton's little *Manual of Optics*. This was one of the best of the old "Galbraith and Houghton's" text-books, and, in its revised form, with numerous exercises, it is still a thoroughly adequate introduction to the theory of light and vision.

To the fourth edition of *A Practical Arithmetic*, by John Jackson (Sampson Low & Co.), a large number of new exercises has been added, considerably increasing the utility of the book. The text of this Arithmetic is clearly set forth, and the illustrations are often ingenious.

Mr. R. F. Macdonald's *School Arithmetic* (Macmillan) is suitable for a second, or moderately advanced, course, being clear in method and provided with very numerous exercises. Mr. Macdonald frankly refers us to Lock and Brooksmith for "explicit reasons for the processes," but at the same time he has sought "to modernize the work by illustrating analogy in processes"—the meaning of which we do not quite gather.

There are some novelties in Mr. Finn's *Junior Euclid, Books I. and II.* (Clarendon Press), such as a preliminary explanation of terms, the introduction of definitions and axioms as they are needed, the anticipation of certain propositions of Book III. as riders on Book I., notes to propositions and hints for the solution of some of the exercises, guiding marks in the diagrams, and an appendix on the geometry of the triangle. This is a serviceable book for intelligent pupils with a judicious teacher.—Mr. F. W. Sanderson's *Geometry for Young Beginners* (Cambridge University Press) is an introduction to theoretical and practical geometry for pupils of eight years upwards, very well calculated to instil general notions about geometrical facts, to make a beginning of geometrical drawing, and to lead up to Euclid. For those purposes it is admirable.

From Messrs. Macmillan we have a convenient set of *Graduated Test-Papers in Elementary Mathematics*, by Walter J. Wood, covering the ground of the Science and Art "Subject 5, Stage I."—with answers; also *Answers to Examples in An Arithmetic for Schools*, by S. L. Loney.—From Messrs. Longmans we have *Complete Arithmetics, Mental and Practical (Course A)*, in five paper-covered books, with five corresponding sets of *Answers*—a simple graduated course of elementary practical arithmetic.—Mr. Dawson sends us *The Warwick Plane Geometry (Standard V.)*. The definitions and other statements are not sufficiently precise. A circle is rightly defined as a plane bounded figure; a right angle "shuts in a quarter of the circle—that is, 90°"; "to measure an angle is to ascertain how wide open the mouth is"; an altitude is "perpendicular height," and, in another place, "the length of the perpendicular height."

MODERN LANGUAGES.

La Main Malheureuse (Anonymous). Edited by H. A. Guerber. (Isbister.)

This short story of sixty pages is taken from *Le Magasin pittoresque*, and may be recommended as suitable for a fourth or fifth form. It is brightly written, and deals with the progress of an artist who is brought to see that his gifts are such as will enable him to achieve success as a modeller of motifs taken from nature—not as a sculptor of great statues, which had been his ambition. It is the sweet little Muguette who cleverly contrives to lead him on to the road to success; and the artist eventually marries her. There is a mere hint of this; there is nothing sentimental in the story itself. There are no notes; but Miss Guerber has supplied a vocabulary, which will probably serve its purpose, though it is incomplete. Thus, we have failed to find in it *à mon adresse*, *s'arrêter* ("to stop"), *charmer*, *préférer*, *voiture* (all on one page of the text), and *anxiété*, *création*, *envers*, *mal* ("illness"), *médecin* (also taken from a single page).

Dumas Fils: La Question d'Argent. Edited by G. N. Henning. (Isbister.)

It is open to question whether any play by this author can be read with advantage at school, however interesting the problems treated may be to the mature man. The editor has omitted a few lines; but, even if he had made more extensive excisions, the play would still be a representation of a side of life which it is well not to put before school children. The introduction is well written; the notes are not so satisfactory. They consist largely of renderings which are not always happy, and often contain slang or Americanisms, which a

teacher would not tolerate. We refer to such expressions as "chappies," "a mighty big difference," "the mighty dollar," "keep right on," "passenger-van," "we're hustlers," "she's a fine one," "come off" (for *allons donc*), "cut stick" (for *filé*).

Jules Verne: Voyage au Centre de la Terre. Edited by R. C. A. Du Pontet, M.A. (Edward Arnold.)

Any book by Jules Verne is sure to be read with avidity. This is one of the earliest, and certainly not the least exciting. It is eminently suitable for very rapid reading, and may then, perhaps, be taken through in a term. The text runs to 194 pages. There are only 22 pages of notes, and these are good and to the point.

Francisque Sarcey: Le Siège de Paris. Edited by T. H. B. Spiers. (Isbister.)

Sarcey, whose death is just announced in the papers, kept a diary during the siege of Paris, which he afterwards expanded into a book. It is written as only a gifted Parisian could write, with a *verve* that could not be repressed even in those gloomy days. School editions have already appeared here and in Germany. This one hails from America. Mr. Spiers furnishes a short introduction, maps of France and of Paris, notes, and an alphabetical list of persons and places. All these are useful and clear, everything being omitted that is not essential. The renderings are, of course, not free from American words and phrases.

E. Richebourg: Les Violettes Blanches. Edited by F. Julien. (Macmillan.)

A good short story (47 pages), with plenty of dialogue. The notes are not uniformly good; some of the renderings are in questionable English. The vocabulary is not full. The editor warns us that "words which are the same in both languages or have little difference, either in spelling or in pronunciation, are avoided." This does not justify the omission of *appuyer*, *brûler*, *crayonner*, *dévoiler*, *éclater*, *feuille*, *poser*, *remplir*, *sanglot*, *trouver*, and *voiture*, all of which occur on a single page of the text.

Molière: Le Bourgeois Gentilhomme. Edited by F. M. Warren. (Isbister.)

This edition contains an excellent introduction, a well printed text and satisfactory notes. It is suitable for school use, but not sufficiently full for University students. The price is very low.

Selections from the Correspondence between Schiller and Goethe.

Edited by J. G. Robertson, M.A., Ph.D. (Ginn & Co.)

This edition deserves unqualified praise. It should be read by every student of German literature who wishes to obtain a picture of the admirable union of Germany's greatest poets. No easy task it was to make a selection from the large number of letters which have fortunately been preserved; nor was it easy to compress into thirty pages all that one would like to say by way of introduction. Mr. Robertson has succeeded in this, and has, further, supplied excellent notes. There are few who will not feel themselves the richer for perusing this book and who will not be grateful to the editor for the conscientious and stimulating way in which he has accomplished his task.

Wildenbruch: Der Leizte. Edited by F. G. G. Schmidt. (Isbister.)

Those who know the same author's "Das edle Blut" will find this story very similar to it in style, and even more sad. It is, indeed, almost too painful and harrowing for girls, while there is hardly enough action for boys. There are some notes, which are fairly satisfactory.

MISCELLANEOUS.

Poetical Works of Alfred Lord Tennyson, Poet Laureate. (Macmillan.)

Here is a complete collected Tennyson—all but the plays—at a very moderate price. It is a single volume of 647 pages, less than an inch in thickness—and these things doubtless imply thin paper and small type; but the double-columned page is very readable. The book includes all that Tennyson approved of his "Juvenilia," and ends with "Songs from the Plays" and "Crossing the Bar." There are also four useful indices.

The Book of Psalms, containing the Prayer Book Version, the Authorized Version, and the Revised Version in Parallel Columns. (Cambridge University Press.)

A very convenient handbook for reference, which will be useful not merely to teachers and students of Scripture, but also to the ordinary reader. It is very clearly printed.

Elements of Prose. By W. A. Brockington, M.A. (Blackie.)

Mr. Brockington begins his serviceable little manual of English prose composition aptly enough by insisting on the value of attentive reading for the purpose of watching the method of good writers. When we can get a student to do this, more than half of our task is done. Rules are comparatively useless to one who is able to observe and imitate. After this good beginning, we find ourselves on all the better terms with the succeeding chapters on the Sentence, the Paragraph, and the Figures of Prose. Though by no means exhaustive, this is a good book for intelligent learners.

Nature's Alphabet. By N. Mumbray. (Newmann.)

This is a clearly written book of suggestions to kindergarten

teachers for making a primrose path to reading, writing, and arithmetic. As is the case with so many of these "interesting" methods, the work is far more arduous than on the old dry system. All the letters are developed from a ball and a stick, and much ingenuity is shown in finding objects to resemble the letters; the child is to remember the letter *r* because it looks like a paper-fastener, *w* like a purse, and so on with each letter. In what sense this can be called Nature's alphabet it is hard to see. We cannot agree with the author that the order of the letters is immaterial in the first stage, for whatever order is taken tends to remain, and will only create confusion when the conventional order has to be acquired later.

Geometrical Drawing for Army and Navy Candidates and Public School Classes. Vol. I., *Practical Plane Geometry.* By Edmund C. Plant. (Macmillan.)

Mr. Plant, of Clifton College, has classified, in this well produced quarto volume, a large number of geometrical problems, illustrated by clear and finished mechanical diagrams. The double aim of geometrical drawing, which is to introduce the pupil to geometry whilst training him in the neat and accurate use of instruments, is carefully borne in mind in this excellent book, which should be very useful to good teachers and studious pupils. The diagrams are produced from photographs of drawings made by Mr. Plant and his assistants, and will serve as a model or standard of draughtsmanship.

Mammals. (Bacon.)

It is seldom that a book of so-called object-lessons is of any practical use. This little handbook, however, intended to illustrate Bacon's "Natural History Pictures," can be heartily recommended. In the hands of a teacher who really knows the animals it will be very serviceable, by setting forth in clear form certain facts which it would cost him much time and trouble to look up, and leaving it to his discretion how much or how little he gives to his class. The general lessons on teeth, hoofs, tongues, &c., with the accompanying suggestions for black-board sketches, are particularly commendable.

Domestic Economy for Teachers. Designed to Meet the Government Requirements for Class and Specific Subjects, and for Queen's Scholarship and Certificate Examinations. By H. Major, B.A., B.Sc. (Newmann.)

It has seldom been our lot to come across a book so carelessly prepared for publication as this *pot-pourri* of information, huddled together without index, list of contents, or trace of logical arrangement. We find "walking-sticks" given as a use for stems, in the section on botany, and a recipe for a pudding takes up a third of the chapter on water. Beef suet is classified as a vegetable, and we are mysteriously told that "starch is insoluble, but when it is dissolved it is carried by the blood to the parts which need it." The diagrams used are evidently those which happened to be at hand, for they illustrate what is least necessary (e.g., the only fish selected for illustration are the herring and the cod), and are in many cases decorated with lettering without any key, or, indeed, any relation to the text. So many are the inaccuracies that it is well, on the whole, that the book is addressed to teachers, and not intended for the pupils.

A History of English Critical Terms. By J. W. Bray, M.A. (Isbister.)

Mr. Bray was decidedly ambitious in undertaking a history of critical terms. His work is in the form of an alphabetical glossary of words more or less freely used in criticism, and under each word we have an indication of its earlier employment, with a few illustrations of its use. We are sufficiently grateful to Mr. Bray for his enterprise, and will not carp at details.

A Practical Handbook on Elocution. By Rose I. Patry. (Sonnenschein.)

A little book full of sensible and useful hints on reading and reciting. The illustrations are almost exclusively from poetry and the musical stave.

A Form Grammar for Secondary Schools. By William Dodds. Part I. (John Heywood.)

We are to understand the junior classes in secondary schools; but what we are to understand by "a form grammar" it is hard to say. Mr. Dodds considers that every question hitherto given in the third-class English grammar papers of the College of Preceptors can be answered from this book. It is a book of 250 pages, so there ought to be a chance. But how of the questions that are to come? There is more than meets the eye in that consideration. Our first impression is that Mr. Dodds knows his business and deserves a trial.

The Principles of Composition. By Henry G. Pearson. (Isbister.)

This little American book is well fitted to break the ground for theme-writing in a juvenile non-classical school. It has a system of its own, and Mr. Pearson is clear and deliberate in expounding it.

History of England. Part III., 1689-1897. By George Carter, M.A. (Relfe Bros.)

This volume, it is stated, is a continuation of the author's "Outlines of English History" on a more comprehensive and detailed scale. Candidates preparing for examination in the special period 1689-1897 will find it very helpful. It is a model of arrangement. Each reign is divided into what may, perhaps, be called homogeneous sections, and

each section is divided into paragraphs, with the heading in large type. Such an arrangement is not without its dangers. We are acquainted with some such *histories* which give the impression the history is a mass of unconnected details: one cannot see the wood for the trees. But Mr. Carter has contrived to avoid this mistake. While dealing effectively with the parts, he gives a clear picture of the whole. A novel and striking characteristic is the use of italicized sentences or phrases, often quotations, which serve to sum up or vividly illustrate the substance of the paragraph. For instance, after a clear statement of the real and pretended objects of the *Holy Alliance*, we read: "The Duke of Wellington refused to join the Alliance, declaring that the British Government would like something more precise." We have noted a few omissions, such as the Transvaal War of 1881. The book, however, has few faults and many merits. Among the latter we may mention the well written biographical sketches of eminent persons and the index. We recommend it as a sound and scholarly and interesting handbook.

A Guide to London. With Plans and Illustrations. (Cassell & Co.) A well executed and convenient guide, arranged alphabetically, with copious information and clearly drawn map, plans, and illustrations.

"School Operettas."—*In Shakespeare's Days.* Libretto by M. C.

Gillington. Music by E. Ouseley Gilbert. (Curwen & Sons.)

This brightly written operetta is designed to enable English boys and girls to realize the life and manners, ideals and games, of Elizabethan times. Two Stratford boys, having heard of Shakespeare's success in London, go up to pay him a visit, when they hear and see many curious things. It is a good idea, and is well and simply worked out.

"Official" Drawing Books. (Macmillan.)

A series of twenty oblong books, combining copies and blank drawing-paper. The arrangement follows the Code, for seven standards and pupil-teachers, but it is very well suited for general use, advancing from easy patterns on squared paper to freehand, geometrical, and model drawing, exercises in shading, animals, flowers, &c. This is an excellent, as well as a cheap, series.

Britannia Copy Books. (Edward Arnold.)

A series of fourteen, making a complete course, from strokes and curves up to correspondence and business forms. The headlines get in a little instruction in geography and history, elementary science and domestic economy. The writing is rounded and slightly sloped.

The Practical Teacher's Copy Book. By Arthur T. Flux. (Edinburgh: Nelson & Sons.)

Good in style, but too expensive for adoption in schools. It is suited for "Certificate" students, and includes printed pieces for writing out.

English History from the Norman Conquest to the End of the Wars of the Roses, in Twenty Stories, is one of Messrs. Bell & Sons' "History Readers." It is simply written, in numbered paragraphs, with words for spelling, summaries, and illustrations.—Messrs. Nelson & Sons send us Book VI. of the "Windsor History Readers," *The Reign of Queen Victoria: Growth of the Empire*, containing many economic and historical facts which will interest a boy or girl of thirteen or fourteen. From the same publishers we have Nos. I. and II. of their "Supplementary Readers," *The Story of the North-East Passage, as told by the Early Explorers*, and a companion *Story of the North-West Passage*.—Mr. C. H. Simpkinson has written *Stories from British History, 1688 to the Present Time*, for Messrs. Wake & Dean's "Victory History Readers."

WE HAVE ALSO RECEIVED the following publications and new editions:—

Two welcome reprints in Macmillan's half-crown series—*Madam How and Lady Why; or, First Lessons in Earth-Lore for Children*, by Charles Kingsley; and *Tales of the Birds*, by W. Warde Fowler (Macmillan)—both admirably illustrated, and not easy to beat as nature-readers for boys and girls.

Scenes from Ivanhoe (Edward Arnold.)

Durham: Cathedral and See, by J. E. Bygate (Bell & Sons' "Cathedral Series").

Key to Exercises in Siepmann's German Primer, by T. H. Bayley, M.A. (Macmillan.)

Object-Lesson Readers, Book III. (M'Dougall.)

"*Excelsior*" Drawing Books, Parts I.-VI. (Bacon.)

CORRESPONDENCE.

CLASSICAL METRES.

To the Editor of the Educational Times.

SIR,—In the very interesting review with which you have honoured my pamphlet on this subject, your reviewer puts certain questions which seem to me well worth following up. If you think the matter of sufficient interest and importance, I should like to attempt some answer to them.

He, in the first place, questions the possibility of the identity of Greek and English accents, which is one of my theories, on the ground that in Greek six or seven consecutive syllables are to be found unaccented. If I am not misunderstanding his position, this objection implies that the same is not the case in English; that in English it is not possible to find six or seven consecutive syllables unaccented. I am inclined to deny this; but then we probably do not mean quite the same by *accent*. Perhaps I may be forgiven if I take the word in my sense, and see how the question works out.

I will first write down a sentence in which there are, according to my views, ten consecutive unaccented syllables: "I am in a, to some extent, irreconcilable position." The only accents which, on the analogy of the Greek, I should allow in this sentence are a circumflex on *I*, an acute ante-penultimate on *irreconcilable*, and an acute penultimate on *position*. There would, of course, be a number of grave accents, but, as your reviewer points out, they simply express that the syllable is unaccented. There are two things in this sentence which I would draw attention to. First, the word *extent*, which by itself is oxytone, to my ear distinctly loses its accent, as it would in Greek; but I must be understood to mean by this simply that the voice is not raised on the syllable. The second point to notice is that *irreconcilable* has a secondary accent on the second syllable; but observe again that the tone is raised very slightly indeed on that syllable, not enough to receive either an acute or a circumflex accent. This slight stress could not, from the nature of Greek accents, be expressed at all, but was, I believe, present in exactly the same way. I believe that the first syllable of *νεφεληγερέα* would have had such an accent; but of course I have no evidence for my belief. Let me remark here that, in English accentual rhythms, this accent, inexpressible in Greek, is used equally with the acute and the circumflex to mark the beat of the verse, the variation between the three being a great part of the charm. Opening "Paradise Lost," the second line my eye fell upon illustrates my meaning:

"Us to abolish lest the adversary,"

where there are only two acute accents, no circumflex, and the rest inexpressible on Greek principles. Such a line would be called, I believe, by many writers a two-stressed verse, which to some extent supports my theory. I am afraid I must plead guilty to having begged the question on what I have just been saying, but I hope I may have incidentally suggested possible relations between English and Greek accents.

Your reviewer further accuses me of overlooking the fact that Homer wrote for music. I confess that, from ignorance of the subject, I thought it as well not to appeal to it, though it seemed to me to be in my favour. We must remember that bars, which are mainly responsible for the accentual character of modern music, are of comparatively recent invention. The tendency to accent the first note in every bar has naturally grown, I suppose, because of its usefulness in keeping a large orchestra together, and musical people tell me that there are signs of reaction in almost all branches of music. However that may be, I am convinced that my verses would not, if sung to some old unaccented plain-song chant, sound particularly grotesque, though the experiment would be more interesting in some other metre, such as Sapphics, which could not be divided into bars at all. I cannot imagine that the effect would be more absurd than that of making every syllable the same length, as we are forced to do in most of our hymns.

I must confess absolute ignorance of the principles of prose-rhythm, and must therefore leave that question untouched. Lastly, your reviewer asks whether I mean quantitative and accentual verse to exist side by side. It seems to me that the principles of the two are so diametrically opposite that they might well do so without clashing; but whether this would be desirable or not I cannot say.—Yours faithfully,
W. J. STONE.

GRANTHAM GRAMMAR SCHOOL.
To the Editor of the Educational Times.

SIR,—I enclose copy of the Commissioners' letter in answer to one asking for information. I may say that Mr. Bigge has suggested May 30 as the date of the inquiry, but whether the Governors have accepted that date I do not yet know. The concluding sentence of the letter seems to me of some importance, and will be all the more so if it can be authoritatively declared that "in no case does a vacancy in the headmastership of a school *ipso facto*" terminate the appointments of assistant-masters. ONLOOKER.

"SIR,—Referring to your letter of the 26th inst., I am directed to inform you that the Commissioners have instructed one of their Assistant Commissioners, Mr. Selby Bigge, to visit Grantham with a view of holding an inquiry into the circumstances of this case as affecting the assistant-masters.

"I am to add that the Commissioners have intimated to the Governors that there is apparently no ground for the contention that the appointments of assistant-masters were *ipso facto* terminated by a vacancy in the headmastership.—I am, &c., "WM. C. LEFROY."

MATHEMATICS.

14159. (Rev. J. CULLEN.)—Prove (1) that the PASCAL line of the hexagon DD'EE'FF', formed by the intersections of the sides of ABC with any "T" circle, is the radical axis of "T" and the circumcircle; (2) the intersections of the homologous sides of DEF and D'E'F' are the vertices of a triangle homothetic with ABC, and the homothetic centre lies on KIEPERT'S hyperbola.

Solution by G. N. BATES, B.A.

Let DE meet AB in R.
Then, from similar triangles RD'B, REA,
RE.RD' = RA.RB;
therefore R is on radical axis of T, and circumcircle, which therefore coincides with PASCAL line of DD'EE'FF'.

If DE, F'D' meet in l, &c., the quadrilateral nmE'F' is cyclic; therefore nm is parallel to BC; i.e., lmn is homothetic with ABC. Now, if Bp be drawn parallel to D'F' to meet Al in p, then Cp is parallel to DE, and p is vertex of isosceles triangle described on BC, with base angle θ ; similarly for q and r; therefore Ap, Bq, Cr, i.e., Al, Bm, Cn, intersect in a point which lies on KIEPERT'S hyperbola.

14072. (Professor NEUBERG).—Résoudre le système

$$\begin{aligned} \sin(y+z+u) &= a \sin x, & \sin(x+u+z) &= b \sin y, \\ \sin(u+x+y) &= c \sin z, & \sin(x+y+z) &= d \sin u. \end{aligned}$$

Solution by H. A. WEBB.

Let $x+y+z+u = \kappa$.
Then $\sin(\kappa-x) = a \sin x$;
therefore $\tan x = \sin \kappa / (a + \cos \kappa)$, and three similar equations (1).

Now $\tan \kappa = \frac{\sum \tan x - \sum \tan y \tan z \tan u}{1 - \sum \tan x \tan y + \tan x \tan y \tan z \tan u}$
 $= \frac{\sum \sin \kappa (a + \cos \kappa) (b + \cos \kappa) (c + \cos \kappa) - \sum \sin^3 \kappa (d + \cos \kappa)}{(a + \cos \kappa)(b + \cos \kappa)(c + \cos \kappa)(d + \cos \kappa) - \sum \sin^2 \kappa (a + \cos \kappa)(b + \cos \kappa) + \sin^4 \kappa}$
therefore either $\sin \kappa = 0$, giving x, y, z , and u each a multiple of π (2),
or we have an equation in $\cos \kappa$ which reduces to

$$\begin{aligned} abc d - \sum ab + 1 - 2 \cos \kappa \cdot \sum a - 4 \cos^2 \kappa = 0; \\ \text{therefore } \cos \kappa = \frac{1}{4} \{ -(a+b+c+d) \pm [a^2 + b^2 + c^2 + d^2 - 2(ab+bc+ca+ad+bd+cd) + 4abcd + 4]^{1/2} \} \dots \dots (3). \end{aligned}$$

(2) is one set of solutions; the others are found by substituting the values of $\sin \kappa, \cos \kappa$ found from (3) in equations (1).

14075. (Professor A. DROZ-FARNY).—Le cercle inscrit du triangle ABC touche les côtés en D, E, F. Soit S le point de contact de ce cercle avec le cercle d'EULER. Démontrez que la droite de SIMSON de S par rapport au triangle DEF est parallèle à la droite d'EULER de ce triangle. Théorème analogue pour les cercles ex-inscrits?

Solution by C. E. HILLYER, M.A.

If O, N, I are the circum-, nine-points-, and in-centres, respectively, of ABC, and AI meets the circumcircle in a, a' is the mid-point of BC so that $OA'a$ is a straight line perpendicular to BC, AP is perpendicular to BC, and NU the parallel radius of the nine-points-circle, so that UDS is a straight line, then

$\angle UA'P = \angle UPA'$
 $= \frac{1}{2}(B \sim C)$
 $= \angle Oaa' = \angle OaA$;
therefore the isosceles triangles $UA'P, OaA$ are similar.

Also, by parallels, $A'D : DP = aI : IA$;
therefore the triangles UDA', OIa are similar. Therefore
 $\angle OIa = UDA' = SDC = \frac{1}{2}SID$,

since DC touches the circle DEF at D . Now it is known that the angle between the SIMSON-lines of two points is half the angle subtended by the two points at the centre ; but the SIMSON-line of D with respect to the triangle DEF is the perpendicular from D on EF , and is therefore parallel to AI . Thus the angle between the SIMSON-line of S and $AI = \frac{1}{2}SID = OIa$. Therefore the SIMSON-line of S is parallel to OI , and it is known that OI passes through the orthocentre of DEF .

Note.—The fact that $\angle UDA' = OIa$ affords a very simple proof of FURBERBACH's theorem, for it is easy to deduce from it that the point in which UD meets NI is on the circumference of the in-circle.

14125, 14127, & 14129. (14125.) (DISCIPULUS.)—If $(1 + 2x)^m / (1 - x)$ be expanded in ascending powers of x , prove that the coefficient of any power of x greater than $m - 1$ is 3^m , m being a positive integer.

(14127.) (REV. T. MITCHESON, B.A.)—Show that
 $(p + q)! / p! q! = 1 + pq + p(p-1)q(q-1) / (2!)^2 + \dots$
 $+ p(p-1)(p-2)q(q-1)(q-2) / (3!)^2 + \dots$

(14129.) (R. KNOWLES, B.A.)—Prove that the $(r + 1)$ th terms in the expansions of $(1 + x)^{m/n}$ and $(1 - x)^{-m/n}$ are respectively

$$\frac{(m + n - nr)(m + 2n - nr)(m + 3n - nr) \dots \text{to } r \text{ terms}}{nr \cdot r!};$$

$$\frac{(n - m - nr)(2n - m - nr)(3n - m - nr) \dots \text{to } r \text{ terms}}{nr \cdot r!}.$$

Solutions by Rev. T. WIGGINS, B.A., and many others.

(14125.)
 $(1 + 2x)^m / (1 - x) = (1 + 2x)^m (1 + x + x^2 + \dots)$
 $= \{c_0 + c_1(2x) + c_2(2x)^2 + \dots + c_m(2x)^m\} (1 + x + \dots)$

In this product the coefficient of any term x^{m-1+k} is
 $(c_0 + c_1 \cdot 2 + c_2 \cdot 2^2 + c_3 \cdot 2^3 + \dots + c_m \cdot 2^m) = (1 + 2)^m = 3^m$.
[The rest in Volume.]

14120. (REV. T. ROACH, M.A.)—Prove geometrically
 $\cot^{-1} 7 + \cot^{-1} 8 + \cot^{-1} 18 = \cot^{-1} 3$.

Solution by the PROPOSER.

Draw $AB = 7$, and BC perpendicular $= 1$; then $\angle CAB = \cot^{-1} 7$.

Make $CAD = \cot^{-1} 8$, and draw DM and CR perpendicular; then, by similar triangles, $CR = \frac{1}{8}$ and $DR = \frac{1}{8}$; therefore $AM = \frac{5}{8}$ and $DM = \frac{1}{8}$.

On AD make $DAE = \cot^{-1} 18$, and draw EN and DS perpendicular; then, by similar triangles, $SD = \frac{1}{18}$ and $ES = \frac{17}{18}$; therefore $AN = \frac{13}{18}$ and $EN = \frac{1}{18}$.

$\angle EAN = \cot^{-1} (AN/EN) = \cot^{-1} 3$.

14070. (FRANCIS ROUNTREE, M.A.)—Solve the following sets of simultaneous equations:—

$$\begin{aligned} x^2 - 5xy + 5y^2 + 3x - 5y + 3 &= 0 \dots\dots\dots (1), \\ 3(x^2 - 2xy + 4y^2) + 2(x - 2y) - 1 &= 0 \dots\dots\dots (2), \end{aligned}$$

and

$$\begin{aligned} (1) \quad 2x^2 + 3xy &= 22x - 18 \} \\ (2) \quad 2y^2 - xy &= 22y - 54 \} \end{aligned}$$

Solution by H. J. WOODALL, A.R.C.S.

From the first set
 $x^2 + x(-5y + 3) + (5y^2 - 5y + 3) = 0$, $3x^2 + x(-6y + 2) + (12y^2 - 4y - 1) = 0$,
giving the determinant

$$\begin{vmatrix} +1, & -5y + 3, & 5y^2 - 5y + 3, & 0 \\ 0, & +1, & -5y + 3, & +5y^2 - 5y + 3 \\ +3, & -6y + 2, & 12y^2 - 4y - 1, & 0 \\ 0, & +3, & -6y + 2, & 12y^2 - 4y - 1 \end{vmatrix} = 0,$$

which reduces to $279y^4 - 420y^3 + 104y^2 + 8y + 37 = 0$, none of whose roots are rational, but when we have found the four values of y we must substitute in $\{3(1) - (2)\}$ and find the corresponding value of x .

For the second part we find from (2), $x = (2y^2 - 22y + 54) / y$. Substituting in (1), we get $7y^4 - 143y^3 + 1032y^2 - 2970y + 2916 = 0$, one of whose roots is $y = 3$, giving $x = 2$.

14146. (R. F. DAVIS, M.A.)—If OP, OP' are tangents from an external point O to a given circle, and any point T is taken upon the line joining their middle points R, R' from which tangents are drawn whose chord of contact intersects RR' in U , prove that OT, OU are at right angles.

Solutions (1) by C. JOSS, M.A.; (2) by H. D. DRURY, M.A.

(1) The figure needs no explanation.
 $CD \cdot CO = CP^2 = CE \cdot CT$;

therefore O, D, E, T is concyclic ;
therefore $\angle DOE = \angle DTE$,
and $\angle DBE = \angle BOE + \angle OEB$,
but $\angle DBE$ also $= \angle ATE$, for B, A, T, E is concyclic ; therefore
 $\angle OEB = \angle ATD = \angle OTA$

(for $OA = AD$) ; therefore O, U, E, T is concyclic.

(2) Let Q, Q' be the points of contact of the tangents from T .

Since T is a point on the radical axis of the "point circle" O and the given circle, we have

$TQ = TQ' = TO$.

Therefore a circle described with T as centre and radius TO will pass through Q, Q' , and this circle will touch UO at O , for $UO^2 = UQ \cdot UQ'$, since U is another point on the radical axis. Hence, &c.

14053. (REV. W. A. WHITWORTH, M.A.)—Prove that Quest. 13630, Vol. LXIX., p. 47, is true if any square number be substituted for $4, e, g$,

$$1 - 9 + 9^2 - 9^3 + 9^4 = \square + \square = 73^2 + 24^2 = 63^2 + 44^2,$$

$$1 - 25 + 625 = \square + \square = 24^2 + 5^2;$$

and generally that

$$1 - a^2 + a^4 - a^6 + \dots + a^{4r} = (1 - a^2 + a^4 - \dots \pm a^{2r})^2 + (a - a^3 + \dots \pm a^{2r-1})^2.$$

Solution by F. H. PRACHELL, B.A.; H. W. CURJEL, M.A.; and Lt.-Col. ALLAN CUNNINGHAM, R.E.

$$1 - a^2 + a^4 - a^6 + \dots + a^{4r} = 1 - a^2 + (a^2)^2 - (a^2)^3 + \dots (a^2)^{2r}$$

$$= \frac{a^{4r+2} + 1}{a^2 + 1} = \left(\frac{a^{2r+2} \pm 1}{a^2 + 1} \right)^2 + \left\{ \frac{a(a^{2r-1} \mp 1)}{a^2 + 1} \right\}^2 \dots\dots\dots (1)$$

$$= (1 - a^2 + a^4 - \dots \pm a^{2r})^2 + (a - a^3 + \dots \pm a^{2r-1})^2 \dots\dots\dots (2).$$

When r is odd, we take the bottom signs in (1) and (2), and the top signs when r is even.

5665. (PROFESSOR CASEY, M.A.)—Given the distance between the centres of two circles, the radius of one circle, and the length of an endless band that passes round the two circles; find the radius of the other circle.

Solution by Professor SANJANA, M.A.

Let d = distance between centres, r_1, r_2 = radii of the circles, and $2l$ = length of endless band; then, if 2θ be the angle subtended at the centre of the larger circle by the free arc,

$\cos \theta = (r_1 - r_2) / d$;

hence $d \sin \theta = \{d^2 - (r_1 - r_2)^2\}^{\frac{1}{2}}$.

Now $2l = 2r_2\theta + 2r_1(\pi - \theta) + 2d \sin \theta$;

Therefore

$l = r_2 \cos^{-1} (r_1 - r_2) / d + r_1 \{ \pi - \cos^{-1} (r_1 - r_2) / d \} + \{d^2 - (r_1 - r_2)^2\}^{\frac{1}{2}}$;

whence one radius may be found when the other three quantities are given. When the band crosses between the circles the formula is

$l = r_2(\pi - \theta) + r_1(\pi - \theta) + d \sin \theta$.

14051. (R. TUCKER, M.A.)— P is a point on the ordinate of an ellipse produced. PK is the perpendicular from P on the polar of P . Find the equation to the circular locus of K , and the envelope of this locus as the ordinate varies in position. Interpret the result.

Solution by H. W. CURJEL, M.A.

Let Q be the pole of the ordinate. Then the polar of $P(a, \beta)$ passes through $Q(a^2/a, 0)$, and $PK \{ (x-a)/a^2 = (y-\beta)/a^2\beta \}$ passes through $R(a^2/a, 0)$. Therefore locus is a circle on QR as diameter. This clearly passes through the points of intersection of the ordinate and the ellipse and also through the foci on the y -axis, which therefore form the envelope of the circles. These circles are therefore coaxial and cut the circles through the foci on the x -axis orthogonally.

13998. (J. J. BARNIVILLE, M.A.)—Prove that the series $1, 1, 2, 3, 5, \dots$ contains multiples of every number. Prove that u_n is divisible by u_n . Can it be shown that u_n is prime when n is prime?
[See *Nature*, May, 1897.]

Solution by C. E. BICKMORE, M.A.; and H. W. CURJEL, M.A.

(1) $u_n = (a^n - \beta^n) / (a - \beta)$, where $a + \beta = 1, a\beta = +1$; u_n is divisible by an uneven prime p , if $(a/\beta)^n \equiv 1 \pmod{p}$. Since $a/\beta = -\frac{1}{2}(3 - \sqrt{5})$, this

is satisfied by $n = p - 1$, if 5 be a 2-ic residue of p , and by $n = p + 1$, if 5 be a 2-ic non-residue of p . Thus

$$u_{10m} \equiv 0 \pmod{10m+1}, \quad u_{10m+8} \equiv 0 \pmod{10m+9},$$

$$u_{10m+4} \equiv 0 \pmod{10m+3}, \quad u_{10m+8} \equiv 0 \pmod{10m+7},$$

the modulus in each case being a prime. Similarly,

$$u_n \equiv 0 \pmod{p^k}, \quad \text{if } n = p^{k-1}(p \pm 1); \quad u_3 = 2, \quad u_6 = 8;$$

therefore $u_n \equiv 0 \pmod{2^k}$, if $n = 3 \cdot 2^{k-2}$, k being > 2 .

(2) Since $(\alpha^{mn} - \beta^{mn}) / (\alpha - \beta)$ is obviously divisible by $(\alpha^n - \beta^n) / (\alpha - \beta)$, u_{mn} is a multiple of u_n .

(3) If n be prime, u_n is not necessarily prime; thus u_{19} is a multiple of 37; but (noting that $u_{2n+1} = u_{n+1}^2 + u_n^2$), if n be a prime > 3 , the prime factors of u_n are of the form $4m+1$, if ending in 1 or 9, and of the form $(4m+2)n-1$ if ending in 3 or 7. As examples of the latter, a prime of form $60m+37$ always divides u_{30m+19} , and a prime of form $60m+13$ always divides u_{30m+7} .

Since one of the two numbers $10m+9$ and $10m+7$ is of the form $4M+1$, when they are both primes, one of them is a factor of u_{5m+4} and the other is not; e.g., $m = 10$ gives 107 a factor of u_{108} but not of u_{54} ; and u_{109} a factor of u_{54} as well as of u_{108} .

QUESTIONS FOR SOLUTION.

14222. (Professor ELLIOTT, F.R.S.)—If $P + a_0Q$, in which P and Q are free from a_0 , is annihilated by $a_0 \frac{\partial}{\partial a_1} + 2a_1 \frac{\partial}{\partial a_2} + 3a_2 \frac{\partial}{\partial a_3} + \dots$ to ∞ , show that $\frac{\partial}{\partial a_1} Q = 0$, and that, when $m > 1$,

$$\frac{\partial}{\partial a_m} Q = -\frac{1}{2} \sum_{r=1}^{m-1} \frac{r^{m-1}}{\partial a_r \partial a_{m-r}} P.$$

14223. (Professor G. B. MATHEWS, F.R.S.)—A variable sphere is inscribed in a right circular cone, and tangent cones are drawn to the sphere from two fixed points on the given cone. Find the locus of their intersection.

14224. (Professor CROFTON, F.R.S.)—Four points are taken at random in a triangle. Find the chance that the point nearest to the side AB shall also be the nearest to AC. (Ans. $\frac{1}{3}$.) By means of this, an elementary proof may be given that the chance of a convex quadrilateral is $\frac{1}{3}$.

14225. (Professor NEUBERG.)—Eliminer x, y, z entre les équations
 $(x-y)(x-z) = ayz,$
 $(y-x)(y-z) = bzx,$
 $(z-x)(z-y) = cxy.$

14226. (Professor S. SIRCOM, M.A.)—Let $O(ABC)$ denote the sine of the solid angle subtended at O by the triangle ABC ; then, if A, B, C, D, E be five fixed points and O any variable point on a quadric, prove that the ratios $\frac{O(ABC) \cdot O(ADE)}{O(ABE) \cdot O(ACD)}, \frac{O(ABC) \cdot O(ABD) \cdot O(CDE)}{O(CDA) \cdot O(CDB) \cdot O(ABE)}$ and $\frac{O(ABC) \cdot O(BCD) \cdot O(CDE) \cdot O(DEA) \cdot O(EAB)}{O(ABD) \cdot O(BCE) \cdot O(CDA) \cdot O(DEB) \cdot O(EAC)}$ are constant.

NOTE.—If ABC be the area of the triangle ABC , and A, B, C, D, E be five points in a plane no three of which are in a straight line, the ratio $\frac{ABC \cdot BCD \cdot CDE \cdot DEA \cdot EAB}{ABD \cdot BCE \cdot CDA \cdot DEB \cdot EAC}$ is unaltered by projection, and may be called the cross ratio of the five points in a plane.

Similarly, if $ABCD$ be the volume of the tetrahedron $ABCD$, and A, B, C, D, E, F be six points in space no four of which are in a plane, the ratio $\frac{ABCD \cdot BCEF \cdot ABCF \cdot ADEF \cdot CDEF \cdot ABDE}{ABCE \cdot BCDF \cdot ABFE \cdot ACFD \cdot BDEF \cdot ACDE}$ may be called

the cross ratio of the six points in space (Quest. 9710), and so on for space of any dimensions. The above proposition is an extension of the anharmonic property of conics to quadrics.

14227. (Professor F. MORLEY.)—In the motion of a plane in a plane, lines whose envelopes have at any instant a given curvature touch a circle, and the points of contact of the lines with their envelopes lie on a limaçon.

14228. (Professor A. DROZ-FARNY.)—Un triangle ABC est inscrit dans une conique. Les deux bissectrices de l'angle A rencontrent pour la seconde fois en a et a' la courbe. Démontrer que la droite aa' et ses analogues $\beta\beta', \gamma\gamma'$ se coupent en un même point.

14229. (Professor UMES CHANDRA GHOSH.)—If the LEMOINE'S circle of a triangle ABC cuts its sides $AB, BC,$ and CA in $F, F'; D, D';$ and E, E' respectively, and if the points of intersection of the symmedians $AK, BK,$ and CK of the triangle ABC with $FE', F'D,$ and ED' be A_1, B_1, C_1 , show that the centre of the LEMOINE'S circle of the triangle $A_1B_1C_1$ is the middle point of the line joining the symmedian point of the triangle ABC and the centre of its LEMOINE'S circle. If triangles $A_2B_2C_2, A_3B_3C_3, A_4B_4C_4, \dots, A_nB_nC_n$ be formed in the same way as $A_1B_1C_1$, and if $O_2, O_3, O_4, \dots, O_n$ be the centres of the LEMOINE'S circles of these triangles, prove that $O_nK = 1/(2^{n-1}) \cdot OK$.

14230. (Professor COCHEZ.)—On donne un cercle fixe O et un point fixe A , par lequel on mène une sécante ABC . Sur AB et AC comme diamètres on décrit des circonférences Σ et Σ' . Lieu des intersections des cercles communes à O et Σ et à O et Σ' quand la sécante tourne autour de A .

14231. (Professor THOMAS SAVAGE.)—The arcs which subtend equal angles, whether at the centres or the circumferences of two circles, being equal, prove that the circles are equal, by elementary geometry.

14232. (Professor H. LANGHORNE ORCHARD, M.A., B.Sc.)—Solve the cubic equation

$$12x^3 - 2(n^3 + 3n^2 + 2n - 3)x^2 - (n^3 + 3n^2 + 2n + 6)x + n^3 + 3n^2 + 2n = 0;$$

and show that the three values of x may each be exhibited as a series.

14233. (Professor K. J. SANJANA.)—If three points A, B, C be referred to two axes meeting in O , the intersections of the joins of B and C, C and A, A and B , with the isogonal conjugates with regard to the given axes of OA, OB, OC , respectively, are collinear. If three straight lines BC, CA, AB be referred to two points on a line Δ , the joins of A, B, C with the isotomic conjugates with regard to the given points of the intersections of Δ with BC, CA, AB , respectively, are concurrent.

14234. (D. BIDDLE.)—As the angle A of a variable triangle increases from 0 to π , the sides AB and AC increase in the same proportion with it. Supposing the dimensions at some period of the transformation to be given, and AB to remain fixed in direction, find (1) the maximum height of C above AB , (2) the maximum area attained, (3) the locus of the centroid.

14235. (R. TUCKER, M.A.)— $ABCD$ is a square. P, Q, R are points on AB, AD, BC respectively, such that PQR is an equilateral triangle. Find maximum value of triangle. Show also that locus of intersection of AR, BQ , as P moves along AB , is a parabola, and that QR touches a rectangular hyperbola.

14236. (C. E. HILLYER, M.A.)— O is the circumcentre and I the incentre of a triangle ABC ; AO, BO, CO meet the circumcircle again in a, b, c respectively; X, Y, Z are the points of contact of the incircle with the sides, and $X\delta, Y\epsilon, Z\zeta$ the perpendiculars of the triangle XYZ . Prove that $a\delta, b\epsilon, c\zeta$ are concurrent in I .

14237. (R. F. DAVIS, M.A.)—The tangent at A to the circumcircle of the triangle ABC meets BC in T and is produced to U so that $AT = TU$. Prove that the polar of A with regard to any circle through B, C passes through U .

14238. (Rev. W. ALLEN WHITWORTH, M.A.)—If a straight line be divided at random into any number of parts, the expectation of the square on any part taken at random is double of the expectation of the rectangle contained by any two of the parts taken at random. [This can be proved by algebra without the integral calculus.]

14239. (B. N. CAMA, M.A. In continuation of Quests. 14177 and 14207.)—If $OP, P_2, \dots, OQ, Q_2, \dots$ be two vectors including a right angle, meeting an equiangular spiral (pole O) in the points $P_1, P_2, \dots, Q_1, Q_2, \dots$, show that the parabolas drawn to touch the curve at $P_1, Q_1, P_2, Q_2, \dots$, and having the chords of contact for their focal chords are in geometrical progression: further, that their axes are parallel to a fixed line.

14240. (V. R. THYAGARAGAIYAR, M.A.)—Solve the following system of equations in four variables:—

$$\begin{vmatrix} x_3 & x_4 & x_1 \\ x_4 & x_1 & x_2 \\ x_1 & x_2 & x_3 \end{vmatrix} = a^3; \quad \begin{vmatrix} x_2 & x_4 & x_1 \\ x_3 & x_1 & x_2 \\ x_4 & x_2 & x_3 \end{vmatrix} = b^3;$$

$$\begin{vmatrix} x_2 & x_3 & x_1 \\ x_3 & x_4 & x_2 \\ x_4 & x_1 & x_3 \end{vmatrix} = c^3; \quad \begin{vmatrix} x_2 & x_3 & x_4 \\ x_3 & x_4 & x_1 \\ x_4 & x_1 & x_2 \end{vmatrix} = a^3.$$

14241. (Rev. T. ROACH, M.A. Suggested by Quest. 13173.)—Six circles are described, each passing through the same excentre of a triangle, and touching one side of the triangle at one of its extremities. (1) Show that the centres of the six circles lie on the radii $I_n D \dots$ on three circles concentric with the excircle. (2) Show that the product of the radii of three alternate circles $= 2R^2 r_n$.

14242. (C. JOSS, M.A.)—Tangents to a circle at the vertices of an inscribed triangle meet the opposite sides produced in collinear points.

14243. (G. H. HARDY.)—If p, m are integers, $p > m$, then, if m is odd,

$$\int_0^{\pi} x \cos px \sin^m x dx = (-)^{\frac{1}{2}[m+(-1)^p]} \left\{ \frac{m! \pi}{(p^2-1^2)(p^2-3^2)\dots(p^2-m^2)} \right\};$$

and, if m is even,

$$\int_0^{\pi} x \sin px \sin^m x dx = (-)^{\frac{1}{2}[m+1+(-1)^p]} \left\{ \frac{m! \pi}{p(p^2-2^2)(p^2-4^2)\dots(p^2-m^2)} \right\}.$$

14244. (H. MACCOLL, B.A.)—The chance that A is true is a , and the chance that B is true is b . It is also given that the chance that A is true when we assume B to be true is k times the chance that A is false when we assume B to be false. Express in terms of a, b, k , firstly, the last two chances; secondly, the dependence of A upon B (see *Quest.* 14181); and, thirdly, the condition that A and B shall be independent.

14245. (W. C. STANHAM, B.A.)—If two of the common chords of two conics (c), (c') intersect at O, and any straight line through O meets (c) at P and Q, and (c') at P' and Q',

$$1/OP + 1/OQ = 1/OP' + 1/OQ'$$

(Regard being had to the geometrical signification of the signs + and -, and O not being one of the points of intersection of the conics.)

14246. (Lt.-Col. ALLAN CUNNINGHAM, R.E.)—Factorise completely $(1440^{10} + 1)$.

14247. (R. F. MUIRHEAD.)—It is sometimes stated that when a particle under a central force varying inversely as the fifth power of its distance from a fixed point is projected with a velocity = $\sqrt{(\mu/2a^4)}$ at a distance a from the centre of force and at right angles to that distance it will describe a circle having that initial distance as diameter. But at the instant of passing through the centre of force the particle is acted on by no force, and there would seem to be no reason why it should not continue moving in a straight line thereafter. Discuss this.

14248. (G. N. BATES, B.A.)—Find the tripolar equation of all conics circumscribing the triangle of reference.

14249. (Rev. T. MITCHESON, B.A.)—Prove that $\sum \{ \sin n\beta \sin (n+1)\beta / \{ \sin \beta + \sin n\beta + \sin (n+1)\beta \} \}$

$$= \{ \sin \frac{1}{2}(n+2)\beta \sin \frac{1}{2}n\beta - n \sin^2 \frac{1}{2}\beta \} / \sin \beta,$$

and use this result to show that, if lines be drawn from one angular point to each of the others of a regular polygon (of n sides) inscribed in a circle,

(1) the sum of the radii of the in-circles of the triangles thus formed

$$= 2R \{ 1 - n \sin^2 (\pi/2n) \};$$

(2) the sum of the squares of these radii

$$= \frac{1}{2}a^2 \{ (n-4) \sec^2 (\pi/2n) + 2n \tan^2 (\pi/2n) \};$$

and (3) the sum of the squares of the distances of the centres of these $(n-2)$ circles from the centre of the given circle

$$= R^2 \{ 4n \sin^2 (\pi/2n) + n - 6 \}.$$

14250. (ROBERT W. D. CHRISTIE.)—Prove the following very general theorem:— $x \cdot 10^{pm+k} = \frac{P_m + x}{\{ \frac{1}{10}(XP+1) \}^k \text{ mod } P} \pmod{P}$,

where x, n, k are any integers, P any odd prime, p the period of $1/P$, m any integer required to make the remainder an integer (always possible).

Ex. gr.—(1) $x = 3, k = 5, P = 7, X = 1, 3, 7, 9$, when P ends in 9, 3, 7, 1, respectively. Therefore

$$3 \cdot 10^{6n+5} = \frac{7m+3}{5^5 \text{ mod } 7} \pmod{7} = \frac{7m+3}{3} = 1 \text{ mod } 7.$$

Thus $3 \cdot 10^{6n-1} = 1 \text{ mod } 7$.

(2) $n = 7, k = 1, P = 19$. $7 \cdot 10^{18n+k} = (19m+7)/2^k = 13 \text{ mod } 19$.

Thus $7 \cdot 10^{18n+1} = 13 \text{ mod } 19$.

14251. (R. KNOWLES, B.A.)—Prove that the sum of the first r coefficients in the expansion of $(1-x)^{-n}$ is $\{r(r+1) \dots (r+n-1)\}/n!$.

14252. (Rev. J. CULLEN.)—Factorize 329554457, i.e., $(7^{11}-1)/(7-1)$. [This is given as x in Mr. BICKMORE's *Table of Fermat's Numbers*.]

14253. (H. FORTEY, M.A.)—If n white, n red, and n black balls are placed one at a time, in random order, in a bag, show that the chance that the bag never, during the process, contains more red balls than white, nor more black balls than red, is $2/\{(n+1)^2(n+2)\}$.

14254. (C. E. BICKMORE, M.A.)—Is the number 78,875,943,472,201 prime or composite? It is a factor of $(10^{20}+1) + (10^5+1)$; has no factor between 1 and 100,000; and any factor when divided by 200 leaves one of the two remainders 1 or 51.

OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

5827. (Professor MATZ, M.A.)—From a point taken at random in the left-hand half of the major axis of an ellipse, whose minor axis is unknown, a circle is drawn at random, but so as to lie wholly in the surface of the ellipse. Show that the average area of the ellipse, whose major axis is that portion of the given major axis between its right-hand extremity and the circumference of the circle, is

$$\frac{\pi a^2}{672} \left(\frac{2205\pi + 2012}{15\pi + 17} \right),$$

where a is the semi-major axis of the primitive ellipse.

5835. (E. B. SEITZ.)—Two equal spheres touch each other externally. If a point be taken at random within each sphere, show that (1) the

chance that the distance between the points is less than the diameter of either sphere is $\frac{2}{3}$, and (2) the average distance between them is $\frac{1}{2}$.

5839. (R. W. GENÈRE, M.A.)—An ellipse turns about its centre; find (1) the envelope of the chords of intersection with the initial position. Also (2), if the ellipse move parallel to its major axis, find the envelope of the chords of intersection with the initial position of the axes.

5840. (A. MARTIN, M.A.)—A catenary is revolved about its axis. If the solid thus formed be cut by a plane making a given angle with its axis, find the equation to the curve bounding the section.

5865. (C. J. MONRO, M.A.)—Of three independent judges, pronouncing on $l+m+n+p$ simple alternatives, one is in a minority l, m, n times, respectively. If, nevertheless, we have equal confidence in all three, find how often, in the most probable case, they are severally right and wrong.

5876. (Professor SYLVESTER, F.R.S.)—If there be given any number of homogeneous functions of any number of variables, prove that there is always a *limited* number of resultants such that any other is a rational integer function of them and of the coefficients of the given functions.

Ex.—Suppose

$$Ax + Bz = 0, \quad Cr^2 + Dz^2 = 0, \quad Ex^3 + Fz^3 = 0;$$

then $A^2D + B^2C, A^3F - B^3E, C^3F^2 + D^3E, ACF + BDE$ are the four fundamental resultants, and any other resultant of the system will be a rational integer function of these and of the coefficients A, B, C, D, E, F .

[The following Note was appended to this Question when it originally appeared: "Professor SYLVESTER states that it is upon this and an allied pure algebraical theorem, and not upon anything special to invariants as such, or to any method of umbral (misnamed symbolical) processes, that 'GORDON'S immortal theorem' on the existence of finite fundamental invariants of scales really depends. That theorem essentially forms part of a grand undeveloped algebraico-diophantine Theory of Elimination. The first algebraico-diophantine problem in set terms ever enunciated, so far as Professor SYLVESTER knows, was proposed by himself in the *Educational Times*. It related to a property of the Bezontiant, and marks the advent of a new phase of algebraical science."]

NOTICE TO CORRESPONDENTS.

It is requested that all Mathematical communications should be sent to

D. BIDDLE, Esq., Charlton Lodge, Kingston-on-Thames.

NOTICE.—*Vol. LXX. of the "Mathematical Reprint" is now ready, and may be had of the Publisher, FRANCIS HODGSON, 89 Farringdon Street, E.C. Price, to Subscribers, 5s.; to Non-Subscribers, 6s. 6d.*

THE LONDON MATHEMATICAL SOCIETY.

Thursday, May 11, 1899.—Prof. H. Lamb, F.R.S., V.P., in the Chair. Sixteen members present.

Messrs. G. A. Miller, Ph.D., Instructor in Mathematics, Cornell University, Ithaca, U.S.A.; and J. Pierpont, Ph.D., Professor of Mathematics, Yale University, New Haven, U.S.A., were elected members.

Major MacMahon, R.A., F.R.S., made a short communication of results at which he has recently arrived in the Theory of Partitions.

Mr. H. M. Macdonald, M.A., read a paper on "The Zeroes of $P_n^m(\mu)$ considered as a Function of n ." The solution of certain problems connected with Laplace's equation requires the determination of all the values of n for which $P_n^m(\mu)$ vanishes, μ being real, and $1 > \mu > -1$, and m a real quantity. The zeroes of $P_n^m(\mu)$ are all real when $1 > \mu > -\infty$ and there are an infinite number of them. There are an infinite number of real zeroes of $P_n^m(\mu)$ when $\infty > \mu > 1$, and, in addition, in general $2k$ complex zeroes, where k is the greatest integer less than m : when m is an integer these $2k$ zeroes become real, and when $\mu = 0$ they are real, in all other cases complex. Formulæ are given for the calculation of the zeroes (1) when μ is not nearly 1 or -1 , (2) when μ is nearly 1, (3) when μ is nearly -1 . The Chairman and Dr. Hobson, F.R.S., made a few remarks upon the paper, which they characterized as an important contribution.

Mr. W. F. Sheppard, M.A., spoke on "The Statistical Rejection of Extreme Variations, Single or Correlated. (Normal variation and normal correlation.)"

At the June meeting, Lord Kelvin, G.C.V.O., the President, promises to read a paper on "Solitary Waves, Equivoluminal and Irrotational, in an Elastic Solid" Papers have also been received from Dr. G. A. Miller, "On several Classes of Simple Groups," and from Prof. J. H. Michell, "On the Transmission of Stress across a Plane of Discontinuity in an Isotropic Elastic Solid, and the Potential Solution for a Plane Boundary."

The Council will, at their meeting, elect the sixth De Morgan Medalist, and the Chairman will announce the result at the General Meeting. The presentation of the medal will be made at the Annual Meeting in November next.

EDUCATIONAL WORKS BY A. K. ISBISTER, M.A., LL.B.

(LATE DEAN OF THE COLLEGE OF PRECEPTORS.)

LATIN AND GREEK.

Sixteenth Edition, with Map. 12mo.

CESAR'S COMMENTARIES on the GALLIC WAR.

BOOKS I.-V. With Notes Critical and Explanatory, a Vocabulary of all the Words in the Text, and Easy Reading Lessons for Beginners price 3s. 6d.
 BOOKS I.-VII. do. do. 4s. 6d.
 Do. (without the Reading Lessons) 4s. 0d.

Twenty-fifth Edition.

BOOK I. (with Vocabulary, Reading Lessons, &c.) 1s. 6d.

Fourteenth Edition. 12mo, price 3s. 6d.

XENOPHON'S ANABASIS, Books I. to III. With Notes, Vocabulary of all the Words in the Text, and a Series of Easy Reading Lessons for Beginners. Designed as a First Greek Reading Book in Schools.

ELOCUTION.

Tenth Edition. 12mo, price 3s. 6d.

THE ILLUSTRATED PUBLIC SCHOOL SPEAKER AND READER, based on Grammatical Analysis, comprising a choice Selection of pieces for Reading and Recitation, annotated for Expression, Emphasis, and Pauses, and illustrated by Diagrams and Figures exhibiting to the eye the appropriate gestures and positions; to which is added a selection of Greek, Latin, French, and German Extracts, suitable for "Speech Days" at Public Schools.

New Edition. 12mo, price 1s. 6d.

LESSONS IN ELOCUTION AND EXPRESSIVE READING FOR BOYS, based on Grammatical Analysis; with a choice selection of Extracts for Reading and Repetition, classified, of Goldsmith's "Deserted Village," set out into Principal and Subordinate Sentences, illustrating the theory of Emphasis and Pauses.

New Edition. 12mo, price 1s. 6d.

LESSONS IN ELOCUTION AND EXPRESSIVE READING FOR GIRLS, based on Grammatical Analysis; with a choice selection of Extracts for Reading and Repetition, classified, under heads for practice in various styles of Reading, and annotated for Expression, Emphasis, and Pauses, and the Analysis of Sentences, with the figure [of a Girl] showing the proper attitude in Reading.

ENGLISH GRAMMAR.

Nineteenth Edition. 16mo, 1s. 6d.; or in Two Parts, price 9d. each.

THE ELEMENTS OF ENGLISH GRAMMAR AND COMPOSITION, including the Analysis of Sentences, simplified for Beginners.

Tenth Edition. 12mo, price 6d.

A FIRST BOOK OF ENGLISH GRAMMAR, GEOGRAPHY, AND ENGLISH HISTORY. With Arithmetical Tables, Dates, &c.

Eleventh Edition. 12mo, price 1s. 6d.

FIRST STEPS IN READING AND LEARNING: a Reading-Book for Beginners, designed to utilize the time of those learning to read, by presenting, in a series of Easy Reading and Writing Lessons, a First Course of Scripture and English History, Geography, English Grammar, Spelling, and Arithmetic, interspersed with Moral Lessons and Simple Poetry for Repetition.

GEOMETRY.

Sixth Edition. 12mo, price 3s. 6d.

THE COLLEGE EUCLID: Comprising the First Six and portions of the Eleventh and Twelfth Books read at the Universities. Chiefly from the Text of Dr. SIMSON. With a new arrangement of the Figures and Demonstrations; the Enunciations of the Propositions separately for Self-Examination, apart from the Text; Notes and Questions on each Book; and a Series of Geometrical Problems for Solution, from the most recent University Examination Papers.

Fifteenth Edition. 12mo, price 2s. 6d.

THE SCHOOL EUCLID: Comprising the First Four Books. With Questions, Geometrical Exercises, &c.

THE SCHOOL EUCLID, Books I. & II. With Questions, Exercises, &c. 12mo, price 1s. 6d.

THE SCHOOL EUCLID, Book I. With Questions, &c. 12mo, price 1s.

New Edition. 12mo, price 9d.

THE COLLEGE AND SCHOOL EXAMINER IN EUCLID, containing the Enunciations of all the Propositions in the College and School Editions, Questions on the Definitions, Arithmetical and Algebraical Demonstrations of the Propositions in Books II. and V., and a large collection of Geometrical Problems for Solution. Designed for Class and Self-Examination, and adapted to all Editions of Euclid.

Third Edition. 12mo, price 1s. 6d.

FIRST STEPS TO EUCLID: Comprising the Propositions of Book I., prepared for writing out, with a recapitulation of the steps of the Demonstration appended to each. Forming a Text-book for the above.

Fifth Edition. Two Quarto Copy Books, price 6d. each.

THE GEOMETRICAL COPY-BOOK. Arranged for writing out the Propositions of Euclid in the Abbreviated and Symbolical Form adopted in the Universities and Public Schools.

ARITHMETIC.

Ninth Edition. 12mo, price 1s.; or, with Answers, 1s. 6d.

UNITARY ARITHMETIC. Embodying the First Book of Arithmetic of the Irish National Board. With numerous additional Examples, and selections from recent Examination Papers; and a full exposition of the "Unitary" System, or Method of Working Arithmetic *without rules*.

. In this Edition, Questions in Proportion, Practice, Interest, Stocks, Partnership, Profit and Loss, &c., are, by the "Unitary" Method, solved by a single rule.

BOOK-KEEPING.

New Edition. 18mo, price 9d.

THE ELEMENTS OF BOOK-KEEPING, by SINGLE and DOUBLE ENTRY; with Practical Explanations and Exercises on the most useful Forms for Business.

4to, 1s. each.

ENGRAVED ACCOUNT BOOKS. Ruled and Interleaved for Copying, adapted to the above.

No. I. Business Forms. 1. Bills of Parcels and Book Debts. 2. Invoices. 3. Account Sales. 4. Receipts. 5. Promissory Notes and Drafts. 6. Bills of Exchange.

No. II. Day-Book and Cash-Book.

No. III. Ledger, Index, and Balance Sheet.

LONDON: LONGMANS & CO., PATERNOSTER ROW, E.C.

THE EDUCATIONAL TIMES,

AND
Journal of the College of Preceptors.

Vol. LII.] New Series, No. 459.

JULY 1, 1899.

{ Price to Non-Members, 6d.
By post, 7d.

COLLEGE OF PRECEPTORS.—

The Half-Yearly GENERAL MEETING of the Members of the Corporation will be held at the College, Bloomsbury Square, W.C., on Saturday, the 22nd of July, at 3 p.m.
C. E. HODGSON, B.A., *Secretary*.

COLLEGE OF PRECEPTORS.— EXAMINATIONS FOR 1899.

1. **DIPLOMAS.**—The next Examination of Teachers for the Diplomas of the College will commence on the 4th of July, 1899.—At the Midsummer Examination, persons who have previously passed in Theory and Practice of Education at the Diploma Examination may be examined practically for Certificates of Ability to Teach.

2. **CERTIFICATE EXAMINATIONS.**—The Christmas Examination for Certificates will commence on the 5th of December.

3. **JUNIOR FORMS EXAMINATIONS.**—The Christmas Examination will commence on the 5th of December.

DAY TRAINING COLLEGE.

The newly recognized Day Training Department of this College will open in September, 1899. Queen's Scholars eligible for admission are invited to apply at once to the Clerk.

A provisional statement of terms of admission may be obtained on application. D. KIDDLE, Clerk.

JOINT AGENCY FOR WOMEN TEACHERS.

(Under the management of a Committee appointed by the Teachers' Guild, College of Preceptors, Headmistresses' Association, Association of Assistant-Mistresses, and Private Schools' Association.)

Address—74 GOWER STREET, LONDON, W.C.

Registrar—Miss AGNES G. COOPER.

This Agency has been established for the purpose of enabling Teachers to find work without unnecessary cost. All fees have therefore been calculated on the lowest basis to cover the working expenses.

Headmistresses of Public and Private Schools, and Parents requiring Teachers, or Teachers seeking appointments, are invited to apply to this Agency.

Many Graduates and Trained Teachers for Schools and Private Families; Visiting Teachers for Music, Art, and other special subjects; Foreign Teachers of various nationalities; Kindergarten and other Teachers are on the Register, and every endeavour is made to supply suitable candidates for any vacancy.

School Partnerships and Transfers are arranged. Office hours—9.30 a.m. to 6 p.m. Miss Cooper's hours for interviews are from 10.30 a.m. to 1.30 p.m., and 2.30 p.m. to 5 p.m.; Wednesdays to 1.30 p.m. only.

THE JOINT AGENCY FOR MEN TEACHERS.

23 SOUTHAMPTON STREET, BLOOMSBURY SQUARE, LONDON, W.C.

Registrar—Rev. F. TAYLOR, M.A. Cantab.

The Agencies for Assistant-Masters and Tutors hitherto conducted by the College of Preceptors, the Teachers' Guild, and the Assistant-Masters' Association, have been amalgamated and placed under the management of a Joint Committee composed of representatives of the following Bodies:—

- Headmasters' Conference. Incorporated Association of Headmasters. College of Preceptors. Teachers' Guild. Welsh County Schools' Association. Private Schools' Association. Association of Headmasters of Preparatory Schools. Association of Headmasters of Roman Catholic Schools. Assistant-Masters' Association. Association of Technical Institutions. &c. &c.

The rates of commission charged to Assistant-Masters are fixed as low as possible, and it is hoped that all branches of the profession will support an Agency managed by so widely representative a Committee.

Headmasters having vacancies on their staffs, and Assistant-Masters seeking appointments, are asked to communicate with the REGISTRAR.

ENGINEERING AND CHEMISTRY.

CITY AND GUILDS OF LONDON INSTITUTE.

SESSION 1899-1900.

The Courses of Instruction at the Institute's CENTRAL TECHNICAL COLLEGE (Exhibition Road) are for Students not under 16 years of age; those at the Institute's TECHNICAL COLLEGE, FINSBURY, for Students not under 14 years of age. The Entrance Examinations to both Colleges are held in September, and the Sessions commence in October. Particulars of the Entrance Examinations, Scholarships, Fees, and Courses of Study, may be obtained from the respective Colleges, or from the Head Office of the Institute, Gresham College, Basinghall Street, E.C.

CITY AND GUILDS CENTRAL TECHNICAL COLLEGE.

Mechanical Engineering and Mathematics—W. E. DALBY, M.A., B.Sc., M.I.M.E.

Chemistry—R. MELDOLA, F.R.S., F.I.C. JOHN WATNEY, Hon. Secretary. City and Guilds of London Institute, Gresham College, Basinghall Street, E.C.

LONDON UNIVERSITY SCIENCE EXAMINATIONS.

Summer Vacation Classes for Beginners IN PRACTICAL CHEMISTRY, PHYSICS, BOTANY, AND ZOOLOGY.

These Classes commence Tuesday, August 1st, 1899, at University Tutorial College, London, and meet daily for four weeks.

The subjects will be dealt with in a very elementary manner, and in Zoology and Botany the work at first will be taken very slowly...

Fees.—Four subjects, £7. 17s. 6d.; Three subjects, £6. 16s. 6d.; Two subjects, £5. 6s.; Chemistry, Zoology, or Botany, £3. 13s. 6d.; Physics, £2. 2s.

At Inter. Science, 1898, Fifty-two Students of University Tutorial College were successful, with nine places in Honours. During the last three years 316 Students have passed Prelim. Sci. (M.B.).

Summer Vacation Revision Classes for B.Sc.

are held at the same time.

At B.Sc., 1898, Thirty seven Students of University Tutorial College were successful, with ten places in Honours.

Time-table and further particulars may be had from The VICE-PRINCIPAL, University Tutorial College, Red Lion Square, London, W.C.

THE HYGIENIC HOME

AND

COLLEGE OF PHYSICAL CULTURE

provides a thorough training for Ladies (as teachers) in the principles and practice of Hygiene, Swedish Gymnastics, and Vegetarian Cookery.

The course extends over two years, and complete theoretical, as well as practical, training is given.

Examinations are held and certificates given to successful students. There are good openings for qualified teachers, who after training here are assisted to obtain posts.

The Leasowes stands in its own extensive grounds, and is surrounded by beautiful woods. Its bracing air, elevated position, and charming situation make it an ideal place for a College of Health.

Elocution, Dancing, Gardening, Games, &c., are also taught as a means of Health and Physical Culture.

Students are admitted in September, age 18 to 30. Apply for particulars to Miss ANSTLEY, The Leasowes, near Halesowen, Worcestershire.

THE

FROEBEL EDUCATIONAL INSTITUTE,

Copy of Balance Sheet will be forwarded. Sell at sacrifice. Address for full particulars—B. A., 227 Messrs. Deacon's, Leadenhall Street, E.C.

A VENDRE, charmante propriété, anciennement à usage d'orphelinat situé entre collines, à 500 mètres d'une gare et d'une rivière poissonneuse: truite, anguille, carpe, &c.; à proximité de la forêt d'Arques et de la mer, à 20 minutes de Dieppe. Superficie environ un hectare, jardin fruitier, cour herbage planté, habitation de directeur, vastes appartements, dortoirs, réfectoire, communs, &c. Pour traiter s'adresser à M. DUVERDREY, à St. Nicolas d'Aliermont, Seme-Inférieure, France.

SUMMER SCHOOL OF MODERN LANGUAGES, EDINBURGH, AUGUST, 1899.

Courses in French and English on the Literature, Social Life, and Institutions of France, Scotland, and England; European Educational Systems; Contemporary Social Evolution; and other subjects. Classes for the Study of French and English style, and Phonetics. Apply—SECRETARY, Outlook Tower, Castle Hill, Edinburgh.

FOR Disposal, an old-established **LADIES' DAY SCHOOL**, near London, with accommodation for a few boarders. It has been most successful in the various public examinations, and the Principal is now retiring. Price for Goodwill and School Furniture £300, or for the whole as it stands, including Household Furniture and Three Pianos, £500. Address—PRINCIPAL, "Educational Times" Office, 89 Farringdon Street, E.C.

COLLEGE OF PRECEPTORS.

THE CALENDAR FOR 1899

is now ready, and may be obtained from Mr. F. HODGSON, 89 Farringdon Street, E.C. Price, free by post,

To Members of the College ... 1s. 6d.
To Non-Members ... 2s. 6d.

The Calendar contains, in addition to the Lists of Members, and of Schools sending in candidates to the Certificate Examinations, the Regulations respecting the Examinations to be held in 1899, &c., and the

EXAMINATION PAPERS

set at the Certificate, Junior Forms, Professional Preliminary, and Diploma Examinations held in 1898.

A SELECTION FROM
CASSELL'S PRIZE BOOKS.

Price 2s. 6d.

In Danger's Hour; or, Stout Hearts and Stirring Deeds. With Introduction by H. O. ARNOLD-FORSYER, M.P. With Four Coloured Plates and numerous Illustrations. Handsomely bound in cloth gilt, 2s. 6d.; also in blue cloth, 1s. 8d.

"Forty years' experience of reading books for boys tells me that no book will prove to be more popular than 'In Danger's Hour.' It is well printed, strongly bound, and splendidly illustrated."—Mr. EUSEBIUS RICHARDSON, *Principal of the High School, Thirsk.*

Price 3s. 6d.

Britain's Roll of Glory; or, The Victoria Cross, its Heroes, and their Valour. By D. H. PARRY. Cheap Edition, Revised and Enlarged. With Eight Full-page Illustrations by STANLEY L. WOOD. Cloth.

The Iron Pirate. A Plain Tale of Strange Happenings on the Sea. By MAX FEMBERTON. With Sixteen Full-page Illustrations.

King Solomon's Mines. By H. RIDER HAGGARD. Illustrated. Cloth.

Gleanings from Popular Authors. Cheap Edition.

Heroes of Britain in Peace and War. With 300 Original Illustrations.

The Master of Ballantrae. By R. L. STEVENSON. Illustrated. Also Library Edition, 6s.

Treasure Island. By R. L. STEVENSON. Illustrated. Also Library Edition, 6s.

The Black Arrow. By R. L. STEVENSON. Illustrated. Also Library Edition, 6s.

Robinson Crusoe, Cassell's Fine Art Edition of. With upwards of 100 Original Illustrations by WALTER PAGET. Cheap Edition, buckram, gilt edges, 5s.

Little Folks. Half-yearly Volumes. Cloth gilt, gilt edges, 5s.

Cassell's Illustrated Bunyan. With 200 Original Illustrations.

Price 5s.

Q.'s Works. In Uniform Binding.

Dead Man's Rock.

The Splendid Spur.

The Blue Pavillions.

The Delectable Duchy.

The Astonishing History of Troy Town.

"I Saw Three Ships," and other Winter's Tales.

Knights and Crosses.

Wandering Heath.

Scarlet and Blue; or, Songs for Soldiers and Sailors. By JOHN FARMER. Words and Music.

Gaudeamus. A Selection of 100 Songs for Colleges and Schools. Edited by JOHN FARMER. Words and Music.

Cassell's Concise Cyclopædia. With about 600 Illustrations.

Cassell's Magazine. With about 600 Original Illustrations. Half-yearly Volume, cloth.

Price 6s.

From the Memoirs of a Minister of France. By STANLEY WEYMAN.

Ballads and Songs. By WILLIAM MAKEPEACE THACKERAY. With Original Illustrations by H. M. BROCK.

Price 7s. 6d.

Doré's Dante's Inferno. Illustrated by GUSTAVE DORÉ. Popular Edition. Also large 4to Edition, cloth gilt, 21s.

Doré's Dante's Purgatory and Paradise. Translated by the Rev. H. F. CARY, M.A. Illustrated by GUSTAVE DORÉ. Popular Edition.

Cassell's Concise Natural History. By E. PERCEVAL WRIGHT, M.A., M.D., F.L.S. With Sixteen full-page Plates, and Several Hundred other Illustrations.

Illustrated British Ballads. With Several Hundred Original Illustrations.

Uncle Tom's Cabin. By HARRIET BEECHER STOWE. Fine-Art Memorial Edition. With upwards of 100 Original Illustrations by JENNY NYSTROM STOOPENDAAK.

Price 9s. each.

The Queen's Empire. A Pictorial Record, in which the Modes of Government, National Institutions, Forms of Worship, Methods of Travel, Sports, Recreations, Occupations, and Home Life of the Inhabitants of the British Empire are faithfully and vividly portrayed. Two Volumes, containing about 700 splendid Illustrations, printed on plate paper, with Descriptive Text.

Price 10s. 6d.

The Story of the Heavens. By Sir ROBERT STAWELL BALL, LL.D., F.R.S., F.R.A.S. Illustrated by Chromo Plates and Wood Engravings.

The Story of the Sun. By Sir ROBERT STAWELL BALL, LL.D., F.R.S., F.R.A.S. With Eight Coloured Plates, and other Illustrations. Cloth gilt.

CASSELL'S ILLUSTRATED PRIZE CATALOGUE, containing a list of Prize Books adapted by the London School Board, &c., and CASSELL'S COMPLETE CATALOGUE, giving particulars of several hundred Books suitable for presentation, will be sent, post free, on application.

CASSELL & COMPANY, LIMITED, LONDON.

G. A. HENTY'S STORY BOOKS

SUITABLE FOR SCHOOL PRIZES.

Fully Illustrated and Elegantly Bound in Cloth.

PRICE SIX SHILLINGS EACH.

Under Wellington's Command. A Tale of the Peninsular War.

Both Sides the Border. A Tale of Hoopspur and Glendower.

With Frederick the Great. A Tale of the Seven Years' War.

With Moore at Corunna. A Tale of the Peninsular War.

At Agincourt. A Tale of the White Hoops of Paris.

With Cochrane the Dauntless. A Tale of the Exploits of Lord Cochrane in South American Waters.

A Knight of the White Cross. A Tale of the Siege of Rhodes.

The Tiger of Mysore. A Story of the War with Tippeo Saib.

Wulf the Saxon. A Story of the Norman Conquest.

St. Bartholomew's Eve. A Tale of the Huguenot War.

Through the Sikh War. A Tale of the Conquest of the Punjab.

Beric the Briton. A Story of the Roman Invasion.

In Greek Waters. A Story of the Grecian War of Independence (1821-1827).

Redskin and Cowboy. A Tale of the Western Plains.

The Dash for Khartoum. A Tale of the Nile Expedition.

By England's Aid; or, The Præcing of the Netherlands.

By Right of Conquest; or, With Cortez in Mexico.

With Lee in Virginia. A Story of the American Civil War.

By Pike and Dyke. A Tale of the Rise of the Dutch Republic.

Captain Bayley's Heir. A Tale of the Goldfields of California.

Bonnie Prince Charlie. A Tale of Fontenoy and Culloden.

For the Temple. A Tale of the Fall of Jerusalem.

The Young Carthaginian. A Story of the Times of Hannibal.

With Wolfe in Canada; or, The Winning of a Continent.

The Lion of the North. A Tale of Gustavus Adolphus.

With Clive in India; or, The Beginnings of an Empire.

In Freedom's Cause. A Story of Wallace and Bruce.

Through the Fray. A Story of the Luddite Riots.

Under Drake's Flag. A Tale of the Spanish Main.

The Lion of St. Mark. A Tale of Venice.

When London Burned. A Story of Restoration Times and the Great Fire.

True to the Old Flag. A Tale of the American War of Independence.

PRICE FIVE SHILLINGS EACH.

At Aboukir and Acre. A Story of Napoleon's Invasion of Egypt.

A March on London. Being a Story of Wat Tyler's Insurrection.

On the Irrawaddy. A Story of the First Burmese War.

Through Russian Snows. A Story of Napoleon's Retreat from Moscow.

In the Heart of the Rockies. A Story of Adventure in Colorado.

A Jacobite Exile. Being the Adventures of a Young Englishman in the Service of Charles XII. of Sweden.

Condemned as a Nihilist. A Story of Escape from Siberia.

Held Fast for England. A Tale of the Siege of Gibraltar.

Maori and Settler. A Story of the New Zealand War.

One of the 28th. A Story of Waterloo.

The Cat of Bubastes. A Story of Ancient Egypt.

In the Reign of Terror. Adventures of a Westminster Boy.

Orange and Green. A Tale of the Boyne and Limerick.

The bravest of the brave; or, with Peterborough in Spain.

A Final Reckoning. A Tale of Bush Life in Australia.

For Name and Fame; or, Through Afghan Passes.

The Dragon and the Raven; or, The Days of King Alfred.

St. George for England. A Tale of Cressy and Poitiers.

By Sheer Pluck. A Tale of the Ashanti War.

Facing Death; or, The Hero of the Vaughan Pit.

BLACKIE & SON'S ILLUSTRATED CATALOGUE OF BOOKS SUITABLE FOR SCHOOL PRIZES, &c., with Synopsis of their Contents, will be sent Post Free on application.

LONDON: BLACKIE & SON, LIMITED, 50 OLD BAILEY.

THIRTEENTH EDITION.

With Two hundred and seventy Illustrations and Four beautifully Coloured Plates. Medium 8vo, cloth elegant, gilt edges, 7s. 6d.

THE UNIVERSE;

OR,

THE INFINITELY GREAT AND THE INFINITELY LITTLE.

A Sketch of Contrasts in Creation and Marvels revealed and explained by Natural Science.

BY

F. A. POUCHET, M.D.

"We can honestly commend this work, which is admirably, as it is copiously, illustrated."—*Times*.

"Scarcely any book in French or in English is so likely to stimulate in the young an interest in the physical phenomena."—*Fortnightly Review*.

The Educational Times.

The Education Bill in the Commons.

THE second reading of the Board of Education Bill was taken in the House of Commons on Monday last, and the Bill has been referred to the Grand Committee on Law. The Bill comes before the House, as we have already stated, in a form which differs materially from its original draft. The third clause, as amended and carried in the House of Lords, now reads as follows:—

3.—(1.) The Board of Education may, by their officers or by any University organization, after taking the advice of the Consultative Committee hereinafter mentioned, inspect any school supplying secondary education and desiring to be so inspected, for the purpose of ascertaining the character of the teaching in the school, and the nature of the provisions made for the teaching and health of the scholars, and may so inspect the school on such terms as may be fixed by the Board of Education, with the consent of the Treasury. Provided that the inspection of schools established by scheme under the Welsh Intermediate Education Act, 1889, shall, subject to regulations made by the Treasury under Section 9 of that Act, be conducted as heretofore by the Central Welsh Board for Intermediate Education, and that the said Board shall be recognized as the proper organization for the inspection of any such schools as may be desirous of inspection under this section.

It will be observed that, in the Bill as now reprinted, the inspection of schools, when not made by the officers of the Government Department, or, in Wales, by the Central Welsh Board, is confined exclusively to University organizations." It seems to us, for reasons which we stated last month, that this exclusiveness would be a serious mistake, and that, if the clause be enacted in its present shape, it will have a direct tendency to defeat the purpose of the Bill. There is not the slightest doubt, as our readers will readily allow, that many private schools would be deterred from accepting inspection by the fact that there would be no one to inquire into the character of their teaching, and the provision made for the teaching and health of their scholars, except Government inspectors and inspectors nominated by University syndicates. The new legislation will be much narrower in spirit and in scope than any reasonable man has expected it to be, if it does not aim at the widest possible comprehension. To begin by restricting freedom of choice, by referring everything to the standard of a Department or of a University, by submitting all methods and conditions to the judgment of inspectors who may, and very likely will, be

wedded to particular methods and particular conditions, would not make for comprehension, because it would inevitably increase the nervous dread of schoolmasters who are at present independent.

This is so manifest that we can scarcely imagine the House of Commons insisting on the hard and fast rule that no authority shall be allowed to inspect a school on behalf of the Education Department except the Universities. If all schools worked up to and fed the Universities, such a hard and fast rule might be natural enough; but this is not by any means the case. The Royal Commission, the Education Conferences, and the framers of the Bill have all seen the necessity for proceeding on broad and comprehensive principles, and of avoiding the autocratic spirit which would sooner or later end in narrow curriculums and a tyrannous control. If the guarantees of elasticity and variety are diminished, and the spirit of comprehension is violated, our confidence in the new legislation will be undermined.

Amendments to Clause 3 will be moved in Committee, and we trust that the House may, in its wisdom, see fit to increase the number of inspecting authorities. We do not attempt to give a list of the authorities which should be named in the Bill. It is manifestly impossible that any list should be looked upon as complete and final. The reasonable course was that which the Government followed in the original draft—to leave the selection of authorities to the Board, after taking the advice of the Consultative Committee. The unfortunate action of Lord Spencer and his friends has expunged this useful provision from the Bill, and it will be a task of no slight difficulty to repair the mischief. What is necessary is that the principle of comprehension should be clearly impressed upon and accepted by the House of Commons. There is always in the House a great majority for common sense. It is common sense to say that the success of secondary organization will largely depend upon this question of inspection—that schools work up to and mould themselves upon their inspections, and that if you make the business of inspection either a function of Whitehall or a close preserve of the Universities, you at once discourage, if you do not destroy, much that is original and distinctive in the educational domain. It will be well to put this clearly and candidly before the House in Committee, so that the point may not be overlooked or passed over. It is no mere detail, but a critical point, on which a great deal will be found to turn.

NOTES.

THE question at issue between the General Medical Council and the College of Preceptors is still unsettled, though through no fault of the College. The Council of the College had reason to expect that the matter would be finally decided at the recent session of the Medical Council. Some time before the opening of the session they had forwarded to every member of the Medical Council a printed copy of a Memorandum, in which it was clearly shown that the essential parts of the Education Committee's Report were vitiated by errors of the gravest character. They had, moreover, addressed a letter to the President, asking him to refer the matter to the whole Council. What happened was that the letter to the President and his reply thereto were read *in camera* at the end of the session, but the Council, evidently feeling that they had not had an adequate opportunity of considering the matter, limited their action to ordering the letter and the reply to be entered on their minutes, refraining from expressing any opinion on the merits of the case. The Memorandum itself, though necessary to a proper understanding of the case, was unfortunately not included in the Council's order. We have, therefore, to wait until November for the Medical Council's decision. It is much to be regretted that opportunity was not afforded for the adequate and public discussion of the matter. The President's reply does little more than convey the reiterated expression of the views of the Education Committee. It is at present under the consideration of the Examination Committee of the College Council, and we need say no more at present concerning it than that it makes no attempt to controvert the facts set out in the College Memorandum—facts which are destructive of the essential positions of the Report of the Education Committee.

ONE manifestly wholesome effect has been produced upon the Education Committee of the Medical Council by their recent experience. They have asked the Council to place at their disposal a sum of money to enable them, during the current year, to obtain expert assistance in the examination of the regulations, requirements, standards, &c., as well as the answers and the markings of candidates, of "the several Junior Preliminary examinations." It is satisfactory, as far as it goes, to find the Committee acknowledging the necessity of expert assistance for such a purpose; but it is unfortunate that they did not recognize the same necessity last year. We shall be curious to learn the names of the experts. Are we to assume that the Education Committee, who have already reported on one of these examinations, will consider themselves entitled to select their own experts? Or will it occur to them that the various bodies which conduct the examinations should be represented on equal terms in such an inquiry?

THE Honour lists at Oxford and Cambridge are always interesting, not only to the candidates and their friends, and to the schools which have laid the foundations of individual success, but also to the nation at large, which may not be unanimous in its respect for classics and mathematics, but invariably enters into the spirit of a competition. This year's Mathematical Tripos at Cambridge has some features which make it specially worthy of notice. The honour of the Senior Wranglership is divided between Birtwistle, of Pembroke, who

hails from a "voluntary" school, by way of Owens College, and Paranjpye, an Indian who migrated to Cambridge from the Bombay University. Mr. Paranjpye's success is very popular: perhaps the only way in which an Indian could render himself more popular in this country would be by heading the batting averages at cricket. One commentator on the Tripos list ventured so far out of his depth as to say that Indians had not hitherto shown much disposition for mathematics. This, of course, is a misconception. India has plenty of good mathematicians, as our own columns testify from month to month.

THE third and fourth Wranglers are from Australia, though one of these is English born. There is another Australian in Part II., Class I., of the Classical Tripos, who owes his classical training to St. Paul's. Another Pauline first, who may be not inappropriately mentioned here, is Mr. H. J. Pinches, in the Natural Science Tripos. The fifth Wrangler is apparently of German birth, but he is one of three contributions to the first class of the Mathematical Tripos from the Cowper Street Central Foundation School. The Cambridge Honour lists published in June include the names of one hundred and one women students. This will be a formidable increase of the number of ungraduated peris who stand disconsolate at the gate of the Cambridge Senate House. What further task will Convocation set them before they draw the bolts and admit the expectant crowd?

THERE is a special interest attaching to the three Cowper Street Wranglers—the fifth, fourteenth, and nineteenth on the list. This triumph for the Central Foundation School is a splendid *finale* to Dr. Wormell's long and honourable tenure of the headmastership, and he is to be congratulated on being able to close his record with so much distinction—a distinction which, so far as mathematics are concerned, is probably not beaten by any other school in this year's Tripos. Our readers will have an opportunity of congratulating Dr. Wormell at the school prize-giving on July 20; and we may add that a further opportunity is afforded by the Old Boys of the Central Foundation School, who have resolved to present a complimentary testimonial to their former Headmaster. We have no doubt that many will desire to be associated with this mark of esteem.

WE have before us the report (dated June 14) of the Special Committee appointed by the Senate of London University—Lord Kimberley, Sir Henry Roscoe, and Sir Joshua Fitch—to confer with representatives of the Treasury and of the Imperial Institute on the proposed removal of the University to the building of the Institute at South Kensington. This report is favourable throughout; and we are bound to say that the Committee, after six months of correspondence, have succeeded in bringing the proposal into a shape eminently favourable to the University. Their final conclusion is as follows:—

Having regard (1) to the fact that our present accommodation is insufficient, and that there are no means of enlarging it upon its present site; (2) to the size and dignity of the Institute building, and its capacity for adaptation and expansion; (3) to the fact that no alternative proposal for the housing of the University in a more appropriate place is before us, or is likely to be made; and (4) to the consideration that the building, though not geographically central for London, is placed in the midst of a group of institutions—the Royal College of Science, the Natural History Museum, the City and Guilds of London Institute, the College of Music, and the Science and Art Galleries and Museums—which are all, in various ways, cognate in their objects with

the purposes and work of the University, we are of opinion that the proposal of the Government has been conceived in a fair and liberal spirit, and that it deserves the favourable consideration of the Senate.

WE may conclude that the scheme will now be carried into effect, and doubtless it will be wise to make the best of it—the more so as the Government are practically pledged to substitute a grant-in-aid for the present annual vote for the University as soon as the work of the Statutory Commission has been completed. The University is to occupy the whole East Wing and part of the centre of the Institute buildings, representing a total floor space and open area of 94,793 square feet, as against the 20,400 square feet in Burlington Gardens. Clearly this is an offer not to be lightly rejected; and there are other and larger possibilities in the future. We had at one time both practical and sentimental objections to the South Kensington site, some of which still remain. But we think that no one who reads this report, and marks the favourable terms on which the University will hold its new premises direct from the Government, will be obstinate enough to maintain a critical attitude.

BEDFORD COLLEGE may regard with considerable satisfaction the fifty years of work which it has just celebrated. Like Newnham College, it was a company of souls before it had a local habitation. The foundress, Mrs. Reid, not only gave her money, she also lent her private house, in the first instance, for lectures and other meetings. In 1849 the promoters rented a house in Bedford Square, whence the College took its name; and from that day to this its work has gone on steadily, its influence ever widening and deepening, and its prosperity has increased with its usefulness. In the first stage of its career it was not so much a college as a society for providing lectures. Its present work includes preparation for the various examinations of London University, the professional training of teachers, and a special department, created four years ago, which provides scientific training for sanitary and factory inspectorships, and for other public careers open to women. The College has been exactly half its lifetime in York Place, Baker Street, removing thither from Bedford Square in 1874.

MORE than one speaker on Friday referred to the debt which this College for Women owes to the generosity and active help of men. Here, as indeed in most other things, the interests of the sexes are identical, and the men whose opinion on the subject is best worth having are the most convinced of that real identity of interest. Miss Maitland—whose brief speech was peculiarly happy and appropriate—said truly that the higher education of women has added greatly, not only to the happiness of women, but also to that of men. Another cause which has had a great influence on Bedford College in the past, and must continue to influence its development in the future, is that the Reid bequest was wisely left unfettered. No dead hand of the past depresses Bedford College, and the example is one to be followed. As long as far-sighted men and women sit at its Council board, it is able, so far as the Reid bequest can enable it, to aim at the highest utility and the greatest good to the greatest number. Yet another substantial proof of men's sympathy with the movement for women's education is the fact that the staff, and especially the men upon it, have served the

College for less remuneration than that to which their abilities and reputation entitled them. This has long been known to a grateful Council, and has been an important factor in the development and reputation of the College, which otherwise could not have offered such able and even brilliant teaching. It is due to the Council to say that when the Government afforded the College a share of the grant to colleges, amounting to £700 in 1894, and to £1,200 in 1896, and when the Technical Education Board of the London County Council granted a subsidy of £500 annually, the Council promptly raised the salaries of its professors and lowered the fees of its students.

THE wiping out of an intellectual defeat by a physical victory is not an unheard of event in English schools, but we should hesitate before finding the origin of "town and gown" riots in intellectual rivalry. It seems, however, that the cause of the recent serious riots in the Tinnevely district of Madras is to be laid at the door of education. The Shanars, being of low caste, have deigned to profit by the teaching of the missionaries, while the more exclusive Maravars, a high-caste race, have chosen to ignore all the educational facilities offered to them. The Shanars, so say the Maravars, have become not only filled with conceit, but also overbearing in manner. This, however, scarcely justifies a hundred murders—unless, indeed, the hundred Shanars were excessively cultured minor poets, who persisted in proving their intellectual superiority by writing birthday odes. We hope, by the way, that Lord Kitchener will not leave out the Baggaras in making up the tale of his Khartoum College students. If he does, he may find that there are Maravars even in the Soudan.

WE have come across the following specimens of children's logic, in each case the child proving easily the victor:—
Examination question: "What do you do first when you parse a word?" Answer: "I rule a margin." Again, a teacher has explained an abstract noun as the name of something you can neither see, nor hear, nor touch, and asks for an example. Answer, after much mental hunting: "A little hen in an egg." On another occasion the teacher affirms that a transitive verb must have an object—"thus, if you break, you must break something"—and cheerfully invites the class to put "break" into a sentence without an object. A small girl ventures this, in perfect good faith: "I tried to break the glass, but couldn't"—adding anxiously: "You see I *didn't* break the glass." To use Milton's expression, grammar is clearly "not a bow for every man to shoot in that counts himself a teacher."

SUMMARY.

THE MONTH.

THE jubilee of Sir George Stokes as Lucasian Professor of Mathematics at Cambridge was celebrated on June 2. It was attended by representatives of sixty-three Universities and learned societies in various parts of the world. Sir George, who was Senior Wrangler in 1841, has also been President of the Royal Society and of the British Association. The Duke of Devonshire, as Chancellor of Cambridge University, presided, and read an address on the occasion, when a commemorative gold medal was presented by the University to Sir George Stokes, who received a similar honour from the French Academy of Sciences. A bust by Mr. Hamo Thornycroft was presented to the University, and a replica of the same to Pembroke College, Lord Kelvin under-

taking this duty. Sir George made a modest reply to the address, saying that the unsolved problems of science were more in number than those which have been solved, and that his main feeling was that he ought to have worked harder than he had done—though, “if he had done so, he might not have been there to receive the felicitations of his friends.”

THE Rede Lecture was delivered in the Cambridge Senate House on June 1, by Professor Cornu, of Paris. The subject was, “The Wave Theory of Light: its Influence on Modern Physics.” The lecturer paid a tribute to the valuable work done by Newton, and dwelt on the great advance in our knowledge of light that was due to him. Professor Cornu pointed out that light, electricity, and magnetism were all transmitted by waves, with ether as the medium for transmission. The lecturer did justice to the recent discoveries in the field of physics by Cambridge men, including Clerk Maxwell, Lord Rayleigh, Lord Kelvin, and Sir George Stokes. The Vice-Chancellor, Dr. Hill, in conveying the thanks of the audience to Professor Cornu for his lecture, said he had done them the compliment to write it in English, but at the request of the Vice-Chancellor and others he had done them the still greater compliment of translating it into French. They rejoiced to think that so many eminent Cambridge men, from Newton downwards, had shared in the discoveries made in this field of science. Dr. Hill mentioned that this was the first time the Rede Lecture had been delivered by a foreigner.

THE Leys School, Cambridge, has been relieved of its debt of £30,000 by the efforts of its friends. June 16 was the twenty-fifth anniversary of its foundation, and Mr. A. J. Balfour presided at the annual distribution of prizes, and congratulated the Governors on having established this Wesleyan school as one of the public schools of England.

AN inquiry into the Grantham Grammar School case was held at Grantham on May 30, on behalf of the Charity Commissioners and at the instance of the Headmasters' Association. The case arose out of the dismissal of the staff of assistant-masters at Christmas, without notice, on the departure of the late Headmaster. The inquiry was conducted by Mr. L. A. Selby-Bigge, Assistant Commissioner. Messrs. Preston, Brooke, and Marindin, the aggrieved masters, were represented by Mr. Cecil Walsh, barrister, of London (who appeared on the instructions of the Assistant-Masters' Association); and Mr. E. H. Fraser, D.C.L. who represented the Headmasters' Association. The Commissioner said that the inquiry had been ordered by the Charity Commissioners, under the Charitable Trusts Acts 1853 to 1894, with a view to ascertaining what might or might not be the rights of assistant-masters at the school, and, if any injustice had been done, what remedy was to be had.

It appeared from the correspondence in the case that when the late Headmaster (Mr. W. J. Hutchings) wrote terminating his engagement, on December 20, the Clerk to the Governors pointed out to him that the assistant masters might look to him for compensation if the new master did not see his way to retaining their services. Mr. Hutchings on the same day wrote to Mr. Preston and Mr. Brooke, reporting what he had heard, and adding that he did not anticipate that they or Mr. Marindin would come upon him for pecuniary satisfaction. On December 24, Mr. Malim (the Clerk) again wrote to Mr. Hutchings, pointing out that on the termination of his appointment, whenever that might be, the engagement of his assistant masters would also terminate. Further letters were also read showing that this was communicated to the three dismissed masters by Mr. Hutchings, who wrote to Mr. Malim telling him so, and also intimating that Mr. Marindin said he was appointed by the Governors, and was under different terms. In the statement Mr. Hutchings had prepared he said that he had not dismissed the assistant-masters, but he simply passed on to them the formal notice from the Clerk, together with the Rev. W. R. Dawson's (the new Headmaster's) declaration that he could not appoint them. At a meeting of the Governors subsequently held letters were read from the assistants, appealing against their dismissal, and it was resolved that the Governors regretted the dismissal of the late under-masters without due notice from the Headmaster, and they desired to express their sincere sympathy with them in their trouble. In recognition of the long services rendered by them to the school, they decided to give an honorarium to each of the assistants. Mr. Brooke, in thanking the Governors, said he accepted the sum as an honorarium,

and not in lieu of notice. Mr. Marindin asked the Governors for salary in lieu of notice, saying that the only notice he had received was from the Rev. W. R. Dawson, when he called upon him before the beginning of the term.

A LARGE amount of evidence was heard, including that of the Clerk to the Governors, the new Headmaster, and the assistant-masters. The Rev. W. R. Dawson, in cross-examination, said he had three reasons for not engaging the old masters. The first was that he preferred not having older persons than himself as assistants; secondly, he required that the assistants should be athletes; and, thirdly, he wished his assistants to reside at the school, so as to study the comfort of the boarders. The Governors contended that the engagement of the assistant-masters terminated with that of the Headmaster; but the Charity Commissioners had already declared against this contention. It was urged on behalf of the assistants that they were servants of the Governors, by whom their salaries were paid, and that they were entitled to a term's notice. Mr. Selby Bigge said that he would report to the Commissioners.

THE Annual Conference of the Headmistresses' Association was held at the Ladies' College, Cheltenham, on June 9 and 10. Miss Jones, of Notting Hill High School, President of the Association, occupied the chair. Miss Beale, in welcoming the Association to Cheltenham, gave a slight sketch of the rise and growth of the Association, and contrasted its first meeting at Cheltenham, twenty years ago, when fewer than thirty members attended, with the present large gathering, the number of members having now reached 184. Miss Jones reviewed the educational work of the past year, particularly as regards legislation on educational matters. The Board of Education Bill formed the chief subject of discussion, and the following amongst other resolutions were passed:—

That this Association regards it of the highest importance: (i.) That in the interests of girls and women a due proportion of seats on the Consultative Committee should be assigned to women; (ii.) that the inspection of schools should not be taken to include the examination of scholars; (iii.) that the inspection of schools should be gratuitous, and open to all schools alike; (iv.) that, at the earliest possible moment, inspectors of the highest competence and experience in secondary schools should be appointed. That, in order to secure that the registration of teachers shall be in the hands of a body with suitable expert qualifications, it is desirable: (i.) that the constitution of the Consultative Committee should be more clearly defined, and that it should so far follow the lines of the Council proposed under the Registration Bill, 1898, as to include, in the first instance, the representatives of the six bodies mentioned in Clause 17 of that Bill—the Headmasters' Conference, the Incorporated Association of Headmasters, the Association of Headmistresses, the College of Preceptors, the Teachers' Guild of Great Britain and Ireland, the National Union of Teachers; (ii.) that the Consultative Committee should be charged with the duty of regulating the maintenance, as well as the formation, of the register of teachers.

Miss Day, of the Grey Coat School, Westminster, was elected President of the Association for the two ensuing years.

THE distribution of prizes in the North London Collegiate School for Girls took place in the Clothworkers' Hall on June 21. The chair was taken by the Bishop of Bristol, and the prizes were distributed by Miss Emily Davies. Among those on the platform were Mrs. Bryant, the Headmistress, Miss Lawford (Headmistress of the Camden School), Miss Ridley, Mr. Latham (Chairman of the Board), Mr. A. T. Pollard (Headmaster of the City of London School), Sir Joshua and Lady Fitch, the Rev. A. J. Buss, and the Rev. Septimus Buss. The Headmistress announced that next year the Jubilee of the School would be celebrated in April. Mrs. Bryant in her report said that the School now contained 467 pupils, of whom 114 had been presented for public examinations during the year, and of these 72 per cent. were successful. Open scholarships had been gained by Miss L. M. Taylor (in mathematics), and by Miss M. Gregory (in classics), at the Royal Holloway College. Miss Agnes Bennett had gained the Girton Entrance Scholarship of £60 a year for three years. Thirteen old pupils had during the year taken degrees at London University, and two, Miss C. A. Raisin and Miss M. T. Newbiggin, had taken the higher degree of Doctor of Science. Another old pupil, Miss Ethel Sargant, had read a paper before the Royal Society. The Bishop of Bristol said that the work of higher education begun by Miss Davies and himself

had developed far beyond what they could have foreseen. Miss Davies was the foundress of Girton, while he was the first secretary of the Cambridge Local Examinations. He was astonished at the number of valuable prizes and scholarships gained by old and present pupils. He spoke of the ever-abiding presence of the memory of Miss Buss, and congratulated the audience on the living presence of Miss Davies. The prizes were then distributed, after which Miss Davies described the attempts made by women to get the London University to open its doors to women, and how out of this grew the application to allow girls a share in the Cambridge Local Examinations. The next step was the opening of a Women's College at Hitchin, the forerunner of Girton.

As part of the celebration of the Jubilee of Bedford College for Women, a meeting of old students was held, on June 22, in the Portman Rooms. Miss Anna Swanwick, LL.D., the first Visitor of the College in 1849, was in the chair. Miss Swanwick gave some interesting reminiscences of her own early schooldays in Liverpool, where she said she never remembered to have seen a map, and the geography lesson consisted of learning a passage by rote from a dull book. Grammar and history were taught in much the same manner. Miss Beatrice Harraden took her B.A. degree from Bedford College in 1882, and amused her audience by retailing her experiences with regard to the value of the magic letters "B.A." in the eyes of the hard-hearted "Editor." They obtained her many a valuable introduction. Other speakers were Dr. Sophie Bryant, Miss Henrietta Busk (who has written a history of the College), Mrs. Morgan Williams, and Miss Hurlbatt, the Principal.

On June 23, a crowded meeting was held in the theatre of London University, of which Bedford College is hereafter to be a constituent institution. Prof. Jebb presided, and, in an interesting address described the progress made by the College during the past half-century. The Duke of Devonshire said that he was there, as a humble member of the Government, in order to show that the immense advances which had been made during the last half-century in the higher education of women was a matter to which the Government was not insensible. Bedford College was among the first to associate itself with the movement, which had opened to women a great number of positions and professions, and its establishment, and the work it had done, had affected the status and the social position of women to an extent which it was impossible to estimate. The Government had fully recognized that movement, and had allotted to Bedford College a substantial grant from the public revenue. When the time came for the public to be approached for the supply of further funds, which would be necessary in the development of the position of the College, he was sure that aid would be forthcoming from the wealthy inhabitants of London.

UNIVERSITIES.

(From our Correspondents.)

We have had a sufficiently gay term, all things considered. It is true that there have been one or two disagreeables, and that the Eights week was somewhat spoiled by rain; but cheerfulness has been the prevailing note—in spite, as some would say, of Schools and Pass examinations intervening just when Oxford had begun to be most enjoyable. Our Schools are later than the Cambridge finals, so that there is nothing for me to say about individual successes or the triumphs of particular colleges or schools. The Hertford, indeed, the special blue ribbon of style and Latinity, which goes to Mr. Garrod, enables one to pick out eight of the best men of the year, for the Hertford award is generally accompanied by a mention of six or seven beyond the actual scholar. They belong to Balliol, New College, Christ Church, and Trinity, three of them being Winchester boys, one a Westminster, and one a Pauline.

A gift of five thousand pounds, from our old friend the anonymous donor, has come in very handily for the Science side of the University, for it has nerved Congregation to add to it an equal sum of money for the erection of a laboratory for the study of pathology, as well as a vote of £250 per annum for five years for equipment and maintenance. This is regarded as a very pretty pendant to the honour which the Queen has conferred upon our Regius Professor, now Sir John Burdon Sanderson, and the Medical School has good reason to felicitate itself.

Commemoration, needless to say, was very brilliant; and in fact there are some experts in these things who say that it was brilliant beyond recent experience. It is only natural that the presence of the popular Duke and Duchess of York should count for much in the direction of gaiety. At the *Enœmia*, when the honorary degrees were conferred, the Duke wore his doctor's robes, and he was attended by Mr. Talbot and Sir William Anson, the latter in his new capacity as M.P. for the University. The graduation ceremony, of course, was the culmination of "Commem.," and the list of D.C.L.'s was certainly notable:—The Earl of Elgin and Kincardine, K.G., M.A. Balliol College, late Viceroy of India; the Right Hon. Lord Kitchener of Khartoum, Governor of the Sudan; the Right Hon. Cecil John Rhodes, M.A. of Oriol College; Sir Hubert Parry; Professor Maitland, of Cambridge; Mr. Godman, of the British Museum; Father Ehrle, the Prefect of the Vatican Library; and Mr. James Frazer, of Trinity College, Cambridge. No doubt the decision of Mr. Rhodes to take up the degree which had been offered to him seven years ago put some of the authorities into a rather perplexing position; and the open secret of the business is that it was certain *others* of the authorities who had encouraged the great Proconsul to come forward at this moment. The excitement over the Rhodes degree has been a London, and not merely an Oxford, concern. Here, it must be admitted, the prevailing opinion of sober-minded people is that, whilst it was a matter of questionable taste for Mr. Rhodes's friends to bring him forward in the middle of a Transvaal crisis, it was not worth while for any body of prominent University men to make a public protest over the degree—especially after the explanation that Mr. Rhodes had been invited in 1892, when he could not be in Oxford, "to take the degree whenever it should be convenient for him to do so." Undergraduates do not worry themselves much over these considerations, and it was a matter of course that Mr. Rhodes should have a tumultuous gallery welcome. The occasion was one to encourage undergraduate wit, and the "Don't look so Boered" was almost as good as "Khartoum College head of the river!" with which Lord Kitchener was saluted.

ANOTHER May term gone. Tripos lists, degree Cambridge. days, dancing and merriment, all are things of the past, and for a fortnight Cambridge will have peace before the Long Vacation term. Much has been compressed into seven short and merry weeks, and complex memories will remain of one of the brightest and most prosperous May terms Cambridge has known for many years.

Each succeeding June makes it clearer that Cambridge is actually becoming a place where serious students form a majority. The last twenty years have seen a most notable development; and an analysis of the class lists for 1899, now all published, shows a rather remarkable state of affairs. Roughly, 204 men have proceeded to the B.A. degree by the poll course, while no less than 457 have taken Honours. It should also be noted that, of the 204, 20 to 30 are going through the M.B. course, and are doing work for that degree quite up to the Honour standard; this would put the figures roughly at—Poll-men, 180; Honours, about 480; or in the proportion of 3 to 8. The Science Tripos, with 40 first-class men and a grand total of 131, is responsible for much of the increase in Honour degrees; while the Classical and Mathematical Triposes, with numbers of 106 and 82 respectively, show little falling off from previous years. Law (40), History (30), and Mechanical Science (17) are active and growing schools; but the Natural Science work is certain to yield still more remarkable developments in the near future. Among the special examinations, Theology takes the lead with 64 passes; Law has 39, Physiology 18, Chemistry 21, and History 15.

The Jubilee of Sir George Stokes was the occasion for a series of impressive functions, most of which were graced by the presence of the Chancellor of the University, the Duke of Devonshire. Our foreign visitors lent an air of variety to the College Courts, while at the receptions and in the Senate House the gorgeous robes and sparkling decorations of the foreign representatives produced a *tout ensemble* not soon to be forgotten. The reception at the Fitzwilliam Museum was attended by about a thousand guests, and was a great success. Prof. Stokes was ubiquitous, receiving congratulations in his gayest and most youthful manner; while Lord Kelvin, in his happiest manner, made speeches, and presented busts of Sir George Stokes to the University and to Pembroke College. Among our distinguished visitors were the seven recipients of honorary degrees in Science: Professors Cornu (Paris), Darboux (Paris), Michelson (Chicago), Mittag-

Leffler (Stockholm), Quincke (Heidelberg), and Voigt (Göttingen). It was universally remarked that our foreign guests showed, by their decorations and honours, the fact that their work was appreciated by the State; while among our English scientists marks of royal favour or State recognition were comparatively rare.

It is now settled that Mr. Chawner, Master of Emmanuel, will be the next Vice-Chancellor, in succession to Dr. Hill, of Downing College. The retiring Vice-Chancellor has earned golden opinions by his courtesy, as well as by his untiring devotion to the duties of his office. Those who knew Dr. Hill when filling a humbler rôle in our University system are not in the least surprised to find that advancement has only brought out the qualities which his intimate friends knew to exist. Mr. Chawner, after the customary two years of office, will be succeeded by Dr. Ryle, President of Queens', unless in the meanwhile the claims of the Episcopal bench render another selection necessary.

The forthcoming Paris Exhibition of 1900 is to be graced with some exhibits representing the work of the University of Cambridge. The Council of the Senate have asked for the large sum of £125, in order that we may make a show which befits our position in the educational world. Doubtless the result will be in proportion to the magnitude of the sum voted.

The success of the ladies has not this year been very marked in the older Triposes—Miss Laphorn, between 21st and 24th Wranglers, and Miss Cave, First Class, Third Division, of the second part of the Mathematical Tripos being the most notable representatives of their sex. In Classics, Miss McCutcheon and Miss Hicks have won first classes. In Science, however, no less than four ladies gain first classes in Part I.—Misses Garrioch, Hartle, Smith, and Sollas; and, in Part II., Miss S. O. Ford and Miss G. L. Matthæi, all of Newnham. Six first classes are also credited to the gentler sex in History, and four in Modern Languages, making twenty in all—a very creditable record, considering the number of candidates sent up.

The election to the Professorship of Agriculture will take place during July. The 13th of the month is the last day for the reception of candidates' names. If rumour is to be believed, the appointment is practically settled through the superior qualifications of one particular candidate.

HISTORICAL EXAMINATION PAPERS.

ON June 14, Mr. J. Wilson, M.A., took the chair at the monthly meeting of members of the College of Preceptors, when Mr. H. E. MALDEN, M.A., read a paper on "Historical Examination Papers: How to Set and Answer Them." The following is an abstract of Mr. Malden's paper:—

It is impossible, when speaking of examinations in any one subject, not to be more or less guilty of the diffuseness of which examiners complain, and to separate entirely the subject chosen from all others. How to set, mark, and answer examination papers, with special reference to historical examples, would be, perhaps, a more completely accurate description of this paper. To the uninitiated, and to the thoughtless, it would appear that the object aimed at in an examination paper is quite simple. Surely it seems to be the finding out what candidates know about a subject. This by itself is not so easy as it may appear; neither is it the sole object of examinations—neither of examinations as they are, nor of examinations as they should be. At any rate, a little experience will soon show that other objects are sometimes present to the minds of those who set papers. I speak now of bad papers only; but from some of these it appears possible that those who set them are aiming at advertising what they know themselves. They ask questions upon curious points lately raised, or which they intend to raise themselves in the transactions of some learned society; or they inquire after recondite opinions expressed somewhere in the works of some voluminous and unintelligible German. If a candidate should happen to have had his attention drawn previously to such points, he will gain great credit and many marks—probably undeservedly, for his achievement will only mean a fortunate reference on his part, not a complete mastery of all the latest and most learned literature of the subject.

Again, another style of bad paper aims at finding out what the candidate does not know. This is not equivalent to discovering by inference what he does know. By questions upon obscure and minute points, by a species of historical puzzle, it is easy to find out that a candidate does not know many things. If one recognizes and another does not recognize a few of these matters of small importance, no just criterion is afforded thereby of the comparative knowledge by these two of men and events which really matter. I have seen the question: "What kings of England had uncles drowned at sea?" How many learned historians could be sure of answering this correctly offhand?

I venture to suggest myself four—Edwy, Edgar, Henry the Second, George the First. But I feel open to correction from that examiner. In fact, what any candidate does not know is, if not infinite in amount, at any rate enormous, and no useful result follows the fishing for specimens out of this shoal of facts. In an examination of one kind it is fair and useful to ask after minute points. If the candidates have been required to master a certain book, it is right to test their industry by asking for a few matters of slight importance, a recollection of which will show that they have read the whole book with attention.

But to turn from bad papers to the true uses of good papers. Undoubtedly these should not aim at drawing out what the candidate knows, irrespective of the question whether this is worth knowing or not. Herein historical examination papers differ from some others. There is no room for dispute as to what a student of "Euclid" ought to know; but the very essence of a real understanding of history lies in the intelligent appreciation of the really important features. No one knows all the detail without reference to a book, but the real historical scholar knows what the story means. When teachers examine, they naturally treat the same points as of importance in their teaching and in the examinations upon their teaching. Examining bodies have a function of teaching the teachers, and ought to frame their questions from year to year so as to impress upon them what are the really important features of history. This they have done with partial success. In papers set during the 'sixties, for instance, any questions about colonial or naval affairs were very rare, the American War and the defeat of the Armada forming the usual exceptions. Teaching was usually silent, I believe, upon these most characteristic sides of English history. The influence of Sir Robert Seeley, and then of Captain Mahan, began to appear in papers before it was felt in schools. Such questions began to be set, but were very badly answered. Now, *crede experto*, questions upon the Colonies and the Navy produce many good answers—many bad answers too, but enough good to show that the right importance is being attached to such subjects. But to produce this good effect examiners had undoubtedly to begin by asking for what most candidates did not know. But good examiners did not severely visit ignorance of these subjects till after sufficient attention had been called to them by repeated questions.

The teacher, whose subsistence may depend upon the results of his pupils' examinations, watches the tendencies of examiners, and sometimes provides candidates with what are known as "tips," samples of information to meet the examiners' ideas of what is important. We all know the favourite points, the supposed safe cards which a candidate is considered sure to have an opportunity of playing. But the properly constructed paper, aiming at drawing out what ought to be known, is, of course, not liable to be "floored" by the candidate who has committed a sufficient number of "tips" to memory. This sort of examination memory is a very useful aid to a business man or a barrister, who wishes to remember certain facts for a time for business purposes; but it can be cultivated by learning the winners of the Derby, or cricket averages, quite as well as by learning the heads of the Petition of Right or the battles of Edward the Third's reign. One sort of information so acquired is as useless as the other. History, properly understood, is a chain, each link of which is important because it is connected with something before and behind, and the understanding of the connexions is necessary for a true appreciation of the whole thing. The candidate furnished with "tips" has, as it were, a quantity of links loose in his pocket. He can bring them out one by one, though he is liable to bring out the wrong one very often; but he is quite unconscious even that they can be linked together. He is like the butt of the Greek Joe Miller, who is recorded to have carried about a brick as a sample of a house. If we want to mark for knowledge of history, we must not mark too favourably for the exhibition of even a good square brick, without some indication of what it supports and of what it stands upon.

Real knowledge of history implies habits of mind and thought. These may be tested to some extent in examination. Beyond the mere linking together of cause and effect, we may look for some judgment of the real importance of men and things, some power of weighing evidence, some readiness in recognizing the difficulties and disabilities of past men and times, some capacity for judging of policy from the point of view of the age of the politician, some idea of the patience necessary to bring about even a slight improvement in human affairs, some resulting charity, sympathy, and impartiality. It is impossible to examine in wisdom—that can be tested only by action; but it is possible in historical examinations to examine in some of the apparatus of wisdom.

I may seem to pitch the ideal of a paper very high. Of course we cannot look for profound judgments from young candidates. We ought to seek, however, for some evidence of attempts to think. Some questions on the grammar of history, accounts of events, details of statutes, even genealogies of kings, we must have. But the more highly marked questions should be in some such form as the following:—"Explain the difficulties with which Elizabeth had to reckon in the religious world in 1558-9"; "Show by a comparison of the positions, in 1640 and 1660 respectively, of Crown and Parliament, what were the net constitutional gains of the Civil Wars"; "What were the really important

consequences, down to 1815, of Nelson's victories at the Nile and Trafalgar?" "Show that the Great Charter was not a class nor party instrument"; "Give the reasons for the breakdown of the Lancastrian Parliamentary monarchy." These questions are not really very difficult; three are well within the compass of a boy of sixteen and of a girl of fifteen who have read school histories attentively and thought a little, but they do require some thought for their answer.

Candidates may, of course, be furnished with thoughts and views ready made by the book or the coach. But the examiner is a bungler who does not recognize these views at a glance. When, amid crude facts, stated in slipshod English, he comes across some well turned political reflection, or some moral truism, he hails an old acquaintance,

"And, smiling, puts the answer by."

From very small children, of course, thought is not to be expected. What we want to know in their case is whether they are interested or not, for which end they may be asked to repeat striking stories. Also it is right that they should have some idea of the sequence of events. To test this, they may be asked dates, always remembering that it is of more importance that they should arrange events in the right order than that they should assign them to the exact year. But, as soon as learners have got a fair idea of the sequence of events, they may be asked to express the results of some thought upon their meaning and connexion. A still more advanced examination should take the form almost entirely of essays and notes. The most advanced of all should be work with the authorities at hand, in order to test the power of candidates to find their way among the authorities, weigh evidence, deduce conclusions, and form judgments upon them. This form of examination, however, is rather beyond the range with which we are dealing.

The necessity for stocking the memory with details, avoided in this last highest form of examination, will always have a tendency to hamper the free exercise of judgment. The faculties which can be cultivated by historical study will flourish the better for that easy command of material which only access to books can give to those whose memories are not as the memory of a Macaulay. It is doubtful whether his decided judgments were not facilitated by a convenient forgetfulness of antagonistic facts. The mass of historical information extant is alarming, and it grows by leaps and bounds. To take only one of the school-books with which school-boys and -girls deal, Gardiner's "Student's History," Vol. III., I find 761 names in the index. About many of these there are many lines of reference. Each event or fact connected with each name has a date connected with it. If we estimate the facts and names and dates in the volume at seven thousand, we shall not err in excess. If for the whole history of England, treated in the same manner, we say fourteen thousand facts, names, and dates, our estimate will still be moderate. It is quite absurd to expect even a well prepared candidate to have an intelligent grasp of all these. A question involving thought and judgment necessitates a knowledge of fact to begin with, and a candidate may be very seriously hampered by a forgetfulness of some of these thousands of facts, by inability to recall a name or to recollect a date. This inability will confuse him, and, perhaps, frighten him off the question. A good historical student may be so hampered in one particular question. The student of algebra exemplifies his knowledge of a rule by solving any one example; the student of grammar is likewise master of his examples by rule; the lad of real historical instincts and of judgment, who understands the meaning of the whole story, may be very much thrown out by a lapse of memory. Therefore, in historical examinations, I should advocate considerable latitude of choice in questions. If we want, after all, to test, not the memory, but the judgment of the examinees, and their power of investigating causes and of deducing results, then we should give them fair opportunity for displaying these qualities. But, as familiarity with names and events is a result of the study of the subject, we are not called upon to give a student all his facts upon which to generalize. Only we must be sure that he has enough to generalize upon. I can imagine a comparative failure, upon one point, by a competent historian even, in such a wide field of time as most examinations offer. If he has a choice of questions, he will not be competent if he fails to deal intelligently with one of them.

This consideration leads me on to the question of marking papers. I should much prefer always to mark historical papers, beyond the most elementary, by impression. There is a specious appearance of fairness about a system of many possible marks. It seems so just to apportion so many marks to this point and so many to that, 25 marks out of 30 to this answer and 21 out of 30 to another. I do not think that such substantial injustice is done by this plan. A good many worthless candidates scrape up marks by fives and sixes for answers which are not every word of them hopeless nonsense. But I believe that the true comparative merit of the candidates appears better by giving marks by impression to each answer, and then by adding or subtracting a few marks by impression for the whole paper. I know if an answer is very well done, well done, fairly done, badly done, or worthless. I can apportion a numerical value much more minutely than this implies. But I do not feel sure that the bad or indifferent answer to which I gave ten marks one day might not have got twelve the next and eight the day before. It is not unfair to give to those

who have, and to take away from those who have not. A really first-class candidate, given more time, would show more knowledge; a very bad one would make worse blunders. A youth who told me last winter that "Napoleon, defeated at the Nile, had to retreat across the Sahara in very bad weather to Moscow" only wanted scope to perpetrate absurdities which should have deprived him of all marks for history. We do not want to know what knowledge or ignorance can be shown in a certain time. We want to know what knowledge or ignorance the candidates have of the subject, and we have two or three hours of their work and many hours of the examiner's time in which to find it out. If the examiner finds that the difference between A. and B. is practically infinite, the difference between something and nothing, may he not fairly express it in marks if marks are required of him? A. and C., moreover, though not infinitely removed from each other, may differ totally in kind if one gets 80 marks and the other 40. It is not merely that A. is twice as good as C. in the same scale. A. probably has real knowledge, C. has imperfectly remembered information.

There is probably no subject in which the labours of the examiner are more cheered by flashes of unintentional humour than in history. Every examiner, I think, must have been struck with the creative genius of boys in this subject compared with the reproductive power of girls, the former contributing nearly all the very good and very bad answers; but even the most wildly imaginative boys have very distinct limits to their invention, and repeat the same blunders from year to year. Besides the natural limitation of human ideas, error is not infinite in practice, bad teaching, especially a failure to explain the difference between persons and places bearing the same or similar names and titles, is responsible for many mistakes.

But, when examiners complain of differences and avoidance of the point in answers, they often are to blame for asking bad questions. For instance, "events leading to," or "results of such and such an event," is a dangerous form of question, unless a limit of time or place be strictly set. A candidate may not be blamed for going a long way back for a cause, nor for looking forward to a very remote result, unless such limits are set. Again "What do you know of" So-and-so? is a bad form of question. If I ask a boy what he knows of the Marquis of Rockingham, and he says truthfully, "Nothing," does he deserve a mark? The answer is a true answer. If he says, truthfully, "He won the first Doncaster St. Leger," does he deserve a mark? The examiner deserves a twinge of conscience for not having at least qualified his question by "as a statesman," or by some such words.

But, after all, the candidates should show some co-operating intelligence to smooth the path of examiners. They should remember that they are never expected to write all they know, like the probably mythical victims of the Chinese examinations. They are expected to give samples of what they know, arranged under certain heads, in a limited time. They must practise economy of truth, and one test of their powers is to be found in the skill with which they can select and indicate sufficiently the really important points in their knowledge. This economy of truth is specially conspicuous by its absence in the answers to those questions in the College of Preceptors' examinations which take the form of arranging notes for a lesson upon some given subject. Nine candidates out of ten appear to think that in the time indicated, perhaps three-quarters of an hour, they can tell the whole truth concerning the reign of Henry the Second or the Revolution of 1688, and cause a class to understand it. They would show not only their practical common sense, but their historical learning better, if they could separate the most important points for treatment in the time.

But neither examiners nor candidates are really answerable for all mistakes in papers. It stands to reason that much bad answering is the result of bad teaching, of bad books especially. If such a question is asked as "Discuss the rival claims of York and Lancaster to the throne in 1459," it is painfully apparent that many candidates have no idea that there is room for discussion upon any such point. They have never been accustomed to look at the matter as a practical question. They give a genealogy, right or wrong, and then leave the examiner to draw inferences, without even adding the other considerations which very seriously affect the question apart from genealogy.

A similar deficiency of judgment, or of attempt to train the judgment, comes out in the strong party views which are given—not the views of the candidate, but the views which have been supplied to him cut and dried, untempered by any experience or thought upon his part. That the world is divided into the whites and the blacks; that any political action of, say, Edward I., which would have been reprehensible in Her Majesty, is therefore to be roundly condemned in him; that statesmen and ecclesiastics of the past ages did not sometimes know their own business better than modern compilers of history know it, is a very natural idea to the young, but it is not typical of historical knowledge, nor the result of a training which has tried to make the most of historical teaching.

Indeed, I should be inclined to advise a clever candidate, who really has any knowledge of the circumstances, that if he finds a question about an unpopular character or policy—unpopular I mean with the ordinary run of school histories—he should try to see what can be said on the other side. If he has any historical knowledge, he can show

it so to better advantage than by repeating accusations and strictures which have been repeated better before.

I have heard of a candidate, in a Roman history examination, who gained great credit by a brilliant defence of Catiline. He was probably wrong, but he could make of his argument a fine exhibition of his knowledge of Roman politics and social life, and of the weak points of the senatorial government. Had he run down Catiline, he would have only faintly echoed Cicero. In defence he could show originality. Such an instance is of course only possible in more advanced examinations, but younger candidates may be taught to see and to show that no persons or parties have a monopoly of error.

Other people, besides the Athenians, may be tired of hearing Aristides called the Just. Examiners, however excellent, are human, and the refreshment of coming across a novel view, put with any appearance of truth and ingenuity, may prepossess them in favour of the candidate. Not that they make favourites—there is no favour in examinations. The examiner has not, as the mothers of plucked candidates suppose, a spite against Tom or a love for Jack. He regards them all as equally disagreeable incidents in his profession; but, if Jack shows some signs of superior intelligence, he is glad to note them, and give Jack the benefit; and, if Tom shows that the foolscap which he is blotting with nonsense would be more fitly employed in ornamenting his temples, the examiner will not give Tom the benefit of the doubt if he occasionally seems to possibly approximate to the truth. The human nature of the examiner may also be touched by the neatness, or the contrary, of the candidate. This should not be the case; but, "till we are shaped like angels," it will be very difficult to approach a well written, clear, neat, well arranged paper, and a paper nearly illegible, with the sheets disarranged in reverse order, fastened at the wrong corner, and with the questions wrongly numbered, in quite the same spirit. Answering with effect, in fact, resolves itself into the results of good teaching, backed up by the common sense and method of the candidate.

Teaching and examination can never be separated. The latter complements the former. The effort of reproduction of teaching for examination purposes undoubtedly helps to fix it in the mind. Examination directs teaching, as I said at the beginning. What is, perhaps, not the least important thing about examinations is that they also teach the examiner. It must be a particularly bad lot of papers which does not suggest to an examiner at least some reconsideration of the relative importance of different points. It must be a peculiarly well set paper which by the answers it brings forth does not suggest to him some improvement in his art.

The Rev. J. O. BEVAN said there were three factors involved in the question discussed by the lecturer—the teachers, the examiners, and the examinees—and the consideration of the relations of these factors to one another considerably complicated the matter. Further, the age of the candidates should properly be regarded in estimating the value of the answers given by them, allowance being made for different stages of mental development, which were dependent, for the most part, on age. It was very difficult for an examiner to form an opinion on this point in the case of a general paper, such as history; and the handwriting was often an unreliable guide. Therefore the examiner was compelled to assign marks mainly according to the amount of knowledge of the subject shown by the candidate, without too much regard to the intelligence and judgment exhibited in the answering. In the case of mathematical subjects—arithmetic, algebra, &c.—intelligence entered to a much larger extent, and the examiner was better able to take account of it. Bad answering was often, undoubtedly, the result of bad methods of teaching and of the insufficient preparation of lessons on the part of the teacher. In the setting of examination papers, it was most important that the examiner himself should work out, his own questions, in order not only to see whether the time allowed was sufficient, but also whether the questions themselves were such as to admit of clear and definite answers from average candidates.

Mr. EVE remarked that history was one of the best and most fruitful of subjects to teach, but one most difficult to examine in. There were practically three classes of questions wanted in history papers. First, those answering to grammar questions, requiring very short answers, uninteresting, but necessary. Next, those requiring the reproduction of continuous narrative, a useful exercise from several points of view, but a little like writing out bookwork in mathematics. The last and most valuable class of questions was, as the lecturer pointed out, the hardest to set, questions namely which should elicit the power of drawing inferences. In fact, "riders" and "unseens" could hardly find a place in a school history paper, and that was the great drawback to history as an examination subject.

Mr. G. BROWN said the lecturer showed that he knew what ought to be expected of candidates. There was, he thought, more scope for the vagaries of examiners in history than in other subjects; and history papers more often gave dissatisfaction to candidates and their teachers. It was the habit of examiners to lay the blame of bad answering on the teachers; but this was, he thought, hardly just. In the teaching of history, the teacher was greatly handicapped by the mass of details and

the limitation of the time that could be given to the subject, which almost compelled him to give his chief attention to the learning of the bare facts. Complaint was made of unintelligent text-books; but it should not be forgotten that the writers of text-books had always in view the examinations for which the pupils had to be prepared; and the publishers of text-books very naturally brought out what they thought would sell. There was, no doubt, a tendency on the part of examiners to get into a groove; and, in a notorious case which took place some years ago, this tendency had been taken advantage of by the teacher to such purpose as to give rise to strong suspicion that access had been illegitimately obtained to the papers prior to the examination. The object of an examination was to test knowledge, and the knowledge required to be shown should be connected with the important facts of history, to the exclusion of insignificant details. No doubt the study of history might be made a valuable means of exercising the judgment; but this would not go very far in answering an examination paper, when there was but little time allowed for thinking out historical problems. It had been suggested that one function of an examination was to direct the teaching; and he thought the examinations of the College did this with some success. It was not necessary, he considered, to take historical periods in consecutive order, and there was no reason why the Victorian era should not be taken as one of the periods to be dealt with.

Mr. ORCHARD concurred with Mr. EVE that the questions set should admit of short, concise answers, and that there should be "alternative" questions. One use of an "alternative" question lay in the very necessity of choosing which it imposed on the candidate. The lecturer had done good service in showing what questions ought not to be, and in indicating what they ought to be—on which last point it could be wished that he had said more. The responsibility for bad answering was, for the most part, distributable among examiner, examinee, and teacher. The lecturer had said that a question should have the double aim of testing what the pupil knew and what he ought to know. He (the speaker) suggested that, besides this, there should be the further aim of finding out to what extent he was able to connect his knowledge and perceive the relations of its various parts. In order to prevent unfairness, the character of a question should, as far as possible, be conditioned by the pupil's opportunity. The proposal that an examiner should work his own paper was reasonable; but the time allotted to the examinee ought to be double that occupied by the examiner. History had been compared by the lecturer to a linked chain. Might it not also be regarded as the unfolding of social and political life, as the development of forces, mental and spiritual, asserting and illustrating themselves in chronological events? Thus, the Catiline conspiracy indicated the condition of Roman society; fealty and loyalty asserted themselves in the Wars of the Roses; Magna Charta spoke of the love of freedom; whilst the English Revolution illustrated both this force and that of the love of truth.

The CHAIRMAN said that, in his view, an examiner in history should, in addition to adequate knowledge, possess saving common sense, a sense of proportion, and such power of imagination as would enable him, when setting his questions, to keep before his mind all the circumstances of age, time limits, claims of other subjects, &c., by which the particular examination was conditioned. A curious illustration of the unreasonable demands that an examiner sometimes makes on his examinees was given by the late Mr. Froude, the historian, in his St. Andrews address. It appears that in the early days of competitive examinations a board of examiners met to settle the scale of requirement before drawing up their papers of questions. The highly distinguished man who was to examine in English history announced that, for himself, he meant to set a paper for which Macaulay might possibly get full marks, and he wished his colleagues to imitate him in the other subjects. Mr. Froude saw the paper this examiner set, and confessed that he could have answered two questions out of a dozen. Now, a paper for which only the most talented specialist could hope to obtain full marks, and on which one talented specialist could answer only two questions out of a dozen, seemed to entirely defeat its purpose. The number and choice of questions in a given period are no easy matters. To cover the ground, the device of alternative questions may be resorted to; but as to what are the important events to be included in a paper, and the comparatively unimportant to be excluded, different examiners would decide differently. Questions of colonial and maritime history, as the lecturer had pointed out, were now commoner in English history papers than formerly. This seemed quite right; and in almost any period of our history, from the Norman Conquest downwards, a question might be fitly set in respect to the loss or gain of colonies or territories beyond the seas, and the relation of such loss or gain to the development of our sea power—a naval defeat or victory. From the point of view also of history being one continuous chain of causes and effects, a question might properly be asked as to what causes produced certain effects. No doubt, such questions should be guarded, and limited to events that followed their causes at no great distance of time. In respect to marking, he thought the numerical evaluation of answers was the fairest, and what he most prized, next to full knowledge, was terseness and directness in setting it out.

Mr. MALDEN having replied to the remarks of the various speakers, a vote of thanks to the lecturer concluded the proceedings.

DENT'S MODERN LANGUAGE SERIES.

Edited by WALTER RIPPMANN, M.A.

In fcap. 8vo, cloth, 1s. 6d. net.
DENT'S FIRST FRENCH BOOK. Based on the Hölzel Pictures of the Seasons. By S. ALGE and WALTER RIPPMANN.

In fcap. 8vo, cloth, 1s. 6d. net.
HINTS ON TEACHING FRENCH. With a running Commentary to Dent's First and Second French Books.
 Prof. FREDERIC SPENCER writes:—"Dent's First French Book appears most opportunely, supplying as it does, on the lines of the 'reform' method, a course which is both rational and eminently practical. . . . This little book, with Mr. Rippmann's running commentary, deserves the careful attention of every teacher of French."

In fcap. 8vo, 1s. 6d. net.
DENT'S SECOND FRENCH BOOK. By S. ALGE and WALTER RIPPMANN. Consists mainly of a charming story by JEANNE MAIRET, "La Tache du Petit Pierre."
 The Second French Book can be taken with a class, even without previously working through the First Book. It will be found an excellent reading book.
 "We can heartily commend this reader as an exposition of the new method."
Journal of Education, Dec. 1898.

In fcap. 8vo, cloth, 2s. 6d. net.
FRENCH DAILY LIFE: Common Words and Common Things.
 Adapted by WALTER RIPPMANN from Dr. KRON'S "Le Petit Parisien."
 "For class use it is far better than anything we have previously seen. It is not, of course, intended for beginners. Students who, without much conversational facility, intend to join a French holiday course next midsummer, might here find valuable assistance. The Englishman travelling in France will find here all the phrases essential to his comfort—not in formal lists, but strung together in a chatty and interesting narrative, which also contains information as to how and where the phrases are to be used."
Education.

SPECIMEN COPIES AND PROSPECTUSES OF THE ABOVE MAY BE HAD ON APPLICATION.

GREEK SCULPTURE WITH STORY AND SONG. By ALBINIA WHEBBY. With 110 Illustrations. In demy 8vo, cloth gilt, gilt top, 6s. net.
 "It covers the whole range of the known sculpture of ancient Greece, and, besides giving a scholarly history of the art, describes all the best known statues and temples."
Scotsman.

ATLAS OF CLASSICAL PORTRAITS. By W. H. D. ROUSE, M.A. (Rugby School). 2 vols., demy 8vo, 1s. 6d. net per vol. *Greek Section. Roman Section.*
 "The two volumes are among the many which make older people think that the schoolboys of to-day are very lucky in having the work of learning made so easy to them."
Times.

A special Catalogue of Books suitable for SCHOOL PRIZES will be sent on application.

J. M. DENT & CO., 29 AND 30 BEDFORD STREET, STRAND, W.C.

THIS DAY IS PUBLISHED.

BLACKWOODS' LITERATURE READERS.

EDITED BY JOHN ADAMS, M.A., B.Sc., F.C.P.,
 Rector of the Free Church Training College, Glasgow.

The Series will consist of Four Volumes:—

- | | | | | | | |
|--|---|---|---|---|---|----------------------|
| BOOK I. | - | - | - | - | - | Price 1s. |
| For Pupils between 8 and 10, according to stage of advancement; this corresponds roughly with Standard III. of the Code. | | | | | | |
| BOOK II. | - | - | - | - | - | Price 1s. 4d. |
| Pupils between 9 and 11; corresponding to Standard IV. | | | | | | |
| BOOK III. | - | - | - | - | - | Price 1s. 6d. |
| Pupils between 10 and 12; corresponding to Standard V. | | | | | | |
| BOOK IV. | - | - | - | - | - | Price 1s. 6d. |
| Pupils from 11 upwards; corresponding to Standard VI. and beyond. | | | | | | |

SPECIMEN COPIES ON APPLICATION.

WILLIAM BLACKWOOD & SONS, Edinburgh and London.

MAGMILLAN & CO.'S NEW BOOKS.

LATIN.

CICERO.—PRO CLUENTIO. Edited, with Introduction and Notes, Explanatory and Critical, by W. PETERSON, M.A. Edin. and Oxon., &c. Fcap. 8vo, 3s. 6d. [Classical Series.]

GREEK.

AN INTRODUCTION TO GREEK PROSE COMPOSITION for use in Preparatory Schools and the Lower Forms of Public Schools. By H. PITMAN, M.A., late Scholar of Oriel College. Globe 8vo, 2s. 6d. *School Board Chronicle.*—"For Mr. Pitman's 'Greek Prose Composition' we have nothing but praise. It is admirable alike in arrangement and in execution. The examples are simple, easily remembered, and typical. The Greek type, as well as the accents, are fully and clearly presented to the eye."

FRENCH.

SPECIMENS OF MODERN FRENCH VERSE. Edited, with Biographical and Critical Notes, and an Introduction on the Structure of French Verse, by H. E. BERTHOUD. Pott 8vo, 2s. 6d. [*Foreign School Classics.*]

LES VIOLETTES BLANCHES. By EMILE RICHEBOURG. Edited, with Grammatical and Explanatory Notes and a French-English Vocabulary, by F. JULIEN. Globe 8vo, 1s. 6d. [*Primary Series.* *Educational News.*—"A very suitable book for a primary class both in matter and editorial skill."]

MATHEMATICS AND SCIENCE.

THE ELEMENTS OF EUCLID. By I. TODHUNTER, D.Sc., F.R.S. New Edition, Revised and Enlarged by S. L. LONEY, M.A. Globe 8vo. Books I. and II., 1s. 6d.; Books I.-IV., 3s.; Complete, 4s. 6d.

A NEW SCHOOL ARITHMETIC.

A SCHOOL ARITHMETIC. By R. F. MACDONALD. Globe 8vo, 2s. 6d.

Guardian.—"The grouping of miscellaneous examples at different stages of the book is a good point not often seen. Besides, the examples are numerous and very well chosen, and the price of the book, which is much below others containing the same amount of material, should guarantee it a trial for school use."

New Edition, now ready.

WOOLWICH MATHEMATICAL PAPERS for Admission into the Royal Military Academy, for the years 1889 to 1898. Edited by E. J. BROOKSMITH, B.A., LL.M. Crown 8vo, 6s.

ELEMENTARY PHYSICS AND CHEMISTRY. First Stage. By R. A. GREGORY, Professor of Astronomy, Queen's College, London, Oxford University Extension Lecturer, and A. T. SIMMONS, B.Sc. Lond., Associate of the Royal College of Science, London. Globe 8vo, 1s. 6d.

Education.—"The arrangement and methods of the book are precise, accurate, scientific. A teacher ignorant of science would have little difficulty in working through it with his pupils. The language is simple, and the book has many illustrations, most of them new, graphic, and of real value to the novice."

GEOMETRICAL DRAWING FOR ARMY AND NAVY CANDIDATES AND PUBLIC SCHOOL CLASSES. By EDMUND C. PLANT, C.B., Instructor in Geometrical and Mechanical Drawing, Military Side and Naval Class, Clifton College. Vol. I. PRACTICAL PLANE GEOMETRY. With an Appendix on the Construction of Scales. Demy 4to, 7s. 6d.

Nature.—"The figures are from photographs of actual drawings by the author and his assistants, and so afford the student a real practical standard of accuracy. The book is likely to be very useful to the classes for whom it is intended."

TWENTY-FOUR TEST PAPERS in PRACTICAL PLANE, AND SOLID GEOMETRY (Science Subjects), Elementary Stage. By GEORGE GRACE, B.Sc. Lond., A.R.C.Sc. Lond., First Class Honours in Solid Geometry, &c. Printed on cartridge paper, price 2s.

Educational Times.—"They are all that could be desired for a practical preparatory course."

THE STEAM ENGINE AND GAS AND OIL ENGINES:

A Book for the Use of Students who have time to make Experiments and Calculations. By JOHN PERRY, D.Sc., F.R.S., Professor of Mechanics and Mathematics in the Royal College of Science. Illustrated, 8vo, 7s. 6d. net.

English Mechanic.—"Will be found of great assistance by students, especially by those who wish to think for themselves."

Number Six now ready.

THE SCHOOL WORLD.

A MONTHLY MAGAZINE OF EDUCATIONAL WORK AND PROGRESS.

PRICE SIXPENCE.

CONTENTS.

MACMILLAN & CO., LIMITED, LONDON.

BELL'S ILLUSTRATED CLASSICAL SERIES.

Edited by E. C. MARCHANT, M.A.,

Head Classical Master of St. Paul's School.

Under the above title Messrs. BELL have in active preparation a new series of annotated classics for the lower and middle forms of schools.

The name of the editor of the series is sufficient guarantee that they will be carried out in compliance with the most recent ideas and requirements, and it is hoped that the introduction of some new features will place them in advance of anything of the kind hitherto attempted.

The special object of the series is to make the editions as interesting and helpful as possible to the intelligent learner; and with this end in view, in addition to the usual apparatus of **Introduction, Notes, and Vocabularies, Illustrations** have been introduced wherever it has been thought that they might help to elucidate the text.

The latter have been gathered from the best sources, and have in most cases, been specially redrawn. **Maps and Plans** will also be inserted as required.

The Volumes may be had with or without Vocabularies.

Pott 8vo, price 1s. 6d. each.

Most of the following will be ready in August.

CORNELIUS NEPOS. Epaminondas, Hannibal, Cato. By H. L. EARL, M.A., Grammar School, Manchester.

EUTROPIUS. Books I. and II. (One Vol.). By J. G. SPENCER, B.A., St. Paul's Preparatory School.

CÆSAR. Book II. By A. C. LIDDELL, M.A., High School, Nottingham.

CÆSAR. Book III. By F. H. COLSON, M.A., Headmaster of Plymouth College, and G. M. GWYTHER, M.A., Assistant-Master.

LIVY. Book IX., c. i.—xix. By C. FLAMSTEAD WALTERS, M.A.

LIVY.—Hannibal's First Campaign in Italy. (Selected from Book XXI.) By F. E. A. TRAYES, M.A., St. Paul's School.

HORACE'S ODES. Books I. and II. (Two Vols.) By C. G. BOTTING, B.A., St. Paul's School.

VIRGIL'S ÆNEID. Books II. and III. (Two Vols.) By L. D. WAINWRIGHT, M.A., St. Paul's School.

VIRGIL'S ÆNEID. Book IV. By A. S. WARMAN, B.A. The Grammar School, Manchester.

VIRGIL'S ÆNEID. Selection from Books VII. to XII. By W. G. COAST, B.A., Fettes College.

OVID'S METAMORPHOSES. Book I. By G. H. WELLS, M.A., Merchant Taylors' School.

OVID'S METAMORPHOSES. A Selection. By J. W. F. FRASER, M.A., Univ. Coll. School, London.

Specimen Copies post free to Headmasters on application.

LONDON: GEORGE BELL & SONS, YORK STREET, COVENT GARDEN.

COLLEGE OF PRECEPTORS' EXAMINATIONS, 1899.

SUITABLE BOOKS IN THE UNIVERSITY TUTORIAL & PRECEPTORS' SERIES.

Special Subjects.

LATIN AND GREEK CLASSICS.

- Aeschylus.**—Prometheus Vincetus. Edited by F. G. PLAISTOWE, M.A., and W. F. MASOM, M.A. Introduction, Text, and Notes. 2s. 6d.

FORECASTS AND COMMENTS.

July 1, 1899.

THE half-yearly general meeting of members of the College of Preceptors will be held on Saturday, July 22, at 3 p.m.

AN autumn course of lectures on "The Practice of Education" will be delivered at the College of Preceptors by Mr. P. A. Barnett, M.A., H.M. Inspector of Training Colleges.

THE Teachers' Diploma Examination of the College of Preceptors will begin on Tuesday next, July 4.

THE Old Rugbeian dinner will be held in the Whitehall Rooms on July 3, and the Old Cliftonian dinner—with the Bishop of Hereford in the chair—is fixed for July 4.

THE International Congress of Women, convened by the International Council of Women, was opened on June 26, and will continue until July 5. In the Educational Section, the remaining fixtures are as follows:—July 1, Co-Education in Schools and Universities, papers and discussions from 10.30 to 1. July 3, Training of Teachers, 10.30; Examinations and Examination Systems, 2. These meetings are held in the Westminster Town Hall. Miss C. S. Bremner is the honorary secretary of the Section.

ON July 6 the Duke of Cambridge will open the new buildings of King's College School, at Wimbledon.

A KINDERGARTEN demonstration will be given in the Portman Rooms on July 7, when the students of some half-dozen training schools will play simple kindergarten games, and otherwise "demonstrate the system." Representatives are expected from the Child-Study Society, the Parents' National Education Society, the Sesame Club, the Pestalozzi Society, &c.

THE Intermediate Examination in Arts and Science at London University begins on July 10.

A VACATION course of lectures for women in horticulture and kindred subjects will be opened at Reading on July 11.

PROF. JEBB, M.P., will distribute the prizes at King's College, London, on July 12.

A "NEW FRENCH HOLIDAY COURSE" will be held at Caen from July 30 to August 25. It enables an English student to spend twenty-seven days in one of the most beautiful provinces of France, to live in a first-class hotel or a good family, to attend twenty-five lectures, thirteen excursions, and several friendly meetings, for about £10. Inquiries should be addressed to Mr. A. Pratt, B.A., Lyndale, Burgoyne Road, Harringay, N. Some of the lectures of this Course will be given by Prof. L. Bascan, who contributed to the Educational Times, in November 1897, an interesting paper on "Public Education in France."

THE Education Department has received from Berne an

announcement that an educational exhibition will be held in that city in the autumn. The authorities organizing the exhibition will welcome exhibits illustrating education in this country. They are specially anxious for exhibits showing methods of physical training, and the nature and organization of school games. Communications from those willing to take part in the Exhibition should be addressed to the Director, Schweizerische Permanente Schulausstellung, Berne, from whom further particulars can be obtained.

Education Gossip. MORE and more of our great towns are taking up the task of co-ordinating the various institutions devoted to education. We are glad to see that Bristol is now considering a scheme for this purpose, and negotiations are proceeding between the authorities of the University College, the Merchant Venturers' Technical College, the Bristol School Board, and the School of Art. The municipalization of the Bradford Technical College is a fact which may be regarded as tending in the same direction.

AT Sheffield there is a proposal to sell the site and buildings of Wesley College, a proprietary institution, and, if this is agreed to, it is anticipated that they would be purchased on behalf of the University College. The original Firth College would then be offered to the School Board, whose central buildings it adjoins. The provision of the purchase money by the Board would probably carry the whole scheme into effect.

A COMMITTEE has been formed at Bath with a view to preventing the collapse of Bath College, the College Company having gone into voluntary liquidation.

AT a meeting of the Council of University College, London, held on Saturday, June 17, Prof. Montelius was appointed Yates Lecturer in Archæology for the year 1900. Andrews Entrance Scholarships of £30 each were awarded to Mr. K. E. Aitken, of Berkhamsted School, and Miss Mary S. Lilley, of Arbroath High School. A Slade Scholarship in Fine Art of £35 per annum for two years was awarded to Mr. C. J. Sharp. The Research Medal was awarded to Dr. S. B. Schryver.

THE zeal of Birmingham is spreading over the Midlands. A Committee has been formed at Hanley to prepare "a statement of the case" for a new University College for North Staffordshire, and to convene a public meeting as soon as its report is ready for presentation.

AN educational monthly paper is somewhat handicapped in reporting meetings which take place on one of the latest days of the month. The Froebel Society held its annual meeting on May 29, when Madame Michaelis occupied the chair as President, and Lady Isabel Margesson read a paper on "The Importance of Self-Expression." Miss Kate Stevens had for her subject "Lessons from the Standpoint of the Child," and Mr. Earl Barnes addressed the meeting on the same theme.

FOR some time past negotiations have been on foot between the Governors of the Leeds Grammar School, the Council of the Girls' High School, and the Charity Commissioners, with regard to the purchase of the High School by the Governors of the Grammar School. At a recent meeting of the Girls' High School Company, Limited, the assent of the shareholders was given to the proposals laid before them, which include the rebuilding of the school, to accommodate 300 girls.

THE question, "Who invented the lucifer match?" is succeeded by a little controversy in the *City Press* as to who was "the pioneer of technical education." Mr. John Warren writes to our contemporary:—

I have heard it declared by successive Lord Mayors at the Mansion

House, and by others in public, that the Turners' Company were the first of the City guilds to hold exhibitions and give prizes for technical education, and I know that my uncle, Mr. John Jones, who is "the father of the Company," was the first to start the idea in the Company. The exact date of the first exhibition I do not at this moment remember, but it must be about forty years ago. Mr. Jones often in Common Hall years ago also advocated the necessity of encouraging technical education.

John Jones, then, let it be—subject to the reflection that "post hoc" is not always "propter hoc."

By the resignation of the Vice-Provost of Trinity College, Dublin, and the death of Dr. Shaw, two men of letters well known to the English reading public, Dr. Mahaffy and Dr. Traill, succeed to the responsible position of Senior Fellows.

"TOM BROWN'S" only begetter, His Honour Judge Hughes, is now commemorated by a marble statue at Rugby. It was unveiled on Speech Day by Mr. Goschen. The statue cost £1,000, and there was a balance of a quarter of that amount for the Rugby School Mission.

WE have received from the Yorkshire Ladies' Council of Education an elaborate curriculum for a training school of commercial education. The object is to enable girls of sixteen and upwards to prepare themselves for commercial life. We wish success to this excellent new departure.

SIR CLEMENTS MARKHAM, Lord Kelvin, Sir H. Howorth, Sir Joseph Hooker, and other Fellows of the Royal and Geographical Societies, went on June 22 as a deputation to Mr. Balfour to ask for Government aid towards fitting out an Antarctic expedition. Mr. Balfour was very complaisant, and held out hopes that the Chancellor of the Exchequer "would find it in his power to give substantial aid." Not only so, but he declared that he should be much surprised "if the expedition did not come across a great number of things which they did not expect to find, which would throw new light on many of their most important scientific theories." A giver can afford to be genial and expansive.

MR. HAROLD LITLEDALE, M.A., Senior Moderator of Trinity College, Dublin, now Vice-President of Baroda College, has been appointed to the Chair of English Language and Literature at Cardiff University College, in succession to Prof. Vaughan.—At the same College, Mr. Sydney J. Chapman, M.A., is appointed Lecturer in Political Science.

THE Curators of Edinburgh University have appointed Prof. E. A. Schäfer, F.R.S., Professor of Physiology, University College, London, to the vacancy in the Chair of Physiology caused by the death of Prof. Rutherford. The new Professor succeeded Prof. Burdon Sanderson in the Jodrell Chair of Physiology in University College, London.

THE University Court of Aberdeen have appointed Dr. J. L. McIntyre to the Anderson Lectureship in Comparative Psychology, in succession to Dr. G. F. Stout, who was recently elected Wilde Lecturer at Oxford.

THE Boden Professorship of Sanskrit at Oxford will be filled in the Michaelmas term.

APPLICATIONS for the Chair of Greek in Glasgow University are to be sent in on or before July 8.

By the death of Dr. W. G. Blaikie, of Edinburgh, the Chair of Theology (Free Church) filled by him becomes vacant.

THE REV. E. H. PEARCE, Vicar of Christ Church, Newgate

Street, has been elected Professor of Bible History at Queen's College, Harley Street.

PROF. W. JAMES, of Harvard, has been selected as Gifford Lecturer at Edinburgh.

THE *Athenæum* says that Mr. P. Hume Brown is expected to be the first Fraser Professor of History and Palæography in the University of Edinburgh.

THERE is a vacancy in the Professorship of the Theory, Art, and Practice of Education at Owens College, Manchester; and a new Professorship of Law has been founded at the Yorkshire College, Leeds.

AN Assistant-Lecturer in Mathematics is required at University College, Liverpool. "Applications as soon as possible."

THE following appointments have been made at Cambridge:—Mr. J. W. Clark, Registrar of the University, to be Sanders Reader in Bibliography; Mr. H. M. Macdonald to be Lecturer in Mathematics for five years; Mr. A. E. Shipley to be Lecturer in Advanced Morphology of Invertebrates for five years; and the Rev. H. C. Beeching to be Clark Lecturer in English Literature at Trinity College.

DR. HERBERTSON has been appointed Assistant-Reader in Geography at Oxford; Mr. H. N. Dickson, Lecturer in Physical Geography for two years; and Mr. G. H. Grundy, Lecturer in Ancient Geography for one year.

THE REV. R. WATERFIELD, M.A., New College, Oxford, has been elected Principal of Cheltenham College in succession to the Rev. R. S. de C. Laffan. Mr. Waterfield, who was for a time tutor to Prince Arthur of Connaught, has been an assistant-master at Rugby since 1893.

THE Governing Body of the City of London College are about to appoint a Principal. Applications should be made on or before July 8.

MR. HOBHOUSE, Headmaster of the Durham Cathedral School, has been compelled by ill-health to resign his position, after a tenure of five years.

MR. J. W. ILIFFE, M.A., has been appointed Headmaster of the Central Higher School, Sheffield. He is succeeded at Cambridge by Mr. James Wallis.

THE Council of Aberystwyth College have appointed Miss C. P. Tremain, B.A., Gilchrist Travelling Student, to be Mistress of Method and Assistant-Lecturer in Education.

WE omitted last month to record the appointment of Mr. F. Collins, Science Master at Tonbridge School, as Headmaster of the Central Foundation School, in succession to Dr. Wormell.

Literary Gossip. MR. A. J. BALFOUR and Mr. Lecky have been added to the Committee of the London Library, in the place of Mr. Gladstone and Sir Henry Barkly respectively. Mr. Leslie Stephen presided at the annual meeting on June 15, and mentioned that a total sum of £18,900 had been expended on the new buildings. The number of subscribers is now 2,631.

THE last grant of books from the Clarendon Press is that made to the Reference Library at Monte Cassino, on the eleven hundredth anniversary of the death of Paulus Diaconus.

This is a specially interesting gift, and it may be looked upon as an acknowledgment of the debt which Oxford, in common with all scholars in Western Europe, has owed for many centuries to the historian of the Lombards.

PAUL WARNEFRID lived as a young man at the court of the ill-fated Desiderius, at Pavia; and, on the smashing of the Lombards by Charles the Great, he withdrew to the monastery of Monte Cassino. From thence he was induced by Charles to migrate to his court at Aachen, where he worked with Alcuin the Englishman for the promotion of learning amongst the Franks. But he found the monastery more congenial; and there he completed his well-written and truthful history.

THE case of the Universities of Oxford and Cambridge against Messrs. Gill & Son, which was heard in Chancery by Mr. Justice Cozens-Hardy, and ended in the granting of an injunction against the defendants, was by no means all plain sailing. The "Cum Privilegio" is a sacrosanct phrase; it is right that the Universities should reap some profit in return for their responsible labour in producing flawless Bibles; and, in any case, an Act of Parliament has given them a copyright.

ON the other hand, the Rev. F. Marshall, the editor of the "St. Luke" and "The Acts of the Apostles," and Messrs. Gill, his publishers, do not seem to have had any idea that they were infringing a copyright. What they did was to collect together the principal emendations in the Revised Version, in the case of two out of many books in the Bible. This may amount to excessive quotation, but it is never easy to say when excessive quotation amounts to legal infringement of copyright. However, the case has been heard and decided, and the decision must be accepted.

A COMMITTEE formed some months ago, in accordance with a resolution of the Association of Headmasters, "to consider ways and means of conducting, through the Press and otherwise, a movement for the purpose of placing before the country the claims of Secondary Education to national aid and recognition," of which Dr. R. P. Scott is the chairman, publish to-day a volume of short essays with the title, "What is Secondary Education?" (Rivingtons). The twenty or thirty writers include many who may claim a hearing on this important and complicated subject. We hope to notice the book next month.

A CORRESPONDENT asks us for a book on anthropometrical and psycho-physical measurements "as subsidiary to education." By a coincidence we receive this month from Mr. Arthur MacDonald, Specialist to the United States Bureau of Education, an elaborate and well illustrated volume on the "Experimental Study of Children" (Government Printing Office, Washington), with an account of such measurements, and of the apparatus employed in taking them, together with a bibliography of the subject.

MR. E. C. MARCHANT, of St. Paul's School, has undertaken to edit for Messrs. Bell & Sons an "Illustrated Classical Series" for the lower and middle forms. The idea of systematically illustrating classical texts for school purposes is both novel and good. Mr. Marchant's list of editors for particular texts includes several of his colleagues at St. Paul's, the headmasters of Christ's College, Brecon, Plymouth College, Blackheath School, and St. Edmund's, Canterbury; the Rev. F. Conway and Mr. G. H. Wells, of Merchant Taylors'; the Rev. E. H. S. Escott, of Dulwich; Mr. J. W. E. Pearce, of University College School; and Mr. J. F. Charles, of the City of London School. The texts so far announced are all Latin. Mr. Marchant is also preparing for the same publishers a translation of the sixth and seventh books of Thucydides.

MESSRS. J. M. DENT & Co. have in preparation two additions

to their "Modern Language Series," viz., "The First German Book," by S. Alge and Walter Rippmann, and "German Daily Life," adapted by Walter Rippmann from Dr. R. Kron's "Der Kleine Deutscher."

* * *

MESSRS. LONGMANS & Co. have arranged for the publication of a series of books dealing with the functions of the State and Society in America, under the title of the "American Citizen Series." They will be under the editorship of Dr. Bushnell Hart, of Harvard University, one of the editors of the *American Historical Review*. The first volume, which is nearly ready, is the "Outline of Practical Sociology," by Dr. Carroll D. Wright, the United States Commissioner of Labour.

FRENCH EDUCATION AND POLITICS.

A CORRESPONDENT writes: "An educational experiment of some interest is to be tried in France in the near future. M. J. Duhamel, now a master at Harrow, is in charge of the scheme, and will in all probability be the first headmaster of the new school, which is to be called 'Le Collège Normand.' He states as his object 'the moral, physical, and mental training of individuals so carried out as to secure the strength of the nation,' and has created a scheme which he claims will achieve this end. He holds that the disease from which France is suffering to-day is directly due to her system of education, and believes that a radical reform of the latter will eventually lead to a more healthy national life. The rioting in Paris during the Dreyfus agitation, the scenes in the Chamber, the tone of the Press, are all symptoms of the same disorder, which, it is hoped, may be cured by the one remedy. In England it is impossible that such scenes as have disgraced France could occur, for the simple reason that by our education we, as a nation, recognize the interdependence of individuals. This leads us to acquiesce in, if not to approve, the laws of the country, and to look with tolerance on the opinions of others. All this is the outcome of our school training. In youth we are taught that our individual actions may injuriously affect the prestige of the school, that school rules are generally for the good of all, and that freedom of thought and speech must justly be granted to all equally with ourselves. Naturally these ideas remain with us when we join the larger community outside, and influence our conduct throughout life. In France, on the other hand, the schools are merely mental forcing-houses through which it is necessary for the child to pass in order that he may, if possible, obtain a lucrative appointment under Government. Hence it follows that moral training is almost wholly neglected; indeed, it has been stated that immoral acts are the rule rather than the exception in the State secondary schools. But this again may be due to the absence of that *esprit de corps* an Englishman associates with his school. Physical training, too, is thought to be of no account, and so but two hours per diem are allowed for recreation; hence, possibly, the decline in French physique. This system necessitates cooping up the pupils for twelve hours per diem in more or less badly ventilated rooms, thus impairing their health, and often sowing the seeds of future fatal diseases. Indeed, many doctors attribute the prevalence of consumption in France to the *lycées*. It is the consideration of these differences, national and educational, which has led M. Duhamel and his friends to believe that an adaptation of the English public-school system will tend to develop across the Channel those attributes of good citizenship which are now lacking.

"Having clearly conceived what it is they wish to achieve, the promoters of the new school have mapped out the lines on which they will work. In so doing, M. Duhamel's twelve years' experience in England has naturally been of service, and, although our public-school system is not to be transplanted bodily, many of its salient features have been adopted. The school will be worked on the 'house' system, so as to break down, so far as may be, the existing hierarchy of administration which leads the pupil to mistrust his masters, and is, therefore, an impediment in the educational path. In order to establish a good moral tone, the number of pupils will be at first restricted to thirty-five, who, it is hoped, will benefit sufficiently, by close personal contact with the masters, to be able to influence new-comers when the school is enlarged. It is also expected that the personal example of the masters, and the knowledge that they are pioneers, will lead the earlier pupils to take an interest in games, and so create that healthy desire for distinction in the playing-fields which has done so much for the physical development of our own country. With this object in view, it has been decided to reduce the hours devoted to mental work from twelve to six; but it must be admitted that the founders have been largely influenced in this decision by the belief that the amount of knowledge acquired does not necessarily correspond with the number of hours spent on its acquisition. Most of the time thus saved will be devoted to football, fives, lacrosse, and manual training. Cricket, for some reason, is not to be played. No less important a revolution than the foregoing is also to take place in the schoolroom.

At present, it is customary for pupils to specialize from the age of ten. At 'Le Collège Normand' fourteen will be the limit. Up till then the aim will be, as was that of Thring, 'to find out in each individual boy his aptitude and capacity for a special sphere of action.' In the meantime, great attention will be paid to the teaching of natural science, modern languages, history, and geography. Latin and Greek will be left till later, and, even then, subordinated to subjects of more practical value in after life.

"In arranging the religious training of the pupils, many difficulties had to be overcome. In the first place, the conflicting claims of Roman Catholics and Protestants had to be considered, and the system moulded to include pupils of all faiths. To meet this difficulty it has been decided to allow the local pastors of all denominations access to boys whose parents may desire it. The masters will not preach any doctrine. They will merely seek to apply and obey the precepts on which we are all agreed, bearing in mind at the same time that a boy, like a man, believes what he can, not what he is ordered to believe. Another difficulty had to be met by compromise. The promoters believe implicitly in the English dormitory system, and would have only too gladly introduced it, had it been possible; but, unfortunately, there is a very strong prejudice against the system in France, heightened, no doubt, by its practical failure in the State seminaries. Under these circumstances, it has been decided to provide a separate room for each pupil. This arrangement is, however, not without its corresponding advantages, for it will secure such privacy as boys may require for the conduct of the devotions they have been accustomed to.

"In conclusion, it should be stated that M. Duhamel is prepared to commence his school as soon as satisfactory premises can be obtained. What he wants is an old *château*, with plenty of ground and trees and good water, in order that the boys may live among healthy surroundings; but, so far, he has been unable to secure a suitable estate. The scheme is being financed by a party of Rouen cotton-spinners, who are only asking 3 per cent. on their money."

SCHOOLBOYS' BOOKS.

No one who is well acquainted with boarding-school life at the present time will dispute Mr. A. C. Benson's remarks in *Literature* (May 13, 1899):—"Books are now a part of the normal furniture of life for the ordinary schoolboy; they are a source of leisurely enjoyment which plays a large part in nearly every boy's life." The statement probably requires some modification when applied to day boys, though it is wonderful what interest they can be led to take in books with a little guidance and stimulus. It would be a good plan in day schools if one hour a week were kept for reading extracts from library books to middle forms, which are usually more easily moved than higher ones, so that a habit of reading good books may be more easily formed.

Schoolboy readers fall mainly into three classes. There are the clever boys who read poetry, pretty much as Dean Farrar says he did at school, and who take an interest in literature generally. During a recent visit to Winchester College, for example, the writer noticed with pleasure the number of books of good literature in the room where the studies are. At the opposite end of the scale are those who read the vulgar comic papers and the dreadful stories that every schoolmaster hates with his whole heart as the plague-seed of foolish visions and idle dreams. Between these two classes comes the great class of the average boy, and it is with him that we have to do.

The average boy reads the magazines, such as the *Windsor*, the *Strand*, *Pearson's*, with great avidity. He also likes to turn over weekly the illustrated papers, such as the *Graphic* or *Black and White*. He is not quite so fond of the *B.O.P.* as he used to be; at least, that is the writer's personal experience. Occasionally he finds the *Strand* a little dry; but it gained a hold on his affections in the days of "Sherlock Holmes" that he is slow to give up. Many boys like *Chums*; but it is not thought quite so "class" as the *B.O.P.* Then all athletic boys, and, in fact, boys generally, follow the athletic columns of the newspapers with the greatest enthusiasm. Their knowledge of details is often amazing, and different boys keep different records with great care. For instance, one will follow a particular player's career for several years, another a particular county or football club. *Answers*, *Tit-Bits*, and *Pearson's Weekly* are constant favourites, and quite deserve the praise bestowed on them recently by Dr. Field, of Radley. They form a tolerable *via media* between the things that a schoolmaster would like boys to read, but which he knows they will not read, and the things that he knows many of them would like to read, though he does not approve them.

Now, as regards books, it is not quite so easy to judge of boys' tastes. They can buy magazines and papers for themselves, and what they buy faithfully reflects their real feelings. Books they like to have and skim, whether they read them thoroughly or not; but these they do not often buy. Hence they are dependent on presents and on the school library. Of certain writers they never tire. Henty, Jules Verne, Manville Fenn, Captain Marryat, Mayne Reid, are favourites

everywhere. Boarders read with avidity all tales on school life, and "Eric" and "St. Winifred's" are still firm favourites. Perhaps "The Fifth Form at St. Dominic's" holds the first place in their favour, and all books by Talbot Baines Reed are popular. Day boys are somewhat shy of these books till they hear a chapter; then they read them as eagerly as boarders do. "Tom Brown's Schooldays" is not, in the writer's experience, the favourite that it is with older people. The first part chokes boys off. If they are told to start later on, they will read it. Otherwise they often return it very dolefully. Scott and Dickens have gone out of favour to an amazing extent. The more thoughtful boys read "Ivanhoe," "Kenilworth," "Pickwick," and "Oliver Twist"; but the majority do not care for these authors. Still, a little persuasion works wonders. Two of Kingsley's books are typical boys' books; but not many take to them as older persons do. The historical parts of "Hereward the Wake" frighten boys; but they like the book if they are told to skip them. A large number do read "Westward Ho!" but it does not "find" them as it does older people. All books by Conan Doyle, Max Pemberton, Stanley Weyman, Rider Haggard, and R. L. Stevenson are read with eagerness. Among these authors, perhaps, the last has the pre-eminence. Some boys take kindly to such books as "John Halifax, Gentleman," and very many like three or four of Mrs. Henry Wood's novels, especially "The Channings" and "Roland Yorke." The historical novels of Edna Lyall are always liked, and older boys read "Donovan" with great interest. "The Cloister and the Hearth" is liked when read, but it often needs a little introducing. If the bear story be read, it goes, and becomes a friend.

It is an undoubted fact that the average boy likes a good book rather than a poor one, and no one derives more keen enjoyment from the standard novels of the day.

"Robinson Crusoe," "Swiss Family Robinson," and "Gulliver's Travels" find a place in most libraries and go out regularly; but it is very doubtful whether boys read the last through. They like pieces and they enjoy the illustrations. Harrison Ainsworth's books are generally popular, and occupy the place one would like Scott to occupy. "The Pilgrim's Progress" is scarcely a general favourite. The British schoolboy is very sceptical about any book that has the reputation of being "good." He reads a story and takes its lessons to heart quite seriously; but, if you tell him that a book will do him good, he does not want to read it after that. In this he is only a chip of the old block, for Englishmen usually hide their deeper feelings. Biographies are not over-popular, though Garfield's and Lincoln's lives are often read. A boy will also take such a book as Clark Russell's "Nelson" ("Heroes of Nations" Series), and look it through carefully, but he does not often read much of it. Benson and Tait's "Men of Might" is often read when spoken about. Many of the pieces in Green's "Readings from English History" (Macmillan) are deservedly popular. The present writer has been very much disappointed with the small success he has met with in trying to get boys to read such books as Smiles's "Self-Help." But perhaps that is expecting them to like one's own books. The little stories in "Heart" are always liked, and afford excellent material for longer compositions. The little reader just issued by Cassell's, called "In Danger's Hour," at once took hold of boys' fancies, and it would be hard to say which story is most liked.

SOMERSET BATEMAN.

REVIEWS.

RHETORIC AND THOUGHT.

Euripides and the Attic Orators. By A. Douglas Thomson. (Macmillan.)

This study of ancient opinion, suggested to Mr. (now Dr.) Thomson by Prof. Butcher, and presented as a thesis to the Senatus of Edinburgh University, raised expectations in the mind of the present writer which, he is bound to confess, have been somewhat disappointed. To be sure, a mass of information on topics of much interest to students of psychology has been brought together and tabulated; but, were it not that Dr. Thomson expresses himself distinctly on the matter at the outset, we should almost have supposed that he had mistaken the nature of his mandate. It would, we venture to say, have been a much more fruitful subject of inquiry—and one, we must add, for which the author appears to us to be better qualified—to compare the language of Euripides, the rhetorician of the boards, with the language of the Orators, the rhetoricians of the courts. To tabulate the opinions put forward by Euripides through his characters on the graver problems of life is a task worth undertaking. To set in order the views thrown out by the great advocates on those problems is, perhaps, less useful, but is not waste labour. But what result was to be expected from a comparison of those views we confess we do not understand. Euripides is a great teacher and a deep thinker. The Orators—so far as the "great problems" are concerned—are of necessity trivial and

commonplace; and it seems odd that Dr. Thomson should have had to write a book to discover the fact. Discover it he does in the end; for when he comes to sum up his results, such as they are, he tells us that the Orators "never think of inquiring, as the poet did, what the origin of evil is, or to what standard conduct is to be referred." No, indeed—and why should they? Fancy Sir Edward Clarke treating the Judges to an inquiry on the origin of evil! "But they agree with him in extolling virtue as the highest of all things, in inculcating temperance and moderation"—and so on. Of course they do; for Euripides was a good man and they were good advocates.

And yet we repeat that Dr. Thomson has collected a quantity of interesting facts. What he has enabled the student to do is, first, to find at a glance what sort of commonplaces the Orators indulged in when they had occasion to touch on the "great problems," and, secondly, what views Euripides puts forward in his different plays on religion, politics, women, and so forth. That Euripides represents a later stage of Greek thought than is represented by Æschylus and Sophocles is obvious; and that fact does not receive any new light from the discovery that the Orators agree with him "in extolling virtue as the highest of all things, in inculcating temperance and moderation."

Not Euripides the preacher is to be compared with the advocates as a whole; but surely Euripides the rhetorician, the stylist. This task calls aloud for performance, and Dr. Thomson would, we are convinced, have performed it admirably. For he has all the patience necessary, and the gift of marshalling facts. Doubtless, too—it is, indeed, evident from his last chapter—he could draw important conclusions from facts from which any conclusions of importance were to be drawn. The present writer once attempted to make tables exhibiting the similarity of language used by Thucydides and Euripides, but was deterred from pursuing the task on hearing from an eminent American scholar that he was engaged in a similar work. It would be highly interesting to trace the resemblance in style and language between these two, and to throw in Demosthenes, not only as rhetorician, but as professed follower of Thucydides. But, when we come to opinions, it is manifest that the Orators, being good advocates, were, as a rule, bound to express, not their personal views on "great problems," but merely the views of the average Athenian. The only exceptions here would be the public harangues of Demosthenes and the exercises of Isocrates. These, no doubt, might be fairly compared as *teaching* with the teaching of Euripides; and so, in the comparison of opinions, we should get Euripides, Demosthenes in part, and Isocrates in part. To these we would attempt to add Thucydides in his speeches and reflections. And thus our programme would be complete in both parts, one part dealing with language, the other with thought.

On the whole, though Dr. Thomson's book is not what its title led us to hope, yet he has performed a service by making these collections.

R. H. QUICK.

The Life and Remains of R. H. Quick. By Francis Storr. (Cambridge University Press.)

Mr. Parkin's life of Edward Thring recently excited much interest in the educational world, and our attention is now called to the life of a not less interesting man, the late R. H. Quick. Though differing widely in character and in the circumstances of their life-work, these two men have much in common. Both have left permanent memorials of their work—Thring, in the great school that he created at Uppingham; Quick, in his "Essays on Educational Reformers." But the main interest in each biography lies in the vivid picture it gives of an original and taking personality, and the main value to the succeeding generation of teachers lies chiefly in what each man thought and said in his ceaseless struggle with what he felt to be wrong methods of education in this country. What they have in common is well expressed by Thring in a letter to Quick: "You are the only man I have met with who has not been a mere partisan in education, who has not looked at it through professional spectacles of more or less self-interest, and been a modernist because that was his line, or a classicist because that was his line; but has quietly looked and thought about what is best."

Quick had the habit of recording his thoughts on all sorts of current topics. The selections in this volume, we are told, are culled from forty note-books. Like other very sensitive persons, he had a way of depreciating himself. As John Bunyan wrote himself down the chief of sinners for playing tip-cat on a Sunday, as Carlyle in his lonely sorrow after his wife's death found relief in exaggerating or inventing his own shortcomings, so we might

suppose from Mr. Quick's references to his work in the school-room that he was an incompetent master. It is, we think, an open question whether the editor has done wisely to include such passages, though we admit that they cannot fail to endear the memory of a teacher so humble and so conscientious. There is plenty of evidence printed from other teachers and from pupils that, in spite of a certain occasional want of tact, he was both successful and beloved. The true explanation of any want of success that he may have incurred in the practice of his profession is probably to be found in frequent ominous references to headache and "brain-tiredness." It was his headaches, we are informed, that finally caused him to leave Harrow.

Quick held an assistant-mastership in several schools for short periods—Lancaster, Guildford, Hurstpierpoint, Cranleigh. Here he soon found a field for the exercise of his dominant critical faculty.

We cry up our business, and insist on the importance of education; and then, when boys are entrusted to us, we compel them to cram lists of useless words, and call that education! As far as I can see, no one here thinks whether one thing is better worth knowing than another.

But Quick, though not without some talent for grumbling, was pre-eminently a constructive critic. Widely read, even at that time, in German *Pädagogik*, he was amazed to find how narrow are the interests, how contractive is the mental horizon of an average assistant-master. From the first he perceived that no improvement in the educational method could be expected under a system that forced the men to shun the occupations and limit their interests wholly to those of the boys. The one thing necessary is that the master should receive some professional training, or, at least, should acquire some effective desire to know what other teachers are doing. At Harrow, where he was appointed to a mastership in 1869, he found a condition so remarkable that we must quote the words in which, in later years, he summed it up:—

Sainte-Beuve says that the University teachers of the middle of the sixteenth century have come to the worst stage possible, "la diversité dans la routine." This was very much the state of things when I was a master at Harrow. Every man taught just as he liked. No attempt was made at any uniform system, but men were so overworked that they could not get on without routine.

To the question of the training of teachers Quick naturally gave much attention. His notes on the subject are extremely interesting. We learn from them a good deal about the opinions and, to some extent, the methods of such eminent educationalists as Abbott, Temple, Eve, and Walker. Occasionally the reminiscences are diverting.

We had met to consider a scheme for a Training College for secondary masters. In the middle of the discussion, Temple said casually: "By the way, what have they of this sort in France?" Sir J. K. S. didn't know, but thought it didn't matter. "French education lies in ruins." I muttered, "*Ecole Normale Supérieure*," but not very loud. Like most Englishmen speaking a foreign language, I avoid false pronunciation as much as possible by not pronouncing the words loud enough for any one to understand them. Nobody else volunteered information, or seemed to think further information desirable.

Some time after leaving Harrow, Quick became Rector of Sedbergh and a governor of the school. Here his attention was given to another aspect of English education in the government of a school by a committee, and the difficulty of giving a life trustee an adequate motive for doing his duty.

Of the chief work of Quick's life, or at any rate of his literary work, we have singularly little in this volume. His book, written apparently after his leaving Cranleigh, attracted little attention in England, though in America it was pirated and sold largely. It took this country twenty years to find out its merits. The last years of his life were spent by Quick in literary retirement at Redhill. He had become a recognized authority on his subject, whose advice and whose books were always accessible. Foreigners in search of information (or a small loan), or American students of pedagogy, gravitated naturally to Redhill. He died somewhat suddenly in 1891, at the house of his friend, Prof. J. R. Seeley.

In this brief notice we have been able to draw attention only to some of the more prominent characteristics of a writer whose knowledge of the history of education was unusually wide, whose power of fructifying the best thoughts of past thinkers was equalled by his own power of origination. The excerpts in this book, ranging over all sorts of subjects—literary, religious, and educational—will be found of great interest by all who enjoy a

vigorous and candid treatment, not untouched by humour, of questions of the day and of personages in the educational world, many of whom are still living. Whether the latter will always equally enjoy these passages is another question.

MATTHEW ARNOLD AGAIN.

"Modern English Writers."—*Matthew Arnold*. By Prof. George Saintsbury. (Blackwood & Sons.)

Here is a new literary series which should be sure of a welcome from all whose taste is satisfied by daintily wholesome, studiously simple fare. "Modern English Writers" will be uniform in shape, length, and price with the publishers' "Ancient Classics for English Readers" and "Foreign Classics." The volume before us heads the list, and it is to be followed by "R. L. Stevenson," by L. Cope Cornford; "Tennyson," by Andrew Lang; "Ruskin," by Mrs. Meynell; "George Eliot," by Sidney Lee; "Browning," by Augustine Birrell; "Froude," by John Oliver Hobbes; "Huxley," by Edward Clodd; "Thackeray," by Charles Whibley, and "Dickens," by W. E. Henley. The assignment of the "Tennyson" and the "Froude" is, perhaps, in a measure, experimental; but we have no doubt that these ten monographs will, in any case, be thoroughly good reading.

Within the past two years we have had at least two small books on Matthew Arnold by Englishmen, and at least another two from America. That seems to be the natural outcome of Mr. G. W. E. Russell's authorized edition of Arnold's "Letters" in 1895. Prof. Saintsbury frankly admits that "Arnold, like other good men of our times, disliked the idea of being made the subject of a regular biography"; and he adds that "it seems to be a duty to confine oneself" to the information of the letters, to that which is already public property, and to "things literary." Things educational played a large part in Arnold's life, and, though Prof. Saintsbury passes over them somewhat lightly, he does not fail to present us with an estimate of the work and influence of Arnold in respect of education. He does not profess to be in sympathy with Arnold's educational views:—

It may undoubtedly be claimed for him—by those who see any force in the argument—that events have followed him. Education, both secondary and University education in England, has, to a large extent, gone since on the lines he indicates; the threatened superiority of the German bagman has asserted itself even more and more; the "teaching of literature" has planted a terrible fixed foot [!] in our schools and colleges. But, perhaps, the weight actually assigned to this kind of corroboration is rather imaginary. That a thing has happened does not prove that it ought to have happened, except on a theory of determinism, which puts "conduct" out of sight altogether. There are those who still, in the vein of Mephistopheles-Akinetos, urge that the system which gave us the men who pulled us out of the Indian Mutiny can stand comparison with the system which gave France the authors of the *débâcle*; that the successes of Germany over France in war have no necessary connexion with education, and those of Germany over England in commerce, diplomacy, &c., still less. They will even go further—some of them—and ask whether the Continental practices and the Arnoldian principle do not necessitate divers terribly large and terribly ill-based assumptions, as that all men are *educable*, that the value of education is undiminished by its diffusion, that all, or at least most, subjects are capable of being made educational instruments, and a great many more.

Mephistopheles-Akinetos may on occasion, it is only too evident, become serious enough for the rôle of "Athanasius contra mundum," for on these "terribly ill-based assumptions" is built "the system which gave us the men who" organized English labour, reconciled the United States, redeemed Egypt, stamped out fanaticism in the Soudan, withstood Jingoism, maintained free trade, stood fast for peace and arbitration, quintupled the readers of the best English literature, filled the technical institutes, depleted the gaols, and brought us as a nation (so the magistrates and police are telling us) almost within sight of the goal of national temperance. Does this look like the value of education being diminished by its diffusion?

Prof. Saintsbury interests us a good deal more with his appreciation of Matthew Arnold as a man of letters and a critic. He is quite sufficiently discriminating—indeed, we can hardly say if it be discrimination—to speak of Arnold's playing "the part of Chesterfield-Socrates, to the diversion of some, to the real improvement of many, but a little to his own disaster." That note is often struck; but, at any rate, we should not have preferred a mere eulogy, and, if Prof. Saintsbury seems occasionally to lack the sympathetic touch, he is not conventional in his estimate. In fact, this volume is full of stimulation, and keeps its readers ever on the alert.

A SCOTTISH PHILOSOPHER.

"Famous Scots Series."—*James Frederick Ferrier*. By E. S. Haldane. (Oliphant, Anderson, & Ferrier.)

The "Famous Scots Series" grows apace and has now reached the twenty-eighth volume. The biographies of Hume and Reid have previously appeared, and we have here a further contribution to the history of the Scottish schools of philosophy. Historically, a life of Sir William Hamilton might fitly have preceded this work. Ferrier marks a stage when the authority of English philosophers was fast disappearing before the wave of German thought that was soon to engulf it. Sir William Hamilton was but slightly affected by the results of German metaphysical inquiry, but Ferrier—about twenty years his junior—having spent some time in Germany, was, as Mr. Haldane says, probably more influenced by German thought than he was himself aware. Although Ferrier's lectures were held in high esteem in his day, it seems clear, from the many appreciations of his learning and character by contemporaries, that his power over his students was derived more from his enthusiastic and sympathetic character and bearing than from a deep or subtle intellect. This is, doubtless, the secret of his high reputation as a teacher, and of the affection felt towards him by his students. His wife's playful summing up of his philosophy—that "it made you feel that you were sitting up on a cloud with nothing on, a lucifer-match in your hand, but nothing to strike it on"—had doubtless a substratum of truth. But we fear the teaching of many other philosophers is open to the same criticism. If the problem of the true relation of mind to matter and of the universe to the soul was not simplified by Ferrier's inquiries, they were amply justified by the effect upon his own character, and by its influence on all who knew him. After all is said, a philosophy must be judged from an individualistic standpoint; and later developments in philosophy, as in science, are not a fair test of the value of a man's teaching. This book is a very readable and worthy addition to the series.

SHREWSBURY SCHOOL.

Annals of Shrewsbury School. By George William Fisher, M.A. (Methuen.)

Three headmasters have presided over Shrewsbury during the nineteenth century—Samuel Butler, B. H. Kennedy, and H. W. Moss; and, throughout the whole of this time, the exceptional distinction of the school has been maintained from year to year at the highest pitch. It is not long since we noticed Mr. Butler's excellent "Life and Letters" of his grandfather, who raised Shrewsbury from a day of small things to its later splendour, and refounded it upon solid and enduring traditions of classical scholarship. Mr. Fisher makes good use of those volumes for the period to which they refer, and adds a thoroughly genial and appreciative account of the pioneer headmaster. Dr. Kennedy's thirty years are adequately recorded. Kennedy, of course, was a pupil of Butler's, just as Mr. Moss (after an earlier career at Lincoln) was a pupil of Kennedy's. The latter was head boy of the school at the age of fifteen, and eventually, like two of his brothers and his nephew Mr. Justice Kennedy, Senior Classic at Cambridge. He became headmaster in 1836, and in 1841 the numbers in the school had fallen to less than half of what they were in Butler's best days. After the foundation of Cheltenham, Marlborough, and Rossall, there were rarely as many as a hundred and thirty on the books, and at one time the number was as low as eighty. Yet within the thirty years from 1841 to 1870 Shrewsbury had thirty-seven men in the first class of the Classical Tripos, of whom nine were Senior Classics, twelve were University Scholars, eight were Chancellor's Medallists, eighteen took the Brown Medal, nineteen the Porson Prize, three the Camden Medal, and eight the Members' Prize, whilst fourteen were firsts at Oxford. It is a marvellous record—as good in its way as Butler's.

The experiment of appointing as headmaster a young man less than two years after his graduation and within six years of his leaving the school—which was the case with Mr. Moss when he succeeded Kennedy in 1866—was a bold one; but it has been amply justified. The high standard of Shrewsbury has not been lowered under its present head. In his first fifteen years there were twenty-two firsts at Cambridge, including two Senior Classics and three Chancellor's Medallists. The new school buildings at Kingsland were occupied in 1882, and the governing body which effected the removal—not without considerable opposition from the town residents and Old Salopians—have modified the statutes and regulations of the school in many important particulars. It may be fairly said that

Shrewsbury has reached the high-water mark of its efficiency as a classical school with a modern side, and with all the adjuncts and appliances which we are accustomed to look for in our public schools, including a splendid chapel built in memory of Kennedy, large playing fields, a great hall 120 ft. in length, ample classrooms, laboratories, drawing schools, a gymnasium, two libraries, assistant-masters' rooms, a common room for day boys, and so forth.

Mr. Fisher died before the publication of his book, and his labours have been supplemented by Mr. Spencer Hill, who has added sundry items to the very interesting appendix.

A PRIVATE VENTURE.

Memories of Half a Century. By Richard W. Hiley, D.D. (Longmans.)

Dr. Hiley may be remembered by some of our readers as having succeeded his father, the writer of a considerable number of school books, in the headmastership of a private school at Thorparch Grange, near Tadcaster, in Yorkshire. He himself took his degree at Oxford, and was for some time an assistant-master under Dr. Howson at Liverpool; he settled down at Thorparch in 1861, and carried on the school to the end of 1889. He does not claim to have made it a financial success; on the contrary, he tells us that he sold for £3,500 what had cost him £15,000. The story of his life is related in this substantial volume with the utmost candour and simplicity, and it reflects the troubles and difficulties of hundreds of men who have spent their private fortune in an effort to found and maintain a high-class secondary school, and have been obliged to confess in the long run that they could not guarantee its efficiency, or even its continued existence. When a private-venture school is successful, nothing can be more independent, more pliable as an instrument, more adapted for the employment of special methods and systems of training. But the profession of a private schoolmaster is often extremely precarious; and Dr. Hiley offers his experience as a document for the use and warning of others.

We cannot say if the reader will find the story in any way self-explanatory—whether, for instance, he will see any connexion between defective syntax and a deficiency of pupils. Dr. Hiley writes very freely and copiously, but we are bound to say that, for an Oxford man and a Doctor of Divinity, his English is peculiar. "On a pause in any debate, and a speaker was desired . . ." "By constant reading newspapers and magazines . . ." "He was also for a time one of the Yeomen of the Guard, or some post of that character; but, being unable to complete the purchase, the occupation ceased." These phrases, together with a remark on the Oxford "Little-go," occur in the opening of two pages taken at hazard. That is all which need be said by way of criticism; it is far more pleasant to add that these four hundred good-sized pages are full of gossip and anecdote, which we owe to the author's life-long habit of putting down all the good things which he heard in the course of his earthly pilgrimage. Some of his gossip about individuals is just a little risky, and some of it, inevitably, is of the threadbare sort which does duty over and over again in connexion with a hundred different people. The venerable story of the American visitor and the obtrusive spittoon is here located in the house of a Liverpool merchant. We have noticed a few other "chestnuts," but they will not interfere with the reader's enjoyment of a lively and chatty volume. As an autobiography it cannot be called important; its meditations are not profound, and Dr. Hiley does not seem to have had much insight or initiative as a private schoolmaster. But he chats and gossips, and when a man does that he stands a very good chance of being read.

GENERAL NOTICES.

CLASSICS.

A Greek Anthology, being Passages from the Greek Poets, chosen by E. C. Marchant, of Trinity College, Oxford, and Peterhouse, Cambridge (Methuen), contains selections from twenty-seven poets. Much of the finest ancient poetry, Mr. Marchant tells us, "moves our admiration, and yet at the same time does not interest us. This happens whenever the subject handled by the poet has ceased to excite our sympathy." Of such poetry very little is admitted in this Anthology. Alcman is wholly passed over, while Alcæus and Anacreon are not represented by their most characteristic work. The reason for this apparent neglect is, not that their art is inferior to that of Solon or Theognis, for example, but rather that "wine and wantonness are no longer the subjects

in which men of cultivated mind find an absorbing attraction." The dramatists are well represented, as also are Hesiod, Pindar, and Theocritus. The choice of pieces is altogether admirable, and the book will serve thoroughly well as a reader, for translation at sight, or for repetition. There are also some excellent notes, conspicuously literary.

Cicero, Pro Cluentio, edited by W. Peterson (Macmillan), adds yet another valuable book to the popular "Red Series of Classics." Indeed, Principal Peterson's contributions to our knowledge of this difficult speech merit more than a general and cursory notice in this column. The circumstances of the case, the part played by the various rascals who come into the problem, the language in which Cicero has clothed his subtle and caustic defence, the manuscripts in which that language is more or less preserved—everything, in fact, connected with this awful tale of depravity and crime—bristles with difficulties. On all of these new light is here shed; and Dr. Peterson has more than justified the claim of his book to existence, even after the well known editions by Mr. Yorke Faussett and the late Prof. Ramsay. From the many ingenious suggestions of the editor may be singled out a very attractive theory, that the text has been contaminated with what he terms "index words," such as "agitur causa," "queritur se ab Oppianico destitutum." The theory is not wholly new, but we do not remember to have seen it so distinctly put forward. The commentary is full of interest, replete with acute explanations, and a very store-house of the knowledge accumulated by others. We venture to add a note on a much-discussed passage in the eighty-first section. Cicero represents the prosecutor of Oppianicus as denying that he had used money to get a conviction in these terms: "Condemnatum adducebam, ut ne cripi quidem pecunia posset." Dr. Peterson decides with Mr. Faussett for rendering: "Oppianicus was (practically) a convicted criminal when he came into court; why, it would have been beyond the power of bribery even to balk justice of her lawful prey." The objection to this explanation is that the prosecutor wants to impute bribery to Oppianicus, and he hardly supports his point when he admits that Oppianicus could not have got himself off with bribes. Dr. Peterson justly calls this objection "apparent rather than real"; but we do not think that Mr. Faussett, or even he, has fully grasped the wholly sophistical nature of the argument used. If a man is *condemnatus* already, he may try to extricate himself (*eripi*) from the condemnation already passed by bribery; but he cannot make himself *non condemnatus*. Cicero says then, "the prosecutor need not use bribery against a condemned man, who found he could not even extricate himself from the penalty practically pronounced on him by bribery." The point is, of course, valueless, except as sophistic. The orators of Athens and Rome were addicted to discharging blank cartridges, which, though perhaps they had little real effect, doubtless made plenty of noise and raised a deal of smoke.

Satura Grammatica, or Latin Critical Notes, by E. G. A. Beckwith (Bell & Sons), though professedly "a mere collation of notes," should prove of real service to the Army candidate and those who are looking forward, more or less, to the London Matriculation, the various Locals, or the Pass Examinations of the great "seats of learning." The ordinary rules—the things with which Mr. Beckwith has found, lucky man, that "the student for some reason is generally conversant"—are omitted. But the real "tips" that the pass examiners delight in—a knowledge of any one of which is apt, we have found, to make the "passee" wild with joy—they are all in the book, all tersely explained and printed in good prominent type: *antequam* and *jamdudum* and *nedum*; *quominus*, *quia*, and *quin*; *winds*, *wishes*, and *time* (we do not find *place*). There are blank pages, too, on which the *passee* may make notes of his own! In the examination known as the "Little-go," a round hundred marks go for Latin grammar. But fifteen is the total that passes; and, if the candidate cannot make them off Mr. Beckwith's bowling, he is past praying for. Seriously, the compiler has provided a collection of grammar notes that seems admirably adapted to its purpose.

Cicero's Catiline Orations, edited by C. H. Keene (Blackie), is a new volume in Messrs. Blackie's "Elementary Latin Classics," issued under the general editorship of Prof. Tyrrell. We have already expressed approval of the series as a whole; and, though we are bound to qualify that approval with the statement that the books, so far as we have tested them, are rather over-elaborate for an elementary series, we can honestly praise Prof. Keene's notes as well suited for their purpose. The introduction, extending to forty-six rather close pages, seems to us altogether too long, and the wood-cuts are not of much interest. Critical notes also appear to us to be out of place in elementary books. It is possible to kill with too much kindness.

The Odes of Horace, Book II., edited by Stephen Gwynn (Blackie), is another volume in the same series, and is good on the whole. Mr. Gwynn is not always quite clear. Thus, his note on *patrix essul* leaves the reader to guess whether *patrix* is genitive or dative; and, in his otherwise useful appendix on "Me truncus illapsus cerebro susulterat," he does not point out that the licence of the construction consists in the omission of *pæne* or a similar qualifying adverb.

An Introduction to Greek Prose Composition, by H. Pitman (Macmillan), is a progressive exercise book intended to lead from the simplest

form of sentence up to easy continuous pieces, to bring a beginner to the point where he may pass on to a more advanced book, such as Mr. A. Sidgwick's "Greek Prose Composition." The exercises are preceded by chapters on grammar that correspond with them, and must be used *pari passu* with them. This book, conscientiously used, will enable the learner to master all the important sentence-forms; and the plan of combining syntax with exercises is to be commended. The scholarship shown in the book is adequate, though not wide.

Forum Latinum, a First Latin Book, by E. V. Arnold (Edward Arnold), seems to labour under the disadvantage of being the work of a University professor and not of a practical schoolmaster. Like several other exercise books, Greek and Latin, written by considerable scholars, it is far too long, and attempts too much. Instead of driving broad lines through the subject, Prof. Arnold wanders into all the sidings of Latin syntax. The book, it is true, is designed for those "who begin Latin at a rather later age than has hitherto been usual"—perhaps, we venture to suggest, for the kind of pupils with whom Prof. Arnold so ably deals. In any case, we fear the book is of no use to schoolmasters. It contains about five hundred long exercises, and is closely printed. In some University colleges it may serve its purpose.

Higher Greek Prose, by H. W. Auden (Blackwood), goes from simple narrative passages to such pieces as might be set for entrance scholarships at the Universities. But these passages are preceded by (1) hints on composition, which contain much that is useful, but are, to our thinking, a little too discursive; (2) a collection of sentences for putting into Greek, intended to revive the pupil's knowledge of the idiom and language before he starts fair on the passages. A special and commendable feature is an excellent English-Greek vocabulary. On the whole, this manual is deserving of much praise. Mr. Auden, as usual, has done his work thoroughly. Of course this is not an *introduction* to Greek prose, so that there are but few syntax rules in the introduction; and some of these even might, perhaps, have been dispensed with. Certainly the remarks on writing and accents will be superfluous to any one who can use such a book as this intelligently.

A Handbook of Translation: Latin, Part II. (Stanford) is part of a new edition of a book that has been long before the public, and has been widely used in schools as an "unseen" book. Time was when the Greek and Latin were bound together in one modest volume. Now the Latin alone has overflowed into two volumes. Most of the passages are taken from papers set to candidates for scholarships at the Universities or for the Civil Service. The book is, therefore, an advanced manual—too difficult for ordinary class use; but it will be found useful by those for whom it is intended.

Vergil: Aeneid II., edited by A. Sidgwick (Cambridge University Press), is a new volume in the series for schools and training colleges. Substantially, the book is taken, with the addition of a vocabulary, from Mr. Sidgwick's well known school "Vergil." There is a list of Homeric parallels, and a scheme of the subjunctive, with references to the book. "C." is Conington; but we cannot find that the editor says so. As "V." = Vergil, the intelligent student may be concluding that "C." = Cæsar.

Euripides: Hecuba, edited by T. T. Jeffery (W. B. Clive), we gladly praise for its practical sense; but the notes should have been revised by a good scholar. It is late in the day to be explaining *ὁσθ' ὄνδ' ὄρασον* (which means simply "you know what you must do") as an *ellipse*. Mr. Jeffery is not familiar with the use of *ὄρε* after *ἀκούω*, *οἶδα*, *μνήμημαι*, and as found in the "De Corona"; he is not sound on the Greek negative (e.g., his note on line 235 is mistaken). On line 614, he says that *προθήσομαι* is to be supplied to *έχω*, whereas the sentence is in reality merely continued from the preceding *προθῶμαι*, as our readers will perceive:—

ὡς παῖδα λούτροις τοῖς πανυστάτοις ἐμῆν
νύμφην τ' ἐνυμφον . . .
λούσω, προθῶμαι θ'—ὡς μὲν ἄξια πόθεν;
οὐκ ἂν δυναίμην—ὡς δ' ἔχω.

Space prevents us from pointing out other errors in the grammatical comments.

Caesar: Gallic War IV., edited by A. H. Allcroft and T. B. Mills (Clive), is a very satisfactory piece of work which calls for no special remark.

SCIENCE.

Elementary Physics and Chemistry. By R. A. Gregory and A. T. Simmons. (Macmillan.)

This book is intended for the higher standards of elementary schools in accordance with a recent scheme in the Code. The experiments are carefully arranged for inexpensive apparatus, and the arrangements and style show practical acquaintance with the conditions of elementary science teaching. The boy or girl who works through the practical course here set out and the accompanying readings will acquire both knowledge and education of a valuable kind.

Measurement and Weighing. By E. Edser. (Chapman & Hall.)

This contains the author's first year's course in experimental physics at a school of science. He regards practice in accuracy of measurement and the concrete illustration of mathematical conceptions as the main objects of such a beginner's course. The book

gives instructions for ninety-one well chosen experiments, under which head are included graphic calculations and the plotting out of curves. They deal with length, area, volume, mass, and density, to be measured in a variety of ways. A list of the complete set of apparatus required should have been given.

Practical Work in Physics. By W. G. Woolcombe. Part IV., *Magnetism and Electricity.* (Clarendon Press.)

This volume completes the series of four, of which the earlier ones have already been noticed in these columns. It deals with measurements of magnetism and current electricity and their associated phenomena. Electrification phenomena have no place in it. While necessarily more technical in character, it maintains the standard of its predecessors.

A Text-Book of General Physics. By C. S. Hastings and F. E. Beach. (Boston, U.S.A.: Ginn & Co.)

This work of over seven hundred and fifty pages has all the good features of the series to which it belongs—accuracy of presentment and clearness of type and illustration. Its severity of method, however, renders it unsuitable for beginners, and its proper place is in the library of a physical laboratory for more advanced students, to whom it will serve as an introduction to more elaborate studies in the special branches of physics.

A Laboratory Manual in Astronomy. By Mary E. Byrd. (Boston, U.S.A.: Ginn & Co.)

The publication of such a work as this seems to indicate that utilization of the heavens for educational purposes is much more usual in the United States than in Britain. To any teacher who wishes to train his pupils in accurate observation of the stars and planets we can recommend this book; he will find it highly suggestive, with abundance of methods to choose from.

"University Tutorial Series."—*An Introduction to the Carbon Compounds.* By R. H. Adie. (Clive.)

The subject of organic chemistry does not, perhaps, lend itself to lucidity of treatment, especially when, as in the present case, rigid economy of space seems to be a primary object of the author. There are here instructions for fifty-five experiments on carbon compounds, selected to cover the requirements of the Intermediate Science and Preliminary Science London Examinations and the first M.B. of Cambridge; but the accompanying reading does not rise to the same level of clearness and interest as in some of the other books on chemistry in this series.

A Course of Practical Chemistry. By M. M. Pattison Muir. Part II. *Intermediate.* (Longmans.)

The second part of this course includes the various methods of volumetric analysis, the preparation of certain compounds and the study of their reactions, the qualitative analysis of mixtures of salts, the determination of equivalent and molecular weights, and gravimetric analysis. Like its predecessor, it is an eminently practical work.

Elementary Physiology. By Benjamin Moore. (Longmans.)

The author has aimed at giving a bird's-eye view of the subject which can be followed by those with no previous knowledge of physiology. In this he has succeeded on the whole, though now and again we find terms used without previous explanation. The book goes deeper into the matter than is usual in books of the same title; it is illustrated with very clear diagrams, and altogether can be recommended as answering its purpose.

MODERN LANGUAGES.

French as Spoken. Being the "Thirty Exercises" on French Pronunciation taught on the Plain-English System. By E. A. Williams. (Burleigh.)

It is a painful duty to review a book like this. The author calls it "the natural rival of the phonetic method advocated by the Association Phonétique." There have been many such "rivals" before the appearance of this plain-English method, an attempt being made to represent the foreign words by using the English letters. We remember seeing something of the kind quite twenty years ago: *j'expire*, so we were told, was to be pronounced like *Shakespeare*. More recently, the "imitated pronunciation" in a number of books published by a well known firm has caused amusement. Perhaps, however, no one yet has made as systematic an attempt as Mr. Williams. It is quite evident that he has given much time and thought to the writing of this volume. We cannot deny him a certain amount of ingenuity and some power of observation. But it is woefully misapplied—a warning example to all who do not realize the importance of becoming acquainted with the more salient results already obtained by other workers in the same field. Mr. Williams can have given but little attention to the meritorious work of the Association Phonétique; otherwise, he would have recognized that it is quite impossible to utilize the English letters for showing the French pronunciation. We shall only point out a few of the many misleading statements and transcriptions. Comments will be superfluous for those who have had any phonetic training. "The circumflexed *d* has a long, open sound." *Le collègue* is to be pronounced *look or leg*; *l'herbe sèche*, *lairb sesh*; *un élève*, *urn ay lev*; *la fontaine*, *luff orn ten*, &c. Exercise III. "will

betray the fact that *ai* in French is not like *ai* in English, though it is like some other English sound." "There are two ways of pronouncing the consonant *r* in France. One way is the *trilled r* (*R roulé*), such as we hear among Scotch people; the other is that which may be called the *smooth r*." Examples given: with *smooth r*, *hardi* is to be pronounced "acker dee" ("pass over the *ck* without pronouncing it, but pronounce the rest of the word as if every letter were sounded"); with *trilled r*, "arra dee" ("pronounce the *a* as little as possible"). In the word *table*, "the ending is not 'l, but -loo (as in *look*)." We give a few more transcriptions: *l'histoire*, *least wire*; *vous voyez*, *voov v'why-ai* (this, and the treatment of *r*, show that Mr. Williams uses southern English speech). We have given so much space to this book because we wish to make it clear to teachers that it is written on entirely wrong lines, and cannot be relied upon to supply "a remedy for the bad pronunciation of French which exists in nearly all schools." It is also claimed in the preface that "the exercises contain a good deal of idiomatic French phraseology." We have found very little, indeed, that could be so described.

Le Trésor de Monte-Cristo. Edited by B. Proper. (Blackie.)

This, of course, makes a very good reader for boys, who rightly pay more attention to the plot than the style. The text runs to about seventy-five pages, in clear type, and carefully printed. There are a few respectable full-page woodcuts, by some French artist. The notes only cover four pages. Certainly the book is one to be read quickly, and might, indeed, be set for private reading, or as a holiday task. The vocabulary is fairly satisfactory, but not quite complete; thus, on page 79, we find the words *acheter*, *condition*, *don*, *impatience*, *livrer*, *loin*, *moment*, *vendre*, *village*, not one of which occurs in the vocabulary; "to pay" is not given as a meaning of *compter* (page 79, line 28), and the use of *mieux* as a substantive (page 79, line 8) is ignored.

Illustrated First Conversational French Reader. With Notes and Full Vocabularies. By T. H. Bertenshaw, B.A., B.Mus. (Longmans.)

We have here a collection of thirty-five simple reading lessons, freely illustrated, with the liaisons marked throughout, and a serviceable grammatical apparatus. It is a book which may be recommended as a first French Reader in English schools.

Cassell's Lessons in French. By L. Fasquelle, Prof. De Lolme, and Prof. E. Roubaud. (Cassell.)

The new edition of this book has been revised by Mr. Boiëlle, and "it is now in all respects suitable for the Oxford and Cambridge Local Examinations, the College of Preceptors' Examinations, or the Queen's Scholarships." Each lesson has been brought within the compass of an hour's work. A book which is in its 145th thousand requires no further recommendation; such popularity speaks for itself. It is undoubtedly a good example of the old method, which makes the early teaching revolve round the grammar. The text has been reset with some care, but (perhaps owing to the paper employed) the "machining" seems to have given some difficulty, with the result that some pages are too black, others too pale, and a good many smudged.

Hints on French Syntax. By F. Storr. (William Rice.)

In this (the seventh) edition of his useful "Hints" Mr. Storr has supplied an appendix, containing about a hundred easier examples for translation. They are well chosen, and many teachers will be glad to have them.

Johanna Spyri: Rosenrösli. Edited by Helene H. Boll. (Isabiter.)

A very short story (29 pages) by the well known author of "Heidi." It is a sweet tale of country life, healthful and simple, which children will be sure to read with pleasure. The notes are adequate, and there is a vocabulary to each page. It is rather amusing to see the references to M.H.G. and O.H.G. in the notes. In England we have recognized that they are quite out of place in elementary reading-books. What is the good of burdening a child's memory with the statement that *gefallen* used to be *gifallan*? Some of the notes on grammar are queerly worded—e.g., "*freundlich*, *freundliches Wort*. The ending of adjective after indefinite article *ein*, nominative and accusative cases, *neuter* gender, the ending '*es*' is attached to adverb to form adjectives."

C. Deslys' Benjamin. Edited by F. Julien. (Longmans.)

An exciting tale, which will be read with interest, in spite of its manifest improbabilities. The text is printed in clear type. We have noticed a few slips: e.g., *tâche*, on page 11, line 25; *effort*, on page 16, line 2; *brulant*, on page 76, line 32. The notes give a good deal of translation, and of elementary grammar. We miss a note on the order of words in *tout de noir vêtu* (page 3, line 10), and *l'un à côté de l'autre assis* (page 8, line 8). The rendering "a kind of circus forming a grove," is not very happy. According to the title-page, the vocabulary is "comprehensive." To test this, we took a page at random: in ten lines there were no less than fifteen words not given in the vocabulary.

MISCELLANEOUS.

Roman Africa: Archaeological Walks in Algeria and Tunis. By Gaston Boissier. Authorized English version, by Arabella Ward. With four Maps. (G. P. Putnam's Sons.)

M. Boissier's archaeological works are sufficiently well known to

English readers without any further introduction. Their translators have not all been equally happy; but Miss Ward seems to have performed her task with adequate care and much success. The present volume deals with the parts of northern Africa which came under the dominion of the Romans, including the Numidian country, Carthage, and the neighbouring settlements, with sundry cities of which we have now but slight traces, either in stone or in written records. The author treads an almost unbroken track (except in so far as the city of Carthage is concerned), and his readers will find him a pleasant, if somewhat discursive, guide.

"The Story of the Nations."—*Modern England under Queen Victoria*. Two volumes. By Justin McCarthy, M.P. (T. Fisher Unwin.)

For the ordinary purposes of reading, and even for school work of a less exacting and formal kind, Mr. McCarthy's volumes, though rather, loosely written and queerly illustrated, will be found by no means inappropriate. They present an easy and attractive narrative of the chief events of the past sixty-two years, told without heat or prejudice and in a manner well calculated to interest an intelligent reader. Mr. McCarthy has touched on so many details that he can rarely allow himself space for more than the briefest abstract. Six pages have to suffice for the literature, science, and art of sixty crowded years. But so much as could be done on such a scale has been done remarkably well.

Analysis of English History. By W. C. Pearce and Dr. S. Hague, LL.B. Revised by W. F. Bangust. (Murby.)

This is the ninety-third edition of a well known and serviceable compendium of English history, revised and brought up to date. We could not dispute its utility as a cram-book.

The Merchants' Handbook of Money, Weights, and Measures, and their British Equivalents. By W. A. Browne, M.A., LL.D. (Stanford.)

The fifth edition of Dr. Browne's valuable handbook (650 pages) of coinage tables and tables of weights and measures. As a book of reference, it is remarkably comprehensive. As a test, we look for information on the market price of silver, and find that the standard ounce has fallen steadily in value from 60'5d. in 1870 to 27'125d. in 1897. The Mint price is maintained at 66d. per ounce; so that the seignorage accruing to the State has risen from 9'09 per cent. in 1870 to 136'77 per cent. in 1897.

Commercial Correspondence. By E. H. Coumbe, B.A. Lond. (Effingham Wilson.)

Mr. Coumbe seeks to provide a practical manual for the use of junior clerks and foreigners who are learning English. He supplies hints on composition, explanations of business terms, and a large number of specimen letters, together with miscellaneous information on the subjects with which the letters deal. The author is very much up to date; he "wires" and he "phones"; he revels in "same" and "such," and makes many sacrifices in order to put himself in touch with the junior clerk. To be businesslike, it is *not* necessary to be ungrammatical or even bald—as "we cannot agree the entry of 18th November"; "you deduct £—, which we find alludes [!] to several different transactions, but on carefully going over same . . ."; "we shall be pleased to have an opportunity of quoting you again." Apart from these things, which are doubtless a matter of shibboleth, Mr. Coumbe's book is fresh and serviceable.

A Short History of England. By Mark Hunter, M.A. (Madras: Srinivasa, Varadachari, & Co.)

"This book is prepared specially to suit the requirements of high-school classes in the Madras Presidency." In what respect the requirements of the high-school classes in the Madras Presidency differ from those of high-school classes in other parts of India we are not informed. We gather from a perusal of the book that they involve a knowledge of many minor details which we should have thought unnecessary for students in any part of India, but that at times a very general sketch is thought sufficient. For instance, the wars of the Saxons are treated in more detail than those of Charles I. and the Parliament; and in a comparatively lengthy notice of the French Revolution the only actors in it thought worthy of mention are the King, Queen, and Bonaparte. It is in this way that the author seeks to carry out the somewhat enigmatic ideal set forth in the preface, "not to burden the beginner's memory with a multitude of facts, but to awaken his interest in the facts admitted by pointing out their significance."

Northern English: Phonetics, Grammar, Texts. By R. J. Lloyd, D.Lit. (David Nutt.)

This is one of Professor Viator's "Skizzen lebender Sprachen." It is a convenient illustration of the newer development of scientific phonetics, and is certainly stimulating, whether one can see eye to eye with the writer or not. We note (at hazard) that Dr. Lloyd uses the same character for the vowel sound of "once," "was," and "would" (pp. 89 and 91). But one of these is evidently a misprint.

"The Books of the Bible."—*The Book of Judges*. Edited by the Rev. H. F. Stewart, M.A. (Livingtons.)

A very interesting treatment of one of the most interesting books in the Old Testament. We have a good introduction, good notes, and a

map, with an appendix of "changes made by the Revised Version in the Book of Judges."

Two Aspects of Education. By Lucy H. M. Soulsby. (Longmans.)

There is much common sense in this little pocket volume. The chapter on "Self-Control" has many valuable thoughts.

Philips' Brushwork Copy-Book. By Elizabeth C. Yeats. With Hints and Instructions. (Philip & Son.)

A good series of copies in a handy oblong, stiff-backed volume. The examples might have been a little more carefully graduated; but, on the whole, this work is admirably conceived, and will be found very serviceable for its purpose.

Parsing and Analysis Scheme. By Rev. Sydney C. Tickell. (Newmann.)

This is a sort of tabular English grammar, and it is called "a new grammar" on the title-page. Too elaborate for students learning to parse and analyse, it is still suggestive and helpful in its way. But we fear it falls between two stools—the stool of the learner who would be puzzled by it and of the teacher who does not need it.

WE HAVE ALSO RECEIVED the following publications and new editions:—

The Code for Day Schools, 1899-1900, edited by Herbert Cornish (Grant & Co.).

An Apology for the Intermediates (for Boys), by Maurice C. Hime, M.A., LL.D. (Simpkin, Marshall, & Co.).

Black Beauty, the Autobiography of a Horse, by Anna Sewell (Jarrold & Sons)—a re-issue of a pleasant reading book about horses.

Practical Problems in Arithmetic for Course B, Standards III. and IV. (Blackie & Son.)

The Art Portfolio, containing four Photogravure Reproductions of National Art Treasures, Part III. (Simpkin, Marshall, & Co.)—good samples, which will bear framing: "produced entirely in England."

The Vivid Map-Sheets (A. G. Dawson)—bold outlines, on hanging cards.

The Oxford Shorthand, No. 2, The Book of the Vowels (Oxford Shorthand Company, Dover)—fifteenth edition.

MEETING OF THE COUNCIL OF THE COLLEGE OF PRECEPTORS.

A MEETING of the Council was held at the College, Bloomsbury Square, on June 17. Present: Dr. Wormell, Vice-President, in the chair; Rev. R. Allott, Miss Bailey, Rev. J. O. Bevan, Mr. Bidlake, Mr. Brown, Dr. Buchheim, Mr. Butler, Mr. Charles, Mr. Chettle, Mr. Eve, Miss Jebb, Mr. Millar-Ingles, Mr. Pinches, Mr. Rule, Mr. Sergeant, Rev. T. W. Sharpe, and Rev. J. Stewart.

The minutes of the last meeting were read and confirmed.

The Secretary reported that the number of entries for the forthcoming Certificate and Junior Forms Examinations, to take place on June 27-30, was about 6,100, and the entries for the following Diploma examination about 180.

A letter from the President of the Medical Council, conveying the observations of their Education Committee on the letter and "Memorandum" which had been forwarded to him on behalf of the Council of the College, was referred to the Examination Committee for consideration and report.

A memorial was directed to be sent to the Duke of Devonshire, setting forth the claims of the College to be recognized for the purpose of inspection of secondary schools.

Mr. P. A. Barnett, M.A., was appointed to deliver the autumn course of lectures to teachers on the Practice of Education.

The Report of the Examination Committee was adopted.

The Draft Report of the Council to the General Meeting was considered, and referred to the President, Vice-Presidents, and Dean for final revision.

Mr. W. G. Rushbrooke, LL.M., Headmaster of St. Olave's School, Southwark, was elected a member of the Council.

The following persons were elected members of the College:—

Mr. L. H. Moonen, B. Æs L., 6 College Villas Road, N.W.

Mr. F. Quickfall, A.C.P., 52 Upper TOLLINGTON Park, N.

The following books have been presented to the Library since the last meeting of the Council:—

By the AUTHOR.—Abbott's Das System der englischen Lehrerbildung.
By Mr. EVE.—Higham's Scott's Ivanhoe (Black's Continuous Readers); Strong's Shakespeare's Merchant of Venice; Thomson's Homer's Odyssey, Book IX.

By G. BELL & SONS.—Beckwith's Satura Grammatica.
By BLACKIE & SONS.—Gwynn's Horace, Odes, Book II.; Keene's Cicero's Catiline Orations; Proper's Dumas' Le Tresor de Monte-Cristo; Smith's Shakespeare's King Henry VIII.

By W. B. CLIVE.—Jeffery's Euripides' Hecuba.
By HACHETTE & Co.—Meissner's German Prose Composition.
By MACMILLAN & Co.—Peterson's Cicero, Pro Cluentio.
By NEWMANN & Co.—Tickell's Newmann's Parsing and Analysis Scheme.
By the OXFORD SHORTHAND Co.—The Book of the Vowels.
By RILEY BROS.—Irvine's British Possessions and Colonies; Knight's First Algebra; Perrault's Contes des Fees.
Supplement to the R. U. I. Calendar for 1899

MATHEMATICS.

14157. (REV. T. MITCHESON, B.A.)—A straight line is drawn from O, the intersection of the directrix and the axis of x , meeting an ellipse in P and Q, so that OP = PQ; show that the length of the chord PQ = $\frac{b^2(17a^2-9b^2)^{1/2}}{4a(a^2-b^2)^{1/2}}$, and its inclination to the major axis is $\cos^{-1} \frac{3a}{(17a^2-9b^2)^{1/2}}$.

Solution by G. BIRTWISTLE, B.Sc.; F. H. PEACHELL, B.A.; and the PROPOSER.

Oy is directrix, Cx major axis. Equation of ellipse referred to Ox and Oy as axes is

$$\frac{1}{a^2} \left(x - \frac{a}{e} \right)^2 + \frac{y^2}{b^2} = 1,$$

or $\frac{1}{a^2} \left(r \cos \theta - \frac{a}{e} \right)^2 + \frac{r^2 \sin^2 \theta}{b^2} = 1.$

Therefore $r^2 \left(\frac{\cos^2 \theta}{a^2} + \frac{\sin^2 \theta}{b^2} \right) - \frac{2r \cos \theta}{ae} + \frac{b^2}{a^2 e^2} = 0$

or $Ar^2 + 2Br + C = 0.$
If r_1 and r_2 are roots of this, $r_1 = OP, r_2 = OQ$; therefore $r_2 = 2r_1$;

therefore $2r_1^2 = \frac{C}{A}, 3r_1 = \frac{-2B}{A}$; therefore $9AC = 8B^2$;

therefore $8 \cos^2 \theta = 9b^2 \left(\frac{\cos^2 \theta}{a^2} + \frac{\sin^2 \theta}{b^2} \right)$;

therefore $8a^2 \cos^2 \theta = 9 \{ b^2 \cos^2 \theta + a^2 (1 - \cos^2 \theta) \}$;

therefore $\cos^2 \theta = \frac{9a^2}{17a^2 - 9b^2}.$

Also $PQ = r_1 = \frac{-2B}{3A} = \frac{2 \cos \theta}{3ae} \sqrt{\frac{b^2 \cos^2 \theta + a^2 \sin^2 \theta}{a^2 b^2}}$
 $= \frac{b^2}{4a^2 e} \sqrt{(17a^2 - 9b^2)} = \frac{b^2}{4a} \sqrt{\left(\frac{17a^2 - 9b^2}{a^2 - b^2} \right)},$

using the value of $\cos \theta$ just found.

14153. (ROBERT W. D. CHRISTIE.)—Resolve $x^{6m} - x^{3m} + 1$ into factors. (This theorem fills the hiatus in the general theorem, Quest. 8098, given in Vol. XLVIII., p. 108.)

Solution by Lt.-Col. ALLAN CUNNINGHAM, R.E.

In all cases $x^{6m} - x^{3m} + 1 = \frac{x^{9m} + 1}{x^{3m} + 1}$

When m is odd (but not $= 3\mu$), this is known to be further divisible by $(x^9 + 1) + (x^3 + 1)$; i.e., by $(x^6 - x^3 + 1)$. By actual division it will be found that the quotient consists of a set of pairs of terms $\pm(x^{3t} + x^{3t-3})$, which can be easily written down at sight, together with certain central terms. Thus, commencing from both ends, the quotient is

$$(x^{6m-6} + x^{6m-9}) - (x^{6m-15} + x^{6m-18}) + (x^{6m-24} + x^{6m-27}) - (x^{6m-33} + x^{6m-36}) + \dots + (x^9 + x^{12}) - (x^3 + x^{12}) + (x^{18} + x^{21}) - (x^{27} + x^{30}) + \dots$$

and, when $m = 3\mu$, the two series coalesce.

When $m = 3\mu + 1$, the two series stop at a single middle term $\pm x^{3(m-1)}$.

When $m = 3\mu + 2$, the two series stop at a group of central terms $-(x^{3(m-2)} + x^{3(m-1)} + x^{3m})$.

When m is an odd prime, the above is the only algebraic factorization; but, when m is an odd composite, there will be other algebraic factors depending on the prime factors in m .

[The rest in Volume.]

14034. (G. W. PRESTON, B.A.)—O, P are two fixed points in a given straight line, and PB, PC are two other fixed straight lines equally inclined to the given straight line and on the same side of it. If a circle be described, with centre O and any radius, so as to cut PB, PC in B and C, show, geometrically, that the difference of the projections of PB, PC on the given straight line is a constant. [Suggested by a problem in LONEY'S Statics.]

Solution by LIONEL E. REAY, B.A.; H. W. CURJEL, M.A.; and the PROPOSER.

OK is perpendicular to PC. CP is produced to D. PD = PB and their projections on OP are equal.

$CP - PB = 2PK = \text{const.},$

since OP and $\angle OPC$ are const.; therefore the difference of the projections of CP, PB on OP = twice the projection of PK = constant.

14016. (PROFESSOR UMES CHANDRA GHOSH.)—Prove that the n -ple integral

$$\int_0^{\pi} \int_0^{\pi} \int_0^{\pi} \dots e^{-(u+v+w+\dots)} u^{(1-u)/n} v^{(2-u)/n} w^{(3-u)/n} \dots du dv dw = \sqrt{\frac{(2\pi)^{n-1}}{n}}$$

Solution by H. W. CURJEL, M.A.

The given integral evidently

$$= \Gamma(1/n) \Gamma(2/n) \dots \Gamma(n/n) = \sqrt{\Gamma(1/n) \Gamma(1-1/n) \Gamma(2/n) \Gamma(1-2/n) \dots \Gamma[(n-1)/n] \Gamma[1-(n-1)/n]} = \sqrt{\left\{ \frac{\pi^{n-1}}{\sin \frac{1}{2}\pi \sin 2\pi/n \dots \sin [(n-1)\pi/n]} \right\}} = \sqrt{\frac{(2\pi)^{n-1}}{n}}$$

13969. (C. WAFELBAKKER.)—The triangle ABC is supposed to revolve round the axis BC, till the vertex A, having described a semi-circle, has reached the position A'. In the same manner the points B' and C' are derived from B and C. It is asked how to construct ABC, being given the points A', B', C'.

Remarks by D. BIDDLE.

The following facts, relating to this Question, are noteworthy:—(1) BB', CC' intersect in P, the ortho-centre of ABC, at an angle supplementary to A, and A', B, P, C are concyclic.

- (2) $A'BC' = 3B,$
and $A'CB' = 3C;$
also $BC' = CB' = a.$
- (3) $(A'B')^2 - c^2 : (A'C')^2 - b^2 = \sin 2C : \sin 2B = B'N : C'M,$

whence $\{(A'B')^2 - c^2\} b \cos B = \{(A'C')^2 - b^2\} c \cos C;$
also $ab \{(A'B')^2 - c^2\} = ac \{(A'C')^2 - b^2\} = b \{a^2 + c^2 - b^2\} = bc \{(B'C')^2 - a^2\} = a \{b^2 + a^2 + c^2\}$

And, of course the case of a right-angled original triangle, one of the unknown sides is equal to one of the known values

- Let $\theta = \angle A'B'C'$ and $A'A = 2x \cos \theta,$
whilst the sides and angles of $A'B'C'$ are $a', b', c', \alpha, \beta, \gamma.$ Then (4) $(c' - 2x)^2 \cos^2 \theta + c'^2 \sin^2 \theta = c^2, \{b' \cos(\alpha - \theta) - 2x \cos \theta\}^2 + b'^2 \sin^2(\alpha - \theta) = b^2,$
and $c^2 : b^2 = \sin^2 C : \sin^2 B = BN : CM.$
- Now $MN = c' \sin \theta + b' \sin(\alpha - \theta)$
and $BM : CN = 1 - 2 \sin^2 B : 1 - 2 \sin^2 C.$

(5) Four equal circles can be drawn, namely, A'CPB, B'PAC, C'PAB, and the fourth, with centre P, passing through the centres of the other three, the joins forming $\Delta = ABC.$ Therefore a fifth circle, equal to the others, is the circumcircle of ABC.

[This Question, having long been published on the Continent without eliciting any satisfactory solution, was, in hopes of better things, sent to the Educational Times, where, however, it seems likely to meet with the same fate. No solution whatever has come to hand.]

14087. (R. F. DAVIS, M.A.)—Extract from the *Life and Letters of Lewis Carroll*, by S. D. COLLINGWOOD. (Fisher Unwin, 1898.)—“Dec. 19th, 1897 (Sunday). Sat up last night till 4 a.m. over a tempting problem sent me from New York—to find three equal rational-sided right-angled triangles. I found two whose sides are 20, 21, 29; 12, 35, 37; but could not find three.”—Prove that the missing triangle was $7\frac{1}{2}, 56,$ and $56\frac{1}{2}$, and find general formulæ for such triangles.

Solution by C. E. HILLYER, M.A.

If a, b, c be the sides of a right-angled triangle,

$c^2 = a^2 + b^2$ or $a^2 = c^2 - b^2 = (c+b)(c-b).$

- Suppose $a = m/n(c-b) = n/m(c+b);$
- then $an + bm = cm$ and $am - bn = cn;$
- therefore $a = \frac{2mn}{m^2 + n^2} c$ and $b = \frac{m^2 - n^2}{m^2 + n^2} c.$

The formulæ, then, for all integral-sided right-angled triangles are

$$a = 2mn, \quad b = m^2 - n^2, \quad c = m^2 + n^2,$$

where m and n stand for any two numbers of which $m > n$, and the area of the triangle = $\frac{1}{2}ab = mn(m^2 - n^2)$ or $mn(m+n)(m-n)$.

We have to find as many as possible different pairs of integers m, n , making the product $mn(m+n)(m-n)$ the same.

Now, if we find equal triangles by giving fractional values to m and n , we shall only have to multiply by the least common denominator to deduce as many equal triangles with integral sides; we may therefore remove the restriction that m and n are to be integers, so that we may suppose either that $m = 1$ and $n =$ some positive number less than 1, or that $n = 1$ and $m =$ some positive number greater than 1.

[The rest in Vol.]

5019. (J. J. WALKER, M.A.)—If A be the refracting angle of a prism, and θ, ϕ the differences between the angles which the part of the ray within the prism makes with the normals to the faces, and between the deviations at incidence and emergence respectively, while D is the total deviation, prove (1) that $\sin \frac{1}{2}(A + D) = \frac{\mu \cos \frac{1}{2}\theta \sin \frac{1}{2}A}{\cos \frac{1}{2}(\theta + \phi)}$, and thence (2) deduce the position of minimum deviation.

Solution by Professor SANJANA, M.A.

In the annexed figure

$$\begin{aligned} \sin \alpha &= \mu \sin \alpha', & \sin \beta &= \mu \sin \beta'; \\ \text{also } \theta &= \alpha' - \beta', \\ \phi &= \alpha - \alpha' - (\beta - \beta') = \alpha - \beta - (\alpha' - \beta') \\ &= \alpha - \beta - \theta. \end{aligned}$$

$$\begin{aligned} \text{As } \sin \alpha + \sin \beta &= \mu (\sin \alpha' + \sin \beta'), \\ \text{therefore } 2 \sin \frac{1}{2}(\alpha + \beta) \cos \frac{1}{2}(\alpha - \beta) &= 2\mu \sin \frac{1}{2}(\alpha' + \beta') \cos \frac{1}{2}(\alpha' - \beta'); \end{aligned}$$

$$\text{therefore } 2 \sin \frac{1}{2}(D + A) \cos \frac{1}{2}(\theta + \phi) = 2\mu \sin \frac{1}{2}A \cos \frac{1}{2}\theta;$$

$$\text{so that } \sin \frac{1}{2}(D + A) = \frac{\mu \cos \frac{1}{2}\theta \sin \frac{1}{2}A}{\cos \frac{1}{2}(\theta + \phi)}.$$

If now $\alpha > \beta, \alpha' > \beta'$, and θ and ϕ are positive; but $\cos \frac{1}{2}\theta > \cos \frac{1}{2}(\theta + \phi)$, and hence $\sin \frac{1}{2}(D + A)$ is greater than $\mu \sin \frac{1}{2}A$. Thus D is not a minimum, unless ϕ vanish; which is the case when $\alpha = \beta$, or when the ray passes symmetrically, and then $\sin \frac{1}{2}(D + A) = \mu \sin \frac{1}{2}A$. If $\alpha < \beta$, reversing the path of the ray, the same conclusion will be obtained.

14115. (H. FORTY, M.A.)—A cheese is a cylinder of 2 feet in diameter, and is of variable quality, the part at the axis being worth 1s. 2d. per lb., and the quality deteriorating as the distance from the axis increases, so that at the circumference it is worth only 10d. per lb. An epicure buys a concentric cylindrical piece cut out of the centre and pays 4s. 11d. for it. What is the diameter of this piece? Given that the whole cheese is worth £1. 18s. 3d.

Solution by Rev. J. H. BLUNN, Chaplain R.N., retired; H. W. CURJEL, M.A.; and the PROPOSER.

The decrease in value of the cheese is at the rate of $\frac{1}{4}$ d. per inch of distance from centre. Therefore value per lb. at a distance $x = (14 - \frac{1}{4}x)$ d.

Hence, evidently, if a be the radius of the cylinder cut out,

$$\int_0^a 2\pi x dx (14 - \frac{1}{4}x) \bigg/ \int_0^{12} 2\pi x dx (14 - \frac{1}{4}x) = \frac{5}{9} \frac{9}{5}.$$

$$\text{Therefore } (7a^2 - \frac{1}{8}a^3) / (7 \times 12^2 - \frac{1}{8} \times 12^3) = \frac{5}{9} \frac{9}{5};$$

$$7a^2 - \frac{1}{8}a^3 = \frac{5}{9} \frac{9}{5} (1008 - 192) = \frac{5}{9} \frac{9}{5} \times 816 = \frac{1}{2} (59 \times 16).$$

$$\text{Therefore } a^3 - 63a^2 + 59 \times 16 = 0, \quad (a-4)(a^2 - 59a - 236) = 0.$$

$a = 4$ is the only possible solution. Therefore diameter of the piece = 8 inches.

14110. (Professor SANJANA, M.A.)—In a triangle ABC , K is the symmedian point and O the circumcentre; on KA, KB, KC points A', B', C' are taken such that $KA' : KA = KB' : KB = KC' : KC = e$ (which may be positive or negative and less than unity or greater); through A', B', C' are drawn $Y'A'Z, Z'B'X, X'C'Y$ anti-parallel to BC, CA, AB meeting these sides in X and X', Y and Y', Z and Z , respectively. Prove (1) that $Y'Z = Z'X = X'Y = 2(1-e)abc / (a^2 + b^2 + c^2)$; (2) that YZ' is parallel to BC and $= a \{ (2e-1)a^2 + b^2 + c^2 \} / (a^2 + b^2 + c^2)$, with similar results for ZX' and XY' ; (3) that

$$XX' = a \{ a^2 + (b^2 + c^2)(2e-1) \} / (a^2 + b^2 + c^2),$$

with similar values for YY' and ZZ' ; (4) that the triangles $XYZ, X'Y'Z$ are equal to each other and similar to ABC ; and that XYZ and ABC have the same positive BROCARD point, and $X'Y'Z'$ and ABC the same negative one; (5) that

$$AZ : BX : CY = b/a : c/b : a/c, \quad \text{and } AY' : CX' : BZ' = c/a : b/c : a/b;$$

(6) that the points X, X', Y, Y', Z, Z' are situated on a circle whose centre lies on OK and coincides with the circumcentre of $A'B'C'$; (7) that the radius of this circle is $R \{ e^2 + (1-e)^2 \tan^2 \omega \}^{\frac{1}{2}}$; (8) that for values $1, \frac{1}{2}, 0$ of e the circle $XX'YY'ZZ'$ becomes respectively the circumcircle the triplicate-ratio circle, the cosine circle; (9) that when

$$e = -\cos A \cos B \cos C,$$

the circle becomes the TAYLOR circle, and its radius

$$= R (\sin^2 A \sin^2 B \sin^2 C + \cos^2 A \cos^2 B \cos^2 C)^{\frac{1}{2}};$$

(10) that when $e = \sin^2 \omega$, the centre of the circle bisects the line joining the BROCARD points, and its radius = $R \sin \omega$, which is the least value that the radius can ever have; and (11) that in a right-angled triangle the TAYLOR and cosine circles coincide. [All properties of TUCKER circles can thus be obtained by elementary trigonometry; the result in (11) is inaccurately given in MILNE'S Companion at p. 146.]

Solution by G. N. BATES.

We have

$$BZ'/a = BX/c = Z'X/b = \rho,$$

and

$$4BB^2 = 2BZ'^2 + 2BX^2 - Z'X^2;$$

therefore

$$\rho^2 = \{ 4(1-e)^2 a^2 c^2 \} / (a^2 + b^2 + c^2);$$

therefore

$$Z'X = 2(1-e)abc / (a^2 + b^2 + c^2) = X'Y = Y'Z \dots \dots \dots (1).$$

$$CY : CA :: a\rho : c :: BZ' : AB;$$

therefore YZ' is parallel to BC , and

$$YZ'/a = (c-a\rho)/c = \{ a^2(2e-1) + b^2 + c^2 \} / (a^2 + b^2 + c^2) \dots \dots (2).$$

$$XX' = a - c\rho - (b^2/c)\rho = a \{ (2e-1)(b^2 + c^2) + a^2 \} / (a^2 + b^2 + c^2) \dots (3);$$

[The rest in Volume.]

13926. (Professor A. DROZ-FARNY.)—Sur une parabole on donne un point A , la tangente en ce point, et la droite qui joint A au foyer F . Une tangente variable coupe la tangente en A au point B , et AF en C . On prend sur cette droite le symétrique D de B par rapport à C . Lieu géométrique de D ? On demande une solution analytique et une solution géométrique.

Solution by R. F. DAVIS, M.A.

The exterior angle ABC between two tangents is equal to the angle AFB , subtended at the focus by one of them (MILNE and DAVIS, p. 30). Thus

$$CB^2 = CA \cdot CF.$$

But $CB = CD$;

hence $CD^2 = CA \cdot CF$.

Completing the parallelogram $BADM$, and drawing perpendiculars AN, CR upon DM ,

$$CR^2 + DR^2 = CA^2 + CA \cdot AF$$

$$DR^2 = RM^2 + CA \cdot AF$$

$$= \lambda AR^2 + \mu AR,$$

for the right-angled triangle AMN is of fixed species, and AM, AN have fixed directions, and therefore so has AR .

The locus of D is thus a hyperbola touching the given parabola at A .

14103. (Prof. CROFTON, F. R. S.)—If $u = x^2 + ax + b$, a solution of the equation $u (d^2y/dx^2) = n(n+1)y$ is $y = D^{n-1}u^n$, and another solution is $y = D^{-n-2}u^{-n-1}$. Also, if $u^2 (d^4y/dx^4) = n(n+1)(n+2)(n+3)y$, one solution is $y = D^{n-1}u^{n+1}$.

Solution by Rev. J. CULLEN, B.A.

If $u = x^2 + ax + b = (x - \alpha)(x - \beta)$, we have, by a well known theorem (WILLIAMSON'S *Int. Cal.*, p. 325, 5th ed.),

$$u^m D^{m+r} u^r = \frac{(r+m)!}{(r-m)!} D^{r-m} u^r.$$

Putting $r = m + n - 1$, we get

$$u^m D^{2m} D^{n-1} u^{m-1} = n(n+1) \dots (n+2m-1) D^{n-1} u^{m-1},$$

so that clearly $y = D^{n-1} u^{m-1}$ is one solution of

$$u^m D^{2m} y = n(n+1) \dots (n+2m-1) y \dots \dots \dots (1),$$

also, since (1) remains unaltered when $-(n+2m-1)$ is written for n , we have another solution in the form $y = D^{n-2m} u^{n-m}$. Hence the results in the question follow at once by putting $m = 1$ and 2 .

QUESTIONS FOR SOLUTION.

14255. (Professor ELLIOTT, F.R.S.)—A surface is given by three equations expressing the coordinates x, y, z in terms of two parameters p, q . Prove that, if u, v, w denote the coefficients of ξ, η, ζ in the equation

$$\left(\xi \frac{\partial x}{\partial p} + \eta \frac{\partial y}{\partial p} + \zeta \frac{\partial z}{\partial p} \right) \left(x \frac{\partial x}{\partial q} + y \frac{\partial y}{\partial q} + z \frac{\partial z}{\partial q} \right) - \left(\xi \frac{\partial x}{\partial q} + \eta \frac{\partial y}{\partial q} + \zeta \frac{\partial z}{\partial q} \right) \left(x \frac{\partial x}{\partial p} + y \frac{\partial y}{\partial p} + z \frac{\partial z}{\partial p} \right) = 0,$$

the equation

$$\begin{vmatrix} u & v & w \\ \frac{\partial u}{\partial p} & \frac{\partial v}{\partial p} & \frac{\partial w}{\partial p} \\ \frac{\partial u}{\partial q} & \frac{\partial v}{\partial q} & \frac{\partial w}{\partial q} \end{vmatrix} = 0$$

is one satisfied at points of the surface where normal planes to lines of curvature pass through the origin, and only at such points of the surface and umbilics.

14256. (Professor G. B. MATHEWS, F.R.S.)—Let $f(x) = \sin x + \frac{1}{2} \sin 2x + \frac{1}{3} \sin 3x + \dots + (1/n) \sin nx$, and suppose that when n increases indefinitely x becomes infinitesimal in such a way that the limit of nx is an assigned real quantity η ($-\infty$ and $+\infty$ included). Prove that the ultimate value of $f(x)$ is $\int_0^\eta \frac{\sin x}{x} dx$.

What is the precise bearing of this result upon the form of the graph corresponding to $y = \sin x + \frac{1}{2} \sin 2x + \dots$ ad inf. = $\sum \frac{\sin nx}{n}$?

[See a recent correspondence in *Nature* on FOURIER series.]

- 14257. (Professor COCHEZ.)—Etudier $x^4 + y^4 + 3x^2y + y^2 = 0$.
- 14258. (Professor E. J. NANSON.)—If a minor M of order m of a determinant Δ of order n does not vanish, and the $(n-m)^2$ minors of order $m+1$ obtained by bordering M with an additional row and column from Δ do vanish, then it is known that all minors of Δ of order $m+1$ vanish. If Δ be symmetrical, and M be a coaxial of Δ , it is obvious that the $(n-m)^2$ minors all vanish if $\frac{1}{2}(n-m)(n-m+1)$ conditions are satisfied. Prove that the same result is true if M be not a coaxial, and determine the $\frac{1}{2}(n-m)(n-m+1)$ conditions when M is given.
- 14259. (Professor NEUBERG.)—Eliminer x, y, z entre les équations $(x+y)(y+z) = ayz, (y+x)(y+z) = bzx, (z+x)(z+y) = cxy$.
- 14260. (Professor UMES CHANDRA GHOSH.)—Solve the differential equation $r(y^2 - p^2) \frac{\partial^2 r}{\partial p^2} + (2r^2 - p^2) \frac{\partial r}{\partial p} - pr \cdot \frac{\partial r}{\partial p} = 0$, and interpret the result geometrically, if r and p be respectively the radius vector and perpendicular from the origin on the tangent at any point of a curve.
- 14261. (Professor THOMAS SAVAGE.)—Show, by assuming the truth of FERMAT'S theorem, that $x^n + y^n = z^n$ is not true for integral values of x, y, z, n , being greater than 2; or, otherwise, that $\left\{ \frac{1}{2}(4m^3 - 1) \right\}^{\frac{1}{2}}$ is not integral when m is integral.
- 14262. (Professor SANJANA.)—Prove that $\frac{1}{1} \cdot \frac{1}{4} + \frac{1}{2} \cdot \frac{1}{4.5} + \frac{1}{3} \cdot \frac{1.2}{4.5.6} + \frac{1}{4} \cdot \frac{1.2.3}{4.5.6.7} + \dots = \frac{6\pi^2 - 7^2}{36}$; and show how to find the value of $\frac{1}{1} \cdot \frac{1}{n} + \frac{1}{2} \cdot \frac{1}{n(n+1)} + \frac{1}{3} \cdot \frac{1.2}{n(n+1)(n+2)} + \dots$, where n is any positive integer.
- 14263. (D. BIDDLE.)—T is a multiple of $(N-T)^{\frac{1}{2}}$: prove that N is factorizable, unless $N-T = 1$; and, conversely, that N is either a prime or the square of a prime, when no lower value of T than $N-1$ will fulfil the conditions.
- 14264. (R. TUCKER, M.A.)—P is a point on a parabola, focus S and vertex A. With P as centre and radius PS, a circle is described. The tangent to the parabola cuts this circle in L, M, and AL, AM cut the parabola in Q, R. Find the equations to AL, AM, and to the chord QR.

14265. (R. F. DAVIS, M.A.)—If O be the centre of inversion (constant = κ^2) investigate the formula of transformation tangent from point P to the circle C = λ (tangent from inverse point P' to inverse circle C'), and show that $\lambda = OP$ (or κ^2/OP)/tangent from O to C'. Apply this to Quest. 13801. (See *Mathematical Reprint*, Vol. LXX., p. 73.)

14266. (V. R. THYAGARAGAIYAR, M.A.)—Find the equation of a curve (in CARTESIAN coordinates) which is such that the radius of curvature at any point is equal to the length of the curve measured up to that point from a fixed point on the curve. Trace the curve.

14267. (B. N. CAMA, M.A.)—If an equiangular spiral be inscribed in a rectangle, prove (i.) that the angular points of the rectangle lie on another spiral, (ii.) the lines joining the points of contact of opposite pairs of sides intersect at right angles in the pole, (iii.) the area of the quadrilateral of the chords of contact varies as the area of the rectangle.

14268. (Rev. W. ALLEN WHITWORTH, M.A.)—Show that the equation $x^2 + x^2 + y^2 + z^2 = 2012$ admits of 756 solutions in positive integers.

14269. (Rev. J. CULLEN.)—Through a given point P in the plane of a triangle ABC lines are drawn cutting the sides in L, M, and N; LF, LE, are drawn parallel to AC, AB; MD, ME, to AB, BC; and NE, ND, to BC, CA, denoting the points where (AD, BE, CF), (AD₁, BE₁, CF₁) concur by K.P and K₁.P. Prove that K'.P = K₁.P if $r+q \equiv 0$ (mod 6) and that K".P is always one of six points.

14270. (H. MACCOLL, B.A.)—If k be a positive constant, and the variables x and y be each taken at random between 0 and 1, show that the chance that the fraction $k(1-x-y)/(1-y-ky)$ will also lie between 0 and 1 is $(k^2+1)/\{2k(k+1)\}$ or $(1+2k-k^2)/\{2(k+1)\}$ according as k is greater or less than 1.

- 14271. (G. H. HARDY, B.A.)—Prove
 - $a^{\frac{1}{2}} \int_0^{\frac{\pi}{2}} \frac{e^{-ax^2}}{\cosh \pi x} dx = b^{\frac{1}{2}} \int_0^{\frac{\pi}{2}} \frac{e^{-bx^2}}{\cosh \pi x} dx$ if $ab = \pi^2$;
 - $a^{\frac{1}{2}} \int_0^{\frac{\pi}{2}} \frac{e^{-ax^2}}{1+2 \cosh \pi x} dx = b^{\frac{1}{2}} \int_0^{\frac{\pi}{2}} \frac{e^{-bx^2}}{1+2 \cosh \pi x} dx$ if $ab = (\frac{2}{3}\pi)^2$;
 - $a^{\frac{1}{2}} \int_0^{\frac{\pi}{2}} \frac{\cosh \frac{1}{2}\pi x}{\cosh \pi x} e^{-ax^2} dx = b^{\frac{1}{2}} \int_0^{\frac{\pi}{2}} \frac{\cosh \frac{1}{2}\pi x}{\cosh \pi x} e^{-bx^2} dx$ if $ab = (\frac{1}{3}\pi)^2$.

14272. (Lt.-Col. ALLAN CUNNINGHAM, R.E.)—Factorize completely $(35^{2n} + 1)$.

14273. (Rev. T. MITCHESON, B.A.)—The angle between a semi-diameter of an ellipse and the tangent at its extremity is a minimum when the area of the rectangle contained by the coordinates of the tangential point is a maximum, i.e., when $x = a/\sqrt{2}, y = b/\sqrt{2}$.

14274. (R. F. MUIRHEAD.)—A block weighing m pounds is dragged along a rough plane by a massless spiral spring, whose stiffness is k pounds weight per foot extension, connecting it with a point constrained to move with horizontal velocity v feet per second. The coefficient of static friction is μ_1 , and that of kinetic friction μ_2 . Initially the block is at rest, and the spring unstrained. Find the subsequent motion.

Show that, if $\mu_1 : \mu_2 \geq 3$, the block will (1) remain at rest $\mu_1 m/kv$ seconds, (2) move during $\sqrt{\left(\frac{m}{kg}\right) \left(\pi + 2 \tan^{-1} \frac{v \sqrt{k}}{\mu \sqrt{mg}}\right)}$ seconds (where $\mu = \mu_1 - \mu_2$), (3) rest during $2\mu m/kv$ seconds, and thereafter repeat (2) and (3) alternately.

Show that, if $\mu_1 : \mu_2$ lie between 3 and 5, the various stages will be (1) rest during $\mu_1 m/kv$ seconds, (2) motion during $\sqrt{\left(\frac{m}{kg}\right) \left(\pi + 2 \tan^{-1} \frac{v \sqrt{k}}{\mu \sqrt{mg}}\right)}$ seconds, (3) backward motion during $\sqrt{\left(\frac{m}{kg}\right) \left(\pi - 2 \tan^{-1} \frac{v \sqrt{k}}{\mu \sqrt{mg}}\right)}$, where $\mu' \equiv \mu_1 - 3\mu_2$, (4) rest during $4\mu_2 m/kv$ seconds, and thereafter continued repetition of (2), (3), (4) in order.

Show that the other critical values of the ratio $\mu_1 : \mu_2$ separating different types of solution are 7, 9, 11, &c.

14275. (R. J. DALLAS.)—Being given four points A, B, C, D, prove that the nine-point circles of the four triangles formed by leaving out one point in turn all pass through one point.

14276. (R. KNOWLES, B.A.)—At a point R (eccentric angle θ) of the ellipse $a^2y^2 + b^2x^2 = a^2b^2$, chords RP, RQ are drawn at right angles; the normal at R meets PQ in M and the curve in N. Prove (1) that RM : MN = $a^4 \sin^2 \theta + b^4 \cos^2 \theta : a^2b^2$. (2) If R($am^2, 2am$) be on the parabola $y^2 = 4ax$, prove that RM = m^2MN .

14277. (ROBERT W. D. CHRISTIE.)—Find (1) a general value for x in the equation $3.2^x + 1 = pq$ when p is a prime. A few examples are $x = 3n - 2$ (n any integer); then $p = 7$ (v . Quest. 14158) $= 4n - 1$, $p = 5$ $= 10n - 3$, $p = 11$

14278. (I. ARNOLD.)—Two non-concentric spheres intersect, forming a shell. Find the centre of gravity of the larger shell and its distance from the centre of the larger sphere, the distance between the centres of the spheres being d , and the radii of the spheres being R and r .

14279. (G. W. MCGORRIDGE.)—PQR is a triangle circumscribing a conic, focus S, the sides touching at L, M, N. The bisector of the exterior angle LSM meets a fourth tangent in Z, &c. Show that PX, QY, RZ are concurrent.

14280. (H. A. WEBB.)—Show that a particle dropped from rest at any height will, relatively to an observer on the earth, describe a curve on the surface of a paraboloid of revolution whose axis is parallel to the axis of the earth; it being assumed that the earth rotates on its axis uniformly and exerts a constant attraction on the particle.

14281. (J. A. THIRD, M.A.)—If a conic touch the sides BC, CA, AB of a triangle at X, Y, Z, and another conic touch the sides YZ, ZX, XY of XYZ at P, Q, R respectively; then AP, BQ, CR are concurrent. When both conics are circles, the point of concurrence lies on the EULER line of XYZ.

14282. (Professor A. DROZ-FARNY.)—Dans le triangle ABC de forme donnée, $\text{tg } A = 1$, $\text{tg } B = 2$, $\text{tg } C = 3$; démontrer que la droite d'EULER est parallèle au côté AC.

OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

5879. (Professor MINCHIN, M.A.)—For a given system of coplanar forces construct (geometrically) a funicular polygon which shall pass through three given points. [Professor MINCHIN states that this problem, which admits of a very simple solution, is of practical importance to engineers.]

5882. (Professor COCHEZ.)—Calculer le rayon d'un cercle inscrit dans un triangle on fonctions des distances du centre aux trois sommets.

5884. (Professor MATZ, M.A.)—Determine the mean distance from the coordinate origin to all the points in the surface enclosed by the cisoid of DIODES and its appertaining circle.

5893. (W. R. ROBERTS, M.A.)—A system of conics is described having double contact with the polar conic of the line joining the three inflexions of a cubic, the chord of contact being the same line; any conic of the system meets the cubic in six points, the tangents at which all touch another conic of the same system.

5895. (R. A. ROBERTS, M.A.)—Find the locus of the centre of gravity of an arc of the lemniscate of BERNOULLI which is of constant length.

5916. (EDWYN ANTHONY, M.A.)—Show that, for all positive integral values of n except unity, $2n!$ is less than $\{n(n+1)\}^n$.

[In the Note to Professor SYLVESTER'S Question 5876, in our last issue of old and unsolved Questions, two misprints were allowed to pass. For "GORDON" read "GORDAN," and for "Bezontiant" read "Bezontiant," so-called after (ETIENNE) BEZOUT, a French mathematician (1730-1781), who published a *Cours des Mathématiques*.]

NOTICE TO CORRESPONDENTS.

It is requested that all Mathematical communications should be sent to

D. BIDDLE, Esq., Charlton Lodge, Kingston-on-Thames.

NOTICE.—Vol. LXX. of the "Mathematical Reprint" is now ready, and may be had of the Publisher, FRANCIS HODGSON, 89 Farringdon Street, E.O. Price, to Subscribers, 5s.; to Non-Subscribers, 6s. 6d.

THE LONDON MATHEMATICAL SOCIETY.

Thursday, June 8, 1899.—Lord Kelvin, G.C.V.O., President, in the Chair. Twenty-two members present.

The President announced that the Council had awarded the De Morgan Medal to Prof. W. Burnside, F.R.S., for his researches in mathematics, particularly in the theory of groups. Prof. Burnside, who was present, briefly thanked the Society for the honour conferred upon him.

The Secretary announced the recent loss the Society had sustained through the death of Mr. S. O. Roberts, M.A.

Prof. Mittag-Leffler was admitted into the Society, being an Honorary Member, and subsequently made a communication (in French) on "The Convergency of Series." Messrs. Elliott, Love, and Hobson offered some remarks, to which Prof. Mittag-Leffler replied; and, at the request of the meeting, consented to put his communication into writing.

The President next spoke on "Solitary Waves, Equivolumental and Irrational, in an Elastic Solid."

Prof. Love expressed himself as having been much interested in the

diagrams exhibited by the President. He then gave a sketch of a paper by Prof. J. H. Michell, on "The Transmission of Stress across a Plane of Discontinuity in an Isotropic Elastic Solid and the Potential Solutions for a Plane Boundary."

The following papers were taken as read:—

"On Several Classes of Simple Groups," Dr. G. A. Miller.

"On Theta Differential Equations and Expansions," Rev. M. M. U. Wilkinson, M.A.

"Finite Current Sheets," Mr. J. H. Jeans.

(1) "On a Congruence Theorem having reference to an Extensive Class of Coefficients"; (2) "On a Set of Coefficients analogous to Eulerian Numbers," Dr. Glaisher, F.R.S.

(1) "The Reduction of a Linear Substitution to its Canonical Form"; (2) "On the Integration of Systems of Total Differential Equations," Prof. A. C. Dixon, M.A.

EXAMINATION PAPER

AS USED BY THE

COLLEGE OF PRECEPTORS.

In strict accordance with the College requirements, and each Sheet bears their Watermark.

Packed in Reams of 480 Sheets... .. per Ream, 2s. 6d.
" " 960 " " " " 5s. 0d.

Bookkeeping Paper, ruled for Ledger, Cash Book, and Journal, 1s. per 100 Sheets.

Remittance should accompany Order.

SPHERICAL TRIGONOMETRY,

AND ITS APPLICATION TO GEODESY AND ASTRONOMY.

With numerous Examples.

HODGES, FIGGIS, & CO., LIMITED, 104 GRAFTON STREET, DUBLIN.

LONDON: LONGMANS & CO.

WORKS on CHEMISTRY published by Sampson Low, Marston & Co., Ltd.

By R. L. TAYLOR, F.I.C., F.C.S.,

Teacher of Chemistry and Physics in the Central Higher Grade School, Manchester, and Headmaster of the Central Evening School of Science and Art, Manchester.

CHEMISTRY FOR BEGINNERS. Adapted for the Elementary Stage of the Science and Art Department's Examinations in Organic Chemistry. Fifth Edition, Enlarged. Illustrated. With 200 Questions and Problems. Crown 8vo, 2s. APPENDIX—EXERCISES IN PRACTICAL CHEMISTRY: MOSTLY QUANTITATIVE. Crown 8vo, 24 pages, paper covers, 6d.

"Covers the whole ground of the Elementary Stage of the Science and Art Department's Examination, and forms generally an excellent introduction to the study of Chemistry, the explanations of chemical phenomena being unusually full."—*School Board Chronicle*.

THE STUDENT'S CHEMISTRY. Adapted for the Advanced Stage of the Science and Art Department's Examinations, the Oxford and Cambridge Local Examinations, the London University Examinations, &c. With over 600 Questions and Problems, Tables of Spectra, &c. Fully Illustrated. Crown 8vo, 360 pages, 5s. With KEY to Problems, 6s. 6d.

"Mr. Taylor has hit the mark well in his attempt to produce a text-book of chemistry for students who wish to reach the level of the Advanced Stage of the Science and Art Department. While he has been careful not to include too much mere detail, he has not thereby rendered his manual incomplete or insufficient. He has endeavoured to make his descriptions of methods and explanations of reactions quite up to date. The concluding chapters set forth the principal theories in such a way as to enable the student to grasp their import readily."—*Schoolmaster*.

CHEMICAL PROBLEMS WITH SOLUTIONS: being the Key to the Problems in "Chemistry for Beginners" and "The Student's Chemistry." By R. L. TAYLOR and S. PARRISH, A.R.C.S. (London), Teacher of Chemistry in the Central Higher Grade School, Leeds. Crown 8vo, cloth, 2s. 6d.

"This is the complement of Mr. Taylor's "Student's Chemistry." Full and intelligible solutions of the problems in the latter work are given."—*Schoolmaster*.

ANALYSIS TABLES FOR CHEMICAL STUDENTS. Adapted for the Advanced Stage of Practical Inorganic Chemistry, and the Elementary and Advanced Stages of Practical Organic Chemistry (Revised Syllabus, 1892). Crown 8vo, limp cloth, 1s. APPENDIX, paper covers, 3d.

"The arrangement is so clear and scientific that these tables will prove a welcome assistant to teacher and taught."—*Saturday Review*.

"We can strongly recommend the use of these tables to students preparing for Examination in Advanced Practical Inorganic Chemistry, or in the Elementary or Advanced Stage of Practical Organic Chemistry."—*Schoolmaster*.

By JOHN MILLS, F.R.A.S.

ALTERNATIVE ELEMENTARY CHEMISTRY: being a Course of Lessons adapted to the requirements of the New Syllabus of Chemistry recently instituted by the Science and Art Department. With a Preface by Professor THORPE, F.R.S. Illustrated with 65 Drawings. Crown 8vo, 104 pages, cloth, 1s. 6d.

"It is a practical and businesslike manual, clear in its description, and illustrated by a number of serviceable diagrams."—*Scotsman*.

CHEMISTRY FOR STUDENTS: a Text-Book for the Elementary Course, Science and Art Department. With over 300 Illustrations. Crown 8vo, cloth, 3s. 6d.

ANSWERS TO EXAMINATION QUESTIONS. Alternative Course, 1887-91, inclusive. Crown 8vo, boards, 1s.

ANSWERS TO EXAMINATION QUESTIONS IN CHEMISTRY. Theoretical and Practical. Ordinary Course, 1887-91, inclusive. Crown 8vo, boards, 1s.

By CHAPMAN JONES.

PRACTICAL INORGANIC CHEMISTRY: a Course of Elementary Experiments. Crown 8vo, cloth, 2s. 6d.

"These experiments, based upon the syllabus of the Elementary Stage of Practical Inorganic Chemistry, will well repay the careful attention of students entering for this Examination. The descriptions and hints are clear and thorough, and the arrangement leaves nothing to be desired."—*Schoolmaster*.

By T. HANDS, M.A.

NUMERICAL EXERCISES IN INORGANIC CHEMISTRY. Crown 8vo, 2s.; with the Answers, 2s. 6d.; Answers separately, 6d.

LOW'S CHEMICAL LECTURE CHARTS.

A Series of TWENTY-FIVE SHEETS, 40 in. by 30 in., price £1. 11s. 6d. net.

Backed with linen, £2. 10s. net.

Backed with linen, varnished, and mounted on rollers, £3. 10s. net.

The object of the Charts is to simplify the work of the teacher by supplying him with first-rate drawings, in bold outline, of arrangements of apparatus for elucidating the more difficult experimental details of chemical manipulation. Apparatus, inaccessible to ninety-nine per cent. of the schools of the country on the ground of cost, is always available in the lecture halls of the leading Colleges and Universities. A cheap equivalent to the less pretentious classes has long been desired, and we therefore appeal to all teachers of Chemistry who are preparing pupils for the Examinations of the Science and Art Department, the London Matriculation or Intermediate Science, Oxford and Cambridge Local, Preliminary Scientific, &c., &c., to carefully consider the merits of THESE AIDS TO THE TEACHING OF CHEMISTRY. They have been compiled from the most reliable sources, and embody much pictorial information which is not easy of access to most teachers, many of the illustrations not yet having appeared in ordinary text-books.

They would be of great service in all organised Science schools, and an acquisition to every chemical laboratory, serving not merely as aids in the lecture, but also as a means of mutual help among students. An inspection of the following list of subjects figured on the Charts will convey a clear notion as to their scope and probable use.

LIST OF SUBJECTS FIGURED ON THE CHARTS.

- No. 1. Catalan Forge for Iron-smelting—A Modern Blast Furnace—The Bessemer Process.
- No. 2. Manufacture of Nitric Acid—Boracic Acid.
- No. 3. Gravimetric Composition of Air—Atomic Weight of Carbon—Gravimetric Synthesis of Water.
- No. 4. Lothar Meyer's Curve.
- No. 5. Isolation of Fluorine—U-tube, Sectional View—Preparation of Anhydrous Hydrofluoric Acid.
- No. 6. Determination of Molecular Weight.
- No. 7. Solubility Curves—Carbonic Acid Isothermals.
- No. 8. Reverberatory Furnace—Pattinson's Process.
- No. 9. Distillation of Water—Charcoal Burning—Distillation of Coal.
- No. 10. Extraction and Sublimation of Sulphur—Lime Burning.
- No. 11. Extraction of Zinc—Distillation of Mercury.
- No. 12. Liquefaction of Gases—Cailliet's Apparatus.
- No. 13. Extraction of Phosphorus—Distillation of Iodine.
- No. 14. Atmolysis—Dissociation—Sprengel Pump.
- No. 15. Oxyhydrogen Furnace—Muffle Furnace—Cupellation of Silver.
- No. 16. Extraction of Bismuth—Preparation of Chromium.
- No. 17. Spectroscope with Comparison Prism—Reversal of the Sodium Lines.
- No. 18. The Leblanc Process.
- No. 19. Apparatus for Saturating Brine with Ammonia.
- No. 20. Reverberatory Electric Furnace—Electrolytic Preparation of Aluminium.
- No. 21. Ozonising Apparatus, &c.
- No. 22. Low Temperature Experiments—Volumetric Composition of Water.
- No. 23. Extraction of Copper—Furnace for Refining Copper.
- No. 24. Manufacture of Sulphuric Acid.
- No. 25. Concentration of Sulphuric Acid.

The *Schoolmaster* says of the Charts:—"The number of charts in this series is twenty-five, but, as nearly every sheet gives two or more distinct drawings, a very considerable amount of ground is covered by them. As regards the general character of the set, the theoretical, experimental, and practical aspects of the subject are all represented. The following may be taken as characteristic examples:—Lothar Meyer's curve and the carbonic acid isothermals; drawings of the apparatus, used by Dumas, Hofmann, Victor Meyer, and Raoult in the determination of molecular weights; and sketches of a Catalan forge, of a blast furnace, and a Bessemer converter. That recent experimental work is not neglected is shown by the inclusion of the apparatus for the isolation of Fluorine. All such diagrams as can readily and speedily be drawn upon the blackboard by the teacher in the course of his lesson have very properly been omitted. The drawings are nearly all in outline, are clear and exact, and free from unnecessary detail. They are certainly to be considered very suitable for class use, and we commend them to the notice of all whose teaching of chemistry is not strictly elementary."

Clarendon Press, Oxford.

OXFORD LOCAL EXAMINATIONS.

- Chaucer.—The Prologue to the Canterbury Tales.** (School Edition.) Edited by W. W. SKEAT, Litt.D. Extra fcap. 8vo, 1s.
- Shakespeare.—As You Like It.** Edited, with Introduction, Notes, &c., by W. ALDIS WRIGHT, D.C.L.
- Milton.—Comus.** Edited, with Notes, by O. ELTON, B.A. 1s.
- **Lycidas.** Edited, with Notes, by O. ELTON, B.A. 6d.
- Scott.—Lay of the Last Minstrel.** Edited, with Notes, &c., by W. MINTO, M.A. With Map. Second Edition. 1s. 6d.
- Tales of Early Rome.** Adapted from the Text of Livy. Edited, with Notes, Latin-English and English-Latin Vocabularies, Introduction, &c., by J. B. ALLEN, M.A. 1s. 6d.
- Caesar.—Gallic War, Books III.—V.** Edited, with Notes, Maps, &c., by C. E. MOBERLY, M.A. 2s. 6d.
- Cicero.—Speeches against Catilina.** With Introduction and Notes, by E. A. UPCOTT, M.A. Second Edition. Extra fcap. 8vo, 2s. 6d.
- Livy.** Book XXII. With Introduction, Notes, and Maps. By M. T. TATHAM. 2s. 6d.
- Virgil.—Aeneid IX.** Edited, with Introduction and Notes, by A. E. HAIGH, M.A. Limp, 1s. 6d. In two Parts, 2s.
- Euripides.—Medea.** Edited, with Introduction and Notes, by C. B. HEBBERDEN, M.A. Second Edition, 2s.
- Homer.—Odyssey VII.—XII.** With Notes, &c., by W. W. MERRY, D.D. 3s.
- Xenophon.—Anabasis, Books III., IV.** With Introduction, &c., by J. MARSHALL, M.A. 3s.
- West Indian Colonies.** With 12 Maps. 7s. 6d. Being Vol. II. of Historical Geography of the British Colonies. By C. P. LUCAS, B.A.
- Lewis.—Remarks on the Use and Abuse of some Political Terms.** By Sir G. CORNEWALL LEWIS, Bart. New Edition, with Notes and Introduction, by THOMAS RALEIGH, D.C.L. Crown 8vo, paper boards, 3s. 6d.; cloth, 4s. 6d.
- Elementary Architecturo** (Classical and Gothic) for Schools, Art Students, and General Readers. By MARTIN A. BUCKMASTER. With 38 full-page Illustrations. Crown 8vo, 4s. 6d.
- Book-keeping.** New and Enlarged Edition. By Sir R. G. C. HAMILTON and JOHN BALL. Cloth, 2s.
- Ruled Exercise Books adapted to the above may be had, price 1s. 6d.; also, adapted to the Preliminary Course only, price 4d.*
- Milton.—Areopagitica.** With Introduction and Notes, by JOHN W. HALES, M.A. 3s.
- **Poems.** Edited by R. C. BROWNE, M.A. In Two Volumes. 6s. 6d.
Sold separately: Vol. I., 4s.; Vol. II., 3s. In paper covers: Lycidas, 3d.; Comus, 6d. Edited, with Notes, by O. ELTON, B.A.: Lycidas, 6d.; L'Allegro, 4d.; Il Penseroso, 4d.; Comus, 1s.
- **Paradise Lost.** Book I. Edited by H. C. BEECHING, M.A. 1s. 6d.; in parchment, 3s. 6d.
- **Paradise Lost.** Book II. Edited by E. K. CHAMBERS, B.A. 1s. 6d. Books I. and II. combined, 2s. 6d.
- **Samson Agonistes.** Edited, with Introduction and Notes, by J. CHURTON COLLINS, M.A. 1s.
- Scott.—The Talsman.** Edited, with Introduction, Notes, and Glossary, by the Rev. H. B. GEORGE, M.A. 2s.
- **Marmion.** Edited, with Introduction and Notes, by T. BAYNE. 3s. 6d.
- A Latin Prose Primer.** By J. Y. SARGENT, M.A. 2s. 6d.
- Passages for Translation into Latin.** Selected by J. Y. SARGENT, M.A. 2s. 6d.
* A Key to the above, price 5s. net. Supplied to Teachers only on application to the Secretary, Clarendon Press.
- Cicero.—De Senectute.** Edited, with Introduction and Notes, by L. HUXLEY, M.A. 2s.
- Livy.** Books XXI.—XXIII. With Introduction and Notes. By M. T. TATHAM, M.A. Second Edition, Enlarged. 5s.
- Book XXI. By the same Editor. 2s. 6d.
- Plato.** With Introduction and Notes by ST. GEORGE STOCK, M.A. 8vo.
- **The Apology.** Third Edition. 2s. 6d.
- **Crito.** 2s.
- Xenophon.—Anabasis.** Book II. With Notes and Map. By C. S. JERRAM, M.A. 2s.
- Lossing.—The Laokoon.** With English Notes by A. HAMANN, M.A. Revised, with an Introduction, by L. E. UPCOTT, M.A. 4s. 6d.
- Schiller.—Wilhelm Tell.** A Drama. Large Edition. With Map. By C. A. BUCHHEIM, Ph.D. 3s. 6d.
- **Wilhelm Tell.** School Edition. With Map. By the same Editor. 2s.
- **Marla Stuart.** A Drama. By the same Editor. 3s. 6d.
- Short German Plays for Reading and Acting.** With Notes and Vocabulary. By E. S. BUCHHEIM. 3s.
- Elementary German Prose Composition.** With Notes, Vocabulary, &c. By the same Editor. Cloth, 2s.; stiff covers, 1s. 6d.
- A Primer of Italian Literature.** By F. J. SNELL, M.A. 3s. 6d.
- Cervantes.—The Adventure of the Wooden Horse and Sancho Panza's Governorship.** Edited, with Introduction, Life, and Notes, by CLOVIS BEVENOT, M.A. 2s. 6d.
- A Primer of the Gothic Language.** With Grammar, Notes, and Glossary. By JOSEPH WRIGHT, M.A., Ph.D. Cloth, 4s. 6d.
- Nixon.—Elementary Plane Trigonometry.** By R. C. J. NIXON, M.A. 7s. 6d.
- Elementary Mechanics of Solids and Fluids.** By A. L. SELBY, M.A. 7s. 6d.
- An Elementary Treatise on Heat.** With numerous Woodcuts and Diagrams. By BALFOUR STEWART, F.R.S. 8s. 6d.
- Hydrostatics and Elementary Hydrokinetics.** By G. M. MINCHIN, M.A. 10s. 6d.
- Geometry for Beginners.** By the same Author. 1s. 6d.
- Practical Work in General Physics.** By W. G. WOOLL-COMBE, M.A., B.Sc. 2s.
- Practical Work in Heat.** By the same Author. 2s.
- Practical Work in Light and Sound.** By the same Author. 2s.
- Practical Work in Electricity and Magnetism.** By the same Author. 2s.

THE EDUCATIONAL TIMES,

AND
Journal of the College of Preceptors.

Vol. LII.] New Series, No. 460.

AUGUST 1, 1899.

{ Price to Non-Members, 6d.
{ By post, 7d.

COLLEGE OF PRECEPTORS.— EXAMINATIONS FOR 1899.

1. **DIPLOMAS.**—The next Examination of Teachers for the Diplomas of the College will commence on the 2nd of January, 1900.—At the Midsummer Examination, persons who have previously passed in Theory and Practice of Education at the Diploma Examination may be examined practically for Certificates of Ability to Teach.

2. **CERTIFICATE EXAMINATIONS.**—The Christmas Examination for Certificates will commence on the 6th of December.

3. **JUNIOR FORMS EXAMINATIONS.**—The Christmas Examination will commence on the 6th of December.

4. **PROFESSIONAL PRELIMINARY EXAMINATIONS.**—These Examinations are held in March and September. The next Examination will commence on the 6th of September, 1899.

5. **INSPECTION AND EXAMINATION OF SCHOOLS.**—Visiting Examiners are appointed by the College for the Inspection and Examination of Public and Private Schools.

PRIZES.

Diploma Examination.—In addition to the Doreck Scholarship of £20, the following Prizes will be competed for:—Theory and Practice of Education, £10; Classics (Greek and Latin), £5; Mathematics, £5; Natural Science, £5.

Certificate Examination.—The "Isbister Prize" will be awarded to the Candidate who stands First, and the "Pinches Memorial Prize" to the Candidate who stands Second in General Proficiency. Prizes will also be awarded to the Third and Fourth in General Proficiency, and to the First and Second in the following subjects:—Classics, Mathematics, Modern Languages, Natural Science, English Subjects. The "Taylor Jones Memorial Prize" will be awarded to the best Candidate in Scripture History. Two Medals will be awarded to the best Candidates in Shorthand.

The Regulations of the above Examinations can be obtained on application to the Secretary at the College, Bloomsbury Square, W.C.

C. R. HODGSON, B.A., Secretary.

PRELIMINARY EXAMINATION OF MEDICAL STUDENTS.—The COLLEGE OF PRECEPTORS will hold an Examination for Certificates recognised by the General Medical Council as qualifying for Registration as a Medical Student, on the 5th, 6th, and 7th of September, 1899.

The Examination will take place in London, and at the following Local Centres:—Birmingham, Bristol, Leeds, Liverpool.

Examination Fee, 25s.

Regulations and Entry Forms may be obtained on application to the Secretary of the College of Preceptors, Bloomsbury Square, W.C.

C. R. HODGSON, B.A., Secretary.

COLLEGE OF PRECEPTORS.—

EXTRACT FROM THE BY-LAWS.

Section II., clause 5.—"The Council may grant the privileges of Membership, without payment, to holders of Diplomas of the College, as long as such persons are engaged in teaching in Secondary Schools."

Holders of the College Diplomas who are not Members of the College are requested to send their Addresses to the Secretary of the College, Bloomsbury Square, W.C.

C. R. HODGSON, B.A., Secretary.

COLLEGE OF PRECEPTORS,

BLOOMSBURY SQUARE, W.C.—The Council of the College of Preceptors will shortly proceed to the appointment of an additional EXAMINER IN MATHEMATICS and an additional EXAMINER IN GERMAN. Candidates must be Graduates (with a preference to those who have taken high Honours), and should have had considerable experience in teaching. Applications (20 copies), stating age, experience, &c., should be addressed to the DEAN of the College not later than the 31st of August. If testimonials are sent they should be not more than 3 in number, and 20 copies of each should be forwarded.

C. R. HODGSON, B.A., Secretary.

COLLEGE OF PRECEPTORS.

(Bloomsbury Square, W.C.)

LECTURES FOR TEACHERS
IN THE SCIENCE, ART, AND HISTORY OF
EDUCATION.

THE TEACHER AND THE CLASS.

To be delivered by P. A. BARNETT, Esq., M.A., formerly Principal of the "Borough Road" Training College, Isleworth.

The Second Course of Lectures (Twenty-Fifth Annual Series) will begin on Friday, 22nd September, at 7 p.m.

These lectures are meant to be of direct service to intending and acting teachers by showing the bearing of questions of theory on the daily practice and the needs of the class-room. The syllabus does not state in detail all the points which will be treated, but indicates the heads under which the most important are likely to present themselves for consideration. References and suggestions for reading will be made from time to time during the progress of the course.

For Syllabus, see page 321.

The Fee for the Course is Half-a-guinea. The Lectures will be delivered on Friday Evenings at 7 o'clock, at the College, Bloomsbury Square, W.C.

Members of the College have Free Admission to this Course.

C. R. HODGSON, B.A., Secretary.

UNIVERSITY DIPLOMA FOR WOMEN.
THE UNIVERSITY OF ST. ANDREWS grants Diploma and Title of L.L.A. to WOMEN.

60 Examination Centres in Great Britain and abroad. For Prospectus, apply to the SECRETARY, L.L.A. Scheme, The University, St. Andrews, N.B.

L.L.A. ST. ANDREWS UNIVERSITY.—

—Oral Classes for London students in all subjects of this examination are held at the Day Training College, White Street, Finsbury Street, and Ropemaker Street, Finsbury Pavement, E.C., and are conducted by Mr. S. Blows, M.A. Honours Cantab., B.A. Honours, B.Sc., and Teachers' Diploma, London.

Correspondence Tuition in all subjects for country students.

All applications to be addressed to PROF. CUBACK.

L.L.A.—THE UNIVERSITY PREPARATORY INSTITUTE, 37 Chambers Street, Edinburgh, with strong Staff of Graduates, L.L.A.'s and Specialists, prepares Ladies thoroughly for this Degree by Correspondence. System includes plans of study, exercises, weekly tests, careful correction, evaluation, and criticism. Class, Open, and L.L.A. Prizes. 131 L.L.A. Successes in 1898.

Moderate Fees. Students are enrolled during the month of August for the First Term of Session 1899-1900, which commences on August 28th. The L.L.A. Guide for 1900, 1s. L.L.A. Prospectus free.

JUNE, 1899.

167

SUCCESSSES

WERE GAINED BY STUDENTS OF

University Correspondence College.

For those who have failed

A SHORT COURSE FOR JANUARY, 1900,
IS PROVIDED.

Fee for all Subjects £3. 13s. 6d.

Classes in this Course and in the Ordinary Course for June, 1900, commence on July 29th.*

* Students may make arrangements for having back lessons.

Prospectus, Guide to Matriculation, Inter. Arts, Inter. Laws, Inter. Science, and B.A. Examinations, and further particulars, will be sent, post free, on application to

THE SECRETARY,

University Correspondence College London Office,
32 Red Lion Square, Holborn, W.C.

UNIVERSITY COLLEGE OF NORTH WALES, BANGOR. (Incorporated under Royal Charter, and a Constituent College of the University of Wales.)

Principal—H. R. REICHEL, M.A., late Fellow of All Souls College, Oxford.

DEPARTMENTS.

Table with 2 columns: Subjects and Professors. Lists subjects like Greek, Latin, French and German, History, Constitutional History, English Language and Literature, Philosophy, Mathematics, Welsh, Physics, Chemistry, Biology, Zoology, Agriculture, and Education with their respective professors.

Inclusive Tuition Fee £11. 1s. a year. Laboratory Fees additional, on the scale of £1. 1s. per term for six hours a week.

The College Courses qualify for the degrees of the University of Wales, and include most of the Subjects for Degrees of London University in Arts and Science.

The average cost of living (in lodgings) and tuition at Bangor for the Session (33 weeks) is from £30 to £40.

At the Entrance Scholarship Examination (which commences in September in each year) over 20 Scholarships and Exhibitions, ranging in value from £40 to £10, will be offered for competition.

For detailed information as to Courses, Entrance and other Scholarships, &c., apply to the Secretary and Registrar.

Bangor. J. E. LLOYD, M.A.

UNIVERSITY COLLEGE OF NORTH WALES. (A Constituent College of the University of Wales.)

DEPARTMENT FOR THE TRAINING OF SECONDARY TEACHERS. (Recognized by the Cambridge Syndicate.)

Lecturer in Education—Mr. J. A. GREEN, B.A. Lond., assisted by Miss C. GRAYSON, B.A. Lond., and Mr. F. NOETHROP, B.A. Vict.

Preparation is offered for the Cambridge Diploma (Theoretical and Practical) and for the Teachers' Diploma of the University of London.

Full particulars of the Course (which is open to both men and women students), Fees, Scholarships, &c., may be had on application to the REGISTRAR.

FROEBEL SOCIETY'S CLASSES.

THE FROEBEL SOCIETY propose to hold a COURSE OF CLASSES on Friday Evenings and Saturday Mornings at St. Martin's Schools, Charing Cross, from September 29 to December 16.

As the above Classes will not be held unless a sufficient number join, it will be necessary for intending students to send in their names to the SECRETARY of the Froebel Society, 4 Bloomsbury Square, W.C., not later than Wednesday, September 20, stating clearly which subjects they wish to take.

BEDFORD COLLEGE, LONDON (FOR WOMEN),

YORK PLACE, BAKER STREET, W.

Principal—Miss ETHEL HUELBAAT.

The Session 1899-1900 will begin on Thursday, October 5th.

Students are expected to enter their names between 2 and 4 on Wednesday, October 4th.

Further information on application to the PRINCIPAL.

BEDFORD COLLEGE, LONDON (FOR WOMEN),

YORK PLACE, BAKER STREET, W.

DEPARTMENT FOR PROFESSIONAL TRAINING IN TEACHING.

Head of the Department—Miss HANNAH ROBERTSON, B.A.

The Third Term of the Session 1899 opens on Tuesday, October 3.

The Course includes full preparation for the Examination for the Teaching Diplomas granted by the Universities of London and Cambridge, held annually in December.

THE MARIA GREY TRAINING COLLEGE,

SALUSBURY ROAD, BRONDESBURY, LONDON, N.W.

A full Course of Training in preparation for the Cambridge Teachers Certificate in the Theory and Practice of Teaching is offered to Ladies who desire to become Teachers.

Scholarships offered in all Divisions. College year begins September 13, 1899. The Winkworth Hall of Residence, for 21 Students, will be opened, opposite the College, in September, 1899.

Address—Miss ALICE WOODS, Principal, The Maria Grey Training College, Salusbury Road, N.W.

THE DACHELOR TRAINING COLLEGE,

CAMBERWELL GROVE, S.E.

(In connexion with the Datchelor Collegiate School for Girls.)

Governing Body—The Worshipful Company of Clothworkers of the City of London.

Principal—Miss BIGG.

Mistress of Method and Lecturer—Miss CARPENTER. Assisted by other Teachers and Lecturers.

This College provides a full course of professional training for Women Teachers, together with abundant opportunity for regular class teaching in a school of over 400 pupils.

Students are prepared for the Examination of the Cambridge Teachers' Training Syndicate. Fees moderate.

A COLLEGE HALL OF RESIDENCE

is provided for Students in the Training College. Terms moderate.

A Free Studentship (Training and Residence) will be awarded in September. For conditions apply to the SECRETARY.

THE CAMBRIDGE TRAINING COLLEGE FOR WOMEN TEACHERS.

Principal—Miss M. PUNNETT, B.A. Lond.

The Students attend the Cambridge University Lectures on Teaching, and have ample opportunity for teaching in various schools in Cambridge.

The object of the College is to give a professional training to educated women who intend to teach. In addition to the course of training, it offers the advantages of a college life, and one year's residence in Cambridge.

Students are admitted in January and September. Full particulars may be obtained by application to the PRINCIPAL, Cambridge Training College, Wollaston Road, Cambridge.

HOME AND COLONIAL SCHOOL SOCIETY.

(Incorporated for Examination and Certificate purposes with the National Froebel Union.)

TRAINING COLLEGE FOR SECONDARY TEACHERS.

HIGHBURY HILL HOUSE, LONDON, N.

Principal—The Rev. DAVID J. THOMAS, M.A. Vice-Principal—Miss PENSTONE.

Students (Resident and Non-resident) trained for the Examinations of the National Froebel Union, and for the Teachers' Diploma of the College of Preceptors.

A High School for Girls, Transition Class, and Kindergarten are attached to the College for purposes of Demonstration and Practice.

LONDON COLLEGE OF MUSIC. Instituted 1837. Incorporated.

GREAT MARLBOROUGH STREET, LONDON, W.

FORMUSICAL EDUCATION, AND EXAMINATIONS IN PRACTICAL AND THEORETICAL MUSIC.

Patron: HIS GRACE THE DUKE OF LEEDS.

Dr. F. J. KARN, Mus. Bac. Cantab., Principal.

G. AUGUSTUS HOLMES, Esq., Director of Examinations.

EXAMINATIONS in PIANOFORTE PLAYING, SINGING THEORY, and all branches of Music will be held in London and 350 Provincial Centres in December, when certificates will be granted to all successful candidates.

The Higher Examinations for Diplomas of Associate (A.L.C.M.), Associate in Music (A.Mus.L.C.M.), Licentiate (L.L.C.M.), Licentiate in Music (L.Mus.L.C.M.), and Fellowship (F.L.C.M.), will take place in December.

Silver and Bronze Medals and Book Prizes are offered for competition in accordance with the regulations.

In the Educational Department students are received and thoroughly trained under the best professors at moderate fees. Day and Evening Classes are held.

T. WEEKES HOLMES, Secretary.

OWENS COLLEGE, VICTORIA UNIVERSITY, MANCHESTER.

PROSPECTUSES for the Session 1899-1900 will be forwarded on application.

I. DEPARTMENT OF ARTS, SCIENCE, AND LAW; and DEPARTMENT FOR WOMEN.

II. DEPARTMENT OF MEDICINE.

III. EVENING AND POPULAR COURSES.

Special Prospectus can also be obtained of:—

IV. DEPARTMENT OF ENGINEERING.

V. DEPARTMENT OF LAW.

VI. DEPARTMENT OF PUBLIC HEALTH.

VII. DENTAL DEPARTMENT.

VIII. PHARMACEUTICAL DEPARTMENT; and

IX. FELLOWSHIPS, SCHOLARSHIPS, EXHIBITIONS, AND PRIZES.

Apply to Mr. CORNISH, 16 St. Ann's Square, Manchester; or at the College.

SYDNEY CHAFFERS, Registrar.

UNIVERSITY COLLEGE, BRISTOL.

ENGINEERING EDUCATION. COURSES FOR CIVIL, MECHANICAL, MINING, AND ELECTRICAL ENGINEERS, ALSO FOR ARCHITECTS AND SURVEYORS.

Professor—J. RYAN, M.A., LL.M., D.Sc.

Special facilities are offered in the way of College Scholarships and Engineering Works Scholarships, favourable arrangements being made with firms in or near Bristol for practical training to be obtained in works concurrently with the College Course.

Surveying, Field Work, and Geology form prominent features of the Civil Engineering Scheme.

A College Diploma is awarded to students who pass the qualifying Examinations.

The Institution of Civil Engineers accepts the Preliminary Certificate of the College in lieu of its Entrance Examination.

Sessional Courses are also organized for the Matriculation, Preliminary Scientific, Intermediate Arts, and Intermediate Science Examinations of the University of London, and for the B.A. and B.Sc. Degree Work.

The work of women students is under the supervision of a Lady Tutor.

Applications for vacancies in October to be made as early as possible to the SECRETARY, from whom prospectus and particulars of residence in Clifton may be obtained.

JAMES RAFTER, Secretary.

ST. GEORGE'S TRAINING COLLEGE, for WOMEN TEACHERS.—This College provides a complete course of training for well-educated women who intend to become Teachers.

The Course includes attendance at Professor Laurie's Lectures on Education at the University of Edinburgh, and practice in Class-Teaching in several schools. Several Bursaries of £30 are offered annually. The College year begins in October. Apply to the PRINCIPAL, 5 Melville Street, Edinburgh.

KELLAND TRAINING COLLEGE FOR TEACHERS, LEICESTER.

Principals—Miss MORGAN, N.F.U. (Higher).

Miss J. MORGAN, B.A. (Lond.).

Head Kindergarten Mistress—Miss JOHNSON, N.F.U. (Higher).

Preparation for the National Froebel Union Certificates. Cambridge Teacher's Diploma. Entrance Scholarships. Grounds comprise Tennis Court, Croquet Lawn, &c. STUDENT-TEACHER required for September 19th.

LONDON UNIVERSITY EXAMINATIONS.

PRIVATE TUITION MAY BE TAKEN UP DURING THE SUMMER VACATION.

DAY AND EVENING CLASSES

FOR THE MATRICULATION AND OTHER

Examinations of London University

Commence at University Tutorial College, Red Lion Square, Holborn, as follows:—MATRICULATION (January and June), Monday, September 11; PRELIM. SOL, Monday, September 18; INTER. ARTS, B.A., INTER. SO., and B.S.O., Monday, October 2. Evening Classes are held in Organic Chemistry for Inter. M.B., Inter. Laws and LL.B.; Mental and Moral Science, Botany, and Geology for B.Sc.

The number of successes during the last two sessions at London University was 602, with 53 places in Honours, and over £1000 was gained in 1898 in Hospital and Entrance Scholarships.

Prospectus on application to

THE VICE-PRINCIPAL,

University Tutorial College, Red Lion Square, Holborn.

THE HYGIENIC HOME

AND

COLLEGE OF PHYSICAL CULTURE

provides a thorough training for ladies (as teachers) in the principles and practice of Hygiene, Swedish Gymnastics, and Vegetarian Cookery.

The course extends over two years, and complete theoretical, as well as practical, training is given.

Examinations are held and certificates given to successful students.

There are good openings for qualified teachers, who after training here are assisted to obtain posts. The College is situated in Worcestershire, six miles from Birmingham, and half-a-mile from Halesowen Station; the old historic mansion, The Leasowes, having been adapted for this purpose.

The Leasowes stands in its own extensive grounds, and is surrounded by beautiful woods. Its bracing air, elevated position, and charming situation make it an ideal place for a College of Health. It has an excellent Gymnasium fitted with Swedish apparatus, also fine Gardens.

Elocution, Dancing, Gardening, Games, &c., are also taught as a means of Health and Physical Culture.

Students are admitted in September, age 18 to 30. Apply for particulars to Miss ANSTREY, The Leasowes, near Halesowen, Worcestershire.

THE

FROEBEL EDUCATIONAL INSTITUTE,

TALGARTH ROAD, WEST KENSINGTON, LONDON, W.

Chairman of the Committee—MR. W. MATHUR.

Treasurer—MR. C. G. MONTEFIORE.

Secretary—MR. ARTHUR G. SYMONDS, M.A.

TRAINING COLLEGE FOR TEACHERS.

Principal—Madame MICHAELIS.

KINDERGARTEN AND SCHOOL.

A.C.P.,

L.C.P., & F.C.P.

PREPARATION BY CORRESPONDENCE

On a thoroughly individual system, which ensures to each student the closest care and attention. Weak subjects receive special help. Fees may be based on success.

Single subjects may be taken—Latin, Greek, French, German, Italian, Mathematics, Mechanics, Physics, Chemistry, Logic, Psychology, Political Economy, &c.

TUTORS.

The Staff includes a number of Graduates of London, Oxford, Cambridge, and Royal Universities, Science Medalists, and Specialists.

The following are a few extracts from letters of successful pupils:—

"Thank you heartily for your careful preparation, without which I am sure I could never have got through."

"I attribute my success entirely to your coaching, and shall be pleased to recommend you to my friends."

"I was pleased to find that many of the questions given to me by you were actually given in the examination."

"I have passed in every subject in the L.C.P., and am very pleased at the result. May I thank you for your kind and valuable help, which had everything to do with the result, for some of the questions I had were the same as I had previously answered in your papers."

"I have passed my examination (all subjects A.C.P.). I am simply delighted, and feel that it is owing to your excellent tuition."

For Terms, Testimonials, &c.,

Address—MR. J. CHARLESTON, B.A. (Honours, Oxon.; and Lond.).

BURLINGTON CLASSES,

27 CHANCERY LANE, LONDON.

KING'S COLLEGE, LONDON.—

Students received in Arts and Science, Engineering, Architecture, and Applied Sciences, Medicine, and other branches of education. Preparation for London and other Examinations. Day and Evening classes.

Students are classed on entrance according to their proficiency, and terminal reports on the progress and conduct of Matriculated Students are sent to their parents and guardians. There are Entrance Scholarships and Exhibitions.

Students who are desirous of studying any particular subject or subjects, without attending the complete courses of the various faculties, can be admitted as non-matriculated students on payment of the separate fees for such classes as they select.

Residence of Students.—There will be a few rooms vacant in the College next Term.

For prospectuses and all information apply to the SECRETARY, King's College, Strand, W.C.

DAY COLLEGE FOR WOMEN.

Term commences 25th Sept.

from

THE SECRETARY,

A Medical School and Departments for Secondary and Elementary Training are attached to the College. Apply to the PRINCIPAL.

**ST. THOMAS'S HOSPITAL
MEDICAL SCHOOL,**

ALBERT EMBANKMENT, LONDON, S.E.

The WINTER SESSION of 1899-1900 will open on Tuesday, October 3, when the prizes will be distributed at 3 p.m. by Professor T. CLIFFORD ALLBUTT, M.D., F.R.S., in the Governors' Hall.

Three Entrance Scholarships will be offered for competition in September, viz., one of £150 and one of £30 in Chemistry and Physics, with either Physiology, Botany, or Zoology, for First Year's Students; one of £50 in Anatomy, Physiology, Chemistry (any two), for Third Year's Students from the Universities.

Scholarships and Money Prizes of the value of £500 awarded at the Sessional Examinations, as well as several Medals.

Special Classes are held throughout the year for the Preliminary Scientific and Intermediate M.B. Examinations of the University of London.

All Hospital Appointments are open to students without charge.

Club-rooms and an Athletic Ground are provided for students.

The School Buildings and the Hospital can be seen on application to the Medical Secretary.

The fees may be paid in one sum or by instalments. Entries may be made separately to Lecture or to Hospital Practice, and special arrangements are made for students entering from the Universities and for Qualified Practitioners.

A Register of approved lodgings is kept by the Medical Secretary, who also has a list of local Medical Practitioners, Clergymen, and others who receive students into their houses.

For Prospectus and all particulars apply to Mr. RENDLE, the Medical Secretary.

H. P. HAWKINS, M.A., M.D. Oxon., *Dean.***CHARING CROSS HOSPITAL
MEDICAL SCHOOL.**

The WINTER SESSION, 1899-1900, will commence on Monday, October 2nd, at 4 p.m., when an Introductory Address will be delivered by

DR. MITCHELL BRUCE.

The Livestone Scholarship (100 guineas), the Huxley Scholarship (55 guineas), and six other Entrance Scholarships, total value £550, are awarded annually.

Two Scholarships of the value of 60 guineas each are reserved for Students of Oxford, Cambridge, or London University.

FEES.—For the five years' curriculum of study required by the various Examining Bodies and for hospital practice, 110 guineas in one sum, or 121 guineas in five instalments.

The composition fee for sons of registered medical practitioners is 100 guineas, and the fee by instalments 110 guineas in five payments.

The composition fee for Dental Students is 54 guineas, or 60 guineas payable in two instalments of 30 guineas each.

A proportionate reduction of the above Fees is made to Students who have completed part of the curriculum elsewhere.

CHARING CROSS HOSPITAL is within three minutes' walk of the Dental Hospital of London, and the hours of Lectures are arranged to suit the convenience of both General and Dental Students.

The Hospital and School are situated within two minutes of both Charing Cross Stations, and the Athletic Ground at Eltham can be reached within half an hour from Charing Cross.

THE SCHOOL PROSPECTUS, containing full information concerning the classes, prizes, and all other arrangements connected with the Medical School, will be sent on application to the Dean, Chandos Street, Strand, W.C.

H. MONTAGUE MURRAY, *Dean.***KING'S COLLEGE, LONDON, and
KING'S COLLEGE HOSPITAL.**

The WINTER SESSION will commence on October 2nd.

SCHOLARSHIPS AND PRIZES.—At Entrance, £500 is awarded annually, of which £150 is for Divinity, Classics, and Mathematics; £220 is for Science and Mathematics; £130 is for Science.

During the curriculum, £300 is awarded annually in Prizes and Scholarships.

There are chambers and buttry for students at King's College, and an approved list is kept of medical men who receive students into their houses.

In addition to the regular courses of instruction for the University and for the Conjoint Board Examinations, Special Classes have been organized for the London Matriculation and for the Primary and Final Examinations for the F.R.C.S.

During the vacation, extensive additions to the accommodation of the Departments of Anatomy and Physiology have been made.

Detailed information of Classes, Scholarships, Prizes, and other matters may be found in the Prospectus, or may be obtained from the Dean or Sub-Dean by letter, or by interview at appointed hours.

ALFRED W. HUGHES, M.B., M.S., F.R.C.S., *Dean.*RAYMOND CRAWFURD, M.A., M.D. Oxon., M.R.C.P., *Sub-Dean.***GUY'S HOSPITAL, MEDICAL
SCHOOL.**

The WINTER SESSION will begin on Monday, October 2nd, 1899. Five Open ENTRANCE SCHOLARSHIPS of the combined value of £410 are offered for competition in September next, and numerous Prizes, Medals, and Scholarships are awarded annually. The COLLEGE accommodates 60 residents, and contains Reading Rooms, Dining Hall, and Gymnasium for the general use of the Students. During last year more than 6,500 patients have been treated in the Wards of the Hospital. The Preliminary Scientific Class for Students who matriculated at London University in July will begin on October 2nd. The Clubs' Union Athletic Ground at Honor Oak Park is easily accessible from the Hospital. A handbook of information for students about to enter the profession will be forwarded on application. For further particulars, or Prospectus of the School, apply personally or by letter to the DEAN, Guy's Hospital, London Bridge, S.E.

**THE MIDDLESEX HOSPITAL
MEDICAL SCHOOL.**

The WINTER SESSION (1899-1900) will commence on Monday, October 2. Mr. JOHN MURRAY, F.R.C.S., will deliver an Introductory Address, after which the prizes gained during the previous year will be distributed.

TWO ENTRANCE SCHOLARSHIPS (value £100 and £60) will be open for competition on September 21 and 22.

ONE ENTRANCE SCHOLARSHIP (value £60), open to Students of the University of Oxford and of the University of Cambridge, will be competed for on September 21 and 22. Notice in writing to be sent to the Dean on or before September 14.

Besides Scholarships and Prizes, there are annually EIGHTEEN RESIDENT HOSPITAL APPOINTMENTS open to Students, without extra fee.

The Composition Fee for general Students for the whole Medical Curriculum is 135 guineas. Special provision is made for Dental Students and for Candidates for the Preliminary Scientific (M.B.) Examination.

Special terms are made in favour of University Students who have already commenced their medical studies, and of University of London Students who have passed the Preliminary Scientific Examination.

The New School Buildings, which provide large and fully equipped laboratories for Physiology, Pathology, and Bacteriology, as well as a new Dissecting Room and Chemical Department, are now in regular use.

The Residential College adjoins the Hospital, and provides accommodation for thirty Students.

Prospectuses and all particulars may be obtained from W. PASTEUR, M.D., *Dean.*

**ST. MARY'S HOSPITAL MEDICAL SCHOOL,
PADDINGTON, W.**

The WINTER SESSION begins on October 2nd with an Introductory Address, at 3 p.m., by Mr. H. G. PLIMMER. The ANNUAL DINNER will be held in the Evening, at the King's Hall, Holborn Restaurant, Dr. SIDNEY PHILLIPS, J.P., in the Chair.

ENTRANCE SCHOLARSHIPS IN NATURAL SCIENCE.

One of £144, two of £78, 15s., one of £62, 10s., two of £57, 15s. (these two open to students from Oxford and Cambridge), will be awarded by Examination on September 21st and 22nd.

There are sixteen Resident Appointments in the Hospital open to students without expense. The School provides complete preparation for the higher Examinations and Degrees of the Universities. Special attention is directed to the fact that the authorities of the Medical School have for the first time thrown open all the Special Classes for the Higher Examinations free to Students.

The Residential College is at present at 33 and 35 Westbourne Terrace, W. Terms may be had on application to the Warden, Mr. H. S. COLLIER.

NEW OUT-PATIENTS' DEPARTMENT.

The New Out-Patients' Department, which covers an area of over 20,000 superficial square feet, was opened in May. It occupies the entire ground floor of the new Clarence Wing, which, when completed, will also provide additional wards and a Residential College for Medical Officers and Students.

ENLARGEMENT OF THE MEDICAL SCHOOL.

The New School Buildings and Laboratories, begun in the Midsummer vacation of last year, were completed by the middle of the Winter Session. The Physiological Laboratories have been further increased, and form a series of rooms which occupy the whole of the first floor of both the old and new buildings.

A fresh Laboratory, fitted with electric light and all modern improvements for the study of Biology, Pathology, and Bacteriology, has been added.

The whole of the buildings hitherto used for the Out-Patients' Department of the Hospital has been apportioned to the Medical School for purposes of new Laboratories, Class-rooms, and a new Museum. A complete reorganization of the Pathological Department has lately been made, with provision of extensive new Laboratories for Pathology and Bacteriology, and an improved Museum for Pathological specimens, with a special Anatomical Department.

HOSPITAL STAFF.

Consulting Physicians—Sir Edward Sieveking, M.D.; Sir William Broadbent, Bart., M.D., F.R.S.

Consulting Surgeons—Mr. H. Spencer Smith, Mr. Field (Aural), Mr. H. Howard Hayward (Dental).

Physicians—Dr. Chocaille, Dr. Lees, Dr. Sidney Phillips; *Out-Patients*—Dr. R. Maguire, Dr. A. P. Luff, Dr. H. A. Caley.

Physicians Accoucheurs—Dr. Montague Handfield Jones, Dr. W. J. Gower (Out-Patients).

Typical Diseases—Dr. John Anderson, C.I.E.

Bacteriology—Mr. H. G. Plummer.

For Prospectus apply to the School Secretary.

OTHER LECTURERS, &c.

Biology—Mr. W. G. Ridewood.

Anesthetics—Mr. Henry Davis.

Casualty Physician—Dr. Poynton.

Medical Registrar—Dr. John Broadbent.

Surgical Registrar—Mr. Ashdowne.

Curator—Dr. Dodgson.

G. P. FIELD, *Dean.*

THE DENTAL HOSPITAL OF LONDON MEDICAL SCHOOL, LEICESTER SQUARE.

The WINTER SESSION, 1899-1900, will commence on Monday, October 2nd.

Dental Anatomy and Physiology (Human and Comparative)—CHARLES S. TOMES, F.R.S., M.A., Oxon., F.R.C.S., L.D.S., on Tuesdays and Thursdays at 5 p.m. (Summer.) (Demonstrator—A. HOPEWELL SMITH, M.A., B.C. Cantab., F.R.C.S.)

Dental Surgery and Pathology—WILLIAM HERN, M.R.C.S., L.D.S., on Tuesdays and Fridays, at 8 a.m. (Summer.) (Demonstrator—R. HERSHELL, L.D.S.)

Mechanical Dentistry—E. LLOYD WILLIAMS, L.R.C.P., M.R.C.S., L.D.S., L.S.A., on Wednesdays at 5.30 p.m. (Winter.)

Metallurgy and its application to Dental Purposes—Dr. FORSTER MORLEY, M.A., F.I.C., F.C.S., on Thursdays at 5 p.m. (Winter.) (Demonstrator—PERCY RICHARDS, F.I.C., F.C.S.)

The Hospital is open both morning and afternoon. During the Sessions the Surgeons of the day will give demonstrations at stated hours.

The Medical Tutor holds classes before each Examination for the L.D.S.

The House Surgeons attend daily while the Hospital is open.

The Saunders Scholarship of £20 per annum and Prizes are open for competition.

Fee for two years' Hospital Practice required by the Curriculum, including Lectures, £50 in one payment, or 50 guineas in two yearly instalments. The Curriculum requires two years to be passed at a General Hospital. The fee for this is about £55. Both Hospitals can be attended simultaneously.

The Calendar may be obtained on application to the DEAN, who attends at the Hospital on Wednesday mornings from 10.30 till 12 through the year.

MORTON SMALE, Dean.

ST. BARTHOLOMEW'S HOSPITAL AND COLLEGE.

The WINTER SESSION will begin on Monday, October 2nd, 1899.

Students can reside in the College within the Hospital walls, subject to the collegiate regulations.

The Hospital contains a service of 750 beds. Scholarships and Prizes of the aggregate value of nearly £900 are awarded annually.

The Medical School contains large Lecture Rooms and well-appointed Laboratories for Practical Teaching, as well as Dissecting Rooms, Museum, Library, &c.

A large Recreation Ground has recently been purchased, and is open to members of the Students' Clubs. For further particulars apply, personally or by letter, to the WARDEN of the College, St. Bartholomew's Hospital, E.C.

A Handbook forwarded on application.

TRINITY COLLEGE, LONDON. (Instituted 1872.)

President—

The Right Hon. Lord COLERIDGE, M.A., Q.C.

Warden—EDMUND H. TURPIN, Mus.D.

MICHAELMAS TERM opens on Monday, September 25, when the individual tuition in all Practical and Theoretical Musical subjects, as well as class tuition in the Theory of Music (during the day and evening) to professional and amateur students, will be resumed.

The Lessons in the Theory of Music by Correspondence also recommence.

The College Choir meets on Tuesdays at 5. Conductor—Dr. H. T. PRINGUER.

The College Orchestra meets on Mondays at 4.30 p.m. Prospectus and student's entry form on application.

By order,

SHELLEY FISHER,

Secretary.

Mandeville Place, Manchester Square.

TO HEADS OF SCHOOLS AND FAMILIES.

THE SOCIÉTÉ NATIONALE DES PROFESSEURS DE FRANÇAIS

Can recommend fully qualified and competent French Teachers and French Governesses. Apply for Teachers to the SECRETARY, 20 Bedford Street, W.C.; and for Governesses to the LADY SUPERINTENDENT, Maison Nationale Française, 93 St. George's Square, S.W.

JOINT AGENCY FOR WOMEN TEACHERS.

(Under the management of a Committee appointed by the Teachers' Guild, College of Preceptors, Headmistresses' Association, Association of Assistant Mistresses, and Private Schools' Association.)

Address—74 GOWER STREET, LONDON, W.C.

Registrar—Miss AGNES G. COOPER.

This Agency has been established for the purpose of enabling Teachers to find work without unnecessary cost. All fees have therefore been calculated on the lowest basis to cover the working expenses.

Headmistresses of Public and Private Schools, and Parents requiring Teachers, or Teachers seeking appointments, are invited to apply to this Agency.

Many Graduates and Trained Teachers for Schools and Private Families; Visiting Teachers for Music, Art, and other special subjects; Foreign Teachers of various nationalities; Kindergarten and other Teachers are on the Register, and every endeavour is made to supply suitable candidates for any vacancy.

School Partnerships and Transfers are arranged.

Office hours—9.30 a.m. to 6 p.m. Miss Cooper's hours for interviews are from 10.30 a.m. to 1.30 p.m., and 2.30 p.m. to 5 p.m.; Wednesdays to 1.30 p.m. only.

THE JOINT AGENCY FOR MEN TEACHERS.

23 SOUTHAMPTON STREET, BLOOMSBURY SQUARE, E. LONDON, W.C.

Registrar—Rev. F. TAYLOR, M.A. Cantab.

The Agencies for Assistant-Masters and Tutors hitherto conducted by the College of Preceptors, the Teachers' Guild, and the Assistant-Masters' Association, have been amalgamated and placed under the management of a Joint Committee composed of representatives of the following Bodies:—

Headmasters' Conference.

Incorporated Association of Headmasters.

College of Preceptors.

Teachers' Guild.

Welsh County Schools' Association.

Private Schools' Association.

Association of Headmasters of Preparatory Schools.

Association of Headmasters of Roman Catholic Schools.

Assistant-Masters' Association.

Association of Technical Institutions.

&c.

The rates of commission charged to Assistant-Masters are fixed as low as possible, and it is hoped that all branches of the profession will support an Agency managed by so widely representative a Committee.

Headmasters having vacancies on their staffs, and Assistant-Masters seeking appointments, are asked to communicate with the REGISTRAR.

ENGINEERING AND CHEMISTRY.

CITY AND GUILDS OF LONDON INSTITUTE.

SESSION 1899-1900.

For further particulars apply to

T. MORTIMER GREEN, Registrar.

GREAT GRIMSBY SCHOOL BOARD.—The above School Board require the services of the following Teachers who have been specially trained in Kindergarten Training Colleges, and who have obtained Certificates from the National Froebel Union:—(1) Trained HEAD TEACHER, Certificated under the Education Department and with the Higher Certificate of the National Froebel Union, who will be required to give instruction to the other Infants' Teachers of the Board, under such arrangements as the Board may hereafter decide, and at an inclusive salary of £150 per year. (2) Trained ASSISTANT-TEACHER, with the Elementary or the Higher Certificate of the National Froebel Union, at a salary of £80 per year. A personal canvass of the members of the Board will be a disqualification. Application forms may be obtained, on receipt of stamped addressed foolscap envelope, from

DOUGLAS CHANDLER,
Clerk to the School Board.

School Board Offices, Grimsby.
27th July, 1899.

HIGH SCHOOL, STAMFORD, NORTHANTS.

BOARDERS are received by the Headmistress, Miss L. M. MONRO. Separate cubicles. Terms on application.

EXCEPTIONAL OPENING FOR A BOARDING SCHOOL.

BROADSTAIRS.—A pair of handsome Queen Anne Houses, each 12 rooms, besides baths and all modern appliances. Sanitation, gas and water supply perfect. Garden, with spacious open fields in the rear. Half-way between Town and North Foreland. Facing the East Esplanade, and two minutes' walk from sea. On lease at £120 per annum, or Freehold, £2,000, of which half can remain. Classroom, 22 ft. square, available. (Photo.)
Each house can be let during the Season at Six Guineas per week.—THOMAS LAURIE, 28 Paternoster Row, E.C.

UNIVERSITY EXAMINATION POSTAL INSTITUTION.

Manager—MR. E. S. WEYMOUTH, M.A., LOND.
Offices—27 SOUTHAMPTON STREET, STRAND, LONDON, W.C.

The University Examination Postal Institution has special Courses to prepare through the post for the

A.C.P., L.C.P., AND F.C.P.;

also for the **TEACHERS' DIPLOMA** (Cambridge or London University); also for many London University Examinations, and the Oxford and Cambridge Locals.

RECENT SUCCESS.—231

Candidates prepared successfully through the post for the **CAMBRIDGE HIGHER LOCAL** Examination, during 1895-8 (four years), 43 gaining a mark of distinction. Only three failures during the last six years for all Teachers' Diploma Examinations; numerous successes.

The Institution is now publishing a series of books having special reference to the

CAMBRIDGE HIGHER LOCAL

Examination. Particulars on application. Write for the **GUIDE TO THE CAMBRIDGE HIGHER LOCAL EXAMINATION**, by the Tutors of the University Examination Postal Institution; containing particulars as to books recommended for 1899 and for 1900, and General Suggestions for a Method of Study and Statistical Tables. (New Edition.) 1s. net; or post free, 1s. 1d.

Laurie's Science Apparatus & Models
28, PATERNOSTER ROW, E.C.

Seventh Edition.

MODERN SIDE ARITHMETIC. EXAMPLES ONLY.
By the Rev. T. MITCHESON, B.A., Assistant-Master in the City of London School.

PART I., crown 8vo, cloth, pp. 119, 1s. (Answers, 1s.; Teachers' Copy, with Answers, 1s. 6d.)

PART II., crown 8vo, cloth, pp. 200, 1s. 6d. (Answers, 1s.; Teachers' Copy, with Answers, 2s.)

COMPLETE IN ONE VOLUME, crown 8vo, cloth, 2s. (Answers, 1s. 6d.; Teachers' Copy, with Answers, 3s.)

Specimen Copies sent post free to Teachers for half the price.

NEW BOOKS.

CARPENTRY AND JOINERY. By F. C. WEBBER. With Numerous Illustrations. Crown 8vo, 3s. 6d.

[Text-Books of Technology.]

"A very useful work, both to teacher and student."—*Scotsman*.

"An excellent work."—*Morning Post*.

"The best book of its kind we have come across."—*Literary World*.

"An admirable elementary text-book on the subject."—*Builder*.

"It has the marks of practical knowledge set forth by a practical teacher."—*Guardian*.

PRACTICAL MECHANICS. By SIDNEY H. WELLS. Illustrated. Crown 8vo, 3s. 6d.

[Text-Books of Technology.]

"This clearly written, fully illustrated manual, with its exercises and suggested experiments, will undoubtedly prove a boon to teachers and pupils."—*Western Morning News*.

PRACTICAL PHYSICS. By H. STROUD, D.Sc., M.A., Professor of Physics in the Durham College of Science, Newcastle-on-Tyne. Fully illustrated. Crown 8vo, 3s. 6d. [Text-Books of Technology.]

GENERAL ELEMENTARY SCIENCE. By J. T. DUNN, D.Sc., and V. A. MUNDELLA. With many Illustrations. Crown 8vo, 3s. 6d. [Methuen's Science Primers.]

A CONSTITUTIONAL AND POLITICAL HISTORY OF ROME. By T. M. TAYLOR, M.A., Fellow of Gonville and Caius College, Cambridge. Senior Chancellor's Medallist for Classics, Porson University Scholar, &c., &c. Crown 8vo, 7s. 6d. [Ready.]

An account of the origin and growth of the Roman institutions, and a discussion of the various political movements in Rome from the earliest times to the death of Augustus.

THE NICOMACHEAN ETHICS OF ARISTOTLE. Edited, with an Introduction and Notes, by JOHN BURNET, M.A., Professor of Greek at St. Andrews. Demy 8vo, 15s. net.

This edition contains parallel passages from the Eudemian Ethics printed under the text, and there is a full commentary, the main object of which is to interpret difficulties in the light of Aristotle's own rules.

THE CAPTIVI OF PLAUTUS. Edited, with an Introduction, Textual Notes, and a Commentary, by W. M. LINDSAY, Fellow of Jesus College, Oxford. Demy 8vo, 10s. 6d. net.

For this edition all the important MSS. have been re-collated. An appendix deals with the accentual element in early Latin verse. The commentary is very full.

THE SCIENTIFIC STUDY OF SCENERY. By J. E. MARR, Fellow of St. John's College, Cambridge. Illustrated. Crown 8vo, 6s.

An elementary treatise on geomorphology—the study of the earth's outward forms. It is for the use of students of physical geography and geology, and will also be highly interesting to the general reader.

THE METRIC SYSTEM. By LEON DELBOS. Crown 8vo, 2s.

A theoretical and practical guide, for use in elementary schools and by the general reader.

A SOUTH AFRICAN ARITHMETIC. By HENRY HILL, B.A., Assistant-Master at Worcester School, Cape Colony. Crown 8vo, 3s. 6d.

This book has been specially written for use in South African schools.

A KEY TO STEDMAN'S EASY LATIN EXERCISES. By C. G. BOTTING, M.A. Crown 8vo, 3s. net.

NEW TESTAMENT GREEK. A Course for Beginners. By G. RODWELL, B.A. With a Preface by WALTER LOCK, D.D., Warden of Keble College. Crown 8vo, 3s. 6d.

EXAMINATION PAPERS IN ENGLISH HISTORY. By J. TAIT WARDLAW, B.A., King's College, Cambridge. Crown 8vo, 2s. 6d. [School Examination Series.]

A GREEK ANTHOLOGY. Selected by E. C. MARCHANT, M.A., Fellow of Peterhouse, Cambridge, and Assistant-Master at St. Paul's School. Crown 8vo, 3s. 6d. [Ready.]

CICERO DE OFFICIIS. Translated by G. B. GARDINER, M.A. Crown 8vo, 2s. 6d. [Classical Translations.]

SCHOOL EXAMINATION SERIES.

EDITED BY A. M. M. STEDMAN, M.A. Crown 8vo, 2s. 6d.

French Examination Papers in Miscellaneous Grammar and Idioms. By A. M. M. STEDMAN, M.A. Tenth Edition.

A Key, issued to Tutors and Private Students only, to be had on application to the Publishers. Fourth Edition. Crown 8vo, 6s. net.

Latin Examination Papers in Miscellaneous Grammar and Idioms. By A. M. M. STEDMAN, M.A. Ninth Edition.

Key, Third Edition (issued as above), 6s. net.

Greek Examination Papers in Miscellaneous Grammar and Idioms. By A. M. M. STEDMAN, M.A. Fifth Edition, Enlarged.

Key, Second Edition (issued as above), 6s. net.

The Educational Times.

As we write these words, the latest speech *Penultimate*. days and distributions of prizes emphasize the fact that another school year has come to an end. Some schools, indeed, prefer to take their opportunity at an earlier date in the summer term; but the last week of July witnesses the closing ceremonies at St. Paul's, Christ's Hospital, the City of London School, University College School, the Mercers' School, St. Olave's, Coopers Hill, Cranleigh, St. Edmund's, Epsom College, Marlborough College, and many others. We give a special report of the distribution at the Central Foundation School, which will have an interest of its own for many of our readers. To-day the Winchester boys will sing their *Domum*, and in a few other schools the month of August may catch the laggards at their desks. But practically the school year has drawn to a close, and the holiday month *par excellence* has begun.

We shall go to press without precisely knowing the fate which Parliament has in store for the Board of Education Bill. If Parliament has not exhausted its energy, the Bill should pass into the statute book this month; but the last omens are somewhat dubious. A final effort is to be made to expunge once more the words cut out of Clause 3 in the House of Lords, and restored in Grand Committee. We report in our Summary of the Month a meeting which plainly indicated the nature of the opposition to this clause, and which confirmed what we said upon the subject last month. Mr. Bryce undertook to move an amendment when the Bill was reported to the full House, the effect of which would be that the new Board of Education would have no authority to delegate its power of inspecting secondary schools. But, as this question has already been argued out and settled, and as the Committee for reconstructing the Education Department has been duly appointed, we presume that the Government have definitely made up their mind upon the details of the Bill, and that they will successfully resist any attempt to modify it in an important particular.

The proceedings in the Grand Committee on Law, when the Bill came before them for consideration, were unexpectedly quiet and peaceful. There was scarcely anything which could be called a fight over any of the amendments which had been put upon the paper. A general feeling seemed to prevail that

it would be inadvisable to restrict inspection to the Universities, or to add one or two educational bodies whilst excluding others equally competent to undertake the work. The only alternative was to leave the Board of Education with discretion to select.

The amendment moved by Mr. Jebb, one of the members for the University of Cambridge, proposed to substitute for the words, "the Board of Education through its officers or any University organization," the words, "the Board of Education through its officers, or, after obtaining the advice of the Consultative Committee, through any University or other organization approved in that behalf by the Board." In the course of his speech Mr. Jebb took occasion to refer to the College of Preceptors as an examining body which had been for many years engaged in the work of examining and inspecting schools, and whose examinations and inspections had been formally accepted by the Charity Commissioners as affording a satisfactory test of the efficiency of schools working under their schemes. He dwelt upon the extent of the examining work carried on by the College, on its recognition by various public authorities, and on its relations with a very large number of private schools in all parts of the country, as giving evidence of its fitness to be included, together with the Universities, in any schedule of bodies to which the Board of Education might delegate its power of inspecting secondary schools. The power of the Board to delegate, as Mr. Jebb further pointed out, is guarded against any possible tendency towards laxity, or premature new departures, by the necessity of obtaining the approval of the Consultative Committee to be created under the Bill.

Against this line of argument the only opposition worth mentioning came from Mr. Bryce, who, anticipating that the inspection under the Act would mainly apply to non-local schools, urged that the delegation of the power of inspection should be restricted to the Universities—at all events, until the statutory creation of the Local Authorities which will be empowered to deal with secondary schools in their respective districts. Mr. Bryce was clearly influenced on the Grand Committee, as we may assume that he will be in his motion on the Report stage—which may have been reached in the House of Commons when these words come under the notice of our readers—by the fears so vigorously expressed at the meeting of the National Education Association, and by the difficulty of recognizing one body without giving many other bodies a pretext and an encouragement to apply for inspecting powers.

We are very much in sympathy with Mr. Bryce's views, and even with the contentions of the National Education Association, a society of men worthy of all respect and consideration from the teaching profession. But we do not share the fears which are entertained in regard to the possible action of the Board of Education under Clause 3. The only bodies to which the Board would be in any way likely (as it seems to us) to delegate its powers are those which are mentioned in the editorial notes of the current *Record of Technical and Secondary Education*, as quoted by us in our Summary of the Month. And, when the new Local Authorities are set up by Act of Parliament, we see no reason to doubt that they will seek the assistance of one or other of the bodies there named, or of some body of equal competence and authority, or of the Universities. The choice will rest with the Local Authorities, not with the Board of Education, or even with the Consultative Committee. All that the Board can do is to limit the choice of the Local Authorities to certain designated bodies. That limitation must be made in any case; but that the power of the Board to designate inspecting bodies should relieve Government of the necessity of creating Local Authorities is, we honestly believe, an absolutely groundless fear.

Mr. Jebb's amendment was adopted without a division, and we may expect to find the words which we have quoted in the enacted Bill.

NOTES.

As we anticipated last month, the Senate of London University finally decided to accept the Government's offer of accommodation in the east wing of the Imperial Institute—but without prejudice to its indefeasible right to show its gratitude in the future by asking for more. We are frankly of opinion, as we have already said, that the transfer of the University from Burlington Gardens to the Institute at South Kensington raises a fair presumption that the University, after no long delay, will enter into definite possession of the entire range of buildings, and of the site on which they stand. Some will say at once that this is impossible, and that the part taken by our Colonies and Dependencies in building the Institute at the instance of the Prince of Wales is sufficient to preclude such an idea. But we maintain our opinion for all that. The star of the University of London is in the ascendant, and no consideration is strong enough to confine it perpetually in a half-building. The Colonies and India may have to sing with Virgil, if Virgil did sing it, "Sic vos non vobis nificatis aves"; but in that case they will sing it without much jealousy, and they may even retain a place in the nest.

THE question of ways and means for the developed University is one of very considerable importance. It should henceforth be the first and most pressing question of all for such as are interested in the future of the University, and the time has come—or will, at any rate, have come as soon as the vacation is at an end—to put forth a strong appeal for private as well as public endowment. We fully endorse what was said on this point in the *Athenæum* of July 15:—

We said some months ago that the Government contemplate the proposal next year of a Parliamentary grant of not less than £40,000 per

annum, in addition to the free accommodation. Considering the very large cost of maintaining the new University buildings, it is to be hoped that this cost will be borne by the Treasury, or else that the grant to be asked from Parliament will greatly exceed the sum above mentioned. It may further be hoped, now that the reconstitution of London University is so far advanced, that a public appeal will be made, and readily responded to, for the equipment and endowment of what is, in many respects, a new University. No more worthy object could be found for the benefactions of wealthy men with a zeal for education than a national University for teaching and research, in the greatest city in the world. Its adequate endowment clearly calls for a more ample provision than that which can be expected to be made by the Government and the London County Council.

THE Oxford class lists in *Literæ Humaniores* and History, coming out at the end of July, a few days after the exceptionally long matriculation list of London University, may be said to complete the academic record of the year. The History list of Honours is unusually long, and the value of a "First" may be measured by the fact that there are only seven men and two women in Class I. out of about a hundred and fifty men and women who have done well enough to deserve Honours. This marks a very high standard. We are glad to note that one of the two women "Firsts" is the daughter of Mr. Arthur Sidgwick, a home student, the other being Miss Carter, of Somerville. The list, indeed, has many distinguished names—that is to say, the names of men and women who have distinguished parents. Women have specially proved their aptitude for historical study, and Oxford has recently produced a group of able women writers on historical subjects. Miss Eva Scott's book on "Prince Rupert" and Miss Eckenstein's essays on the Guidi in the *English Historical Review* are cases in point. The younger generation of women historians cannot do better than emulate the distinction which has been gained, for instance, by Mrs. J. R. Green and Miss Kate Norgate.

THE "Public School Record" for the past twelve months, published in the *Daily News*, accounts for about three hundred and fifty scholarships at Oxford and Cambridge, mostly open, which have been won by boys from about one hundred and thirty-five endowed and proprietary schools. The following schools are credited with five or more scholarships each, close scholarships being included in the case of Merchant Taylors', Winchester, and Eton:—St. Paul's (High Master, Mr. F. W. Walker, number in the school, 609), scholarships, 29—total for thirteen years, 256; Merchant Taylors' (Rev. Dr. Baker, 508), 15—total, 215; Clifton (Rev. M. G. Glazebrook, 600), 12—total, 128; Marlborough (Rev. G. C. Bell, 580), 10—total, 129; Dulwich (Mr. A. H. Gilkes, 663), 10—total, 128; Christ's Hospital (Rev. R. Lee, 580), 10—total, 87; Winchester (Rev. Dr. Fearon, 400), 9—total, 135; Eton (Rev. Dr. Warre, 1,010), 9—total, 132; Rugby (Rev. Dr. James, 575), 9—total, 108; Charterhouse (Rev. G. H. Rendall, 555), 9—total, 100; Tonbridge (Rev. C. C. Tancock, 400), 9—total, 51; City of London (Mr. A. T. Pollard, 670), 7—total, 77; Harrow (Rev. Dr. Wood, 600), 7—total, 62; Cheltenham (Rev. R. S. de C. Laffan, 620), 7—total, 57; Manchester (Mr. J. E. King, 770), 6—total, 127; Felsted (Rev. H. A. Dalton, 250), 6—total, 27; Bradford (Rev. W. H. Keeling, 465), 5—total, 73; Malvern (Rev. S. R. James, 450), 5—total, 67; Bath (Rev. W. Y. Fausset, 135), 5—total, 64; Rossall (Rev. J. P. Way, 315), 5—total, 61; Uppingham (Rev. E. C. Selwyn, 415), 5—total, 47; Nottingham (Dr. J. Gow, 370), 5—total, 35; King's, Canterbury (Rev. A. J. Galpin, 172),

5—total, 25; Leicester (Rev. J. Went, 440), 5—total, 23. Thirteen schools, including Owen's, Islington (Mr. Easterbrook, 430), have won three scholarships; and thirty-one schools, including Highgate (Rev. A. E. Allcock, 230), have won two.

THE educational side of the co-operative movement steadily develops. The Co-operative Union organizes lectures and arranges for examinations on industrial history, co-operation and economics, &c., and the Women's Co-operative Guild does a similar work. At Hebden Bridge, the co-operators have for years run courses of University Extension lectures, and co-operators are among the most enthusiastic of Extension students at the summer meetings. At the August meeting, just begun, there is to be a Co-operative Conference held at Oriel College on August 12, and here a paper will be read on "The Teaching of Citizenship," by Mr. Albert Mansbridge, an enthusiastic co-operator, who has recently conducted a class in industrial history at Battersea. Oriel College, by the way, is peculiarly dear to the hearts of co-operators from its connexion with "Tom Hughes" and E. Vansittart Neale. It is interesting to note that one-half of the scholarships and prize-money offered by the Oxford University Delegacy has gone to co-operators. In other ways, too, co-operators are coming into touch with the University of Oxford. The Oxford Delegacy has undertaken to give what help it can towards improving the qualifications of the teaching staff of the Co-operative Union. To this end special examinations are to be held for teachers to enable them to qualify for a place on a special register. Any classes held in future under such registered teachers will be officially recognized and examined by Oxford University. In addition to this, the Co-operative Union has agreed to engage a qualified teacher on economics and kindred subjects for the coming winter session, half of the cost being defrayed by the Delegacy and half by the Educational Committee of the Co-operative Union.

THE Second Annual Report of Intermediate Education in Wales is distinctly encouraging—marking progress in numbers and general efficiency alike. The number of schools established under the Act has now risen to ninety-three. Of these, twenty are for boys, twenty-one for girls, forty-five provide for the education of both, but in separate buildings, and seven are mixed schools, in which the experiment of co-education is being tried. Nearly £12,000 has been given in the last year in scholarships and bursaries, the greater number of these being held by pupils from the public elementary schools. Of the sixty-eight headmasters all are graduates, whilst seventeen of the twenty-eight headmistresses hold degrees. An analysis of salaries shows the average salary of the former to be £272, and of the latter £227. Most of the school buildings are new, and are provided, in most cases, by the County Board, which has important and varied duties to perform. Here are some of them:—It distributes the County Fund, and provides scholarships to enable pupils to pass on to a University education. It looks after the inspection and examination of the schools, provides travelling teachers in various subjects, organizes the Teachers' Pension Fund, and frames general regulations for the guidance of the district bodies. These local bodies are responsible for local finance and school management, and administer the Local Scholarship Fund. The constitution of the County Board is as follows:—A majority

of the members is appointed by the County Council, and, in every case, at least one governor is appointed by one of the Welsh University colleges. The remainder are appointed by the district governing bodies, by co-optation, and, in some cases, by the head-teachers of the public elementary schools. It is thus sufficiently representative.

THE ladder of learning in Wales is a fair structure to the casual beholder. Its middle rungs are certainly admirably constructed for their work. But, alas! we learn that the lower rungs are all too weak, and that the progress of secondary education in the new county schools is seriously hampered by the weakness and inefficiency of the elementary education on which it is based. There are now nearly seven thousand children in the intermediate schools of Wales. Of these, more than one-third come from rural parishes, and five out of every seven come from some grade of elementary school. If it is asked: What are the weak spots in elementary education? the answer is simple and by no means unheard of in England. Bad attendance, child-labour, scarcity of teachers, inadequacy of their equipment. All these things need to be remedied, and, until they are, the success of a splendid scheme of intermediate education in Wales must fall far short of what it might otherwise attain. The house of education needs firm foundations if it is to be enduring and beautiful.

SUMMARY.

THE MONTH.

WHEN the Board of Education Bill was referred, on its second reading in the Commons, to the Grand Committee on Law, no difficulty was experienced in restoring the provision in Clause 3 which had been expunged by a surprise vote in the House of Lords. The opponents of the clause as drafted in the Bill were not content to be overruled without another effort to get rid of the obnoxious words. A meeting was held at the office of the National Education Association, when it was decided, on the motion of the Rev. E. F. M. McCarthy, of Birmingham, seconded by the Rev. Dr. Bruce, Huddersfield, "That the National Education Association is strongly of opinion that nothing should be done in the Board of Education Bill to prejudice the formation by Parliament of Local Authorities for Secondary Education, and hopes that Clause 3 may be omitted from the Bill, as tending to enable the Education Department to set up such an Authority by Departmental action."

THE Association above mentioned has prepared and circulated a special report, in which it is maintained that the only way to protect the schools and to preserve to Parliament the right and responsibility of designating the Local Authorities for Secondary Education is to strike Clause 3 out of the Bill.

The clause is outside the declared object of the Bill. It can be of no immediate use, for the Board of Education created by the Bill does not come into existence till April next, so it is possible for the Local Authorities to be created by Act of Parliament next Session at an earlier date than it could be done by Administrative Order under this clause; i.e., if the Government are honest in their intentions to introduce such a Bill. Every educational body, such as secondary schools of all types, the Universities, the diocesan organizations, the County Councils, the non-County Boroughs, the School Boards, the teachers' organizations, and others who are interested in the future Local Authorities, will be affected by the action of the Board under this clause. So far from safeguarding the interests of any of these bodies, the clause does not even provide that the organization selected shall be of an educational character. The issue at the present moment, however, is not what form the Local Authority for Education shall take, but whether that question (which is one of the most important the House of Commons could decide) shall be handed over entirely to the Minister and the Education Board to settle without reference to Parliament.

THE *Record of Technical and Secondary Education*—the quarterly journal of the National Association for the Promotion of Technical and Secondary Education—of which the Duke of Devonshire is President, refers in its July number to the attitude of the Government towards the Board of Education Bill. We quote from our contemporary's "Editorial Notes":—

At the instance of Earl Spencer, the Standing Committee took exception to this provision, and, by the deletion of certain words, limited the inspection of secondary education to the Board's officers or the officers of any University organization. We cannot understand why it should be sought to fetter the new Board of Education by the proscription of one of their most important functions. It is universally admitted that, if our secondary education is to be systematically organized, the forces now engaged in this field must be brought into harmonious relations with each other and with the new Board of Education. To accomplish this task, it will be necessary to utilize all such existing resources as may be suitable, and consequently the Bill should confer ample powers for the purpose. We feel sure that, if the Standing Committee of the House of Lords had contemplated the real effect of the amendment, their Lordships would not have agreed to the restrictive clause. But the misunderstanding which has arisen has not been without its uses; an opportunity was thus provided for the demonstration of the need for that "freedom, variety, and elasticity," not only for what may be termed secondary education proper, but also in those other forms of education which the Royal Commission held to be within the "secondary" sphere. Among the bodies who embraced this opportunity are the National Association for the Promotion of Technical and Secondary Education, the City and Guilds of London Institute, the London Chamber of Commerce, the Joint Scholarships Board, the College of Preceptors, the Technical Education Board of the London County Council, and the Association of Directors and Organizing Secretaries for Technical and Secondary Education. It is clear that manifestations of this character have not failed to impress the Grand Committee of the House of Commons with the serious nature of the issues which have been raised: for, when the Bill came before them, they agreed, on the motion of Prof. Jebb, to the insertion of words which will secure all that is desired.

THE Duke of Devonshire, questioned on July 20 as to the probable administrative effect of the Board of Education Bill, said it was impossible to sketch in detail what the organization of the future Education Department would be until the subject had been inquired into and reported upon by the Departmental Committee which had been appointed. The Committee would be composed of Sir Horace Walpole, who would be the Chairman; Sir Geo. Kekewich, Secretary of the Education Department; Capt. Abney, Director of the Science and Art Department; Mr. Spring-Rice, of the Treasury; and Mr. Tucker, Principal Assistant-Secretary of the Education Department. In the apprehensions that had been expressed, sufficient regard was not paid to the extremely close connexion between the various officials of the Board which would be established by the new reorganization scheme. There was not the slightest intention of placing schools and Educational Authorities in undue subordination to District Authorities, and, at the same time, nothing would be done to restrict the County Councils in the field of technical and scientific education which they were usefully occupying.

THE changes which took place early in the month in the staff of the Science and Art Department are doubtless, in some sense, provisional. Sir John Donnelly has retired from the Secretaryship, after forty years of public service; and, in consequence, the Duke of Devonshire, as Lord President of the Council, has made the following appointments:—Sir George W. Kekewich, K.C.B., the present Secretary of the Education Department, to be also Secretary of the Science and Art Department; Captain W. de W. Abney, C.B., to be the Principal Assistant Secretary of the Science and Art Department; and Mr. W. Tucker, C.B., to be the Principal Assistant Secretary of the Education Department.

At an adjourned meeting of the Senate of London University, held on July 5, the following resolution was proposed by Sir Edward Fry, seconded by Mr. Bryce, and carried by a large majority:—"That the Senate accepts the proposal of Her Majesty's Government as far as it provides in the buildings of the Imperial Institute accommodation for the work hitherto done by the University; and authorizes the Committee, consisting of the Chancellor, the Vice-Chancellor, and Sir J. G. Fitch, to settle the formal terms of agreement with the Government; and the Senate reserves the right of the University to hereafter request the Government to make further provision for such further needs as may arise in the future." The Treasury are making the

necessary arrangements, and it is understood that the transfer from Burlington Gardens to South Kensington will be finally effected before the beginning of next term.

A CONFERENCE of teachers of anatomy, physiology, and *materia medica* in the medical schools of London was recently held to consider the advisability of amalgamating the teaching of the early medical studies, and to discuss the best means of carrying out such an amalgamation in connexion with the reconstitution of the University of London. It is understood that the conference was summoned in response to informal representations which had been made on behalf of the Statutory Commission. As was to be expected, considerable difference of opinion was disclosed, and on the first occasion the conference was adjourned without coming to any definite decision. At the adjourned meeting two committees were appointed to embody in two separate reports the divergent opinions with regard to the advantages of centralization which had been expressed. These reports will eventually come before the committees of the various medical schools.

MR. JEBB, M.P., presided at the distribution of prizes at King's College, London, on July 12, and, in the course of his address, he said that the medical faculty was in a decidedly prosperous state. Another proof of the manner in which the work was growing was that it had been found necessary to appeal for funds to provide accommodation for biological work. The proposal was to erect a new block on the second floor of the college so as to obtain an additional laboratory for bacteriology, more accommodation for physiology, and a joint-lecture theatre for the two departments. With extended accommodation for science, and with the teaching of the eminent men who adorned the staff of the college in that and other departments, they might feel confident that King's College would uphold and enhance its distinguished record, and continue under new conditions to fulfil with even an increased measure of success the noble purpose for which it was founded.

BISHOP MITCHINSON, Master of Pembroke College, Oxford, attended the prize-giving at Cheltenham College, when Mr. De Courcy Laffan retired from his position as Principal. The Bishop made a speech which has apparently fluttered the dovescotes at Corioli.

The Principal had spoken of physical training. Personally he was not an athlete (though he would undertake to beat any old gentleman of his own age, and equal almost any middle-aged man, at walking), but he was interested to learn that they paid due attention to the scientific training of the body in the gymnasium. He represented a very primeval state of affairs as an old schoolboy, as the only athletic training they received at old Durham Cathedral School, whose primitive ways in his time he described amidst much amusement, was by the desecration of a neighbouring churchyard. He believed in the *mens sana in corpore sano*, but he appealed to them to keep athletics in their place. He was shocked at the absolute devotion to athletics in his own college, where the prospect of getting their own man into the University eight was considered a far higher distinction than getting a Double First. Muscles never ruled the world, but mind did and always would, and he warned them against letting themselves drift into the idolatry of athleticism. The besetting sin of Oxford to-day was idleness, absolute idleness. People did not care about being ploughed. The rank and file at the University gave themselves to play and not to work. There was much enjoyment got out of a life of work. He had had to make his own way from the days when he was a penniless lad of seventeen; but he believed there were few who had a better record or who had lived a brighter, happier, and more absolutely enjoyable life than the old man now speaking to them. The secret of his happiness was that he had had lots of pursuits as a boy at school, and that they had stuck to him like limpets to a rock throughout his career in England, in Barbadoes, and in his little country parish. He had ridden his hobbies, and continued to ride them, and he exhorted them to try to cultivate a hobby or two during their holidays. The enjoyment of these intellectual pleasures would never pall. Athletics would. These hobbies would save them from being the intolerable nuisance that boys at home without anything on earth to do were to their parents and their sisters.

THE following scholarships have been awarded at the Cambridge Training College for Women Teachers for next September:—The Council Scholarship of £30 to Miss Annie D. F. Salmond, M.A. Aberdeen (Honours in Philosophy, Seafield Gold Medal and Minto Memorial Prize in English); the Council Scholarship of £25 to Miss Minnie L. Arthur, M.A. Glasgow (Honours in Modern Languages); the Gilchrist Scholarship of £25 to Miss E. M. Lloyd, B.A. Wales (Honours in English), of University College, Aberystwyth; the Council Scholarship of £20 to Miss Gertrude

Williams, B.A. London (Honours in English); and the Scholarship of £20 offered by the Cambridge Training College Guild of Old Students to Miss E. Boyd, B.A. Royal University of Ireland.

At Bedford College, London, the Reid Scholarship in Arts has been awarded to Miss Elizabeth Florence Lowes, of Queenswood School, Clapham; the Arnott Scholarship in Science has been awarded to Miss Lilian Marian Warwick, of the North London Collegiate School; the College Hygiene Certificate has been awarded to Miss Mildred O. Power and to Miss Lucy M. Fryer. The Early English Text Society's Prize for English has been awarded to Miss Edith L. Calkin.

THE results of the L.L.A. Examination of the University of St. Andrews, which was held at numerous centres in Great Britain and Ireland, France, Germany, Belgium, Switzerland, Roumania, Natal, Cape Colony, Victoria, and the United States of America, on May 30 and 31 and on June 1, have been issued by the University. It appears that 959 candidates entered for examination at 77 centres this year, as compared with 950 at 74 centres in 1898, and 951 at 72 centres in 1897. 319 candidates entered this year for the first time, as compared with 285 in 1898; and, from the commencement of the scheme in 1877, 4,789 candidates in all have been entered for examination. 127 candidates have completed the requisite number of subjects, and will receive the L.L.A. diploma of the University.

THE results of the Degree Examinations of the University of Wales are published. The following women students of Aberdare Hall, Cardiff, have been successful:—In the Faculty of Arts: G. E. Holding, C. E. Davies, M. G. W. Evans, S. A. Evans, M. Salmon, E. C. Williams, M. G. Edwards, G. S. Pole Evans, A. E. George, C. M. Jenner, H. M. Davies. In the Faculty of Science: Philosophy, Special, A. Embleton; Elementary Logic, E. d'Auvergne; Mathematics, Special, C. E. Browne; Mathematics, Intermediate, E. d'Auvergne; Botany, Final, A. Embleton; Zoology, Final, A. Embleton; Biology, Intermediate, E. d'Auvergne. G. E. Holding has completed her qualification for the B.A. degree, and A. Embleton for the B.Sc. degree.

DR. WORMELL.

THESE were circumstances of exceptional interest connected with the annual distribution of prizes, on July 20, at the Central Foundation School for Boys. As our readers are aware, Dr. Wormell retires this term from the headmastership of the school, which he has held for the past twenty-five years, and the occasion was seized by many of his friends, with whom he has been associated in the various phases of his career as an educational expert, to bear witness to the esteem with which he is universally regarded. It would have been difficult, if the attempt had been made, to bring together a more widely representative gathering than that which spontaneously assembled in Cowper Street to do honour to Dr. Wormell on his last appearance as headmaster. The governors of the school were represented by Captain Gassiot, chairman, Sir Owen Roberts, vice-chairman, and others. Mr. Bryce, M.P., Canon Lyttelton, Mr. Yoxall, M.P., and Mr. Sadler were colleagues of Dr. Wormell on the Royal Commission on Secondary Education—and, in a measure, the same gentlemen may be taken as having represented the Education Department, the "Conference" Headmasters, and the National Union of Teachers. Sir Joshua Fitch and Mr. Sharpe are *emeriti* inspectors under the Education Department. Dr. W. Garnett represented the London County Council; Dr. Scott and Mr. Easterbrook stood for the London Endowed Schools. The College of Preceptors, of which Dr. Wormell is the senior vice-president, was represented by the Dean, Treasurer, and Secretary of the College, with two or three other members of the Council.

Mr. Bryce, who distributed the prizes and subsequently addressed the school and the visitors, bore testimony to the services which Dr. Wormell had rendered, not merely to the institution with which he had been connected from its foundation in 1866, but also to his colleagues on the Royal Commission—of which it will be remembered that Mr. Bryce was the chairman. "Dr. Wormell," he said, "was a member of the recent Royal Commission on Secondary Education, of which other members were present, and he believed he was expressing their feelings as well as his own when he said that they greatly enjoyed his co-operation, and profited by the knowledge and experience he was able to bring to bear on its work, while they quitted it with their respect for him greatly increased by the knowledge they gained of his character during those years. They felt that he was well qualified to express the failings and ideals of secondary education. They appreciated what he had done for the school, and wished him every good in his retirement, and many years of happiness, in which he

might still render great and valuable services to the cause of education."

On behalf of the present scholars, H. P. Farrell read the following address to Dr. Wormell:—"We, the boys of the Central Foundation School, take this opportunity of publicly expressing our deep regret at your retirement from the post which you have filled with such distinction during the past twenty-five years. We take advantage of this occasion to express our gratitude for the devotion with which you have laboured to make our school leave a sound preparation for the future. Being yet schoolboys, we probably do not fully appreciate all the good influence brought to bear upon us while under your care; but the experience of those who have left the school assures us that we shall, at no distant date, find full cause to be thankful for what you have done for us. Your readiness to give advice and assistance, and the firm and gentle way which you have exercised in matters of discipline, have left a lasting impression on the memories of all who have had the good fortune to be your pupils. While we regret your leaving, we must not omit to express our heartiest wish that you may yet have many years of usefulness to devote to the work of education."

Mr. John Guppy spoke on behalf of the past scholars. He was there, he said, as the representative of a very large constituency. He had a message from old boys in all corners of the world. He had had letters from Australia, from South Africa, from Vancouver, the Continent of Europe, and all parts of the British Isles. They were all sorry to learn that "The Doctor" was retiring, and hoped that he would live long and happily. They desired to thank Dr. Wormell for many reasons. First, they thanked him for his absolute fairness to every boy in the school. The Doctor's system had been to trust every boy until he proved that he could not, and he was rarely wrong. Next they thanked him for his many-sidedness. No one came to him for advice on a subject without getting what he wanted. In conclusion, he had to express the old scholars' thankfulness and gratitude for all that Dr. Wormell had done for them in the past, the love and respect which they bore towards him, and their hope for his assistance and friendship in the future.

A portrait of himself, painted by Mr. H. M. Paget, an old boy, and presented to Dr. Wormell by the past and present scholars, was then unveiled by Mr. Bryce amidst loud cheering, which was renewed as the Doctor rose to respond.

DR. WORMELL said:—Mr. Chairman, ladies, gentlemen, boys, and friends, I am sure you will understand the reason when I tell you that I cannot say many words to-day. I am too emotional to try to put into words a fraction of what is in my heart. When I heard that the time had come for my retirement, I prayed I might be allowed to pass away in peace and without demonstration. Your kindness and appreciation, I must admit, will go a long way to help me over a very trying crisis. In the many letters I have received in the last day or two, two words almost invariably come together—congratulations and regrets. Naturally, I have come to regard those two words as being almost synonymous. I have tried to congratulate myself, and I have always ended with regrets. I have quoted the poets. I have said, for instance,

"Merrily, merrily shall I live now,
Under the blossom that hangs on the bough."

I am sure, however, that the poets are not always true prophets. I have also tried the philosophers. Pericles said those who were born to govern had only two happy days—that on which they entered office, and that on which they left it. Now, all my happiest days lie between those two extremes. The pleasures of work in this place cannot be described. I have had an infinite number of problems in humanity to solve. Some I have solved, and some only partially; and there is a feeling of unfinished work rising in my mind. It is not the boys who have made great achievements who are most on my mind. You all know that the member of the family who brings most anxiety is the one around whom the cords of affection are most tightly drawn. Your kindness, however, has given me some hope that I may still be of use to somebody. To boys present and boys past, to colleagues, and to friends, I would say that if, in the future, I can be of any use to you, I shall be at your service for the asking.

THEORY AND PRACTICE.

IT is one thing to learn principles of mechanics out of a book; quite another to recognize these principles when hidden, as they are sometimes, in their practical applications to engineering problems, and the student often has his faith put to a severe test when he endeavours to reconcile practice with theory. It is well for the engineer to be equipped with a strong disposition to accept mechanical principles as laws incapable of being altered, and to attempt to reconcile practical engineering anomalies, as they appear to him, to these laws, rather than to choose the alternative of doubting principles when practice does not seem to indicate their infallibility.

As an illustration of what is meant, a student refused to believe that a definite number of foot-pounds was the equivalent of a thermal unit, because "he had undoubted proof to the contrary." On being asked to state his reasons, he said that bodily exertion, which he supposed,

quite rightly, was the expenditure of energy, left the body hotter than before the exercise began. Consequently, his proof was established satisfactorily to himself, for would not the body be colder after the withdrawal of energy equivalent to so much heat? The explanation lies in the domain of physiology, and, consequently, outside of his special lines, though it is sufficiently simple to become clear after a little thought. Our student never thought of applying this same reasoning to the case of a steam boiler, which, after a day's work of furnishing steam to the machinery is over, is certainly hotter than in the morning before the fires were started, and which has been giving forth mechanical energy all day in the form of rotating shafts and moving tools, to which the power of a steam-engine in a shop is applied. Such rash conclusions are strengthened by the fact that, to the untechnical mind, there does not seem to be any possible connexion between heat and mechanical energy. The hasty generalizer has the majority on his side; but evidence of this kind can often be turned against him, as a shrewd lawyer will use the false statements of opposing witnesses to strengthen his case.

This is only one instance out of many which the engineer comes across in the everyday practice of his profession, and the ability to make law and order out of chaos is by no means the least useful of his attainments, for the satisfaction alone which comes from understanding problems thoroughly is of itself almost full payment for the trouble of acquiring the knowledge.

The practical man sometimes places little confidence in formulæ which are supposedly free from error, and which mathematicians guarantee for their accuracy. If the workings of Nature were simple, and we could dissociate certain causes from their combined effects, we should be better able to apply formulæ to engineering problems. Thus, the well known formula for falling bodies, by which the space through which a body falls in a given time can be calculated, is only true when we neglect the resistance of the air—an assumption which we cannot make in many practical problems, and which, if made, plunges us at once into error and inaccuracy. The term "neglecting friction," so common on examination papers, cannot appear among engineering work unless the effect of taking it into account is balanced by other elements in the problem. Otherwise provision must be made for including the effect it has in modifying the result. The engineer might say that the mathematician does not go far enough. He ought to supply formulæ for the solution of the common problems which comprise the everyday work of the practising engineer, and, if such simple matters as the falling of a body in air are beyond his range, how can we trust his deductions in more complicated cases? The answer is that common sense supplies most of the shortcomings noticed in formulæ. It is nearly always possible, by the exercise of judgment, to supply the deficiencies and adapt formulæ to the special problems which occur in practice. A large number of formulæ of special utility to be found in handbooks are empirical in the sense that they are derived by tentatives, and are thus the results of practice put into a condensed and convenient form, and do not depend for their existence on theory alone. Those which are purely theoretical, though possessing absolute accuracy as far as the data from which they were derived is reliable, must be used with great care to avoid error, for, on close examination, the data of the special problem to which you are about to apply the formula may differ essentially from those to which the formula owes its origin.

Formulæ for beams are in general use, but special care must be taken to see that a formula copied from a handbook includes all the conditions of the problem, and excludes all others. It is a common mistake in proportioning beams to apply the formula which gives the fibre stress in a beam supported at the ends and loaded in a certain manner to the case of a beam which, as many beams are in practice, is not merely supported, but fastened at the ends to the supports. A widely different result is obtained if pains are taken to include all the conditions. There is a tendency to let the blame fall unjustly on the formula, for the innocent combination of symbols refers to something else for which it was designed. Illustrations of this kind could be multiplied to show that mathematically deduced formulæ must be handled with care for the purpose of the engineer. The habit of taking formulæ from handbooks to apply to problems without exact consideration of the results which can be expected from them is responsible for much lack of confidence in theory, and for the continued use of hit-and-miss methods.

ROBERT S. BALL, B.Sc.

COLLEGE OF PRECEPTORS.—HALF-YEARLY GENERAL MEETING.

THE Ordinary half-yearly General Meeting of the members of the College was held at the College, Bloomsbury Square, on Saturday, July 22.

The Secretary having read the advertisement convening the meeting, Dr. WORMELL, Vice-President, was appointed Chairman.

The Report of the Council was laid before the meeting, and was taken as read, a copy having been sent to every member of the College. It was as follows:—

REPORT OF THE COUNCIL.

The Council beg to lay the following Report of the proceedings for the past half-year before the Members of the College:—

1. They have to report that the number of candidates entered for the Midsummer Examination for Certificates is 4,830, while the number of entries for the Junior Forms Examination is 1,300, the total being about 4 per cent. below the number of entries for the corresponding Examinations in 1898. The Public Distribution of Prizes and Certificates to the successful candidates at the last Christmas Examination took place at the College on the 1st of March, when the Chair was occupied by the Rev. T. W. Sharpe, C.B., late Senior Inspector of Training Colleges. Due notice will be given of the time and place of the forthcoming Distribution.

2. The Professional Preliminary Examination for intending medical students and others was held, as usual, in the second week in March, and was attended by 229 candidates. The Medical Council, who have for some time been anxious to raise the minimum qualification for admission to the profession, acting on a Report of their Education Committee, decided in November last to withdraw recognition from the College Second Class Certificate on and after the 1st of January, 1900. The Education Committee's Report gives expression to views which are opposed to the published opinions of important educational authorities, and also contains errors of so grave a character as, in the opinion of the Council of the College, to vitiate entirely the conclusions based upon it. A letter calling attention to these errors, and asking for a revision of the Report, has been sent to the President of the Medical Council, and it is hoped that their final decision will be made known in November next.

3. For the Midsummer Examination of Teachers for the College Diplomas 186 candidates have entered (including 10 who offer themselves for the Practical Examination for Certificates of Ability to Teach). This number shows a considerable falling-off as compared with the corresponding Examination in 1898, which is entirely due to the recent limitation of exemption from examination in subjects other than Theory and Practice of Education, in the case of holders of Privy Council Certificates, to the highest grade of Certificate granted by the Education Department. The Examination will be held in London and at the following local centres:—Birmingham, Bristol, Leeds, and Manchester.

4. In addition to their own Examinations of pupils and teachers, and the Examination of schools by Visiting Examiners, the Council have conducted, during the past half-year, the Preliminary Examinations of the Pharmaceutical Society of Great Britain.

5. The Thirtieth Annual Series of Lectures to Teachers on "The Science and Art of Education" commenced on the 16th of February with a Course of Twelve Lectures on "Moral Education," by Prof. James Sully, M.A.; and a Course of Twelve Lectures on "The Practice of Education" will be delivered in the autumn by Mr. P. A. Barnett, M.A. The Winter Meeting for Teachers, which was held in the first fortnight in January, was in every way as conspicuous a success as the first Winter Meeting, which took place in January, 1898. The Council propose to arrange for a similar Meeting, with Courses of Lectures on special departments of education, to take place during the next Christmas vacation.

6. The usual Monthly Evening Meetings of the Members have been held during the past half-year, at which the following lectures have been delivered:—"On the Teaching of Modern Languages in German Schools," by W. C. Brown, M.A., F.C.P.; "Literary Inventiveness in School-Children," by H. Holman, M.A.; "The Growth of the Child Mind," by Prof. Woods Hutchinson, M.A., M.D.; "The Board of Education Bill and Secondary Education," by R. P. Scott, M.A., LL.D.; "Historical Examination Papers: How to Set and Answer Them," by H. E. Malden, M.A. The lectures and the discussions on them have been reported, as usual, in the *Educational Times*.

7. The Bill for the constitution of a Board of Education, to deal with secondary as well as elementary education, was introduced by the Duke of Devonshire in the House of Lords in March last, and, after passing through the various stages, was reported on the 12th of May. The clauses of the Bill give a large discretion to the Board in dealing with the varied and difficult questions connected with the organization of secondary education, in which the Board is to have the assistance of a "Consultative Committee," consisting mainly of "persons representing Universities and bodies interested in education." To this Consultative Committee is to be entrusted the framing of regulations for the formation of a Register of Teachers. The vagueness of the provisions for the inspection of secondary schools was made the occasion of an amendment in Committee, which limited the power of inspection to the officers of the Board and to University organizations. The effect of this amendment would be to exclude the College of Preceptors, whose inspections and examinations of schools have for many years been accepted by the Charity Commissioners as satisfactory tests of efficiency. The amendment was carried in spite of the opposition of the Duke of Devonshire, who pointed out the effect of it; but it is hoped that it may be found possible to secure the introduction of some provision in favour of the College, when the Bill reaches the Committee stage in the House of Commons. The Council believe that it is for the interests of secondary education that the Bill should become law during the present Session, and they trust that this may be effected without in any way injuring the work that they have carried on for the past forty years.

8. During the past half-year, the Diploma of Licentiate has been conferred on five candidates, and that of Associate on forty-eight, who had

passed the required examinations. Twenty-seven new members have been elected, and notice has been received of the withdrawal of seven. The Council regret to have to report the death of one of the oldest members of their body, Mr. W. J. Reynolds, F.C.P., and also of the following members:—Sir John Struthers and Prof. Bartholomew Price (honorary members), Mr. W. T. Adkins, the Rev. G. Frost, F.C.P., Mr. G. W. Gentleman, A.C.P., Mr. T. J. Leeming, A.C.P., Mr. J. Royds, A.C.P., the Rev. Dr. Schoell, the Rev. T. Rudd, and Mr. W. J. Stafford.

In reference to paragraph 7, the DEAN called the attention of the meeting to the fact that since the Report was sent out the Board of Education Bill had been discussed in Committee of the House of Commons, when Clause 3, which, as amended in the House of Lords, would have limited the inspection of schools to University organisations, was, by an amendment proposed by Professor Jebb, and carried without a division, extended so as to include the College of Preceptors and other bodies which might be judged by the Board of Education, after taking the advice of the Consultative Committee, to be competent for the work. In his speech in moving his amendment, Professor Jebb spoke in the most appreciative terms of the work which the College had done for so many years past in the examination and inspection of secondary schools, and stated clearly the reasons why the recognition which the College had hitherto received from the State for these purposes should be continued.

The Report of the Council was then adopted.

The DEAN presented his Report, which had been printed and distributed among the members present, and which was as follows:—

THE DEAN'S REPORT.

In addition to the general statement of the examination work of the College during the past half-year, which has been embodied in the Report of the Council, I have now to submit to you, in detail, the statistics and results of the various examinations.

The Midsummer Examination of candidates for Certificates took place on the 27th to the 30th June at 170 Local Centres and Schools. In the United Kingdom the Examination was held at the following places:—Alvechurch, Barnstaple, Barrow-in-Furness, Bath, Belfast, Berwick-on-Tweed, Betley, Buxhill, Birmingham, Bishop's Stortford, Blackpool, Bolton, Boston Spa, Bournemouth, Brecon, Brighton, Bristol, Bromyard, Broxbourne, Bruff (Co. Limerick), Bungay, Camborne, Camelford, Canterbury, Cardiff, Carnarvon, Cavendish, Cheltenham, Cheshunt, Coleraine, Cork, Croydon, Deal, Doncaster, Drax, Dumfries, Durham, Ealing, East Grinstead, Eaton Socon, Edgbaston, Epsom, Exeter, Eye (Suffolk), Fakenham, Falmouth, Faversham, Forest Hill, Goudhurst, Greenwich, Grimsargh (Preston), Handsworth, Hartlepool, Hastings, Hatfield, Hereford, Herne Bay, Horsmonden, Huddersfield, Hungerford, Hutton (Preston), Jersey, King's Lynn, Kingston-on-Thames, Kingston (Herefordshire), Langland Bay, Launceston, Leeds, Liskeard, Liverpool, Llandilo, Llandudno, London, Maidenhead, Maidstone, Manchester, Margate, Market Bosworth, Market Harborough, New Brighton, Newbury, Newcastle-on-Tyne, Newtownbarry, Northwich, Nottingham, Oswestry, Pencader, Plymouth, Pontardawe, Portsea, Portsmouth, Reigate, Richmond, Ripley (Surrey), Rochester, Romford, Ruthin, Rye, St. Davids, St. Leonards-on-Sea, Salisbury, Sandwich, Seaford, Shebbear, Sheffield, Sidecup, Slough, Southampton, Southend, Southport, Southwell, Spalding, Steyning, Stroud, Sunderland, Taplow, Taunton, Thame, Torquay, Totland Bay, Trowbridge, Wellington (Salop), Weston-super-Mare, Wexford, Weybridge, Whitechurch (Salop), Winchcombe, Winchester, Windsor, Winslow, Wirksworth, Woodford, Woolhampton, Worcester, Wrexham, Yarmouth, Yeovil, York. The Examination was also held at Georgetown (British Guiana), Buenos Ayres, Gibraltar, Ceylon (Batticaloa and Colombo), and Constantinople.

The total number of candidates examined (not including 75 examined at Foreign and Colonial Centres) was 4,558—3,116 boys and 1,442 girls.

Taking the Christmas and Midsummer Examinations together, the total number of candidates examined during the year ending Midsummer, 1899 (not including those who attended the supplementary examinations in March and September), has been 12,072.

The following table shows the proportion of the candidates at the recent Midsummer Examination who passed in the class for which they were entered:—

	Entered.	Passed.	Percentage.
First Class	453	257	57
Second Class	1,797	1,164	65
Third Class	2,308	1,429	62

This does not take account of those candidates who obtained Certificates of a lower class than that for which they were entered.

The number of candidates entered for the Junior Forms Examination (not including 28 examined at Foreign and Colonial Centres) was 1,209—672 boys and 537 girls. Of these, 907 passed, or 75 per cent.

At the Professional Preliminary Examination for First and Second Class Certificates, which was held on the 7th to 9th of March, in London and at four Provincial Centres, viz., Birmingham, Bristol, Leeds, and Liverpool, 223 candidates presented themselves.

The Examination of Teachers for the College Diplomas took place on the 4th of July and three following days, in London and at the following Local Centres:—Birmingham, Bristol, Lafford, Leeds, and Manchester. It was attended by 161 candidates, of whom 111 were men and 50 women. The subjects of examination included the Theory and Practice of Education, Scripture History, English Language, English History, Geography, Arithmetic, Algebra, Euclid, Trigonometry, Analytical Geometry, Mechanics, Physics, Latin, Greek, French, German, Spanish, Animal Physiology, Geology, Botany, Astronomy, Chemistry, and Drawing. On the results of this Examination, 3 candidates have obtained the Diploma of Licentiate, and 36 that of Associate; while 5 candidates have obtained Certificates of Practical Ability to Teach.

The Preliminary Literary Examinations of the Pharmaceutical Society have been held, as usual, at the times appointed. The number of candidates examined during the past half-year was 761.

The DEAN, in moving the adoption of the Report, mentioned that the general results of the examinations did not differ materially from those of last year. The percentage of passes in the First Class was slightly lower, that of the Second Class rather higher, and that of the Third Class a little lower than the figures given in the Report submitted to the meeting in July last.

The Report was adopted.

A vote of thanks to the Chairman concluded the proceedings.

CORRESPONDENCE.

A PRIVATE VENTURE.

To the Editor of the Educational Times.

DEAR SIR,—Your review of my book "Memories of Half a Century," in your July number, has been forwarded to me. When I was in harness I read the *Educational Times* regularly, though I am not aware that I ever wrote in it, and I respectfully beg permission to make a few remarks on your criticisms. On the last page but one of my book I admit having observed, on my last revision, numerous defects of style and expression, but my failing health prevented me from correcting them; I write now with my left hand, the right being incapacitated by rheumatism. Thus I appealed for mercy for defects, a few of which you have pointed out.

But a point which I consider of greater importance is your remark, "He does not claim to have made it a financial success; on the contrary, he tells us that he sold for £3,500 what had cost him £15,000." Strictly speaking, the school was a financial success, and was so regarded through the county. This success tempted me to add building upon building, and, had I withdrawn six years earlier, all would have been well. The numbers had been doubled, and the terms of payment raised considerably. But a physical affliction marred all my expectations. That was a calamity rather calling for sympathy than the above comment.

Finally, you observe that "Dr. Hiley does not seem to have had much insight or initiative as a private schoolmaster." That is your opinion as an outsider; fortunately, it was not the general opinion of those who knew me well.

As a frequent reviewer myself, I know full well how modifying circumstances may escape the notice of even the most fair-minded reviewer. Hence I have ventured on this rejoinder, which I beg you to accept in the spirit in which it is written.—Very faithfully your servant,

RICHARD W. HILEY.

Wighill Vicarage, near Tadcaster,

July 5, 1899.

EXAMINATIONS AND HOT WEATHER.

To the Editor of the Educational Times.

SIR,—Passing the door of a Cambridge examination centre one baking day in July, it occurred to me to wonder why the powers that order these things should hit upon the very coldest and the very hottest times of the year for examination purposes.

Provided that proper heating arrangements are made, the Christmas examination season need not be objected to. Experience has shown that it is possible to be too cold to think; but, except in extreme cases, I believe that intellectual activity is far keener in cold weather than in hot. The keenness of the atmosphere has a sharpening effect upon the wits. When we have got a little further in psychological observation and child study, perhaps some one will be able to give us exact information on the relation between temperature and brain power.

Meanwhile, I suggest that in the hot July weather originality is at its lowest, ideas come slowly, and thinking is more than usually difficult. Then why have intellectual tests at that particular time? Is this consideration of no moment?

April ought to be a good month, being neither too hot nor too cold,

but a time when the fresh energies of the season are still unspent, and the mind shares in the general spring of natural forces.—Yours faithfully,
A MODERATOR.

PLAIN ENGLISH v. PHONETICS.

To the Editor of the Educational Times.

SIR,—May I appeal to your courtesy to publish a few remarks in reply to criticisms on the book "French as Said"?

Your reviewer is evidently a partisan of the Phonetic Association, and naturally wishes to suppress a rival system, like my own. All I ask for is that he should conduct the war by legitimate means, and not mislead your readers by a mixture of reticence and insinuation. The reviewer cites a number of the Plain-English descriptions of sound taken from "French as Said"; he brands them as "misleading," and asks teachers to believe that the book "is written on entirely wrong lines." Of course, that is what he would like them to believe. Meanwhile, he excuses himself from all comments and explanations, on the ground that they would be "superfluous." I do not altogether share this view; and, as the reviewer withholds his comments, perhaps I may be allowed to offer my own.

How should the French phrase *Uerbe sèche* be pronounced? I have described the sound as *lairb sesh*. I am very much surprised that the reviewer should call this "misleading." I wonder how he pronounces the phrase himself? The common fault is to pronounce *sèche* as "saish," and for this the description *sesh* will be the proper corrective, and will greatly improve the person's pronunciation. If some of my descriptions do not possess a definition-like accuracy, but are correctives rather than "transcriptions," as the reviewer styles them, teachers need not, therefore, lose confidence in the author, who

has written a paragraph in the preface to explain the fact. (Why did not the reviewer mention this?) The description *sesh*, for instance, certainly has a tiny defect; it is a little too abrupt, too rapid. But it guides us to a much better pronunciation; and to call it "misleading" is monstrous. I invite teachers to settle the question for themselves, independently of author and reviewer. Let them ask a French native to read from a slip of paper the inscription *Uerbe sèche*. The inquirer should at the same time have in sight, written on paper, the formula *lairb sesh*, and should notice whether the French native seems to be saying that.

I will take the next example. I have described *la fontaine* as *laff orn ten*. The usual faults are—*la* as "lar"; a false stress on the first syllable of *fontaine*, in accordance with English habit; too narrow a tone, as in the English "font"; the final syllable mispronounced "tain." All these erring habits are removed by practising *laff orn ten*. If *orn* does not accurately describe the French nasal syllable in *fontaine*, it is not half bad, and, at least, it gives the best aid that can be given at the early stage of Exercise III. In Exercise II., a warning footnote on this point may be found. If that was the point held up to reproach, the reviewer ought to have observed that the subject of nasal syllables was fully and carefully dealt with in its proper place (see table of contents).

I would gladly discuss the examples one by one, if space permitted; but I trust this will be sufficient to show that the training afforded by the book is by no means misleading. I strongly hope that some of your readers may find much help in it. But let them freely choose their own methods. If any feel that they would derive more guidance from the phonetic formula, *le : rb se : f*, than from my own simple *lairb sesh*, by all means let them try it. But I think they will rub their eyes.—I am, Sir, yours obediently,
E. ALDRED WILLIAMS.

COLLEGE OF PRECEPTORS.

Lectures for Teachers.

By P. A. BARNETT, Esq., M.A., formerly Principal of the "Borough Road" Training College, Isleworth.

SYLLABUS.

LECTURE I.

Preparation for Teaching as a Profession.

The meaning and purpose of training; economy of effort; development of capacity. The possibilities of training; the cultivable margin of aptitude. The methods of training; practice in the art of instruction; personal observation and record-making; study of books. Training as it affects the teacher's aim, character, and temperament, appreciation of the scope and difficulties of education, and personal acceptability.

LECTURE II.

The Teacher and a Definition of Education.

The value of the definition of an art; to simplify and inspire purpose; to determine method; to suggest procedure. Education the direction of a force constant in society; the teacher's place as beneficent agent. The historical development of the ideal of education in political and religious societies; its social and psychological consequences as they affect teaching. The effect of prevalent theories of knowledge and conduct on conceptions of education. Misleading ideals. The authorities in education and teaching.

LECTURE III.

Education as a problem in Organization.

What is a liberal education, and who is to have it? The many-sidedness of human nature. Educational needs indicated by common fundamental endowments and destiny; hence interrelation of sociology and psychology. Free access to a liberal education as a test of social and political ideals. Current conceptions of a liberal education. The division of "subjects." The nature of specialization; its limits and social effects. The teacher and his syllabus and time table. Curriculum for boys and for girls.

LECTURE IV.

Education as a problem in Psychology.

The value and scope of psychology in the work of the class-room. Teaching and education. The suggestiveness of physio-psychology. The conflicting doctrines of psychologists. The mind as a combination or *plexus* of "faculties." Professional pedantry and superstitions of the school-room. Empirical tricks and delusive short-cuts in teaching. The direct lessons of psychology. The teacher and "all-round" cultivation.

LECTURE V.

The Relation of Body and Mind.

Physiological health and psychological health involve each other. The basis of the Kindergarten organization and methods. The dangers of excessive regard for machinery. Youth a process. Stages of development, and necessary growth of curriculum and alteration of procedure. Signs of distress and defect. Training of manual dexterities. The limit of its usefulness; as to age; as to social conditions. Health in the school, school-house, and school-room. The meaning of Play.

LECTURE VI.

School Morals.

School a poor substitute for, but necessary complement to, the home. A definition of School necessary in order to economize and direct effort. Domestic and public virtues. The corporate life of school. Sentiment and conduct. The cultivation of aptitudes for an ideal community. Rewards and punishments. The cultivation of character by the teacher. The effect of surroundings on character. Surroundings and habit. Nagging. The organization and character of school games.

LECTURE VII.

Language as Literature and Rhetoric.

Literature and its definition. Literature in the cultivation of the imagination and emotions. Use of literature in school; as reading, as recitation, as a "study." Literature a compendious study. The order of interest. "Culture" and its relation to literature in school. The investigation of literary masterpieces; dangers of philological treatment. The relation of appreciation and expression. The order of rhetoric or "composition" teaching. The need for *copiousness* of reading.

LECTURE VIII.

Language as Speech.

The meaning of "Self-expression." The relations of intelligence and intelligibility. The cultivation of audible speech; a physical exercise. Procedure in teaching Speech, Reading, Elocution. The place of the Pattern. The rarity and importance of right Emphasis. Oral examination. Foreign speech: the mother method; the analytical method. The differences in the teaching of modern and ancient languages; as to aim; as to procedure. The limits of oral teaching. The application of tests in examination.

LECTURE IX.

Abstraction in Mathematics, Logic, and Grammar.

The capacity for abstraction. Its place in mental development. Mathematical certainty and the necessary qualifications of mathematical certitude; the delimitation of terms used *technically*, in special connexions. The value of cultivating the power to define. The uses and limitations of Arithmetic and formal Grammar; the skeleton of the art of reasoning. Grammar as an inductive science.

LECTURE X.

Training in the power of Discovery.

Science and its definition. False notions of science, and meaningless antithesis between science and other studies. Science as observation and experiment in the school curriculum. The perils of restricted observations and unanalysed experiments. The logical subdivisions of science. Philology as science. Imagination in science. Invention and Design. The place of Geography in the hierarchy of sciences; as a compendious and general study; as a special and applied study.

LECTURE XI.

History as a School Subject.

History as a concrete study, and as a method. The relation of history to literature and other subjects in the curriculum. History as an atmosphere; as a panorama; as the interpretation of the succession of events affecting political societies. The necessary material for basis. The order of teaching. The desirable completeness of each stage. The passage from general to particular and *vice versa*. The need for frequent concrete attachments in school teaching. Ancient and modern history. History as a core or centre of instruction. Suggested courses.

LECTURE XII.

Summaries and general conclusions.

The Fee for the Course of Twelve Lectures is Half-a-Guinea.

The Lectures will be delivered on Friday Evenings at 7 o'clock, at the College, Bloomsbury Square, W.C.—Members of the College have free admission to the Course.

CASSELL'S EDUCATIONAL BOOKS.

RECENT PUBLICATIONS.

An Entirely New and Enlarged Edition.

OPTICS. By PROF. HAUGHTON. Revised and, to a great extent, Rewritten by the Rev. ISAAC WARRREN, of Trinity College, Dublin. With additional Illustrations. 2s. 6d.

From J. H. POYNTING, Esq., D.Sc., F.R.S., Mason University College:—"I beg to acknowledge, with many thanks, the receipt of the revised 'Optics.' I am just now giving a course on optics to my students, and I shall recommend the book to any who have not yet got a text-book. I have looked through the work, and I believe it just what I want for the class."

An Entirely New and Revised Edition.

CASSELL'S LESSONS IN FRENCH, Part I. Containing 249 pp., crown 8vo, bound in cloth, 2s.

This work, which reached a sale of 141,000 copies in its original edition, has been revised throughout by Mr. JAMES BOELLE, B.A., Examiner in French Language and Literature in the University of London. It is now in all respects suitable for the Oxford and Cambridge Local Examinations and the College of Preceptors' Examinations. The type has been reset in a bold style, and each lesson, with the exercises bearing upon it, has been brought within the compass of an hour's work. * * * The Revised Part II. will be ready in the autumn of 1899.

A HISTORY OF ENGLAND. Fully Illustrated. Extra crown 8vo, 810 pp. Third Edition, 5s.

The Scotsman says:—"The picturesqueness of its manner, its fine national spirit, its insistence on those parts of the story that have most use and interest for the modern world, its numerous choice of appropriate and interesting illustrations—all those things make it a book for everybody who wishes to be won to an interest in a study too often made repellent by the Dryasdusts. . . . Few popular histories if any, have been better done."

Cassell's Educational Catalogue will be sent, post free, on application.

CASSELL & CO., LIMITED, LUDGATE HILL, LONDON, E.C.

CASEY'S EUCLID.

THE ELEMENTS OF EUCLID,

BOOKS I.—VI., and PROPOSITIONS I.—XXI. of BOOK XI.

HODGES, FIGGIS, & CO., LIMITED, 104 GRAFTON STREET, DUBLIN. LONDON: LONGMANS & CO.

BLACKWOODS' CLASSICAL TEXTS.

IN CROWN 8VO VOLUMES.

With numerous Plain and Coloured Illustrations.

MESSRS. WM. BLACKWOOD & SONS have pleasure in announcing the issue at an early date of the opening volumes of a new Series of **CLASSICAL TEXTS** under the general editorship of **H. W. AUDEN, M.A.**, Assistant-Master at Fettes College, late Scholar of Christ's College, Cambridge, and Bell University Scholar.

Some Leading Features of the Series.

The primary aim of the Series is to supply *cheap, attractive, and practical* editions of the more ordinary school classics.

Introductions will be short and interesting, containing (a) a life of the author; (b) some account of his works generally; and (c) a notice of the special work under treatment.

Text.—A sound text will be given in every case, but textual criticism will be avoided except where the MS. is of some general interest, historically or otherwise.

Notes will be as brief as is consistent with the proper elucidation of the text. In this respect the *practical* aim of the Series as *School Editions* will be strictly kept in view.

Appreciation of Contents.—To this end careful attention will be given to typographical arrangements. Marginal analyses will be given, together with useful summaries (in Appendix) collecting results of what has been read—*e.g.*, tabulation of similes in Vergil, of military terms in Xenophon, and chronological tables.

Realization of Greek and Roman Life.—The publishers hope to make this a special feature of the Series by numerous maps, plans, and illustrations (both plain and coloured), from the best German and other sources.

General.—Practical hints on translation, &c., will be given, and wherever possible the more certain modern results of comparative philology, mythology, and archæology will be touched on.

The following Volumes are arranged for:—

CÆSAR.—GALLIC WAR. Books IV.—V. By ST. J. B. WYNNE-WILLSON, M.A., late Scholar of St. John's College, Cambridge; Assistant-Master at Rugby. Price 1s. 6d. [*Immediately.*]

VERGIL.—GEORGIC IV. By J. SARGEANT, M.A., late Scholar of University College, Oxford; Assistant-Master at Westminster. [*Immediately.*]

OVID.—METAMORPHOSES (Selections). By J. H. VINCE, M.A., late Scholar of Christ's College, Cambridge; Assistant-Master at Bradfield. Price 1s. 6d. [*Immediately.*]

CÆSAR.—GALLIC WAR. Books I.—III. By J. M. HARDWICH, M.A., late Scholar of St. John's College, Cambridge; Assistant-Master at Rugby.

CICERO.—IN CATILINAM, I.—IV. By H. W. AUDEN, M.A., late Scholar of Christ's College, Cambridge; Assistant-Master at Fettes College.

HOMER.—ODYSSEY. Book VI. By E. E. SIKES, M.A., Fellow and Lecturer of St. John's College, Cambridge.

OVID.—ELEGIAC EXTRACTS. By A. R. F. HYSLOP, M.A., late Scholar of King's College, Cambridge; Assistant-Master at Harrow.

SALLUST.—JUGURTHA. By J. F. SMEDLEY, M.A., late Fellow of Pembroke College, Cambridge; Assistant-Master at Westminster.

The following are also arranged for:—

HOMER; ODYSSEY. Book VII. By E. E. SIKES, M.A.—**DEMOSTHENES; OLYNTHIACS. I.—III.** By H. SHARPLEY, M.A.—**CICERO; PRO LEGE MANILIA and PRO ARCHIA.** By K. P. WILSON, M.A.—**TACITUS; AGRICOLA.** By H. F. MORLAND SIMPSON, M.A.—**XENOPHON; ANABASIS. Books I.—III.** By A. R. F. HYSLOP, M.A.—**XENOPHON; HELLENICA (Selections).** By G. MIDDLETON, M.A.—**EURIPIDES; HECUBA.** By F. GRIFFIN, M.A.

Other Volumes to follow.

Specimen Copies will be sent on Application.

WILLIAM BLACKWOOD & SONS, EDINBURGH AND LONDON.

CLARENDON PRESS, OXFORD.

COLLEGE OF PRECEPTORS EXAMS.

Shakespeare.—As You Like It. Edited, with Introduction, Notes, &c., by W. ALDIS WRIGHT, D.C.L.

Scott.—Lay of the Last Minstrel. Edited, with Notes, &c., by W. MINTO, M.A. With Map. Second Edition. 1s. 6d.

Caesar.—Gallo War, Books III.—V. Edited, with Notes, Maps, &c., by C. E. MOBERLY, M.A. 2s. 6d.

Livy. Book XXII. With Introduction, Notes, and Maps. By M. T. FATHAM. 2s. 6d.

Virgil.—Æneid IX. Edited, with Introduction and Notes, by A. E. HAIGH, M.A. Limp, 1s. 6d. In two Parts, 2s.

Anglice Reddenda; or, Extracts, Latin and Greek, for Unseen Translation. By C. S. JERRAM, M.A.

First Series (for Junior School). 2s. 6d.

Second Series (for Middle School). 3s.

FORECASTS AND COMMENTS.

August 1, 1899.

An autumn course of lectures on "The Practice of Education" will be delivered at the College of Preceptors by Mr. P. A. Barnett, M.A., H.M. Inspector of Training Colleges. These lectures will begin on September 22.

* * *

THE next Professional Preliminary Examination of the College of Preceptors will begin on September 5, in London and at the local centres of Birmingham, Bristol, Leeds, and Liverpool.

* * *

WE are requested to state that an entrance scholarship examination will begin at Bradford Grammar School on August 2. The scholarship examination at St. Paul's School (thirty vacancies) will extend from September 5 to September 11.

* * *

IN connexion with the Oxford summer meeting of the University Extension students, which is now proceeding, there will be a conference on August 4 to consider "University work and methods," at which Sir Joshua Fitch will read a paper on the influence of University Extension on teachers. Dr. Kimmins, the secretary of the London Society and one of the inspectors under the Technical Board of the London County Council, will deal with the subject of "The Study of the Humanities in Technical Institutes."

* * *

IN the same connexion, on August 12, there will be a conference, presided over by Mr. L. L. Price, Fellow of Oriel College, to discuss "The Relation of the Co-operative Movement to Citizens' Education." The speakers will include the Bishop of Hereford.

* * *

AN examination will be held at the University of Durham, beginning on October 11, for a scholarship of £70 a year and an exhibition of £50 a year, tenable by women for two years.

* * *

AN examination for open exhibitions in the Durham College of Science, Newcastle-on-Tyne, will begin on September 28.

* * *

AT Cambridge, as we announced in June, a combined examination for entrance scholarships and exhibitions at Pembroke, Gonville and Caius, King's, Jesus, Christ's, St. John's, and Emmanuel Colleges will begin on November 7. Sixty-two scholarships and exhibitions in all are announced for competition among candidates under nineteen years of age, in mathematics, classics, natural sciences, history, modern languages, and Hebrew; and at the last two colleges named additional small exhibitions and sub-scholarships may be awarded to deserving candidates. Intending competitors should procure a copy of the Cambridge University Reporter of June 30, which gives full particulars and conditions.

* * *

THE principal college groups of scholarship examinations at Oxford will again be held in November and December.

A LECTURE "About History and the Study of History" will be given on October 17 by Prof. Pelham, President of Trinity College, Oxford, at the opening of the next session of the Ladies' Department of King's College, London.

Education
Gossip.

THERE is a brisk demand for—at the very least there is a brisk supply of—education for the working classes in citizenship. Ruskin Hall at Oxford is to have a namesake devoted to similar objects at Manchester, and having an unofficial connexion with Owens College. The intention is to provide an opportunity for young working men to obtain instruction in social economy and political science.

THE degree conferred by Cambridge on Mr. W. F. Trench, the new Professor of History at Galway, in recognition of his "advanced research," is matched by the degree of M.A. conferred by the University of Wales on Miss Beatrice Edgell, lecturer at Bedford College, London. She graduated last year in Wales with first class Honours in Philosophy, and has now submitted a thesis on "Lotze's Logic and its relations to Current Logical Doctrines in England." In consideration of the excellence of the thesis, the examiners have not exacted any further test.

MR. F. W. WALKER, High Master of St. Paul's, has received the honorary degree of Doctor of Letters from Victoria University. Mrs. Henry Sidgwick was similarly honoured on the same occasion. Lord Cadogan, Mr. Chamberlain, and the Marquis of Lansdowne, receive the degree of LL.D. at Dublin. The Chancellor of the Exchequer and Mr. Thiselton Dyer, Director of Kew Gardens, are amongst the latest additions to the roll of honorary students at Christ Church, Oxford.

AN experiment which, as the *Athenæum* says, is worthy of further development is being tried at Bradford. Three highly competent teachers are to be sent from Paris to the higher schools of Bradford, and an equal number of teachers will proceed from Bradford to conduct English classes in Paris. These mutual engagements are to extend over one year.

HOLLOWAY COLLEGE—having happily abandoned its almost pathetic ambition to expand into an independent University for Women—is now to be incorporated in London University. A short measure is being passed through Parliament to effect this object.

SCIENCE is equally happy when inventing engines of destruction and when healing the wounds of war. Thus, Dr. Ramon y Cajal, the distinguished Professor of Histology in the University of Madrid, has gone to the United States in response to an invitation sent by the Clark University, Worcester, Mass., in order to deliver, on the occasion of the tenth anniversary of the foundation of that seat of learning, three lectures on the structure of the brain. Again, we read in a medical paper that M. Doyen, of Paris, received an ovation from the students in Prof. von Esmarch's clinic in Kiel, when he demonstrated the kinematograph of an operation which he showed to the British Medical Association at the annual meeting at Edinburgh last year.

AT Oxford, the *Guardian* says, a considerable amount of building is in prospect for this summer. As "academic" work there are the new Science Library and the new Pathological Laboratory, both at the Museum. The pinnacles on the roof of the choir of St. Mary's are also to be restored, like those lately restored on the roof of the nave; somewhat the same kind of repairs are to be executed on the roof of New College Chapel, and there are several other works of refacing (as at Oriel) and

repair. Hertford College are sooner or later to erect a new quadrangle on the north side of the entrance to New College Lane. But their plan of erecting a bridge over the lane, to connect their two parts, has been rejected by the Town Council.

AT last Cambridge has a Professor of Agriculture. It is the duty of the Professor to teach and illustrate the principles of agriculture, to apply himself to the advancement of the knowledge of this subject, and to undertake the direction of the Department of Agriculture in connexion with the University. The Professorship ceases at the end of ten years from the date of appointment of the first professor, unless before the expiration of that period the University shall have otherwise determined. The Professor will receive a stipend of £800 a year from the Agricultural Education Fund.

IN order that the work of the Ladies' Department of King's College may be adequately developed and may no longer be hampered by lack of funds, strenuous efforts are being made to commemorate its "coming of age" this year by paying off a debt of £2,000 on the College buildings. With this object in view a Committee has been formed, which has decided to appeal in the first place to those who have benefited by the lectures given in Kensington Square, and who have known the work carried on there during the past twenty-one years.

Appointments
and
Vacancies.

THREE important modifications in the professorial staff of Glasgow University have occurred within a brief period of time. Lord Kelvin, who celebrated the jubilee of his professorship three years ago, has given notice of his desire to withdraw from the Chair of Natural Philosophy, which is consequently vacant. The recent retirement of Prof. Murray from the Chair of Greek has led to the appointment in his place of a young Oxford man, Mr. J. S. Phillimore, of Christ Church. Mr. Phillimore was a Queen's Scholar at Westminster, and has had a very brilliant University career. At the same University a vacancy is created in the Chair of History by the appointment of Prof. Lodge to the corresponding Chair in the University of Edinburgh, in succession to Prof. Prothero, resigned. It is cheerful to be able to record all these changes without having to note a single deficiency by death.

DR. W. WACE CARLIER, Lecturer on Experimental Physiology and Histology in the University of Edinburgh, has been appointed Professor of Physiology in Mason University College, Birmingham.

THE first occupant of the new Chair of Agriculture in Cambridge University is Mr. William Somerville, who has been Lecturer on Economics at the Durham College of Science.

AT University College, London, Mr. E. A. Minchin, M.A., Fellow of Merton College, Oxford, has been elected to the Jodrell Professorship of Zoology, in succession to Prof. W. F. R. Weldon. At King's College Mr. A. McMillan succeeds Prof. Rumsey in the Chair of Indian Jurisprudence.

MR. WALTER R. PHILLIPS, formerly Professor of Law in the University of Adelaide, South Australia, has been appointed to the new Chair of Law in the Yorkshire College, Leeds.

THE Council of King's College, London, have appointed the Rev. A. Nairne, M.A. Cambridge, to be Lecturer on Hebrew and Latin in the Theological Faculty.

MR. W. F. TRENCH has been appointed Professor of History, English Literature, and Mental Science in Queen's College, Galway. In 1894 Mr. Trench graduated in the University of

Dublin as Senior Moderator and Gold Medallist in Modern Literature. He then migrated from Dublin to Christ's College, Cambridge, where he obtained the Skeat Prize in 1897, becoming in the same year an advanced student, and in 1898 he was awarded the rare distinction of a B.A. degree without examination in recognition of original research exhibited in an admirable study of "A Mirror for Magistrates."

* * *

By the death of Prof. Banister Fletcher a vacancy is created in the Chair of Architecture and Building Construction at King's College, London.

* * *

At the Central Technical College of the City and Guilds Institute there is a vacancy for an Assistant Professor of Civil and Mechanical Engineering.

* * *

A MODIFICATION is to be made next session in the staff of University College, Bangor. Principal Reichel, who has hitherto also acted as Professor of History, will, in future, act as Professor of Constitutional History only, Mr. J. E. Lloyd, the Secretary and Registrar, becoming Professor of History, and having Mr. Richard Williams as an assistant in the Registrar's office. Mr. J. O. Peet, B.Sc. Edinburgh, has been appointed Assistant Lecturer in Agriculture, and Mr. A. Lauder, F.C.S., Assistant Lecturer and Demonstrator in Chemistry.

* * *

DR. A. C. HOUSTON has been appointed Lecturer in Bacteriology at Bedford College, London.

* * *

THE Midland Clergy College will be opened for the reception of theological students in Edgbaston next October, with the Rev. J. H. B. Masterman as first principal, to whom applications for entrance should be made.

* * *

MR. E. H. HENSLEY, M.A. St. John's College, Cambridge, at present Headmaster of St. Saviour's Grammar School, Southwark, has been appointed Headmaster of the County School, Sutton.

* * *

MR. EDWIN TEMPLE, B.A., assistant-master at Glenalmond, has been appointed Rector of Glasgow Academy.

* * *

THE Dean and Chapter of Durham have appointed Mr. A. E. Hillard, M.A., assistant-master of Clifton College, to be Headmaster of the Cathedral Grammar School, in succession to Mr. Hobhouse, resigned.

* * *

THE REV. J. E. STEVENSON MOORE, M.A. Cambridge, has been appointed by the Dean and Chapter of Llandaff to be Headmaster of the Cathedral School.

* * *

MR. GEORGE CORNER, of Hymer's College, Hull, has been appointed Headmaster of the West Somerset County School, in succession to Mr. J. O. Beuttler, resigned.

* * *

THE REV. A. B. HASLAM has been appointed Headmaster of Sheffield Grammar School; Mr. L. W. Lyde, M.A. Oxford, Headmaster of Bolton Grammar School; and the Rev. Dr. Gibbons, Headmaster of Kidderminster Grammar School.

* * *

THERE are vacancies in the Chair of Humanity at St. Andrews University (applications by September 2); in the Chair of Natural History at the Royal Agricultural College, Cirencester (applications by August 5); and in the Lectureships in Art and Economics at the Huddersfield Technical College. A Headmaster is required for Dauntsey Agricultural School (applications by August 1).

* * *

APPLICATIONS are invited for the post of Warden or Lady Principal of the Royal Victoria College for Women Students in McGill University, Montreal.

Literary Gossip. FEW writers of fiction have been better or longer known to successive generations of schoolboys and schoolgirls than Miss Charlotte Yonge, and the commemoration of her name by the founding of a scholarship at Winchester High School is a very appropriate mode of celebrating her diamond jubilee as an author. On July 19 the Bishop of Winchester presented Miss Yonge with an illuminated address containing the names of the subscribers, and congratulated her upon the unique testimony made to the high principles and teaching instilled by her works. Miss Yonge is able to look back upon sixty years of unflinching literary work, and the Bishop rightly attributed her popularity to the fact that her novels have idealized home life.

* * *

PROF. LODGE, who has just been transferred from the Chair of History at Glasgow to that at the sister University of Edinburgh, is the author of a "History of Modern Europe from 1453 to 1878," and of the volume on "Richelieu" in the series of "Great Foreign Statesmen."

* * *

THE attraction of Cambridge as a place of residence to old Cambridge men—as of Oxford to old Oxford men—seems to be forcibly illustrated by the fact that there were nine hundred applications for the post of Secretary of the Cambridge University Library, at a salary of £200. The selected candidate is Mr. G. Aldis, hitherto Secretary of the Philosophical Institution at Edinburgh.

* * *

THE CLARENDON PRESS has begun its re-issue of the Oxford "New English Dictionary," in monthly numbers, at the price of 3s. 6d. for the part of 88 pages. The first part extends from A to "acrious." In a dictionary not based "on historical principles" we could lightly dispense with "acrious"; but in the Oxford Dictionary we look to find not only the English that is written, but all the English that has ever been written. And, what is more, we find it. Writers on phonetics, by the way, especially if they are English writers, would do well to study the "key to pronunciation," printed in this part, before indulging themselves in the invention of new symbols. The Oxford system is admirable.

* * *

THE third quarterly number of *Child Life* (Philip & Son), an excellent magazine for all who are engaged in the earnest study of the characteristics of childhood, reports in a complete form several of the papers read in the Education Section of the International Congress of Women. Inevitable literary comments on this Congress were made by two of the speakers:—

The words in which Canon Wilberforce referred to that meeting of women was striking. "Once more," he said, "is the Sisera of wrongdoing about to be delivered into the hands of Jael the woman." One of the speakers in the Literature Section, in speaking of great women of the past, quoted: "Until that I, Deborah, arose, a mother in Israel, then was war in the gate." These seem martial references at a time when the Peace Conference is in our minds. But Jael fought, according to her lights, against the tyrant and oppressor; and the peace which Deborah ended was the false peace of faint-heartedness.

* * *

WE are glad to find on our table, amongst the books of the month, a handsome large-octavo volume of "Essays and Nature Studies, with Lectures," by W. J. C. Miller, B.A., London (Elliot Stock). This is an edition limited to two hundred numbered copies, and there is a portrait of the author opposite to the title-page. The book is edited, like a former collection of Mr. Miller's pleasant nature-studies, by Mr. H. Kirke Swann, who supplies a short biography of the author.

* * *

EVEN the youngest of our readers will not need to be told that Mr. Miller edited our special columns of "Mathematics" for something like thirty-six years. Mr. Swann says:

The late Prof. Clifford considered that the mathematical portion of the

Educational Times had "done more to suggest and encourage original research than any other European periodical." Similar testimony has been borne by Sir Robert S. Ball, Professors Tait, Crofton, Townsend, Todhunter, Cayley, [Sylvester], and others. . . . Now there are five hundred vigorous contributors in all parts of the globe. Many are educated Hindoos (professors and others); others are Americans, Australians, Frenchmen, Germans, Russians, Italians, Spaniards; while some write from the South American Republics.

* * *

MESSRS. CONSTABLE have in the press a volume of unpublished studies by Mr. Round, giving the result of much original research in English medieval history. A special feature of this will be the early government of London, with regard to which Mr. Round has made some interesting discoveries. Mr. Round, by the way, contributes one of his characteristic essays to the *English Historical Review* for July, on "Bernard, the King's Scribe"—an elaborate reconstruction from the Pipe Roll of 1130, elucidated from many other contemporary sources.

* * *

A VOLUME of "Essays on Good Citizenship," dealing with social, personal, and economic subjects, will be ready early in the autumn. The standpoint of these will be that of sympathy with new aspirations combined with a recognition of the place that religion should have in the direction of such aspirations. The preface will be written by Canon Gore, and the list of essayists includes Canon Barnett, Canon Scott Holland, Dr. Morrison, Mr. J. A. Hobson, and others.

* * *

ANY one who is interested in Russian literature and folk-lore should pay a visit to the unique collection now being exhibited at the offices of the *Anglo-Russian*, 21 Paternoster Square, and containing original manuscripts, as marked and passed by the Press Censor, various specimens of Russian illustrated books and papers, medals, and artistic coloured post-cards, commemorative of the poet Pushkin, *lubochnia kartini* (coloured illustrations), statues of celebrated authors, &c. The collection comprises also a number of articles characteristic of Russian special industries, such as the famous samovar, and a variety of icons.

DRAWING AS A FORM SUBJECT.

UNTIL recently drawing has never been treated seriously in English schools. It was supposed to have no educational or practical value, and, owing to the prevalent idea that none but an artist could teach it, it was usual to put several classes together, generally in the afternoon, to copy from the flat, each pupil by himself, presided over by a visiting drawing master. An alternative to this has been a course of lessons on the "Ablett" system, which is supposed to require a specially trained teacher. When a subject is not taken by the whole form, in the regular morning course, it is apt to be regarded as unimportant, both by teachers and pupils, and, except to the specially gifted, the time is for the most part wasted. I would suggest that the educational value of drawing would be greatly increased if it were taken by the average form teacher, so long as he is able, in the roughest way, to depict an object in front of him. The intricacies of perspective are not required, for all that is necessary in this branch can be grasped by an intelligent teacher in a few minutes. However much artists may protest against this, the bad results of non-specialist teaching are not so great in drawing as in many other subjects. The inspiration to the pupil comes more directly from the outer world. In languages, science, history, and even literature, much must be explained, and a thorough course must be worked through before a pupil can be left to himself. In art, however, the chief requisites are something to look at and a teacher who is able to create a desire to copy it. There is no need for him to be able to make a faultless copy himself; indeed, when he can, there is too great a temptation to do the work himself, while his pupils hopelessly admire his dexterity; or, worse again, to give them his own studies to copy. Rousseau's method, quaint and impracticable as it seems, is far nearer the ideal than the bulk of our school teaching. To let the child work and work and work, to keep yourself in the background, to draw *with* him if you like, but to draw *badly*, and to let him criticize and even ridicule your poor attempts—such a plan really compares favourably with the lethargic copying from the flat that goes on in most drawing lessons.

Rousseau's idea of putting the worst productions of the pupil in the gaudiest frames, and gradually simplifying the frames as the drawings improved, till at last they were good enough to go without any frame, seems to suggest that an attempt should be made to educate a pupil's

taste and appreciation of art generally—a branch that has been almost entirely neglected in English schools, and a branch, too, that can quite easily be managed by a teacher who is not an artist himself. Every one can have his life made fuller and richer by being taught to appreciate good works of art, and to distinguish a good picture from a bad one. Pupils who will never do much in actual production can thoroughly enter into this side of the subject; and it is particularly desirable that the taste of girls should be cultivated in this way, for it is to them that the decoration of the home usually falls, and even our geniuses will not paint well if there is no appreciative public to paint for. The best way to develop this artistic taste is to put before the class examples of the great masters, some care being exercised in the choice. A picture should be chosen that is undeniably excellent, that can be seen in a public gallery, and whose subject is suitable to the class—such, for instance, as Turner's "Ulysses deriding Polyphemus." The story may first be told, then the pupils invited to judge of the best point in it for an artist to choose for his painting; then a reproduction should be shown and the colours described. Of course a visit to the gallery ought to follow such a lesson. Every visit to a gallery should have a very definite object, or the distractions are so great that the time is wasted. An hour in the National Gallery might, for instance, be arranged in this way: (a) A thorough study of the picture on which a lesson has been given. (b) An inspection of all the pictures by one artist, say Crivelli, as a preparation for a lesson on his work. When they came to the class the pupils could describe these pictures, say which they preferred, and why, and discuss them generally. The teacher need do little more than organize their observations. In all such lessons and visits it is impossible to overstate the importance of inducing the pupils to try to copy some little detail of the great picture. A tiny sketch-book, a sharp pencil, and a good piece of india-rubber—that is all. Only the teacher should abstain from watching or criticizing. The difficulty of the task is quite sufficient education, as in the amusing lesson that Ruskin once gave a pupil who desired to understand Egyptian carving.

With regard to the actual management of the lessons, a little care in the planning of a syllabus will ensure the form teacher an animated and delightful class once or twice a week. The chief point is to get variety. We want our pupils to develop their individuality, in art above all things. They must not be dull, and they must not for a moment entertain the idea that they are stupid; there is sure to be some branch of the work that they can do, if we could but find it. Sometimes a pupil who is poor at drawing will excel in finding subjects for his fellows to draw. A pleasant change may be made by a tale being told by one pupil, and various points in it illustrated by the others.

Again, there must be variety in the instruments employed. One boy may do best with pen and ink, another with his paint brush, and another with rough chalk drawings on the blackboard. Let everything be tried, and the pupils will soon strike out along their individual lines. It is a great mistake to keep a class for a whole term at copying "objects," or at shading, or at any one exercise. It is out of the question to be thorough in the time allotted on the time-table. You might just as well expect a pupil to get on in music with one hour a week. Practice is needed in every art, and ten minutes' practice *con amore* is worth an hour's drudgery. Therefore, in our one lesson a week, we must so inspire our pupils that they will want to practise in the meantime. To encourage this, suggestions must be given for optional work, and each pupil should be provided with a small sketch book, which he can carry about in his pocket, and in which he can do his little studies, dating them carefully, and keeping them as a record of progress. It gives an additional interest to the lesson if each pupil is asked to bring a note, or better still a drawing, of anything beautiful he has noticed in the week, such as a cloud, a tree, a good combination of colours in a dress, or a prize butterfly or silkworm in a boy's collection. Leaving thoroughness then to take care of itself, any amount of variety in the lessons can be indulged in, and I suggest the following syllabus as an instance of what I mean in this respect:—(1) An empty jam-pot, drawn in different positions; (2) a carrot, painted; (3) a design, in form; (4) lesson on a picture; (5) a pair of scissors drawn from memory; (6) an egg, shaded; (7) a spray of leaves, painted; (8) a talk on an artist and his work; (9) a design, in colour; (10) an open door, for simple perspective; (11) a story told and illustrated; (12) a competition in drawing a circle.

This syllabus is more superficial in appearance than in reality. Every lesson may be made a training in observation or in a feeling for beauty, and, if any exercises are done at odd times, there will be a considerable increase of technical power at the end of the term. Colouring of any kind is very delightful to children; chalks are better than nothing, but paint-boxes are very cheap now, and simple water-colour work is much easier to manage in a class than is usually supposed, and may be begun with quite young children. There is nothing occult about "brush-work," as it is often called. A definitely coloured natural object, such as a cherry or a radish, is placed on a piece of white paper between two children, and they copy it with their colours without previously pencilling the outline. They can tell themselves whether it "looks like" a radish or not, and they can try again and again till they succeed.

Design should be an exercise in creative imagination, no matter how crude. A square, a circle, or a triangle might be given, and the children requested to fill it up according to their tastes, with, perhaps, some flower or fruit as a basis. At the close of such a lesson a good specimen of design should be shown and its excellencies pointed out. It is important that each lesson should be a complete whole, with no work dragging on to next time. The hour should be employed briskly, with no time wasted in passing books, sharpening pencils, and so on; everything must be ready beforehand.

One difficulty to the teacher inexperienced in drawing lies in the astonishing difference of ability and rates of progress in pupils of the same age. The chief thing to remember is never to split an art class into divisions. The sympathy of numbers is as important here as in any other subject, and far better work will be done when the whole class thinks and acts the same thing. A rapid worker can simply shift his seat and draw his jam-pot in another position, or he can make a more elaborate design, or more delicate shading, or, best device of all, he can do the same exercise with another instrument.

I hope that enough has been said to induce a form teacher to take up drawing as one of his own subjects. There is hardly any other that will put him so quickly in touch with each member of the class, with his tastes, his hobbies, his home life, and his higher aspirations.

M. V. HUGHES.

OUR SCHOOLS AND COLLEGES.

A CONVERSATION ON A COUNTRY ROAD.

Interlocutors: ASHTON, a Country Squire; and BARWELL, the Vicar of a neighbouring Parish.

A.—Well met; I wanted to see you. You will be glad to hear that my boy has passed into Headford very well. He thinks his place is due, in great measure, to the Latin prose you were good enough to give him last Christmas.

B.—I am glad that Bob has done well, and yet I cannot help wondering whether he will get as much at Headford as he would have got elsewhere.

A.—Surely you, of all men, must admit that there is a tone and a habit of self-reliance acquired at a public school that cannot be got elsewhere. Look at Davis of our year at Cambridge, a double first and one of the very best fellows in existence; yet he has never made his mark, and has been passed by far inferior men, solely, I believe, because they were at a public school, and he was brought up at home.

B.—Yes, Davis is a case in point, and so is Kyrle, third Wrangler in the year below us, and an uncommonly clear-headed man, and yet he is a failure at the Bar. They say that no solicitor can get on with him.

A.—Just so. A public school would have been the making of Kyrle. It would have knocked all the pig-headedness out of him, and taught him to be decently civil even to little Simpson, whose rooms were next to Kyrle's, and who was ploughed every time he went in for an examination.

B.—Yes, undoubtedly, both Davis and Kyrle would have done far more if they had been at a public school; but what are these schools doing for the generality of boys?

A.—For the average boy, to use that new and charming phrase, why, everything. There is not an open examination in the country at which public-school men do not carry off some of the honours.

B.—Some of the honours, I grant you. Every prize list and school advertisement is full of the successes of that particular school, and yet I maintain that the results are very small comparatively. A public school, remember, consists of picked boys. As a rule they have to pass an examination to get in, and, if any boy falls much below what is considered to be the place corresponding to his age, he is superannuated without pity. Of course, under such a system, the public schools must obtain some successes; but really they ought to have more. Look at the Indian Civil, for example. A public school, with its endowments and prestige, and with the pick of both Universities for its masters, gets one candidate in, and speeches are made about him on prize day. Mr. Eagles, while quite an unknown man, started as a private tutor a few years ago, and now his pupils take at least half the appointments every year.

A.—More, I believe, to judge from his advertisements. In fact, I think the India Office altered the examination some years back with the intention of cutting out Mr. Eagles, and letting in the public schools.

B.—They haven't succeeded yet, then; but the same thing takes place with the Army examinations. Very few of those who get into Woolwich and Sandhurst pass directly from the large schools, and when they do a shout of exultation is raised by every one connected with the school, and a half holiday is given to the boys in honour of the event.

A.—I don't think you have allowed sufficiently for the difficulty of dealing with large classes of boys intended for various professions; but undoubtedly there is a good deal in what you say. A boy ought to be able to enter Woolwich or Sandhurst direct from his school, without having to go to a private tutor for a year. On the other hand, however, think of the benefits a boy gets from entering a school where

no one cares whether his father is a nobleman or a big tradesman, a millionaire or a poor country squire. You and I will never forget the good we got at Anmouth.

B.—But future generations will not remember that good, because they will never acquire it. Anmouth is no longer a place to which a poor man can send his son. The scale of payment is quite different from what it was in our time.

A.—My good friend, expenses must increase in everything. I pay my labourers double what my father did. Every one, with the trifling exception of landowners, expects to be paid at a higher rate than formerly.

B.—Quite so; but are all those extra expenses necessary? Anmouth was founded as a school to which comparatively poor men should be able to send their sons. Now all that is changed. Every boy must have his study, and the furnishing of the study is a heavy extra expense. Then the chapel is not gorgeous enough, and there must be a whip round for new embellishments; and all that comes out of the parents' pockets. The style of living at schools is getting too luxurious, compared to what it was in our day.

A.—I don't know, really. We had a good deal of roughing it, and I should be sorry to think my boys would have the same. I can't complain that things are better in some ways; though, of course, we must pay for it.

B.—Oh! yes; improvements were wanted sadly. But is it necessary, or even desirable, that a boy should come home and find fault with the paternal tap, on the ground that he has better beer at school, or that he should draw a sarcastic comparison between the morning meal of the Vicarage and the pork-pie or sausage that he enjoys at school? Why should I pay that my son may live more comfortably than I do myself?

A.—Come, you are getting cross. Half of these complaints are only swagger. We were young once ourselves, and thought as much of Anmouth as any one else. Suppose any one had told you and me thirty years ago that our school style of batting was cramped. I should have been in a rage, and you'd have knocked him down.

B.—Yes, we were young, though I scorn your last insinuation. But we taught ourselves to play then. Now the chief emulation seems to be which school can support the greatest number of professionals, and, of course, they have to be paid for. Even the uniforms are getting to be expensive, just as the prizes at the athletic sports are growing more and more valuable.

A.—I am afraid there is a tendency to increase expenses in many ways. I met old Lawson just now—Captain Lawson, you know—and found him positively foaming with rage. He has a son at Eastbury, and the boy thought he should like a shilling pair of compasses to draw his circles with—a luxury I don't believe he required, mark you—but, anyhow, he got an order for the thing. "Sir," said the old man, boiling over, "they sent me in a bill for a fifty-shilling case of instruments, and I had to pay it, too; and yet they say that Eastbury College was founded for the benefit of the sons of poor officers!"

B.—Too bad! Lawson has to retrench, I know, to send his son there at all.

A.—I don't know, though, why you should grumble. Your boy holds a scholarship at Anmouth.

B.—Yes, he does; but he won't hold it very long.

A.—Why not? I didn't know that your objections had gone so far as to make you think of taking your own son away from school.

B.—Simply because I can no longer afford to send him to a public school, even with a scholarship. As it is he costs me a good deal more than I ever cost my father, and he must leave the end of this half—I beg his pardon; the end of this term.

A.—But I thought your next boy was going to try for a scholarship there? You certainly told me so lately.

B.—He was; but what I heard at Anmouth the last time I was there made me change my mind. I took the boy with me, and Simpson put him through his paces. He said the boy had brains, and would stand a fair chance of a scholarship if I would send him for a year to Griffiths. Griffiths, it seems, lays himself out for this kind of thing, and his boys take nearly half the entrance scholarships at Anmouth. I told Simpson I couldn't do that, and must, therefore, leave the Anmouth scholarships to richer men, who could afford to pay Griffiths's fees.

A.—Then you think the scholarships go to those who ought not to hold them?

B.—I don't know about that; but I do know that, unless a boy has most exceptional talent, he has no chance, as a rule, against those whose parents can afford to pay for a year or two's special training.

A.—But, if you object to throwing open scholarships in this manner at school, what have you to say about the University Commissions and their acts?

B.—Why, that, with the best intentions in the world, the Commissioners have done a good deal of harm. Do you remember that scholarship I held at St. Paul's—the Heyworth, it was called—a close scholarship confined to those born in the district?

A.—Of course I do. You were the last holder of it before it was thrown open, and, as we were all enthusiastic reformers at the scholars' table, we dubbed you the "survival of the unfittest." Luccombe, I

remember, wished to bring forward at the debating society the proposition "that the painless extinction of Barwell would be a measure fraught with benefit to the college."

B.—He did so, and was very eager that I should support him. We were all iconoclastic enough then, and yet I don't know but what my poor old Heyworth did as good service then as it has done since. Without that scholarship I should never have gone to college, but must have tried my chance abroad. Australia or Canada would have gained a not particularly useful colonist, and Jarningham Parva would have lost — .

A.—The very best parson the parish is ever likely to have; but what would you do? Would you never interfere with the pious founder, even if —

B.—Even if he were not particularly pious, you were going to say. Yes; I would generally interfere with the letter of his will, but try, perhaps more than has been done, to carry out the spirit of his intentions. Out of curiosity I have been inquiring into the antecedents of the three present holders of the Heyworth.

A.—And what is the result?

B.—Well, as follows: One is a Farnborough man, son of a county member; another was educated I don't know where exactly, but his father is a baronet of old family; and the third, who was brought up at Lanford, is the son of a successful contractor, not of a very old family. They are all, I doubt not, clever; at any rate, they have learnt far more than I ever did; but their relatives could all have afforded to send them to college perfectly well, which my father could not, and I can but think that when they presented me the trustees were keeping closer to the spirit of old Heyworth's intentions.

A.—And what remedy do you propose?

B.—Nay, you must ask for that from wiser heads than mine. I can only exercise my right of grumbling. But I do feel that my boys are losing something of what I had as a young man.

A.—Well, here our roads divide; so fare you well. T. ROACH.

CONCERNING HOLIDAYS: A PROTEST.

"Nor less I deem that there are Powers
Which of themselves our minds impress;
That we can feed this mind of ours
With a wise passiveness.

Think you 'mid all this mighty sun
Of things for ever speaking
That nothing of itself will come,
But we must still be seeking?"

So sang Wordsworth; and perhaps a majority of his countrymen will reply that "nothing of itself will come"; and that they "must still be seeking." Nevertheless, there is another side to the matter, which they might do well to ponder, for their soul's good. There are things which come to us in the stillness of the dark which no amount of striving would bring. They are of grace, not of works, so to speak; nor do the things we desire always come directly, but sometimes from the quarter whence we should least expect them.

"And not by eastern windows only,
When daylight comes, comes in the light.
In front the sun climbs slow; how slowly!
But westward, look, the land is bright."

Now, I suppose that, if there is one thing more than another that this generation abhors, it is "a wise passiveness." It is nothing if not active. "So many worlds, so much to do," these people cry as they rush past in their feverish energy. Teachers are by no means exempt from this blight of busy-ness, which has fallen upon us all; and the disease appears, perhaps, in its most malignant form in the holiday with a purpose, now so sadly common. If the "novel with a purpose" is inartistic, how much more so is the strenuous, improving, studious holiday? This unholy zeal for self-improvement is surely much to be deprecated—it carries its victims to such extravagant lengths, and no season is safe from it.

In the keen frosty days of the Christmas vacation these unhappy persons attend educational meetings and wrestle with psychological problems, when they should be adjusting their skates. At Eastertide they sit in conference, instead of taking walking tours, and discuss some pale and bloodless abstraction like "child-psychology." It might reasonably be supposed that in August, at least, they would hold their hand, and refrain themselves; but nothing of the kind. This is their energy raised by some unnatural means to a higher power than ever, and they fairly wallow in every form of summer meeting. This is the appointed time for holiday courses. There are language courses in Germany; language courses in France; ditto at Edinburgh. You can have universal culture at Oxford; you may go to Sweden to cut wood, or do it at home, if your enthusiasm is only moderate in degree. You can scarcely visit Switzerland and escape the professional lecturer; and he dogs your steps even as far as Egypt and Palestine. It is really very fatiguing. August, and the fierce sun overhead,

suggests—nay, demands—things other than these—a judicious idleness, a return to Nature, a turning away from books.

Thoreau, the naturalist and philosopher of Walden Woods and prince of idlers, speaks of "days when idleness was the most attractive and productive industry." "Sometimes," he says, in "a summer morning, having taken my accustomed bath, I sat in my sunny doorway from sunrise till noon, rapt in a reverie, among the pines and hickories and sumachs, in undisturbed solitude and stillness, while the birds sang around, or flitted, noiseless, through the house, until, by the sun falling in at my west window, or the noise of some traveller's wagon on the distant highway, I was reminded of the lapse of time. I grew in those seasons like corn in the night, and they were far better than any work of the hands would have been. They were not time abstracted from my life, but so much over and above my usual allowance. I realized what the Orientals mean by contemplation and the forsaking of works."

"The forsaking of works!" I like that phrase. What an excellent motto for an August holiday! At any rate, one's ordinary works should be forsaken, for that is the one essential of a true holiday.

Let the theologian cease to theologize and the banker to think on gold; let the merchant forget his merchandise and the schoolmaster cease to instruct. Is this last quite impossible? "Never dares the man put off the prophet." Then is it bad for everybody—not least for the prophet himself. There are some people who cannot idle. Idlers, like poets, are born, not made. It is a gift. Who has not suffered at one time or another from that feverishly energetic person whose mere presence in a room is enough to banish all tranquillity from the mind of every one present? His restless spirit diffuses itself somehow throughout the entire company, and drives pleasant peace effectually away.

Not, of course, that activity on a holiday is to be entirely taboo. This is merely a plea for the recognition of the place and value of the receptive attitude of mind in days when the active side of human nature is necessarily emphasized so strongly. It is significant that it is Wordsworth who pleads for "a wise passiveness"—the man who rediscovered for us our true relations with Nature. He had the good fortune himself to live very near to Nature; and to do that is to see the active and the passive side of life in their true proportions—a thing infinitely difficult for the majority of persons to-day who live in cities, and have thereby separated themselves by barriers, tangible and intangible, from the earth life. It is part of the price we have to pay for what is known as "civilization" that in the lives of so many people fellowship with Nature is only an episode, not a constant influence. Hence the curious fact that numbers of persons have to depend mainly on the poets and the artists for their knowledge, being unable to get it at first hand through the medium of their own eyes and ears. The general exodus into the country which we see in the summer months is in reality a pathetic attempt to get back for a short time at least into primitive natural relationship to the earth, our mother. It is true that the instinct underlying the migration to sea and hills is not always consciously recognized, and that in many people it is found only in a very degenerate form; or why should the multitude find satisfaction in sojourning with hundreds of their fellows at a sea-side place, where promenade bands and beach niggers are the outstanding attractions? You can scarcely see the sea for the niggers, or hear the sound of the wind and the waves for the strains of "The Washington Post." Is this a return to Nature? Well, hardly that! But who shall venture to prescribe exactly for the needs of others in these matters? To some society, to others solitude, will be the best medicine. To every man his own holidays.

Probably a judicious admixture of both is desirable for most of us, if it can be obtained; but, in the present populous state of Great Britain, this is not within the reach of all. For those to whom it is possible, it were well to spend a part, at least, of the holiday in the attitude of absorption, listening only to the wind among the trees, the roar and rush of the sea, the babbling of brooks, and the hum of bees amidst the heather. Good for us all is it sometimes to cease from our busy striving, and let the influences of Nature have their way with us, as the August corn ripens silently and naturally in the fields under noontide sunshine and the play of midnight lightning.

Something of Walt Whitman's exultant joy in the earth should be in the heart of every one who makes holiday:—

"I inhale great draughts of space.

The east and the west are mine, and the north and the south are mine.

Now I see the secret of the making of the best persons.

It is to grow in the open air, and to eat and to sleep with the earth."

M. S.

INTERNATIONAL CONGRESS OF WOMEN.

NOTES IN THE EDUCATION SECTION.

YOUR criticism two months ago on the enormous number of subjects and speakers at the Congress generally was applicable in a high degree to the Education Section. The papers were undoubtedly too brief. As many admirable authorities on different subjects had been secured,

it was much to be regretted that sufficient time could not be allowed them for the proper development of their themes. If we take the first morning's work, we find four subjects placed on the programme for discussion: psychology of childhood, parental responsibility, education as a preparation for life, and connexion between home and school life. Eight speakers were announced, and five others contributed to the discussion. As the morning only lasted two and a half hours, some idea of the brevity of papers and speeches may be gathered. Yet it would be unfair to deny that many were highly suggestive and useful, although perhaps a little more time would have deepened the mental impression. As it was, one felt that one had been beholding an animatograph. The Chairman's bell was very much in evidence at most of the sessions, and now and then it approached the comic to watch the race between the Chairman's right hand and the speaker's rapid flow of language. Practised speakers whom not even a bell could disconcert announced their dislike of it, and their determination to "get through" at all hazards, in which laudable ambition they often enlisted the sympathy of the audience, who signified their desire to hear them to the end.

On one or two occasions the audiences were very large and very cosmopolitan. One could distinguish a Chinese and a Japanese lady in the audience; Italians, French, Germans, Austrians, Americans, Belgians were, of course, well represented. In the gallery and body of the hall were three or four nuns, in their sombre dress, presumably belonging to a teaching order, who followed the proceedings closely and with evident interest.

On the psychology of childhood, Prof. Earl Barnes and Miss Macmillan were both heard to advantage. The former anticipated criticism by observing that, if a teacher aroused morbid self-consciousness in a child by watching him too closely, such a result was the fault of the method of the teacher, a proof that he was not equal to his task. By means of charts, Prof. Barnes then showed how from groups of children who have been studied we may gather similar results, and prove that the same general tendencies exist. Miss Macmillan may be said to have taken as her text: "And a little child shall lead them," showing that movement is the only mode of self-expression that children possess; that even from the twitching, aimless movements of a small child important inferences can be made; that a child learns less through teachers and books than by his own power to feel. Mrs. Franklin reminded her audience that this is the children's age, that there must be closer co-operation between teachers and parents, and she made a point on the value of quiet for a child's growth. Those who watch him must not be always pulling him up, to study his roots. Mrs. Stetson (U.S.A.) spoke of the enormous importance of the first four years of life, the early environment making the chief difference between one child and another. The speaker made the audience smile by declaring that the average mother was no more fit to train a child during its early life than to give it a college education during adolescence, and suggesting a trained assistant for every ignorant parent or nurse. Why should this training be expected of a mother? The love of the parent for the child was often a positive hindrance to its best education. Later in the day Fr. Borchart offered, as her contribution to the subject, the suggestion that, just as conscription compels men to serve at least a year in the army, so women should give a year to study the kindergarten.

Canon Lyttelton referred to the importance of home training and to the waste of life caused by ignorance of its principles. A knowledge of the facts of life must be imparted to young people, and it was clearly the duty of parents not to avoid the matter as a painful subject, but to regard it as a great and deep privilege. Properly instructed, a sense of reverence for life would be implanted, and the child strengthened and ennobled; otherwise, parents might be very certain that the facts of life would be learned in a distorted, pernicious, poisonous manner.

In the afternoon the praises of Pestalozzi and Froebel were sung by Mdme. du Portugall, Miss Weldon, Mdme. Michaelis, Mrs. Walter Ward, and others. The first lady laid special stress on Froebel as the apostle of woman's emancipation, since he desired for her dignity, as wife and mother, real companionship with her husband.

On the following day Mrs. Stanton Blatch put in a plea for general manual training for girls, instead of confining such training to the needle. Woman, she said, had been too long taught to look through the eye of a needle. The result was a cramped general education, the result of too early specialization, and the depressed position in the labour market, which, in the long run, injured men's position also. "If you are going to be a tailor," said Mrs. Blatch, "avoid the needle in your youth."

Mrs. James Miller advocated physical education. If we want to make the best of ourselves and our children, we revert to physiology, to hygiene and physical development. We want to know how to eat; if certain tissues need development, what foods are necessary to produce them.

Mrs. Bridges Adam, labour member of the London School Board, characterized the English primary system as weak, bad, rotten; it was a class system, and its key-note was competition. Payment by results was hideous and "damnable." If only educated people would come to the front, and say the people shall be educated, then it would

be done. Evidently the speaker did not seem to think that the people themselves should make this demand, but assumed that it should emanate from the oppressive classes. When training of teachers was under consideration the same speaker reverted to the theme of class education, alluding to the uneducated democracy and the deadly class hatred arising in England. Both Miss Agnes Ward and Miss Macmillan offered corrections on this point, the latter stating that the size of the classes prevented individual attention.

When secondary education was discussed, Fr. von Dömming's paper on the state of girls' education in Germany aroused attention. There are plenty of Gymnasien for boys in Germany, even in quite small towns, but it is most difficult to get such schools established for girls. Even when no State aid is claimed—only permission to open such a school—it is usually refused, especially in Prussia.

Miss Beale dealt with the State organization of secondary schools. Officials must have felt guilty when she read out her "reference." "I am asked to treat the subject not merely from a national point of view but from as broad and philosophic a standpoint as possible. And this to be accomplished in fifteen minutes!" Miss Beale declared that in England we have hitherto preferred independence and liberty to State organization of secondary education. Enthusiasm, energy, and generosity die when the State interferes. Yet registration of schools and teachers is desirable, and aid might perhaps be granted in certain cases. The writer mentioned the fact that no working man's child could grow up without a certain amount of education; that in England this is the privilege of the daughters of the professional classes. Mrs. Bryant dealt with the curriculum question in the early part of her address, attaching importance to literature in the development of right sentiment. It had been well said that one-half the misery of the world is caused by failure in sentiment and the other half by failure in accuracy. The speaker then proceeded to explain the projected Central Authority in education, and the Local Authorities, briefly referring to the division of power between them, and to the need of the Local Authority inquiring into the requirements of different districts before moving. In England we do things piecemeal, and this makes a homogeneous scheme difficult, if not impossible. Fru Nielsen advised ladies not to be modest in their demands on Government. In Norway they had made heavy demands, and, though the Storting had perhaps thought the persons who made them disagreeable, in the end girls were placed on an equal footing with boys. Then gallant little Wales intervened, and, with voluble indignation, showed that intermediate education had been discussed, and yet Welsh achievements had not been so much as mentioned. This grave omission was repaired to some extent before the session was adjourned.

On Thursday afternoon Mr. Badley's paper dealt with the educational experiments now being conducted at Bedales, and an American speaker gave a description of the vacation schools begun by voluntary effort in Chicago and other great cities during the long vacation, June to September. Children are brought in from the streets, taught drawing, painting, gymnastics, manual work, and, in general, as the speaker phrased it, made children of God, instead of diligent followers of the adversary. So popular are these vacation schools that attendance is better than in ordinary schools, and the police have to be called in, to prevent the forcing of the doors.

The Education Section completed its labours on July 3, when Mr. Sadler gave a thoughtful paper on examinations, in which he rather assumed that they tend to exhaustion, to undue competition, and maintained that it is bad teaching to fly to stimulants. The purposes of examination were, he said, threefold:—(1) auditing the pupil's work, (2) auditing the teacher's work, and (3) selecting candidates for the public service. The speaker maintained that examinations should follow, and not prescribe, courses of study; and that a body of earnest men and women should study the effects of examination, and check evil results. Miss Robertson, in discussion, declared that English secondary education owes much, and girls' education all, to examination, though she deprecated the twisting and destruction of the school programme for the mere obtaining of results as an abuse of the system. REVIEWS.

COMMON SENSE.

Common Sense in Education and Teaching: an Introduction to Practice. By P. A. Barnett. (Longmans.)

The basis of Mr. Barnett's book is the course of lectures on "The Practice of Education" which he delivered at the College of Preceptors in the winter session of 1898. He could not have chosen a better or more descriptive title for his printed volume, which is full of unaffected common sense on the practical problems of education. His straightforward talk to teachers will appeal directly to those for whom it is intended; and, though simple in its character, it is the reverse of superficial. It strikes the right note in his first chapter on "Instruction as Discipline." "There can be no rigid rules of procedure in instruction. . . True philosophy brings home to the teacher chiefly the diver-

sities of both pupils and subjects." Let us add, of teachers also—for rigidity of method and procedure, which is in a limited degree useful in counteracting the futilities of commonplace teachers, is fatal to true education when it paralyzes the more inspiring qualities of men and women of genius in their vocation. Again, the wise teacher recognizes that childhood has "its own perfection," and a tyrannical instructor who sets himself obstinately to crush rather than to develop the individuality of a child is often actively noxious in the schoolroom. To protest against rigidity is not to deny that there are true standards and types of teaching with which every teacher—not excluding the University Honour man in the classical public school—ought to be made familiar by a professional training.

Mr. Barnett gives a useful warning against a common misconception of the Socratic method—and even against the danger of what was really the Socratic method, that of "showing his victims that they knew nothing"—"the essential and corrupting fact being that the teacher does all the work, and the pupil speaks, may think, only on invitation and on a line prescribed. He is, in other words, led by the nose."

The pupils begin by putting themselves into a thoroughly false attitude. They enter on a kind of guessing competition, striving to find out what is in the teacher's mind—*what he wants them to say*. This is bad teaching. Once upon a time, for instance, a master was about to give a lesson on marble to some small boys, and began, for some occult reason, by asking his class to tell him the names of various stones. He thus "elicited" hearthstone, bluestone, granite, kerbstone, sandstone—everything but marble. At last he tried another tack. "Do you ever," he asked, "go for walks on Sunday—in the churchyard?" "Yes, sir," said a little boy. "And what do you see there?" "The tombstones." "Well, don't these remind you of another kind of stone? Think, boys, think!" "Please, sir, *brimstone*."

Speaking of the abuse of generalization, and of hasty generalization from insufficient data, to which the familiar Herbartian process is liable in the hands of an unwary teacher, Mr. Barnett observes:

Most good lessons will teach more, and many good lessons will teach less, than is implied [in the strict use of the Herbartian formula]. The incidental teaching in a lesson is often of greater value than the generalization in which it accomplishes itself, and "application" may have to stand over for a fit opportunity. But this criticism is not more fatal to the general formula of teaching than it is to other useful formulas. For instance: "Things that are equal to the same thing are equal to one another" is true only, so to speak, *in vacuo*; for no one thing can be conceivably equal to another thing. Still the formula is very useful—things that tend to be equal to the same thing tend also to be equal to one another; and by believing this we get very valuable results.

A mathematician may demur to Mr. Barnett's selection of an instance from his particular field; for in mathematics the axiom is absolutely indisputable, and there is no room for quibbling about the equality of two straight lines, or angles, or triangles, which are separately equal to a third magnitude of the same kind. But a mathematical formula applied outside the domain of mathematics no doubt requires caution and qualification.

Mr. Barnett has much that is valuable to say on the discipline of character, on literature and linguistic study, on the necessity for maintaining the study of Latin and Greek, on the teaching of science and mathematics, geography, and history. His chapters on the history of education and on "the making of the teacher" are excellent. His ideal of the training requisite for the secondary teacher is high; but there is no domain of life in which the ideals of a conscientious man are more inevitably high.

The badly trained teacher probably uses procedure which has at all events been the subject of some sort of discussion and public criticism, whereas his untrained brother habitually adopts procedure which is the result of his own manufacture, and has probably been amended by no other man's counsel. The science of education is no more an exact science with indisputable premisses ascertained and affirmable, as a religious dogma is affirmed, than is the science of conduct. It is not religion, nor logic, nor psychology, nor ethics, nor sociology; but all these things and some others. The purpose of education, whatever our formal definition may be, is to influence people in such a way that they may have the will and the power to advance when the teacher's stimulus is removed. The study of education will, therefore, necessarily comprise all those sciences which concern themselves with the history of man, his constitution as a living and thinking being, and the purpose of his being.

The reader will find this in every way a very stimulating book, no less when he disagrees with the writer than when he agrees with him. It is the book of a shrewd mind directed to practical issues, and capable of applying the method of common sense in a field of inquiry peculiarly exposed to the tyranny of dogmatism and prejudice.

THE EDUCATION CRISIS.

What is Secondary Education? Essays on the Problems of Organization. Edited by R. P. Scott, M.A., J.L.D. (Rivingtons.)

On reading this collection of essays by some thirty writers, representative of the various fields in secondary education, one is specially struck with the hopefulness pervading them all. There is here no dread of inspection or of innovation in any form. The evils and shortcomings of the existing state of things are so fully admitted, and the Government Bill is so enthusiastically welcomed, that, though recognizing their avowedly propagandist purpose, we hardly expected to find such a complete absence of the conservative spirit. However, the inertia of the public is so great, and the chances of Government apathy in the future so high, that our hope of ultimate success depends upon the enthusiasm of schoolmasters being maintained. It should be clearly understood that the passing of the Board of Education Bill marks only the initial stage in the work to be done. It provides for the partial transfer to the Board of Education of the powers of the Charity Commissioners in regard to education. It gives the Board a wide jurisdiction over all secondary schools, public and private, but only so far as inspection goes, and if the schools desire it; and it provides for the creation of a register of teachers. Thus a vast field is left untouched by the Bill, and it becomes a matter of the highest importance that the extent, nature, and needs of this field should be ascertained with precision.

As an instalment of the views of practical and experienced men with regard to this debatable land, this collection of essays deserves hearty recognition. If there are in some of the papers traces of a lack of thoroughness and insight into difficulties, such deficiencies are atoned for by the force and clearness of some of the others. At the threshold of future progress lies the great question as to what is to be the national policy in education. Is it to be a beneficent autocracy, guarded by the firm hand of the Central Authority; or a liberal democracy, in which local representative agencies are to be paramount? If the latter, how are these agencies to be chosen, and how far shall their jurisdiction extend? These questions are clearly political, to be decided by the nation at large, and are fully recognized as such by Dr. Scott, the editor of these papers. How far he is justified in concluding that they must necessarily lead to party friction and heated political controversy remains to be seen. There can be no question as to the duty of all educationists with regard to the discussion. The religious question alone contains stumbling-blocks sufficient to retard progress for many a year, and it is clearly every one's interest to be content with the *status quo* in that respect until all matters of organization and finance are definitely provided for by further legislation. The Welsh Intermediate Education Act was passed in the vortex of a religious controversy, and the attempted solution has in no way allayed the storm.

Dr. Scott rightly lays stress on the fact that, if the future educational reform is to be truly national, it will involve expense; and that both tax- and rate-payers must be prepared for sacrifices. Of all truly national questions, as Canon Barnett and Mr. Brereton point out, this of secondary education is the most far-reaching in its probable effect upon the class from which local administrators are recruited; and these papers show a consensus of opinion in making the Local Educational Authority truly representative. The introduction upon such bodies of a few experts, by giving a power to the Lord President to nominate a proportion, worked satisfactorily in the case of the Welsh Joint Education Committees. Such a plan might be adopted without in any way affecting the representative character or jeopardizing the local interest which elected bodies develop for the matters with which they deal. Mr. Graham Balfour gives a concise account of existing Education Authorities and their shortcomings. Every one concedes that in future the sole Authorities must be the Central and Local, and any discussion which throws light on their proper mutual relation will serve a good purpose.

After all questions relating to the construction of Authorities are settled there comes the question of their functions, and, doubtless, the most difficult will be the relation of the Local Authority to private schools. It seems established that, if we include "Company" schools, at least two-thirds of the work of secondary education is done by private schools. Some means must, therefore, be discovered for welding private schools into our national system of education, because it would not be desirable, even if possible, for the State to occupy the field now worked by private enterprise. Indeed, in the past, the more efficient private schools have acted as an effective spur to the older foundations. There is nothing conclusive in a name.

What is required is an adequate guarantee of efficiency, and the day will probably never come when small and efficient private schools will not be required. There are three papers in this collection dealing with the place of private schools in relation to secondary education, and we heartily endorse the view expressed in them, that, the means of adequate inspection once provided, the interests of the nation are best safeguarded by leaving private schools alone. The fresh needs of commercial and industrial life and of changing social conditions in modern civilization have not always been foreseen by the older Universities or by our crystallized educational corporations; and, with all deference to Canon Lyttelton's experience, we think there are too many "dingy and dishonourable piles" maintained even by the drones of the Universities. It is true that private schools are often at a disadvantage compared with endowed schools in matters of equipment and staff; but, just as educational grants are now given to voluntary elementary schools and by South Kensington to science and art classes wherever organized, similar assistance ought to, and henceforth will, be given to private secondary schools, upon the condition that the schools claiming it shall conform to the requirements of the Board of Education both as to quality and quantity of equipment and staff.

We looked for more enlightenment when we came to the papers dealing with the position of teachers and their claims to representative authority; but this is a matter which evidently requires further discussion. Canon Lyttelton rightly insists on the necessity of training, and Dr. Scott is convinced that no other method than that proposed by the Government Bill for forming the register is practicable. A register must be formed, and it really matters little how elastic its first boundaries are. It is, to begin with, the chief *raison d'être* of the Consultative Committee, because the other work of this Committee, that of advising the Board on matters relating to inspection, is of very limited scope. After the register is formed, and regulations for admission are settled, the further existence of the Committee, with the limited jurisdiction given by the present Bill, would have little to do. But it is essential that the whole profession of secondary teachers should have a body to represent them for the purposes of stating their views or grievances. For this purpose a Council might well be elected by the profession at large and entrusted with disciplinary powers over the members of the profession, and with the power to express the opinions of schoolmasters in all matters of professional interest. It is a far cry, doubtless, to this goal. In some future Bill "to further amend the provisions as to education in this country," the suggestion may take practical shape. Mr. Vardy, of Birmingham, seems to approve the permanence of the Consultative Committee in its present form, and it is only right that the Government's creation should have a fair trial; but it does not, as it stands, even regarding it as a partially elective body, meet half the necessities of the profession.

THE HISTORY OF MAN.

"Cambridge Geographical Series." Edited by F. H. H. Guillemard, M.D.—*Man Past and Present*. By A. H. Keane, Emeritus Professor of Hindustani, University College, London. (Cambridge University Press.)

It is now some time since a notice appeared in these columns of Mr. Keane's admirable book on "Ethnology," the first of the "Cambridge Geographical Series." The volume before us is in part a sequel, in part an expansion, of the earlier work. As the author says: "In the 'Ethnology' were discussed those more fundamental questions which concern the human family as a whole—its origin and evolution, its specific unity, antiquity and primeval cultural stages, together with the probable cradle and area of dispersion of the four varietal divisions over the globe. Here these divisions are treated more in detail, with the primary view of establishing their independent specialization in their several geographical zones, and at the same time elucidating the difficult questions associated with the origins and interrelations of the chief sub-groups, and thus bridging over the breaks of continuity between 'Man Past and Present.'" Again, more attention is paid in the new volume to what Mr. Keane calls the psychic unity of primitive and later peoples, and to such subjects as mythology, folklore, and superstitions. After two introductory chapters, transitional between the "Ethnology" and the present volume, Mr. Keane takes the main divisions of the human race in detail and shows, where demonstration is possible, the origin and development of the modern inhabitants of the earth. With the assistance of the most recent researches in anthropology and archaeology he has produced a work which is

at once scientific and of general interest—not too common a combination of qualities.

For those who have not the time or do not take the trouble to keep themselves informed on the latest theories of ethnologists, Mr. Keane's book will be all the more pleasant reading in that it may occasionally administer a slight shock of surprise. For instance, the identification of the Basques of Europe and the Berbers of North Africa, so ably advocated by Dr. Collignon and adopted by Mr. Keane, will probably be new to many. Mr. Keane quotes an instructive list of words in which the similarity of the Basque and Berber forms is very marked, especially as the separation of the two peoples has lasted for so many thousand years.

The author is very instructive on the subject of the Pelasgians, formerly so great a problem to Greek historical scholars. The assumption of Herodotus that they were a rude and barbarous race has, indeed, been long recognized as hasty and prejudiced. As to their Hellenic successors, Mr. Keane says:

That the Hellenes were at first, and probably long after their advent in Greece, an illiterate people might almost be inferred from the solitary reference in Homer to writing of any kind, the more so since the writer is a Pelasgian king of Argos. The reference thus shows that the Pelasgians were at that time a cultured people, who corresponded with each other on both sides of the Ægean, apparently in a script now revealed by the researches of Mr. Evans in Crete.

The trend of modern research is to upset the view that European culture was introduced from the East. It is rather true, as Mr. Keane observes, that

it was from the Ægean centre, and not directly from the East, that the arts of the Bronze and later periods were introduced into Europe, so that the Ægean is to be regarded as the connecting link between East and West; between, for instance, the bronzes of Ireland and Scandinavia on the one hand, and those of Egypt and Babylonia on the other. The old views respecting the "Etruscan" or "Semitic" origin of the Western bronze culture are falling into the background, and making way for the several periods of Ægean culture. . . . The assumption that navigation in the eastern Mediterranean had its rise on the unsheltered Syrian seaboard, where we now know that the Phœnicians arrived at a relatively late period, can no longer be maintained. The Ægean islands were the natural home of the earliest efforts of seafaring man, and thus was here stimulated a higher degree of culture, which not only reacted on the whole of the European domain, but also influenced the earlier Egyptian and Asiatic fields themselves.

We cannot here go into fuller detail as to the presentation of new evidence and the deduction of new theories from the old which Mr. Keane, with the aid of all the more recent authorities, so ably presents. But we can with justice say that the excellence of his former volume on "Ethnology" is surpassed in the new one, and that none of those who read the earlier book can afford not to read "Man Past and Present." Mr. Keane's method in marshalling his facts is an admirable example to writers on ethnological subjects, and his style is thoroughly lucid and intelligible.

OLD IDEALS.

Social Phases of Education in the School and the Home. By Samuel T. Dutton. (Macmillan.)

It is pleasant to find a modern educational work that disclaims all attempt at new discoveries, and only endeavours to illuminate the old, to make no new definitions, but to seek for better and broader conceptions of ideals long accepted. Such is the avowed aim of Mr. Dutton in his lectures on the social aspects of education, delivered recently in American Universities, and now put into book form. And his aim is well fulfilled, for an unusual spirit of modesty, tolerance, and breadth of idea pervades every lecture. Added to this there is an enthusiasm, an explicitness in practical detail, and a simplicity of style, that will make the book a valuable addition to our training college libraries. Its tendency to excessive optimism is perhaps only an error in the right direction, and no young teacher could read it without feeling that his work in life was of incalculable importance in the progress of the world.

These lectures may be regarded as expounding and illustrating two main ideas; first, the importance of *vocation* in education; and, secondly, the necessity of *correlating educational forces* in any community. With regard to the first, the difficulty of the relation between technical and general education (apparently as great a problem in America as here) is ably dealt with. The distinction between these two sides of school life is not to be found in the subjects taught, as our English statutory definition very bewilderingly implies; nor does it lie in a difference in aim, as is usually supposed. According to Mr. Dutton, there is no dis-

tion at all. The guiding principle for all teachers in arranging a child's curriculum should be his vocation, his future work for the world; and all culture studies must be subsidiary to this. "It is utility," he says, "that gives all subjects their highest value. There should be nothing in our schools that is not strongly marked with the element of utility." In this age of aimless education and confusion of principles, it is bracing to meet with an idea so strongly put. Far from being a low or sordid aim, it is conceived in the noblest spirit. Our children are to be impressed with the importance of working for the world, and of being trained to that end. Art, literature, music, are not to be neglected, but to be increased, because of their power in making better and nobler workmen, rather than as a means of self-culture. School studies that prepare the way for honest bread-winning are urged for another reason: the best factor in a Christian civilization is a happy home, free from grinding poverty, with an atmosphere of contented work. "The best Christian is not a hungry one," and we cannot do better for general human progress than enable our young people to form for themselves a happy domestic life, getting the utmost comfort and beauty out of small means. This aim has the double advantage of securing the average parent's hearty co-operation and affording a teacher boundless scope for influencing character. Any approach to a better understanding between parent and teacher as to general aim is devoutly to be wished.

This brings us to the second leading idea of these lectures. Mr. Dutton makes an eloquent appeal to the general public to do their utmost in any community towards the utilizing of all the forces at command in the cause of education. The home, the church, the public library, the art gallery, the concert room—these may all be made to contribute their share of work in the teacher's struggle with ignorance, weakness, and hereditary evil. Education societies, with sub-committees in all these directions, seem to have done much more solid work in America than they have been able to achieve in England. It is certain, too, that the Americans have been wiser in the matter of kindergartens than we have. They have provided them for the poorest classes, where it is of the highest importance that the children should be rescued from home influences as early as possible, while in England, until recently, our kindergartens have been the luxury of the well-to-do.

Mr. Dutton devotes a chapter to the influence of Froebel and Herbart on our modern schools. A more thorough acquaintance with the history of education would probably have led him to go further back, at least as far as Pestalozzi, the acknowledged master of both these reformers. We owe perhaps to Herbart the emphasis that is now laid on the importance of character, and the idea that no school subject is secular; but all are equally sacred in so far as they minister to the moral end. But certainly the present book reminds us far more of the martyr of Stanz, who was above all a social reformer, who expressed plainly in his life what Herbart not always plainly expresses in his books, and whose spirit of unselfish devotion, as old and as fresh as Christianity itself, is as convincing and encouraging as ever in the pages before us.

A NEW HANDBOOK OF PHYSICS.

Physics Experimental and Theoretical. Vol. I. By R. H. Jude, D.Sc., and H. Gossin. (Chapman & Hall.)

Dr. Jude tells us that he originally sat down to translate Prof. Gossin's "Cours de Physique," which was written in 1892 to meet the requirements of the French code in Elementary Physics, and has already passed into a third edition. Then it naturally occurred to him and to his publishers that French and English methods of teaching and examination were not identical, and that a translation pure and simple, even of an excellent text, could not be quite as practical and serviceable as an English teacher might have made it for English schools. Additions and re-handling of particular subjects were undertaken; and then Dr. Jude, though as much convinced as ever of the value of Gossin's elementary expositions, resolved to abandon the "elementary" limit, and to include such aspects of physical science as are generally dealt with in the University colleges and the higher classes of scientific and technical schools in Great Britain. Thus the book before us has outgrown the French text, and assumed something of the character of a medley. But Dr. Jude has carefully distinguished between the original and the translated sections of his work, so that neither M. Gossin nor the reader has any ground for complaint.

This first volume is divided into three parts: the first treating of mechanics and hydrostatics, with pneumatics; the second of

heat; and the third of acoustics. The treatise as it stands is a very comprehensive and sufficiently complete treatise on the subjects mentioned, advancing in each case from a series of carefully enunciated definitions of terms and expositions of principles to fairly advanced theorems and problems. Examples and exercises are added in the text, and there is a large number of well chosen illustrations. All things considered, this new course of physics deserve careful attention. It combines many excellent features, amongst which its constantly direct and practical appeal to mathematical demonstration is not the least valuable.

GENERAL NOTICES.

CLASSICS.

The Bacchae of Euripides, the text and a translation into English verse, by A. Kerr (Edward Arnold), is a volume of a kind that seems to be winning some favour in America. The Greek and the translation are printed in parallel columns, and there are no notes of any kind. Prof. Kerr's version is in blank verse throughout, the choruses being in irregular or in equal unrhymed lines. The translation is smooth and facile, and it is, for the most part, literal. But we cannot think it comparable to Mr. Way's rendering. Prof. Kerr has not at his command the rich poetic vocabulary, much less the metrical skill, of Mr. Way; and whenever the diction of the Greek presents a problem to the translator he seems inclined to "give it up." Thus, the couplet that every one knows—

οὐ μὴ προσοίσεις χεῖρα, βακχεύσεις δ' ἰών,
μηδ' ἐξομόρξει μαριαν τὴν σὴν ἐμοί;

is represented by these lines:—

"Lay not thy hand on me; thyself go revel,
Nor make me share thy imbecility."

In the second line the problem of ἐξομόρξει—solved in Mr. Way's "Neither besmirch me with thy folly's stain"—is not attempted. Again,

νῦν γὰρ πέτει τε καὶ φρονῶν οὐδὲν φρονεῖς

is, by Mr. Way, most happily rendered: "Thou'rt now in cloudland: naught thy wisdom is." Prof. Kerr is content with: "For now thy mind's distraught, thy wit is folly," thus merely paraphrasing πέτει. The choric passages are satisfactory so long as smoothness is all that is needful to give the effect of the Greek. But, as soon as Euripides quits the level plain, Prof. Kerr's shortcomings are manifest. One quotation must suffice to exhibit our meaning:—

"But where is the fairest realm of all,
Pieria, home of the Muses,
Majestic slope of Olympus?
Thither conduct me, O Bromios, Bromios,
Leader of Bacchanals, Evian god!
There are the Graces, and there dwells Desire;
And there, too, it is lawful to celebrate Bacchic rites."

The last line—who would suspect it?—is a climax in the Greek. In the English it is an appalling bathos. For the purpose of contrast, we give the conclusion of Mr. Way's rendering of the same:—

"Thitherward lead me, O Clamour-King!
O Revel-god, guide where the Graces abide
And Desire—where danceth, of no man denied,
The Bacchanal ring."

Homer, Odyssey, Book XII., edited by R. A. Minckwitz (Edward Arnold), is designed, says the editor, for pupils "who have mastered the rudiments of the language and wish to read the ancient masters for the enjoyment of their beauty of thought and expression rather than for purposes of grammatical exploitation." The apparatus provided is well adapted to this end, and the book would be found suitable in ladies' schools and colleges, and in the middle classes of public schools. Mr. Minckwitz has produced a good book of its class.

Longmans' Illustrated First Latin Reading-Book and Grammar, by H. R. Heatley, belongs to a series of such books published by Messrs. Longmans. It is well that the Latin is drawn from real sources—much of it is verse—and the system appears to us to be a sound one. Certainly the book, if properly used, will enable the beginner to secure a good vocabulary. Part of the grammar must be learned first, for the exercises assume some knowledge of cases and tenses; but, after a little, the grammar may proceed *pari passu* with the exercises. The book should prove more interesting than most of the Latin readers in use. The illustrations, by Mr. Launcelot Speed, are amusing.

Messrs. Macmillan add to their "Elementary Classics" Mr. Marchant's *Selections from Thucydides, Book VII.* (the Athenian Disaster in Sicily). The editor's method is admirable; in place of references to grammars and other books of reference, he supplies a short list of "Peculiarities of Thucydides," a few brief explanatory notes, a "supplementary list of problems," or short test-papers, and a simple

vocabulary. With such an apparatus the student will not only completely master the selection, but he will also have a very good first notion of Thucydides and his style.

MATHEMATICS.

The latest of the familiar large octavo treatises in the higher mathematics which are published by the Cambridge University Press is *A Treatise on the Kinetic Theory of Gases*, by Mr. S. H. Burbury, M.A., F.R.S. Mr. Burbury applies a new method of analysis to the theory in question, departing from the usual fundamental assumption that the molecules of a gas have a relative motion independent of each other. His own assumption, which seems to be reasonable, of a partial interdependence of molecular motion gives him a modified value of Q for the computation of translation velocities.

A First Book in Statics and Dynamics (Longmans) is a very clear and practical treatment of the subject, with numerous examples, by the Rev. J. L. Robinson, of the Royal Naval College at Greenwich. It is adapted to the London Matriculation standard, and the "representative examples" are conspicuously well chosen and helpful. In the kinetic section the poundal is used throughout as the unit of force.

The Preceptors' Trigonometry (Clive) is edited by Mr. Briggs, Principal of the University Correspondence College, and it may be regarded as a simple and adequate text-book, not unsuitable, as the editor claims, for students preparing for the College of Preceptors' and similar examinations.

From Messrs. Macmillan we have a new and revised edition of Todhunter's *Euclid I.-VI.*, with notes, appendix, and exercises, prepared by Mr. Loney. The text of the propositions is somewhat simplified and shortened, especially in the case of the fifth book. The more important of Todhunter's notes are appended to the propositions to which they refer, and, so far as possible, each proposition begins a new page, and does not turn over. The number of exercises is nearly doubled. Altogether, this is an excellent school Euclid. From the same publishers we have *Euclid III. and IV.*, by Charles Smith, M.A., and Sophie Bryant, D.Sc. As in the case of the two earlier books edited by Mr. Smith and Mrs. Bryant, the tendency to vary from Euclid's text is somewhat marked. If we are not quite clear as to the advantage of the change in every particular, the editors are unquestionably sound and ingenious.

An Elementary Course of Mathematics (Macmillan), by Messrs. Hall and Stevens, appeals more especially to students outside the circumference of a school—to home students, for instance, and such as attend evening classes. It is elementary in scope, reaching discount, stocks and shares in arithmetic, simple equations and problems, with positive integral indices, in algebra, and the first book of Euclid.

From Messrs. Isbister we have *The Essentials of Geometry*, by Webster Wells, of Massachusetts; and from Mr. Edward Arnold, *Plane Geometry*, by G. A. Wentworth (Ginn & Co.).

Examples in Arithmetic for Schools, by the Rev. J. B. Lock, M.A. (Macmillan), may be described in another form as the examples in the "Arithmetic for Schools," extracted from the work of Mr. Lock which was noticed in these columns on its publication. The book will be very serviceable for general practice.

The Arithmetic of Electrical Measurements, by W. R. P. Hobbs, of the Naval Torpedo School, Portsmouth (Murby), appears in a revised and partially rewritten seventh edition.

MODERN LANGUAGES.

Dumas: Episodes from Les Deux Rois. Edited by F. H. Hewitt, M.A. (Longmans.)

This well chosen episode is taken from "Le Vicomte de Bragelonne." There are about eighty small pages of text, so that the book can easily be read in a term; probably it would take even less time, for it is sure to be of great interest to children, who will want to read it as quickly as possible. The text is carefully printed, though here also there are instances of the hyphen with *très* (e.g., twice on page 9); *poète* is another instance of old-fashioned spelling. The notes are mostly good; here and there we come across curious statements. No such word as *episc* ever existed. "Parthian Games," and "Milon got held fast," "Minos had private tuition in law-giving from Zeus" will, we trust, not reappear in the second edition. Some of the renderings (e.g. "he allowed himself to be surprised by his feelings") and the frequent use of grammatical terminology borrowed from the classics ("virtually consecutive," "disjunctive dative," "meditative infinitive") might also yield to something more satisfactory.

Sequel to the Child's French Grammar. By Clara A. Fairgrieve. (Oliver & Boyd.)

Miss Fairgrieve has arranged this book very much on the same lines as her "Child's French Grammar." It is the old method of grammar and exercises, and the usual lists of exceptions. We have not much sympathy with a system which constrains children to occupy themselves with grammar at an age when they are psychologically quite unfit for a methodical study of this branch of language teaching. At the same time we readily acknowledge that Miss Fairgrieve shows herself to be a skilful teacher, and that her book compares very favourably with almost all the other books which follow the gram-

matical method. Attention is given to conversation, and the sentences for translation are not so uniformly wearisome as is usually the case. On page 17 we note a strange slip: "je vous souhaite le toujour," and the sentence "Madame Lebrun porte de faux cheveux," which might well have been omitted. "Il y a trois vieux canapés dans le salon du commis," a few lines on, is quite in the bad old style. The book is very well printed.

Practical French Primer. By V. Spiers, M.A. (Simpkin & Marshall.)

Prof. Spiers is evidently no believer in the reform movement; he objects to the book which is a combination of reader and grammar, as well as to the special vocabulary, to which he prefers the dictionary. And he has produced a book which he wishes to be considered practical, and, if this be interpreted to mean "convenient for purposes of reference, especially with a view to examinations," he has certainly achieved his object. The book is indeed full of tips and neat rules, the result of many years' experience in preparing candidates for examinations. The section on pronunciation contains some misleading statements. The difference in quality between the *a* in *patte* and that in *pas* is not mentioned. The pronunciation of *au* is given as *ô* except in *mauvais*; but in this word the sound is often close and half long. The words *auberge* and *automne* should have been quoted as exceptions. The *a* is not always long in *-able*, nor when it is followed by *r*; and *o* is not always short before *r*—it is long in *port*.

French Vocabulary for Repetition. By V. Spiers, M.A. (Simpkin & Marshall.)

This volume contains "the three thousand most important words, with their most useful derivations, preceded by a short note on pronunciation, and followed by an appendix on the different prepositions required by French verbs." Some teachers believe in this method of acquiring a vocabulary, and, perhaps, it may be justified in the case of pupils whose only aim is to pass an examination in the shortest possible time. That, however, is obviously not to learn a language in the true sense of the word, but comes under the head of cramming. The word lists are well compiled and neatly arranged; but in many cases the mark to show the length of a vowel is in the wrong place. Thus, the *a* is not long in *parler, estomac, article, barbe*, and many others here printed with *â*. The sections on pronunciation and on prepositions are taken from the author's "Primer" noticed above.

Eugène Labiche: La Grammaire. Edited by H. S. Piatt, Ph.D. (Ginn & Co.)

A nicely printed text of this favourite play, with only a few pages of notes, which are satisfactory. We have noticed a few slips—e.g., the old-fashioned hyphen in *très-fort* (page 6) and *très-loin* (page 8), *port* for *porte* (page 51), *été* for *perdu* (note 96). Notes 6 and 98 suggest difficulties where the point is quite clear; and "I'll see you again soon" is not a particularly happy rendering of *à bientôt*, for which our nearest equivalent is obviously "so long!"

Three Plays by Souvestre. Edited by Margaret Ninet. (Dent.)

Miss Ninet has selected the plays "La Vieille Cousine," "La Loterie de Frankfort," and "Le Testament de Madame Patural." They are written in simple French, which will be very useful for the acquisition of the conversational language. The plays lend themselves very well to acting, and should prove particularly popular in girls' schools. The mode of annotation is rather novel: everything is explained in French at the bottom of the page. This does away with the necessity of constant reference to a dictionary, and supplies further materials for conversation. The "Short Plays" form a volume of "Dent's Modern Language Series," and the absence of English notes is consistent with the principles adopted in the First and Second French Books issued in the same series.

German Prose Composition. By A. L. Meissner. (Hachette.)

A useful and well written little volume. The introduction contains some very judicious and suggestive pages, and will be read with advantage by many teachers. Mr. Meissner has had extensive experience, and here shows once more how well he knows the English language and the difficulties of English students of German. A number of "selected graduated passages" for translation are given, to which Mr. Meissner adds some, but not too many, hints, further information being supplied by an English-German vocabulary, which appears to have been compiled with great care.

El Sí de las Niñas: Comedia en tres Actos y en Prosa. By L. F. de Moratin. Edited by J. W. M. Ford, Ph.D. (Edward Arnold.)

This excellent comedy, first printed nearly a hundred years ago, makes a thoroughly good Spanish reading-book. It holds an honourable place in the literature of Spain, and both the spirit of the piece and the simplicity of the text are calculated to attract the student. Dr. Ford's notes are helpful, not merely for translation, but for the study of the language. There is a serviceable introduction on the Spanish drama.

MISCELLANEOUS.

"Literatures of the World."—Edited by Edmund Gosse.—*A History of Bohemian Literature.* By Francis Count Lützow. (Heinemann.) Bohemian literature is practically an unknown quantity and quality in Western Europe. It is partly the fault of the language and partly of political circumstances, which placed the country for some time

under a kind of ban, and led to something like a deliberate stamping out of the writings of the Czechs. Many books known to have been valuable as literary monuments have actually disappeared; what we have to-day are either very early or the product of the nineteenth century. Count Lützow is wise, therefore, in taking nothing for granted in introducing each author to us, and in giving us plenty of quotations. Englishmen know a good deal about Hus, and something of Komensky and Palacky. In this well written volume they will find much to interest them on Bohemian writers in a lighter strain.

John Milton: A Short Study of his Life and Works. By William P. Trent. (Macmillan.)

Mr. Trent thinks that Milton is neglected and misunderstood by the Anglo-Saxons—"is rapidly passing into the class of authors whom we talk about oftener than we read"—and he hopes, by this little book, to do something towards making amends. It had not occurred to us that Milton was misunderstood or neglected by his countrymen. We do not think that his minor poems were ever more frequently read than they are to-day, or that any previous five years have seen so many biographies or editions of his works as the last five. But Mr. Trent's book is a good one, and we do not withhold our welcome.

The Companion Ranger Series. Vols. I.-III. (Edward Arnold.)

In these three well printed, illustrated, and slightly annotated volumes we have selected passages, fifty or sixty pages in length, from "Westward Ho!" "The Pathfinder," "Children of the New Forest," "The Rifle Rangers," "Ivanhoe," "It is Never too Late to Mend," "The Christmas Carol," and others; four authors to the volume. Apart from the incompleteness, these are capital story-books for the young.

The Children's Book of Moral Lessons. By F. G. Gould. (Watts & Co.)

This is the first volume of a projected series. The lessons first appeared in the columns of the *Ethical World*, and are intended for children aged from ten to fourteen. The lessons are liberally illustrated with stories from history and anecdotes.

High Aims at School. By the Rev. R. A. Byrde, M.A., with a Preface by the Rev. H. A. James, D.D. (Elliot Stock.)

The Headmaster of Rugby warrants these short school sermons as reflecting "the earnest conviction of a preacher who knows what boy nature is." They are of "the best type for securing their end—simple, direct, and interesting." They average about seven small pages in length, and we may add to Dr. James's epithets that they are thoroughly readable. Frankly, it seems to us that these sermons are just the kind of thing to take hold of a boy in the middle of his second decade.

A Graduated Course of Drawing for Infants. By Constance H. Fowler. (Macmillan.)

The Rev. T. W. Sharpe writes an introductory note for Miss Fowler's book of slate and paper designs for infants in the kindergarten. Mr. Sharpe has been "much impressed with the variety of design and the originality of combination" produced by infants in his presence. This book gives ample evidence of the same kind, many of the designs being reproduced from the work of young children.

Royal Crown Song Book. Part I. (Nelson & Sons.)

Eight-and-twenty songs, music and words, composed specially for the use of children from seven to ten years of age. The airs are sweet and simple, and the book seems to be very well suited to its purpose. There are a few good preliminary hints on the cultivation of "purity of tone."

Object-Lessons in Geography. By T. F. G. Dexter and A. H. Garlick. (Longmans.)

Geography is a study that lends itself easily to practical demonstration, especially in its physical aspects. Indeed, it may be said absolutely to need such demonstration in many cases. With young children especially, for whom the work is intended, the object-lesson is invaluable. To train the child's observation is of higher value than to overload his brain with facts and figures, too often ill-digested and half-understood. This book, which is well and copiously illustrated, will be of great assistance to the teacher. It contains a series of practical lessons, brightly and clearly set forth. The lessons are in no particular order, and may be chosen at random. Prefixed are some useful hints on the making of geographical models, and the volume has some good diagrams and maps.

Geographical Handbooks, I.-VI. (Edward Arnold.)

This is a very fair geography, issued sectionally in paper covers—England and Wales; Scotland, Ireland, Australasia, and Canada; Europe; Greater Britain (with some of the second section over again); The British Isles (with some of the first and second sections over again); and Asia. Other sections are to follow. Though the substance of this work is well enough, the arrangement is confused. What is the object of the repetitions?

Animal Stories. (Nelson & Sons' "Supplementary Readers.")

This is a handy little reader, teaching the duty of kindness to dumb creatures.

Higher English Reader. (W. & R. Chambers.)

A very useful reading-book of selections from English authors,

most of the nineteenth century, and a few from the eighteenth, with explanations of the meanings of many words, spelling lists, lists of prefixes and suffixes, and a "list of roots." The book is something of a medley.

Word-Building, Transcription and Composition. Two Vols. By Robert S. Wood. (Macmillan.)

One of the aims of this work, it may be assumed, or of the code to which it is adapted, is to make a sort of new "subject" for elementary pupils out of the scattered fragments of English etymology. The thing is accomplished; and we do not know that any one could have done it better than Mr. Wood. The book as it stands is very serviceable.

King Henry the Eighth, edited by D. Nichol Smith, M.A., is the fourteenth volume of Messrs. Blackie's "Warwick Shakespeare."

From Messrs. Macmillan we have the sixth canto of Mr. Michael Macmillan's annotated edition of Scott's "Marmion"; and from Mr. Edward Arnold an edition of Macaulay's "Lays," by M. G. Daniell (Ginn & Co.).

WE HAVE ALSO RECEIVED the following publications and new editions:—

Handbook of British, Continental, and Canadian Universities, with special mention of Courses open to Women, compiled by Isabel Maddison, Ph.D. Bryn Mawr (Macmillan)—an enlarged second edition of the "Handbook of Courses," published in 1896.

A reprint of *In the Lion's Mouth,* by Eleanor C. Price (Macmillan)—an interesting and harmless story of a boy and girl in the French Revolution.

Colour: a Handbook of the Theory of Colour, by George H. Hurst (Scott, Greenwood, & Co.)—a technical treatise which should be useful to colour-printers, painters, and artists.

Curiosities of Light and Sight, by Shelford Bidwell, M.A. (Sonnenschein)—a well written book, dealing with optical effects and defects, especially in regard to colour.

Secondary Education, being a Series of Articles reprinted with Alterations and Additions from the *Chester Courant*, by Bingham Dixon Turner, M.A. (Chester: Phillipson & Golder)—a well considered and common-sense brochure by the Rector of Kelvinside Academy, well worth reading.

From Her Majesty's Stationery Office we have a series of *Special Reports* issued by the Education Department, being sectional reprints from Vols. II. and III. of the "Special Reports on Educational Subjects," recently noticed by us. The numbers before us are "Secondary Education in Prussia," "Modern Language Teaching," "Secondary Schools in Baden," "The Heuristic Method of Teaching," and "The Connexion between the Public Library and the Public Elementary School."

On the Spanish Main, by G. A. Henty (Chambers)—a fourpenny reprint.

The Remington Typewriter Manual, specially arranged for Classes and Schools (Pitman & Sons)—a third edition of a serviceable technical guide.

Domestic Economy, by H. Rowland Wakefield, Parts I. and II. in paper covers (Chambers)—a revised and enlarged edition.

ADJOURNED MEETING OF THE COUNCIL OF THE COLLEGE OF PRECEPTORS.

AN adjourned meeting of the Council was held at the College on July 22. Present: Dr. Wormell, Vice-President, in the Chair; Mr. Barlet, Mr. Baumann, Rev. J. O. Bevan, Mr. Bidlake, Mr. Eve, Mr. Pinches, Mr. Sergeant, and Rev. J. Twentyman.

Diplomas were granted to the following, who had completed their subjects at the Midsummer Examination of Teachers for Diplomas:—

Licentiate-ship:

J. L. Holland. J. B. Irvine. F. W. Jordan.

Associate-ship:

Miss G. A. Aldridge.	J. G. Gilchrist.	R. W. Pearson.
T. O. Alexander.	T. Graham.	R. Ramsdale.
G. T. Aston.	W. C. Hardy.	O. Riley.
Miss C. J. Bailey.	S. Harrison.	H. Rose.
B. T. Barber.	Mrs. F. E. Hubbard.	Miss E. K. Sadler.
F. T. Bowen.	D. J. Hughes-Jones.	A. A. Savage.
W. Bradburn.	A. R. Iverson.	S. A. Smith.
E. E. Capewell.	E. Jago.	Miss E. G. M. Spiller.
J. G. Cowen.	G. Moore.	G. J. Springer.
W. E. Coxall.	R. A. Nixon.	A. E. Vickers.
Miss H. M. Davis.	T. E. Paine.	E. Williams.
A. Eady.	Miss B. E. Passmore.	J. Wilson.

Certificates of Ability to Teach were awarded to the following, who had passed the required practical examination:—J. F. Alder, J. Birch, W. Bradburn, Miss H. M. Davis, F. M. Walker.

The Prize of £10 for Theory and Practice of Education was awarded to Mr. J. L. Holland, and the Prize of £5 for Natural Sciences to Mr. E. F. W. Mondy.

MATHEMATICS.

14128. (G. W. PRESTON, B.A.)—Show that

$$(i.) \frac{\sum (y-z)^2}{\sum (y-z)^2} - 4\pi (y-z)^2 = \{\sum x^2 - \sum yz\}^3;$$

$$(ii.) \frac{\sum \frac{b+c+d}{abcd} (b-a)(c-a)(d-a)(x-a)}{(x-a)(x-b)(x-c)(x-d)} = \frac{a+b+c+d-x}{(x-a)(x-b)(x-c)(x-d)}$$

[See CHRYSTAL'S *Algebra*.]

Solution by LIONEL E. REAY, B.A.; *the PROPOSER*; PROFESSOR SANJANA; and others.

(i.) Put $y-z = a$, $z-x = b$, $x-y = c$, &c.; then $a+b+c = 0$.

Also $\sum a^2 = \sum (y-z)^2 = 2\{\sum x^2 - \sum yz\}$ and $\sum a^2 = -2\sum bc$;

therefore $4(\sum bc)^2 = (\sum a^2)^2 = \sum a^4 + 2\sum b^2c^2$.

But $(\sum bc)^2 = \sum b^2c^2 + 2abc\sum a = \sum b^2c^2$;

$\therefore \sum a^4 = 2\sum b^2c^2$; $\therefore (\sum a^2)^2 = 2\sum a^4$; $\therefore (\sum a^2)^2 = 4(\sum b^2c^2)^2$;

$\therefore \sum a^8 = 2\sum b^4c^4 + 8(\sum a^2)^2 \sum b^2c^2$; $\therefore (\sum a^4)^2 = 2\sum a^8 - 8a^2b^2c^2 \sum a^2$;

$\therefore (\sum a^2)^4 = 4(\sum a^4)^2 = 8\sum a^8 - 32a^2b^2c^2 \sum a^2$;

$\therefore (\sum a^2)^2 = 8(\sum a^8 / \sum a^2) - 32a^2b^2c^2$;

$\therefore \{\sum x^2 - \sum yz\}^3 = \{\sum (y-z)^2 / \sum (y-z)^2\} - 4\pi (y-z)^2$.

[The rest in Volume.]

14099. (H. W. CURJEL, M.A.)—In a given quadrilateral inscribe a quadrilateral similar to a given quadrilateral.

Solution by C. E. HILLYER, M.A.

Let ABCD be the quadrilateral in which a quadrilateral is to be inscribed similar to $abcd$.

Let DA, CB meet in E, and AB, DC in F.

On AB describe a segment of a circle containing an angle equal to $b-E$, and on AE a segment containing an angle equal to $EBA-bac$, and let the two circles meet in W. Similarly, let X be the intersection of circles on FB and on CB, such that $FXB = FCB-bac$ and $CXB = c-F$.

Let the circle XBW meet AB in β and BC in γ , the circle WBA meet AD in α , and the circle X γ C meet CD in δ ; then $\alpha\beta\gamma\delta$ shall be the quadrilateral required.

For $\angle \alpha\beta\gamma = E\gamma\beta + E\alpha\beta + E = BW\beta + AW\beta + E = BWA + E = b$.

Also, since $\angle \gamma W\alpha = \gamma W\beta + \alpha W\beta = EBA + EAB$,

E, γ , W, α are concyclic, and

$$\angle \beta\alpha\gamma = \beta\alpha W - \gamma\alpha W = BAW - BEW = BAD - WAD - E + WEA = EBA - EWA = bac;$$

therefore $\alpha\beta\gamma$ is similar to abc ; and in the same way it can be shown that $\gamma\delta\alpha$ is similar to eda .

14133. (Lt.-Col. ALLAN CUNNINGHAM, R.E.)—Find a sum of successive odd cubes equal to a square.

Solution by the PROPOSER.

Let $S_n =$ sum of successive cubes [1^3 to n^3]; $S_n = \left(\frac{n(n+1)}{2}\right)^2$;

let $s_{2r} =$ sum of successive even cubes [1^3 to $(2r)^3$];

let $s_{2r-1} =$ sum of successive odd cubes [1^3 to $(2r-1)^3$].

Then $s_{2r} = 2^3(1^3 + 2^3 + \dots + r^3) = 2^3 S_r$,

$$\text{and } s_{2r-1} = S_{2r} - s_{2r} = \left(2r \frac{2r+1}{2}\right)^2 - 2^3 \left(r \frac{r+1}{2}\right)^2 = r^2(2r^2-1) = r^2 \cdot z^2 \text{ (if } s_{2r-1} = \square).$$

Hence every solution of $2r^2 - z^2 = 1$ gives a solution of the problem; the solutions r, z are known to be as shown below; the last term of the series is $(2r-1)$.

$$r = 1, 5, 29, 169, 985, 5741, 33461, \&c.,$$

$$z = 1, 7, 41, 239, 1393, 8119, 47321, \&c.,$$

$$2r-1 = 1, 9, 57, 337, 1969, 11481, 66831, \&c.$$

Thus the lowest solution is $1^3 + 3^3 + 5^3 + 7^3 + 9^3 = (517)^2$.

As to any other solutions not beginning (as above) with 1:

Let $s =$ sum of successive odd cubes $(2p+1)^3 + (2p+3)^3 + \dots + (2r-1)^3$,

$$\text{so that } s = s_{2r-1} - s_{2p-1} = r^2(2r^2-1) - p^2(2p^2-1) = (r^2 - p^2)(2r^2 + 2p^2) + 1.$$

If $s = \square$, each of its factors, being prime to one another, must be squares. Therefore $r-p = t^2$, $r+p = u^2$, where

$$2r^2 + 2p^2 + 1 = t^4 + u^4 + 1 = \square,$$

an impossible result; see EULER'S *Comment. Arithm.*, Petrop., 1849, Vol. II., p. 281. Hence the system of solutions given above is the only one.

[Mr. WHITWORTH solves the Question as follows:—Let N/D , where D is an odd number, be one of the convergents obtained by expressing $\sqrt{2}$ as a continued fraction. Then

$$1^3 + 3^3 + 5^3 + \dots + (2D-1)^3 = N^2 D^2.$$

Thus we have a series of consecutive odd cubes whose sum is a square.

The simplest case is when $N = 5$, $D = 7$, thus:

$$1^3 + 3^3 + 5^3 + 7^3 + 9^3 = 35^2.]$$

14189. (V. DANIEL.)—XY is the line $x \cos \alpha + y \sin \alpha = p$, referred to rectangular axes through O. If a point move along the zigzag line $OPP_1P_2P_3P_4 \dots$ (which is such that OP is perpendicular to XY, PP_1 to YO, and generally, P_nP_{n+1} perpendicular to $P_{n-1}P_n$), it will ultimately arrive at a point S. Similarly, if it move along $OP_1P_2P_3 \dots$, it will ultimately arrive at a point S'. Prove (1) S and S' are the foci of an ellipse inscribed in the triangle YOX, and its major axis is

$$p/\sqrt{1 + \cos^2 \alpha \sin^2 \alpha}.$$

(2) OX, OY subtend right angles at S and S' respectively, and hence that three pairs of triangles are similar, namely, OSX, OS'Y; OSY, XS'Y; OS'X, XSY. (3) If SS' produced intersect the axes in T and T', $OS^2 \cdot OT' = OS'^2 \cdot OT$. (4) When YOX is isosceles, the ellipse has eccentricity = $1/\sqrt{5}$.

Solution by the PROPOSER, and R. TUCKER, M.A.

Continue the line $OPP_2 \dots$ until the triangle $P_5P_6P_7$ is formed, similar and similarly situated to the triangle OXY. The coordinates of P_7 are $x = P_1P_3 - P_5P_7$, $y = OP_1 - P_3P_5$. Since all the triangles in the figure are similar, these are evidently

$$x = p \cos \alpha \sin^2 \alpha - p \cos^3 \alpha \sin^4 \alpha = p \cos \alpha \sin^2 \alpha (1 - \cos^2 \alpha \sin^2 \alpha),$$

$$y = p \sin \alpha - p \sin^3 \alpha \cos^2 \alpha = p \sin \alpha (1 - \cos^2 \alpha \sin^2 \alpha).$$

Regarding $P_5P_6P_7$ as the original triangle, the coordinates (referred to P_7 as origin) of the right angle of the next similar and similarly-situated triangle are the same as x and y with p , written for p ; so that the coordinates of the limiting point at which the triangle vanishes are given by

$$x = \cos \alpha \sin^2 \alpha (1 - \cos^2 \alpha \sin^2 \alpha) \{p + p_1 + p_2 + \dots + p_n\}_{n \rightarrow \infty},$$

$$y = \sin \alpha (1 - \cos^2 \alpha \sin^2 \alpha) \{p + p_1 + p_2 + \dots + p_n\}_{n \rightarrow \infty}.$$

But $p_n/p_{n-1} = p_{n-1}/p_{n-2} = \dots = p_1/p = \cos^4 \alpha \sin^4 \alpha$.

Hence $\{p + p_1 + p_2 + \dots + p_n\}_{n \rightarrow \infty} = p/(1 - \cos^4 \alpha \sin^4 \alpha)$.

Therefore S is the point;

$$x = \frac{p \cos \alpha \sin^2 \alpha}{1 + \cos^2 \alpha \sin^2 \alpha}; \quad y = \frac{p \sin \alpha}{1 + \cos^2 \alpha \sin^2 \alpha}$$

Similarly, S' is the point ;

$$x' = \frac{p \cos \alpha}{1 + \cos^2 \alpha \sin^2 \alpha}; \quad y' = \frac{p \sin \alpha \cos^2 \alpha}{1 + \cos^2 \alpha \sin^2 \alpha}$$

[The rest in Vol.]

14204. (J. MACLEOD, M.A.)—B, E are the remote points in which the line of centres of two unequal circles which intersect meets the circumferences; A one of the points of intersection of the circles; BF = BA; ED = EA; $\angle FAC = \frac{1}{2} \angle BAE$. The radius AO produced meets the circumference in G; AD produced meets the same circumference in H, and AC meets in K. Prove AKGH a parallelogram.

Solution by PROFESSOR T. SAVAGE.

Since $\angle H$ is right, it is sufficient to show $\angle DAC$ right. Produce BA to W.

$$\begin{aligned} \angle BAF + \angle EAD &= \angle DFA + \angle FDA, \\ &\text{(Euc. I. 5)} \end{aligned}$$

$$\therefore \angle BAE + 2 \angle DAF = \text{two right angles};$$

$$\therefore \angle DAF = \frac{1}{2} \angle EAW.$$

$$\text{But } \angle FAC = \frac{1}{2} \angle BAE,$$

$$\therefore \angle DAC = \text{right angle.}$$

14095. (R. KNOWLES, B.A.)—

$$ax^2 + bxy + cy^2 + cy = 0, \quad a'x^2 + b'xy + c'y^2 + c'y = 0$$

are the equations to two parabolas, touching at P, referred to a tangent and normal at P as axes; if F, F' are the foci, prove that, if $b : c = b' : c'$, F, F', P are collinear.

Solution by R. TUCKER, M.A.; Prof. A. DROZ-FARNY; and many others.

Let the curve cut the normal in A. Therefore

$$AP = -e/c \dots (i).$$

Since the curve is a parabola,

$$b^2 = 4ac;$$

and tangent at A is given by

$$bx + cy + e = 0,$$

therefore $PR = -e/b \dots (ii).$

Therefore

$$\begin{aligned} \tan PRV &= PV/PR \\ &= b/2c \\ &= \tan RPF. \end{aligned}$$

Hence, if $b : c = b' : c'$,

then $\angle RPF = RPF'$;

Therefore &c.

14093. (Rev. T. MITCHESON, B.A.)—PQ, a tangent to an ellipse at P, is equal to a diameter parallel to itself: find the locus of Q.

Solution (1) by J. O. WATTS; R. TUCKER, M.A.; and others; (2) by H. A. WEBB; H. W. CURJEL, M.A.; and others.

(1) Let P be $(a \cos \alpha, b \sin \alpha)$.

Let D be $(-a \sin \alpha, b \cos \alpha)$. Let

$$CR = 2CD.$$

Then R is $(-2a \sin \alpha, 2b \cos \alpha)$.

Therefore, if RQ is parallel to PC,

meeting tangent in Q, Q is the moving point.

$$RQ \text{ is } \begin{cases} x + 2a \sin \alpha = a \cos \alpha \\ y - 2b \cos \alpha = b \sin \alpha \end{cases}$$

or $(x/a) \sin \alpha - (y/b) \cos \alpha = -2$

PQ is $(x/a) \cos \alpha + (y/b) \sin \alpha = 1$

Therefore locus is (squaring and adding) $x^2/a^2 + y^2/b^2 = 5$.

(2) PQ is equal and parallel to DD'. We have to find the locus of Q.

Project the ellipse orthogonally into a circle, and we have at once that the locus of the projection of Q is a concentric circle whose radius is $\sqrt{5}$ times the radius of the projection of the circle.

Hence the locus of Q is a concentric and similar ellipse whose area is 5 times the area of the given ellipse.

14160. (G. BIRTWISTLE, B.Sc.)—The tangents to any umbilical geodesic on a quadric all intersect the focal hyperbola.

Solution by Rev. J. CULLEN.

For a geodesic we have, in ordinary notation,

$$a'^2 \cos^2 i + a''^2 \sin^2 i = k^2,$$

where

$$k^2 = a^2 (1 - b^2 c^2 / p^2 D^2).$$

Now pD is constant and equals ac at an umbilic; therefore

$$a'^2 \cos^2 i + a''^2 \sin^2 i = a^2 - b^2.$$

But, by a known theorem, tangents to a geodesic touch the confocal whose primary axis is k, which reduces to the focal hyperbola

$$x^2/(a^2 - b^2) + z^2/(c^2 - b^2) = 1,$$

when $k^2 = a^2 - b^2$; therefore, &c.

13947. (P. W. FLOOD.)—Given one of the segments and the difference of the perpendicular (drawn from one of the equal angles to the opposite side) and other segment of an isosceles triangle, to construct it.

Solution by I. ARNOLD; F. H. PRACHELL, B.A.; and others.

Analysis.—Let ABC be the isosceles triangle, and BD the perpendicular from one of the equal angles; and AD and BE the given segment and the given difference respectively.

Let DE or DC = x; then

$$(BE + x)^2 + AD^2 = AB^2 = AC^2 = (AD + x)^2.$$

$$\begin{aligned} \text{Then } BE^2 + 2BE \cdot x + x^2 + AD^2 &= AD^2 + 2AD \cdot x + x^2; \\ \text{or } BE^2 + 2BE \cdot x &= 2AD \cdot x; \end{aligned}$$

consequently x or DC = $\frac{1}{2} \frac{BE^2}{AD - BE}$; hence this construction.

Make AD = the given segment and AF = the given difference. Draw a perpendicular through D both ways, and make $DG^2 = \frac{1}{2} AF^2$. Join FG, and from G draw GC perpendicular to FG, cutting AD produced in C. Make DE = DC and EB = AF. Join AB and BC; then is ABC the isosceles triangle required.

13654. (SALUTATION.)—The triangle ABC has the sides AB, AC bisected in D, E respectively. DE is produced to F, such that EF = DE, and FC is joined. Again, the triangle CEF has its sides CE, CF bisected in G, H respectively, GH is produced to I, such that HI = GH, and IF is joined to form a third independent triangle. The process being continued ad infinitum, (1) show that the centroids of the system of triangles are collinear; (2) find the distance apart of the extreme centroids; and (3) find the centre of gravity of the entire system.

Solution by H. W. CURJEL, M.A., and L. E. RRAY, B.A.

Let G_1, G_2, G_3, \dots , be the centroids of the triangles ABC, CEF, FHI, &c. Since G_1, G_2, G_3, \dots , divide the medians through A, C, F, &c., in the ratio 2 : 1 and $\frac{1}{2} - \frac{1}{4} = \frac{1}{4} \times \frac{1}{2}$, therefore G_1, G_2, G_3 are all on the line through G_1 parallel to BC.

Also AG_1, CG_2, FG_3, \dots , are clearly parallel.

Therefore $BC = 2G_1G_2 = 4G_2G_3 = \dots$;

therefore $G_1G_n = BC$.

Taking moments about G_1 , we see that the distance of the centre of gravity of the system from G_1

$$= BC \cdot \frac{1}{2} \cdot \frac{1}{2} + \frac{3}{4} \left(\frac{1}{2}\right)^2 + \frac{5}{8} \left(\frac{1}{2}\right)^3 + \dots = \frac{1}{2} (BC).$$

5810. (J. L. MCKENZIE, B.A.)—Given two points P_1, P_2 on a fixed circle, and three points A_1, A_2, A_3 in a straight line. A circle is drawn through either of the points P and any two of the points A, cutting the given circle again in H; and a line is drawn joining the remaining points P and A, and cutting the given circle in K. Prove that the six lines HK thus obtained all cut the line ABC in the same point.

Solution by R. F. DAVIS, M.A.; and F. L. WARD, B.A.

Since

$$A_2X \cdot XA_1 = FX \cdot XE,$$

we can deduce without difficulty by *componendo*

$$EX : FX = EA_1 : EA_2 = FA_1 : FA_2.$$

$$\text{Now } K \{P_2FEH\}$$

$$= P_1 \{P_2FEH\},$$

$$\text{or } \{A_3FER\} = \{OFEX\};$$

$$\text{or } A_3F \cdot ER : A_3E \cdot FR = OF \cdot EX : OE \cdot FX.$$

Substituting for EX : FX, we find

$$RE : FR = -EA_1 \cdot EA_2 \cdot EA_3 : FA_1 \cdot FA_2 \cdot FA_3 \cdot OE \\ = \text{a symmetrical quantity.}$$

QUESTIONS FOR SOLUTION.

14283. (Professor G. B. MATHEWS, M.A.)—Prove that through $2m$ points taken arbitrarily upon a conic a $\frac{1}{2}m(m-1)$ -fold infinity of curves of order m may be drawn: in other words, the $2m$ points on the conic are equivalent, so far as determining a curve of order m is concerned, to an arbitrary set of $2m$ points in the plane of reference. How far may this proposition be generalized? (For instance, if we take 12 points on a cubic, we cannot, in general, draw any quartic through them; but, if one such quartic can be drawn, a threefold infinity of such quartics is possible.)

14284. (Professor NEUBERG.)—Soient O, I, I_a, I_b, I_c les centres des cercles circonscrit, inscrit et exinscrits au triangle ABC ; soient D, E, F les pieds des hauteurs, et A_1, B_1, C_1 les pôles de BC, CA, AB par rapport au cercle O . Les quadrilatères tangentes communes aux cercles $(I, I_a), (I, I_b), (I, I_c)$ forment un triangle $aB\gamma$ homothétique aux triangles $A_1B_1C_1, DEF$. Le centre d'homothétie des triangles $aB\gamma, A_1B_1C_1$ partage la droite OI dans le rapport $R : r$, et est le conjugué isogonal du point de GERGONNE de ABC ; ses coordonnées normales par rapport au triangle $aB\gamma$ sont $1/a, 1/b, 1/c$. Le centre d'homothétie des triangles $aB\gamma, DEF$ a pour coordonnées normales, dans les triangles, $\tan \frac{1}{2}A, \tan \frac{1}{2}B, \tan \frac{1}{2}C$.

14285. (Professor E. J. NANSON.)—Find the conditions that the family $f_1(x_1, x_2, \dots, x_n) = \text{const.}$ may belong to a set of n -ply orthogonal surfaces in space of n dimensions; that is, find the conditions that f_1 may be such that

$$dx_1^2 + dx_2^2 + \dots + dx_n^2 = F_1 df_1^2 + F_2 df_2^2 + \dots + F_n df_n^2.$$

14286. (Professor COCHEZ.)—Etudier $\rho^2 - 2\rho(1 + \sin \omega) + \cos^2 \omega = 0$.

14287. (Professor THOMAS SAVAGE.)—Find the sums of the angles made with the axis of x by the lines joining the origin to the points of intersection of (1) $x + y = 1$ and $x^3 - x^2y - xy^2 + y^3 = 0$; (2) of $x + y = 1$ and $x^3 - x^2y + xy^2 + y^3 = 0$.

14288. (Professor UMES CHANDRA GHOSH.)—(See Quest. 14195.)—If $A'B'C'$ be the projection of the triangle ABC upon a plane making an angle ϕ with the plane ABC , and if α, β, γ be the inclinations of the sides a', b', c' of $\triangle A'B'C'$ to a, b, c of $\triangle ABC$, prove that

- (1) $\cos \beta \cos \gamma \cos A' = \cos A - \sin \beta \sin \gamma$;
- (2) $\cot A' = \sec \phi + \left(\cot A - \frac{\sin^2 \phi}{\cot B + \cot C} \right)$;
- (3) $\sin^2 \beta + \sin^2 \gamma - 2 \sin \beta \sin \gamma \cos A = \sin^2 A \cdot \sin^2 \phi$;
- (4) $\frac{\sin \alpha}{\sin A} = \frac{\sin \beta}{\sin B} = \frac{\sin \gamma}{\sin C} = \sin \phi$;
- (5) $\frac{\sin A'/\sin \alpha}{\cos \alpha} = \frac{\sin B'/\sin \beta}{\cos \beta} = \frac{\sin C'/\sin \gamma}{\cos \gamma} = \frac{\cos \phi}{\cos \alpha \cos \beta \cos \gamma}$.

14289. (Professor SANJANA, M.A.)—A conic is inscribed in the triangle of reference. If its centre be at the point (fgh) , prove that its equation is $\Sigma \{aa(bh + ch - af)\}^2 = 0$. If one focus be at (fgh) , the equation is $\Sigma \{a(gh^{-1} + hg^{-1} + 2 \cos A)\}^2 = 0$. Verify these results by obtaining the usual equations of the incircle, the excircles, the Brocard ellipse, and the LEMOINE ellipse. [The equation of the last is $\Sigma m_1 \sqrt{aa} = 0$, and is inaccurately given in CASEY (p. 459).]

14290. (D. BIDDLE.)—In a plane triangle, the square of the distance from the incentre to any vertex is in inverse proportion to the difference between the square of the inradius and the product of the segments into which the point of contact divides the opposite side.

14291. (R. F. DAVIS, M.A.)—If $ABCD$ be any quadrilateral circumscribed to a circle (centre O), then $AB \cdot AD/OA^2 = CP \cdot CQ/OC^2$.

14292. (J. A. THURD, M.A.)— L, M, N are fixed collinear points on the sides BC, CA, AB , respectively, of a fixed triangle; L', M', N' are their harmonic conjugates with respect to the ends of the sides on which they lie; X, Y, Z are the points where a variable conic touches BC, CA, AB ; P is the pole of LMN with respect to this conic; and S is the point of concurrence of AX, BY, CZ . Show that, if the locus of S is a straight line, the locus of P is a conic through L', M', N' , and that, if the locus of S is a conic circumscribed to ABC , the locus of P is a straight line; and state the reciprocal theorem.

14293. (Rev. T. ROACH, M.A.)—An impressionist landscape gardener determines to lay out a piece of ground as follows:—In the middle is to be a triangle of dark green foliage plants, each side being 14 feet in length. Within this is to be a circular plot touching the sides of the triangle and containing white flowers, and outside three circular plots touching the sides of the triangles on those lines if they were produced, and filled with red, blue, and yellow flowers respectively. The rest of the ground is to be covered with turf, and the whole effect depends upon the larger circles being each nine times the size of the smaller circle.

The man who has to plant the foliage plants finds that he has made the first line a foot too long, and, having only plants for 42 feet, to save himself trouble, shifts the other lines a little, and makes one a foot too short. Show that the ratio of the larger circles to the smaller will be $6\frac{2}{3} : 9$, and $12\frac{1}{2}$, thus spoiling the whole effect.

14294. (B. N. CAMA, M.A.)—Show that (1) the envelope of a line $PP'QQ'$ which intersects two circles (radii a, b) in P, P' and Q, Q' , so that the range $\{PP', QQ'\}$ is harmonic, is a conic; (2) its eccentricity (ϵ) is $\delta/\{2(a^2 + b^2) - \delta^2\}^{\frac{1}{2}}$, δ being the distance between the centres; (3) the circles have a real or imaginary intersection according as $\epsilon < \frac{a+b}{a-b}$; (4) in the former case, the conic is an ellipse or a hyperbola, according as the circles cut at obtuse or acute angles.

14295. (N. M. W.)—Solve the simultaneous equations

$$(x + y)(ax - by) = a(a - b)(a + b)^2 \\ (x - y)(ay - bx) = b(a + b)(a - b)^2$$

14296. (H. MACCOLL, B.A.)—If x, y, z be each taken at random between 0 and 1, show that the chance that the fraction $\frac{z(1-x-y)}{1-y-yz}$ will also be between 0 and 1 is $\frac{5}{3} - \log 2$, which is very nearly $5/9$.

14297. (G. H. HARDY, B.A.)—Prove that, if $f(x, a)$ be a continuous function of x in (a, A) , except at a number of discrete points X (in general functions of a), at which it becomes determinately infinite like $\{\log(x - X)\}^r, \{\log \log(x - X)\}^s, \dots$; and, if also it be in general a continuous function of a between $a - h, a + h$, for values of x in (a, A) ; and, if $a f/da$ in general exist and be continuous, then, under certain further conditions,

$$\frac{d}{da} \int_a^A f(x, a) dx = \int_a^A \frac{df(x, a)}{da} dx,$$

the integral on the left hand being completely determinate, but that on the right given only by its principal value. Thus, e.g.,

$$(1) \frac{d}{da} \int_0^a \log \cos^2 ax dx = -2 \int_0^a \frac{\tan ax}{x} dx = -\pi,$$

$$(2) \int_0^x \log \left(1 - \frac{p}{x^2}\right)^2 \log \left(1 - \frac{q}{x^2}\right)^2 \dots dx = 0,$$

provided no two of p, q, \dots are equal.

14298. (E. W. REES, B.A. Oxon.)—In a triangle ABC K is the symmedian point, and AS_1, BS_2, CS_3 the symmedian lines through A, B , and C respectively; prove that

$$\frac{AK}{AS_1} + \frac{BK}{BS_2} + \frac{CK}{CS_3} = 2.$$

14299. (Rev. T. MITCHESON, B.A.)—Let P_1QR_1 be an equilateral triangle such that P_1 is on one side of a square, Q_1 and R_1 on the adjacent sides, Q_1R_1 parallel to the other side, and O the mid-point of Q_1R_1 ; and let PQR be any other equilateral triangle, whose angular points are the same sides, QR passing through O , and let P_1Q_1 meet PQ in S, P_1R_1 meet PR in T . Then the circle passing through P, P_1, S, T touches QR in O , and circles passing through O, T, R, R_1 and O, S, Q, Q_1 , respectively, are each one quarter of the first circle. (An echo of Quest. 14235.)

14300. (H. A. WEBB.)—One form of the card game of Patience is played as follows:—The cards are dealt face upwards, the dealer calling out "Ace, Two, Three, ..., Knave, Queen, King" as he deals the 1st, 2nd, 3rd, ..., 11th, 12th, 13th cards, respectively. If at any point the name or number called out be identical with the name or number of the card dealt, the dealer wins a point and begins counting again at "Ace, Two, Three, ..." Such an event is called "a hit." If, however, the dealer count up to "King" without making a hit, he loses a point and begins counting again at "Ace, Two, Three, ..." The game continues until all the cards are dealt. Unless a hit be made with the last card, the dealer loses a point. It is easily seen that the dealer cannot lose more than four points, or win more than eighteen points, in one game. Show that, if only the net gain or loss in each game be considered, the dealer wins nearly twice as often as he loses, and wins on an average about one point a game.

14301. (J. J. BARNVILLE, B.A.)—Sum the series

$$\begin{aligned} & 1 + 3^2 + 2 + 4^2 + 3 + 5^2 + \dots \\ & 2 + 4^2 + 5 + 7^2 + 8 + 10^2 + \dots \\ & 2^2 + 3 + 3^2 + 7 + 4^2 + 11 + \dots \\ & 5^2 + 7 + 9^2 + 15 + 13^2 + 23 + \dots \end{aligned}$$

[Errata.—In Quest. 14097 for $7 + \sqrt{5}$ read $7 - \sqrt{5}$. In Quest. 14130, last line, for 3563 read 3363.]

14302. (ROBERT W. D. CHRISTIE.)—Let N consist of $ln + l - 1$ units. Prove that

$$N = \frac{10^{l-1} m^n (m-1) + 10^l (m^n - 1) - (m^{n+1} - 1)}{(10-1)(m-1)} \pmod{(10^l - m)},$$

e.g., let $l = 3, n = 5, m = 997$;

thus $N = 3n + 2$ units = 111 111 111 111 11.

Thus $N = 152 \pmod{997}$.

14303. (R. KNOWLES.)— $ax^2 + bxy + cy^2 + dy = 0$ is the equation to a parabola, referred to a tangent and normals as axes. Prove that the equation to the latus rectum is $2b(a+c)x - 4a(a+c)y = d(a-c)$.

14304. (C. E. HILLYER, M.A.)—A diameter of an ellipse (excentric angle α) meets the tangent at the extremity of the minor axis in O , and OQ touches the curve, show that $\angle COQ$ cannot be obtuse unless $\epsilon > 1/\sqrt{2}$; also determine the values of α for which COQ is (1) a right angle, (2) a maximum.

14305. (H. J. WOODALL, A.R.C.S.)—Factorize $16^a 2^r \pm 1, a = 1$ to 10 .

OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

5958. (Professor ASAPH HALL, M.A.)—Given $x = a \cos A \pm r_1, y = a \sin A \pm r_2$, where r_1, r_2 are the probable errors of x, y ; find the probable errors of a, A .

5959. (Professor MINCHIN, M.A.)—A heavy body, movable in a vertical plane about a fixed horizontal axis, is sustained in a given position by a rope (whose weight may be neglected); state the cases (depending on the natures of the rope and axis) in which the resultant action at the axis can be found both in magnitude and direction.

5961. (Professor MATZ, M.A.)—Three unequal homogeneous spheres of uniform density are thrown into a hemispherical bowl; determine their position when in equilibrium.

5963. (Professor MOREL.)—On donne une sphère S , un plan P et un point A : par le point A on mène une droite qui rencontre le plan P en un point B , puis, sur AB comme diamètre, on décrit une sphère S' ; le plan radical des sphères S et S' rencontre la droite AB en un point M : (1) Trouver le lieu décrit par le point M quand la droite AB tourne autour du point A ; (2) discuter le lieu précédent en supposant que le point A se déplace dans l'espace, le plan P et la sphère S restant fixes.

5985. (Professor CROFTON, F.R.S.)—A line is divided at random into n parts, two of which are taken at random; find the mean value of their difference.

6001. (J. HAMMOND, M.A.)—Calling a determinant alternate when all its negative terms are changed to positive, *e.g.*, the alternate determinant $\begin{vmatrix} a & b \\ a_1 & b_1 \end{vmatrix}$ is $ab_1 + ba_1$; prove that the coefficient, in the expansion of the product of n linear factors, of $xyz \dots$, all these letters being different and there being n of them, is an alternate determinant of the n th order. In the case $(a_1x + b_1y + c_1z)(a_2x + b_2y + c_2z)(a_3x + b_3y + c_3z)$ it is the alternate determinant $\begin{vmatrix} a_1 & b_1 & c_1 \\ a_2 & b_2 & c_2 \\ a_3 & b_3 & c_3 \end{vmatrix}$, a result which is easily general-

ized. In the general case

$(a_1x + b_1y + \dots n \text{ terms})(a_2x + b_2y + \dots n \text{ terms}) \dots n \text{ factors}$, the coefficients of $x^n, x^{n-1}y$ are, respectively, the determinant and the alternate determinant

$$\begin{vmatrix} a_1 & . & . & . \\ . & a_2 & . & . \\ . & . & a_3 & . \text{ \&c.} \\ . & . & . & a_4 \\ . & . & . & . \\ . & . & . & . \\ \text{\&c.} & . & . & . \end{vmatrix} \quad \begin{vmatrix} . & . & . & . \\ a_1 & b_1 & . & . \\ a_2 & b_2 & a_2 & . \\ . & b_3 & a_3 & a_3 \\ . & b_4 & a_4 & a_4 \\ . & b_5 & . & a_5 \end{vmatrix} \quad n \text{ rows,}$$

where it is scarcely necessary to add that the blank spaces are filled with zeros. Find the general term of the expansion, which is always an alternate determinant.

83 HIGH HOLBORN, LONDON, W.C.

DR. DAVIS'S

ARITHMETICAL EXAMPLES, Part I. Pp. 128.

Cloth, 8d. (Book of Answers, 1s.)

The sales of this work having now reached upwards of half a million
the Author will be happy to send, post free, a specimen copy to any
School Principal who may have not seen it, but who may wish to
examine it with the view of introducing it if found suitable for his or
her pupils. It is confidently believed that no other work of a similar
kind contains so large a number and variety of *original* examples, and
the paper, printing, and binding will be found exceptionally good.

For specimens, address—Dr. DAVIS, St. Germain's, Cheltenham.

Macmillan & Co.'s New Books.

Third Edition. Revised throughout and greatly Enlarged.

A HISTORY OF ETON COLLEGE (1440-1898).

By Sir H. C. MAXWELL LYTE, K.C.B.

With Illustrations. 8vo, 21s. net.

NEW VOLUME OF THE CAMBRIDGE NATURAL HISTORY.

VOLUME VI.:

INSECTS.

PART II.

By DAVID SHARP, M.A. Cantab., M.B. Edin., F.R.S.

8vo, 17s. net.

LATIN.

CICERO.—PRO CLUENTIO. Edited, with Introduction and Notes, Explanatory and Critical, by W. PETERSON, M.A. Edin. and Oxon., &c. Feap. 8vo, 3s. 6d. [*Classical Series.*]

Educational Times.—"Adds yet another valuable book to the popular 'Red Series of Classics.' . . . The commentary is full of interest, replete with acute explanations, and a very store-house of the knowledge accumulated by others."

GREEK.

THUCYDIDES. Selections from Book VII. Athenian Disaster in Sicily. Edited by E. C. MARCHANT, M.A. Poit 8vo, 1s. 6d. [*Macmillan's Elementary Classics.*]

Educational News.—"A nice, handy, scholarly, and pleasing specimen of the fine Greek of the work."

AN INTRODUCTION TO GREEK PROSE COMPOSITION. For use in Preparatory Schools and the Lower Forms of Public Schools. By H. PITMAN, M.A., late Scholar of Oriel College. Globe 8vo, 2s. 6d.

School Board Chronicle.—"For Mr. Pitman's 'Greek Prose Composition' we have nothing but praise. It is admirable alike in arrangement and in execution. The examples are simple, easily remembered, and typical. The Greek type, as well as the accents, are fully and clearly presented to the eye."

FRENCH.

SPECIMENS OF MODERN FRENCH VERSE. Edited, with Biographical and Critical Notes, and an Introduction on the Structure of French Verse, by H. E. BERTHOUD. Poit 8vo, 2s. 6d. [*Foreign School Classics.*]

Educational News.—"Nothing seems missing, nothing is amiss."

LES VIOLETTES BLANCHES. By EMILE RICHEBOURG. Edited, with Grammatical and Explanatory Notes and a French-English Vocabulary, by F. JULIEN. Globe 8vo, 1s. 6d. [*Primary Series.*]

Educational News.—"A very suitable book for a primary class both in matter and editorial skill."

MATHEMATICS AND SCIENCE.

By H. S. HALL, M.A., and F. H. STEVENS, M.A.

AN ELEMENTARY COURSE OF MATHEMATICS, comprising Arithmetic, Algebra, and Euclid. By H. S. HALL, M.A., and F. H. STEVENS, M.A. Globe 8vo, 2s. 6d.

A NEW SCHOOL ARITHMETIC.

A SCHOOL ARITHMETIC. By R. F. MACDONALD. Globe 8vo, 2s. 6d.

Guardian.—"The grouping of miscellaneous examples at different stages of the book is a good point not often seen. Besides, the examples are numerous and very well chosen, and the price of the book, which is much below others containing the same amount of material, should guarantee it a trial for school use."

EXAMPLES IN ARITHMETIC FOR SCHOOLS. Being the Examples in the Arithmetic for Schools. By the Rev. J. B. LOCK, M.A. Globe 8vo, 3s.

THE ELEMENTS OF EUCLID. By I. TODD HUNTER, D.Sc., F.R.S. New Edition, Revised and Enlarged by S. L. LONEY, M.A. Globe 8vo. Books I. and II., 1s. 6d.; Books I.-IV., 3s.; Complete, 4s. 6d.

BOOKS III. AND IV. NOW READY.

EUCLID'S ELEMENTS OF GEOMETRY. Books III. and IV. Edited for the use of Schools by CHARLES SMITH, M.A., and SOPHIE BRYANT, D.Sc. Globe 8vo, 2s.

NO. 7 NOW READY.

MACMILLAN & CO., LIMITED, LONDON.

BELL'S ILLUSTRATED CLASSICS.

Edited by E. C. MARCHANT, M.A.,

Classical Master at St. Paul's School.

UNDER the above title Messrs. BELL have in active preparation a new Series of Annotated Classics for the lower and middle forms of schools.

The name of the Editor of the Series is sufficient guarantee that they will be carried out in compliance with the most recent ideas and requirements, and it is hoped that the introduction of some new features will place them in advance of anything of the kind hitherto attempted.

The special object of the Series is to make the editions as interesting and helpful as possible to the intelligent learner; and with this end in view, in addition to the usual apparatus of Introduction, Notes, and Vocabularies, **Illustrations** have been introduced wherever it has been thought that they might help to elucidate the text.

The **INTRODUCTIONS** will give, briefly, an account of the Author's life and works, a note on the special work dealt with, and a simple statement of the writer's literary position. In the case of poets, a simple account of the metre will be given, and also specimens of famous translations.

The **NOTES** will be brief and explanatory. Textual difficulties will not be discussed, and parallel passages and philological notes will be avoided as far as possible.

In an **APPENDIX**, as an additional help to masters, the chief grammatical and other difficulties will be grouped together.

The volumes will be issued *with* or *without* **VOCABULARIES**, to suit the requirements of different schools.

The **ILLUSTRATIONS** will be gathered from the best sources, and will be chosen with a view to explaining the text, and making the reader more familiar with Greek and Roman life. Most of the Illustrations will be specially redrawn.

MAPS and **PLANS** will also be inserted as required.

The Volumes are being printed at the Oxford University Press, in pott 8vo size, and will be issued at the uniform rate of **1s. 6d.** each (with or without Vocabularies).

The following will be ready in August or September:—

CORNELIUS NEPOS. Epaminondas, Hannibal, Cato. By H. L. EARL, M.A., Grammar School, Manchester.

EUTROPIUS. Books I. and II. (One Vol.). By J. G. SPENCER, B.A., St. Paul's Preparatory School.

CESAR. Book II. By A. C. LIDDELL, M.A., High School, Nottingham.

CESAR. Book III. By F. H. COLSON, M.A., Headmaster of Plymouth College, and G. M. GWYTHYR, M.A., Assistant-Master.

LIVY. Book IX., c. i.—xix. By W. C. FLAMSTEAD WALTERS, M.A., formerly of Christ's College, New Zealand.

LIVY.—Hannibal's First Campaign in Italy. (Selected from Bk. XXI.) By F. E. A. TRAYES, M.A., St. Paul's School.

HORACE'S ODES. Book I. By C. G. BOTTING, B.A., St. Paul's School.

VIRGIL'S ENEID. Book II. By L. D. WAINWRIGHT, M.A., St. Paul's School.

VIRGIL'S ENEID. Book IV. By A. S. WARMAN, B.A., The Grammar School, Manchester.

OVID'S METAMORPHOSES. Book I. By G. H. WELLS, M.A., Merchant Taylors' School.

OTHERS IN PREPARATION.

Specimen Copies post free to Headmasters on application.

LONDON: GEORGE BELL & SONS, YORK STREET, COVENT GARDEN.

CAMBRIDGE UNIVERSITY PRESS.

NOW READY.

LIFE AND REMAINS OF THE REV. R. H. QUICK.

Edited by F. STORR. With Portrait. Crown 8vo, 7s. 6d.

Glasgow Herald.—"There can be no doubt that Quick's life was full of interest; it was distinctly worth writing, especially as it is here written; and, as fully a quarter of the book is taken up with a variety of subjects interesting to a highly educated and keenly observant man, the book will well repay perusal beyond pedagogic circles."

Scotsman.—"A book which, while possessing great interest for members of the teaching profession, is not without features of attraction for the general reader, and particularly for persons actually engaged in connexion with educational affairs. Mr. Storr has worthily performed his part of the work. Severe compression and exclusion were necessary in dealing with the immense mass of material placed at his disposal. He has exercised both with discrimination, and so has produced a biography to which few will turn without imbibing something of the feeling of admiration and enthusiasm that have obviously inspired its preparation."

Aberdeen Free Press.—"The names of Quick and Thring have long been associated in England as reforming forces in education, and the book will take rank with Dr. Parkin's 'Life of Thring' as one of real value to all engaged in teaching. . . . Quick was not a great man, and this book is not a great book, but it has few dull pages. . . . Every genuine teacher who is anxious to examine himself, and to review his practice, is sure to find both encouragement and inspiration from the perusal of this volume."

THE PITT PRESS SHAKESPEARE FOR SCHOOLS.

Athenaeum.—"The Pitt Press Shakespeare can stand in competition with any of the numerous editions of the sort now showered upon reviewers. This instance of it does credit to Mr. Verity, who is an excellent editor; he does not overdo the philology, and adds an excellent glossary of difficult words."

School World.—"Every page shows careful scholarship and a ripe literary judgment. It would be difficult to praise this work (or this series) too highly."

KING RICHARD II. With Introduction, Notes, Glossary, and Index. By A. W. VERITY, M.A., sometime Scholar of Trinity College. 1s. 6d.

ENGLISH GRAMMARS.

NEW AND ENLARGED EDITION.

THE ELEMENTS OF ENGLISH GRAMMAR. By A. S. WEST, M.A., Trinity College, Cambridge. 2s. 6d.

Prefatory Note to the Enlarged Edition.—Some hundreds of additional Questions and Examples are given in the present edition, and in a few places the wording of the text has been altered. The numbers of the paragraphs remain the same.

School World.—"The larger work shows a master hand. It is adapted to the higher forms, and its historical survey contains just what is wanted for examination purposes. . . . Both books deserve a large sale."

Guardian.—"We note with satisfaction that Mr. Alfred West's 'Elements of English Grammar' has now reached its second edition and twenty-sixth thousand, thus tending to justify the prophecy as to its future popularity which we ventured to utter on its first appearance in 1893. . . . For thoughtful students in the upper forms of secondary schools we know of no more suitable work."

AN ENGLISH GRAMMAR FOR BEGINNERS. By the same Author. 1s.

Schoolmaster.—"It is a capital little work, which we can heartily recommend." *School World*.—"The smaller of these two works ought to be extensively used for the teaching of junior forms. Its matter is arranged with the greatest care, its explanations are full, and easily adapted to juvenile intelligences. . . . Altogether the book is worthy of high commendation."

THE PITT PRESS MATHEMATICAL SERIES.

EUCLID.—ELEMENTS OF GEOMETRY. Edited by H. M. TAYLOR, M.A., Trinity College, Cambridge.

School of Education.—"It cannot fail to take a very prominent place among the valuable text-books of Geometry which have been issued during the last ten years."

Books I., II. 1s. 6d. Books III., IV. 1s. 6d.
Books V., VI. 1s. 6d. Books XI., XII. 1s. 6d.
Books I.-IV. 3s. Books I.-VI. 4s.
Books I.-VI. and XI., XII., in One Vol., complete. 5s.

SOLUTIONS TO THE EXERCISES IN TAYLOR'S EUCLID. By W. W. TAYLOR, M.A. Books I.-IV., 6s. Books VI. and XI., 6s. Books I.-IV., VI., and XI., crown 8vo, 10s. 6d.

ARITHMETIC FOR SCHOOLS. By C. SMITH, M.A., Master of Sidney Sussex College, Cambridge. With or without Answers. Second Edition. 3s. 6d. Or in Two Parts:—Part I.: Chapters I.-VIII., Elementary. With or without Answers. 2s. Part II.: Chapters IX.-XX. With or without Answers. 2s.

KEY TO C. SMITH'S ARITHMETIC. By G. HALE, M.A. Crown 8vo, 7s. 6d.

ELEMENTARY ALGEBRA. By W. W. ROUSE BALL, M.A. 4s. 6d.

ELEMENTARY PLANE TRIGONOMETRY. By E. W. HOBSON, Sc.D., F.R.S., and C. M. JESSOP, M.A. 4s. 6d.

ELEMENTS OF STATICS AND DYNAMICS. By S. L. LONEY, M.A. Fifth Edition. 7s. 6d. Part I.: Elements of Statics. 4s. 6d. Part II.: Elements of Dynamics. 3s. 6d.

These books are suitable for the Science and Art Department Examination in Theoretical Mechanics (Advanced Stage and Honours); London University Intermediate B.Sc. (Pass), and B.A. and B.Sc. (Mixed Mathematics); Woolwich Entrance Examination; Cambridge Local Examination (Senior Students); Cambridge General Examination for the Ordinary B.A. Degree, &c.

SOLUTIONS OF THE EXAMPLES IN THE ELEMENTS OF STATICS AND DYNAMICS. By the same Author. 7s. 6d.

MECHANICS AND HYDROSTATICS FOR BEGINNERS. By S. L. LONEY, M.A. Fifth Edition. 4s. 6d.

This book is suitable for the Science and Art Department Examination in Theoretical Mechanics (Solids and Fluids), Elementary Stage; The University of London Matriculation Examination; Cambridge Local Examinations (Junior Students); and other Elementary Examinations.

PITT PRESS SERIES.

AUTHOR.	BOOK.	EDITOR.	PRICE.
Macaulay	Lays of Ancient Rome, &c.	J. H. Flather	1 6
<i>School World</i> .—"Is in thorough keeping with the other volumes of this series, an evidence of patient labour, and no mean tribute to Macaulay himself. . . . The notes are brief and pointed, and two useful maps are appended. The introduction is brief, but exceedingly well done."			
Milton	Paradise Lost, Books I. and II.	A. W. Verity	2 0
Caesar	De Bello Gallico, Books IV. & V.	A. G. Peckett	1 6
Cicero	De Amicitia	J. S. Reid	3 6
Livy	Book XXI.	M. S. Dimsdale	2 6
Vergil	Aeneid, Books II. and VI.	A. Sidgwick	each 1 6
Aeschylus	Prometheus Vincitus	H. Rackham	[Nearly ready.]
Herodotus	Book VI.	E. S. Shuckburgh	4 0
Horace	Odes, Book II.	J. Gow	1 6

CAMBRIDGE SERIES FOR SCHOOLS AND TRAINING COLLEGES.

Caesar De Bello Gallico, Book IV. E. S. Shuckburgh. 1 6

School Guardian.—"The object of this series is fully attained in the above four volumes (Caesar, 'De Bello Gallico,' III. and IV., Vergil, 'Aeneid,' XII., and Xenophon's 'Anabasis,' Book IV.)—viz., the preparation of exact and scholarly, and at the same time simple, text-books. The University Press are to be congratulated upon having secured as editors such eminent scholars; their names are a guarantee of their work. We are quite sure that the students preparing for the Queen's Scholarship and Certificate Examinations will not be the only students who will find these text-books of value; they will find their way into numberless preparatory schools and lower forms of public schools; they deal so thoroughly and clearly with the subject in each case that nothing better could be desired by master or pupil. Among others, there is this immense advantage—each volume is its own note-book and dictionary; the student, however elementary his knowledge, needs only the book in hand and a simple grammar."

Cicero In Catilinam I. J. H. Flather 1 6

School Guardian.—"The simplicity and usefulness of this little volume are wonderful. It is meant for students who have had little experience in reading Latin, and who have not access to books of reference. In itself, therefore, it should be complete, and it is."

Vergil Aeneid II. A. Sidgwick 1 6

Educational Times.—"Mr. Sidgwick's volume is a rather abridged and elementary version of his well-known edition. The notes are entirely to the purpose, and there are a vocabulary and a useful conspectus of the Latin subjunctive. Mr. Flather's book ('Cicero in Catilinam I.'), which also contains a vocabulary, is rendered noteworthy by the careful table of 'syntactical usages,' which considerably enhances the value of the book. . . . If all the volumes of the Latin series are up to the level reached in the two before us, the new series should prove a valuable addition to the stock of class-books."

School Guardian.—"For a small edition this is one of the most compact and complete possible. We commend it to all students who want to read Vergil for the first time, and to read it well."

Xenophon Anabasis, Book IV. G. M. Edwards 1 6

GEOMETRY FOR YOUNG BEGINNERS. An Introduction to Theoretical and Practical Geometry. By F. W. SANDERSON, M.A., Headmaster of Oundle School. 1s. 4d.

Teachers' Monthly (Birmingham).—"We are delighted with this book."

Aberdeen Free Press.—"Of the many books which have been published to render this important subject easily comprehensible by very young people, we have rarely seen one better adapted to its purpose than this little manual."

Morning Post.—"The work will commend itself to teachers and students."

Dublin Express.—"It is a thoroughly practical and useful little book."

CLASS LIST

OF PUPILS WHO HAVE PASSED THE MIDSUMMER EXAMINATION OF THE COLLEGE OF PRECEPTORS.

[Throughout the following List, bracketing of names implies equality].

PROFESSOR MEIKLEJOHN'S SERIES.

THE ART OF WRITING ENGLISH.

A Manual for Students.

With Chapters on Paraphrasing, Essay Writing, Précis Writing, Punctuation, and other matters.

By J. M. D. MEIKLEJOHN, M.A.

Second Edition. Cr. 8vo, 340 pp., 2s. 6d.

"The Art of Writing English teems with good advice."—*Literary World*.
 "Whatever Prof. Meiklejohn writes is sure to be vigorous and racy, and on the subject of English composition, he is peculiarly well qualified to speak."—*The Journal of Education*.

One Hundred Short Essays in Outline. By Professor MEIKLEJOHN. Crown 8vo, 110 pp. 1s.

These Outline Essays have been prepared to assist Candidates for Queen's Scholarship, for the Civil Service, and in other Examinations. They show the young students how to put their matter into the right perspective, and how to make clear and brief statements. They treat of such subjects as Athletics, The Bank of England, The Bicycle, Competition, The Navy, Newspapers, &c., &c.—in short subjects generally set in Public Examinations.

The Comparative Atlas. By J. G. BARTHOLOMEW, F.R.G.S., and Edited by Professor MEIKLEJOHN. Containing 64 Plates and a General Index. 2s. 6d.

"No atlas that we know at anything like the price gives so much so well."—*The Teachers' Monthly*.

"This is certainly the most comprehensive work ever published at the moderate price of half-a-crown. From the attractive frontispiece, representing the flags of all nations, to the final page on geographical etymology, there is not a wasted inch."—*The Teachers' Review*.

A New Arithmetic. By G. A. CHRISTIAN, B.A. Lond., and G. COLLAR, B.A., B.Sc. Lond. Crown 8vo, 562 pp. Third Edition. 4s. 6d.

"We recommend teachers and students to judge for themselves what a powerful auxiliary to success has been given them by the experience and judgment of the able authors."—*The Schoolmaster*.

"We also welcome it because in several of its chapters—such, for example, as those on factors, decimal fractions, involution and evolution, surds and logarithms—it seems to us to mark a distinct advance on the majority of its predecessors."—*The School Guardian*.

"We consider it so satisfactory that we have at once placed it on our list of books."—*The Rev. G. H. S. Walpole, D.D., Principal, Bede College, Durham*.

The English Language: its Grammar, History, and Literature. By J. M. D. MEIKLEJOHN, M.A. Eighteenth Edition. Enlarged, with Exercises and additional Analysis. Crown 8vo, 470 pp. 4s. 6d.

"For the first class College of Preceptors your work is most excellent and valuable."—*The Rev. F. Marshall, M.A., Almondbury Grammar School*.

"I gave it to a girl candidate for an English scholarship; she got first place, and valued the help she got from the book."—*W. Johnson, Esq., B.A., Elmfield College, York*.

A New Geography on the Comparative Method. With Maps and Diagrams and an Outline of Commercial Geography. By J. M. D. MEIKLEJOHN, M.A. Twenty-second Edition. 120th Thousand. Crown 8vo, 630 pp. 4s. 6d.

"A most useful manual for examiners, and full of stimulating matter for students of geography. Its picturesqueness of description and vividness of style make it almost as interesting and enjoyable reading as a book of travels."—*The Journal of Education*.

"For all that is best worth knowing no better book than this could be studied."—*The Educational News*.

A New History of England and Great Britain. With Maps and Tables. By J. M. D. MEIKLEJOHN, M.A. Fourteenth Edition. Crown 8vo, 740 pp. 4s. 6d.

"I like your History very much. It is suggestive, and does not ignore the social and literary side of things."—*Miss A. F. Andrews, Maida Vale High School for Girls, W.*

"I am very pleased with the concise statements and orderly marshalling of facts—such an improvement on our ordinary histories."—*R. A. Little, Esq., M.A., The College, Buxton*.

The Principles and Practice of Teaching and Class Management. By JOSEPH LANDON, F.G.S., Vice-Principal in the Salford Training College. Third Edition. Crown 8vo, 462 pp. 5s. 0d.

"We have no hesitation in saying that this is one of the best treatises on this subject which has appeared for some time, and we cannot too strongly recommend it to the attention of all interested in the practical work of education."—*The Educational News*.

"We congratulate Mr. Landon on the completion of this long-projected and laborious work—a worthy sequel to his 'School Management.'"—*The Journal of Education*.

A School Algebra for Junior Forms. By F. OSCAR LANE, B.Sc. Lond., Assistant-Master, King Edward's School, Birmingham. Crown 8vo, 232 pp. 1s. 6d. With Answers, 266 pp. 2s. 0d.

"A very trustworthy book for beginners, extending to indices, surds, and progressions."—*The University Correspondent*.

"The scientific method, from known to unknown, from Arithmetic to Algebra, has invariably been adopted, while lucid explanations and proofs precede oral exercises, followed in turn by numerous carefully graduated examples for attaining the necessary mechanical accuracy."—*The Educational News*.

The United States: their Geography, Resources, Commerce, and History. By M. J. C. MEIKLEJOHN, B.A. 92 pp. 6d.

"Useful tables of products, exports, distances, &c., are given, and many valuable hints on map practice. The book is brightened by numerous quotations from travellers, geographers, and historians. A little book of great value to the student."—*The Practical Teacher*.

Australasia: its Geography, Resources, Commerce, and Chronicle of Discovery. By M. J. C. MEIKLEJOHN, B.A. Crown 8vo, 86 pp. 6d.

"This book is up to date in every detail; there is a very good and useful map as frontispiece, and the paragraph arrangement is adopted. The student will find it a very desirable text-book on this portion of Greater Britain."—*The Pupil Teacher*.

Africa: its Geography, Resources, and Chronicle of Discovery up to 1897. By M. J. C. MEIKLEJOHN, B.A. Oxon. Third Edition. Crown 8vo, 76 pp. 4d.

"This little book is, for its size, remarkably full of information about Africa, and gives pithy explanations of such current expressions as 'sphere of influence' and 'hinter-land,' &c."—*The Teachers' Aid*.

The British Colonies and Dependencies: their Resources and Commerce. With Chapters on the Interchange of Productions and Climatic Conditions. By M. J. C. MEIKLEJOHN, B.A. Second Edition. Crown 8vo, 96 pp. 6d.

"This manual is terse and full; intelligently paraphrased and skillfully managed typographically. It does credit to the compiler, and we hope this work may gain the recognition it really merits."—*The Educational News*.

A Short Geography, with the Commercial Highways of the World. Fifteenth Edition. Crown 8vo, 196 pp. 1s.

"Terse, practical, informative, and statistic. This shilling Geography is exactly what a School Geography needs to be."—*The Teachers' Aid*.

"Clearness and conciseness exemplified."—*The Private Schoolmaster*.

A Short History of England and Great Britain. B.C. 55 to A.D. 1890. Eleventh Edition. Crown 8vo. 1s.

"In the 'Short History' there is plenty of anecdote, ballad, and stray gems of literature; and we find, though not with its usual emphasis, the Professor's expertness in the use and disposition of type."—*Education*.

A Short Grammar of the English Tongue, with Three Hundred and Thirty Exercises. Tenth Edition. 1s.

This little book is written in the clearest and simplest style for beginners. It contains:—

- | | |
|---------------------------------|---|
| i. The Simplest Definitions. | iv. Graduated Methods of Parsing. |
| ii. Slowly graduated Exercises. | v. Bad Grammar Corrected, with Reasons. |
| iii. Clearly printed Tables. | vi. Analysis, with Plain Diagrams. |

A New Spelling Book. With Side Lights from History. Eighth Edition. Crown 8vo, 152 pp. 1s.

"We agree with the main principle here followed—that spelling should be learnt through the eye rather than through the ear."—*The School Guardian*.

The Spelling List. For Civil Service and other Examinations. With a Key to Correct Spelling. Third Edition. Crown 8vo, 146 pp. 1s.

"Your 'Spelling List' is a very decided advance in the right direction, ably conceived, and brilliantly written. We shall certainly strongly recommend it to our pupils."—*The Rev. H. P. Gurney, M.A. (Messrs. Wren & Gurney), Powis Square, London*.

A New Poetry Book for the use of Schools and Families. Fourth Edition. 166 pp. 1s.

"This neatly bound little collection, which is one of Professor Meiklejohn's series of school manuals, may be confidently recommended to teachers in search of new selections for recitation."—*The Schoolmaster*.

LONDON: A. M. HOLDEN, 11 PATERNOSTER SQUARE, E.C.

THE EDUCATIONAL TIMES,

AND
Journal of the College of Preceptors.

Vol. LII.] New Series, No. 461.

SEPTEMBER 1, 1899.

{ Price to Non-Members, 6d.
By post, 7d.

COLLEGE OF PRECEPTORS,
BLOOMSBURY SQUARE, W.C.
The Public Distribution of Prizes, Diplomas, and Certificates, awarded on the results of the Midsummer Examinations, will take place at the College on Thursday, the 26th of October, at 3 p.m. The Chair will be taken by the Right Rev. the LORD BISHOP OF LONDON.
C. R. HODGSON, B.A., *Secretary.*

COLLEGE OF PRECEPTORS.— EXAMINATIONS FOR 1899.

1. **DIPLOMAS.**—The next Examination of Teachers for the Diplomas of the College will commence on the 2nd of January, 1900.—At the Midsummer Examination, persons who have previously passed in Theory and Practice of Education at the Diploma Examination may be examined practically for Certificates of Ability to Teach.

2. **CERTIFICATE EXAMINATIONS.**—The Christmas Examination for Certificates will commence on the 5th of December.

3. **JUNIOR FORMS EXAMINATIONS.**—The Christmas Examination will commence on the 5th of December.

4. **PROFESSIONAL PRELIMINARY EXAMINATIONS.**—These Examinations are held in March and September. The next Examination will commence on the 5th of September, 1899.

5. **INSPECTION AND EXAMINATION OF SCHOOLS.**—Visiting Examiners are appointed by the College for the Inspection and Examination of Public and Private Schools.

PRIZES.

Diploma Examination.—In addition to the Doreck Scholarship of £20, the following Prizes will be competed for:—Theory and Practice of Education, £10; Classics (Greek and Latin), £5; Mathematics, £5; Natural Science, £5.

Certificate Examination.—The "Isbister Prize" will be awarded to the Candidate who stands First, and the "Pinches Memorial Prize" to the Candidate who stands Second in General Proficiency. Prizes will also be awarded to the Third and Fourth in General Proficiency, and to the First and Second in the following subjects:—Classics, Mathematics, Modern Languages, Natural Sciences, English Subjects. The "Taylor Jones Memorial Prize" will be awarded to the best Candidate in Scripture History. Two Medals will be awarded to the best Candidates in Shorthand.

The Regulations of the above Examinations can be obtained on application to the Secretary at the College, Bloomsbury Square, W.C.

C. R. HODGSON, B.A., *Secretary.*

PRELIMINARY EXAMINATION OF MEDICAL STUDENTS.—The COLLEGE OF PRECEPTORS will hold an Examination for Certificates recognised by the General Medical Council as qualifying for Registration as a Medical Student, on the 5th, 6th, and 7th of September, 1899.

The Examination will take place in London, and at the following Local Centres:—Birmingham, Bristol, Leeds, Liverpool.

Examination Fee, 25s.
Regulations and Entry Forms may be obtained on application to the Secretary of the College of Preceptors, Bloomsbury Square, W.C.

C. R. HODGSON, B.A., *Secretary.*

COLLEGE OF PRECEPTORS.—

EXTRACT FROM THE BY-LAWS.

Section II., clause 5.—"The Council may grant the privileges of Membership, without payment, to holders of Diplomas of the College, as long as such persons are engaged in teaching in Secondary Schools."

Holders of the College Diplomas who are not Members of the College are requested to send their Addresses to the Secretary of the College, Bloomsbury Square, W.C.

C. R. HODGSON, B.A., *Secretary.*

COLLEGE OF PRECEPTORS.
(Bloomsbury Square, W.C.)

LECTURES FOR TEACHERS IN THE SCIENCE, ART, AND HISTORY OF EDUCATION.

THE TEACHER AND THE CLASS.

To be delivered by P. A. BARNETT, Esq., M.A., formerly Principal of the "Borough Road" Training College, Isleworth.

The Second Course of Lectures (Twenty-Fifth Annual Series) will begin on Friday, 22nd September, at 7 p.m.

These lectures are meant to be of direct service to intending and acting teachers by showing the bearing of questions of theory on the daily practice and the needs of the class-room. The syllabus does not state in detail all the points which will be treated, but indicates the heads under which the most important are likely to present themselves for consideration. References and suggestions for reading will be made from time to time during the progress of the course.

For Syllabus, see page 362.

The Fee for the Course is Half-a-guinea.
The Lectures will be delivered on Friday Evenings at 7 o'clock, at the College, Bloomsbury Square, W.C.

Members of the College have Free Admission to this Course.

C. R. HODGSON, B.A., *Secretary.*

UNIVERSITY DIPLOMA FOR WOMEN.

THE UNIVERSITY OF ST. ANDREWS grants Diploma and Title of L.L.A. to WOMEN.

UNIVERSITY COLLEGE OF NORTH WALES, BANGOR.

(A Constituent College of the University of Wales.)

Principal—H. R. REICHEL, M.A.

Next Session begins October 3rd, 1899. The College Courses are arranged with reference to the degrees of the University of Wales and include most of the subjects for the B.A. and B.Sc. degrees of the London University. Students may pursue their first year of medical study at the College. There are special departments for Agriculture and Electrical Engineering, a Day Training Department for men and women, and a department for the Training of Teachers in Secondary Schools.

Sessional Fee for ordinary Arts student, £11. 1s.; ditto for Intermediate Science or Medical student, £15. 15s. The cost of living in lodgings in Bangor averages from £20 to £30 for the Session. The new Hall of Residence for Women Students in Upper Bangor—fee £31. 10s. for the session—is now open.

At the Entrance Scholarship Examination (beginning September 19), more than twenty Scholarships and Exhibitions, ranging in value from £40 to £10, will be open for competition. One half the total amount offered is reserved for Welsh candidates.

For further information and copies of the Prospectus, apply to JOHN EDWARD LLOYD, M.A.,

Secretary and Registrar.

UNIVERSITY COLLEGE OF NORTH WALES.

(A Constituent College of the University of Wales.)

DEPARTMENT FOR THE TRAINING OF SECONDARY TEACHERS.

(Recognized by the Cambridge Syndicate.)

Lecturer in Education—Mr. J. A. GREEN, B.A. Lond., assisted by Miss C. GRAVESON, B.A. Lond., and Mr. F. NORTHROP, B.A. Vict.

Preparation is offered for the Cambridge Diploma (Theoretical and Practical) and for the Teachers' Diploma of the University of London.

Full particulars of the Course (which is open to both men and women students), Fees, Scholarships, &c., may be had on application to the REGISTRAR.

UNIVERSITY COLLEGE OF WALES, ABERYSTWYTH.

(One of the constituent Colleges of the Univ. of Wales.) TRAINING DEPARTMENT FOR SECONDARY TEACHERS, MEN AND WOMEN.

Recognized by the Cambridge Teachers' Training Syndicate.

Assistant Lecturers—Miss CAROLINE P. TREMAIN, B.A. Wales; D. R. BARKIS, B.A. Camb. and Lond.

Preparation for (a) The Degrees in Arts and Science of the University of Wales, the curriculum for which includes the Theory and History of Education as an optional subject in the third year; (b) Cambridge Teachers' Certificate, Theory and Practice; (c) London University Teachers' Diploma; (d) College of Preceptors' Diplomas.

Composition Fee for the Session (including Lectures and Practice) £10.

Men Students reside in registered lodgings in the town. Some of the Men Students are able, with economy, to limit the cost of Board and Residence to £25 per annum.

Women Students reside in the Alexandra Hall of Residence for Women Students. Terms from 31 to 40 guineas.

For further particulars apply to

T. MORTIMER GREEN, Registrar.

THE MARIA GREY TRAINING COLLEGE,

SALUSURY ROAD, BRONDSBURY, LONDON, N.W.

A full Course of Training in preparation for the Cambridge Teachers' Certificate in the Theory and Practice of Teaching is offered to Ladies who desire to become Teachers. Kindergarten Teachers are also prepared for the Higher Certificates of the National Froebel Union. Junior Students are prepared for the Cambridge Higher Local Examinations.

Scholarships offered in all Divisions. College year begins September 13, 1899. The Winkworth Hall of Residence, for 21 Students, will be opened, opposite the College, in September, 1899.

Address—Miss ALICE WOODS, Principal, The Maria Grey Training College, Salusury Road, N.W.

THE OXFORD SHORTHAND IN LONDON.

The Oxford Shorthand Company, Dover, have pleasure in announcing that a FIRST-CLASS TEACHER is already on the spot, and engagements can be booked immediately.

ST. THOMAS'S HOSPITAL MEDICAL SCHOOL,

ALBERT EMBANKMENT, LONDON, S.E.

The WINTER SESSION of 1899-1900 will open on Tuesday, October 3, when the prizes will be distributed at 3 p.m. by Professor T. CLIFFORD ALLBUTT, M.D., F.R.S., in the Governors' Hall.

Three Entrance Scholarships will be offered for competition in September, viz., one of £150 and one of £50 in Chemistry and Physics, with either Physiology, Botany, or Zoology, for First Year's Students; one of £50 in Anatomy, Physiology, Chemistry (any two), for Third Year's Students from the Universities.

Scholarships and Money Prizes of the value of £500 are awarded at the Sessional Examinations, as well as several Medals.

Special Classes are held throughout the year for the Preliminary Scientific and Intermediate M.B. Examinations of the University of London.

All Hospital Appointments are open to students without charge.

Club-rooms and an Athletic Ground are provided for students.

The School Buildings and the Hospital can be seen on application to the Medical Secretary.

The fees may be paid in one sum or by instalments. Enquiries may be made separately to Lecture or to Hospital Practice, and special arrangements are made for students entering from the Universities and for Qualified Practitioners.

A Register of approved lodgings is kept by the Medical Secretary, who also has a list of local Medical Practitioners, Clergymen, and others who receive students into their houses.

For Prospectus and all particulars apply to Mr. RENDLE, the Medical Secretary.

H. P. HAWKINS, M.A., M.D. Oxon., Dean.

ST. MARY'S HOSPITAL MEDICAL SCHOOL, PADDINGTON, W.

The WINTER SESSION begins on October 2nd with an Introductory Address, at 3 p.m., by H. G. PLIMMER, Esq.

The ANNUAL DINNER will be held in the Evening, at the King's Hall, Holborn Restaurant, Dr. SIDNEY PHILLIPS in the Chair.

ENTRANCE SCHOLARSHIPS IN NATURAL SCIENCE.

One of £144, two of £78. 15s., one of £52. 10s., two of £57. 15s. (both open to students from Oxford and Cambridge), will be awarded by Examination on September 20th and 21st.

The School provides complete preparation for the Higher Examinations and Degrees of the Universities.

SPECIAL TUITION.

Special Classes.—All the Special Classes for the Higher Examinations have recently been made free to Students. Honours Examinations.—Special tuition is provided for the various Examinations of the Universities of Oxford, Cambridge, and London, and for the Fellowship of the Royal College of Surgeons.

Final Examinations.—The Medical, Surgical, and Obstetric Tutors demonstrate the whole of the year to Students preparing for Final Examinations.

NEW OUT-PATIENTS' DEPARTMENT.

This Department, now in full working, occupies the whole ground floor of the new Clarence Wing, which, when completed, will increase the number of beds in the Hospital to 580, and provide a Residential College for Medical Officers and Students.

ENLARGEMENT OF THE MEDICAL SCHOOL.

The Physiological Laboratories have been further extended, and a special Lecture Theatre and a new and enlarged Chemical Laboratory have been added. A new Laboratory, fitted with electric light and every modern improvement for the study of Biology, Pathology, and Bacteriology, has also been provided. Another extensive and important addition has been made by the handing over to the School of the premises vacated by the transfer of the Out-Patients' Department to the Clarence Wing. This has provided new Laboratories, Class-rooms, and a new Museum.

A complete reorganization of the Pathological Department has also lately been made, with provision of extensive new Laboratories for Pathology and Bacteriology, and an improved Museum for radiological specimens, with a special Anatomical Department.

The Residential College is at 33 and 35 Westbourne Terrace, W., close to the Hospital. For Terms application should be made to the Warden, Mr. H. S. COLLIER, F.R.C.S. There are eighteen Resident Appointments in the Hospital open to Students without expense.

For prospectus apply to the Secretary.

G. P. FIELD, Dean.

STUDY AT HOME FOR L.L.A.

Governesses with this Diploma command superior appointments. Tutors, Honours Graduates. Study greatly simplified. Full Notes, Likely Questions, Model Answers, Careful Correction, Individual Attention. Read Help. Complete Pass Course (each subject), £2. 2s. 111 Successes, L.L.A., 1899. Course Guide to L.L.A. (showing Roles) and University syllabus free from Sec. LONDON AND NORTHERN TUTORIAL CLASSES, 3 James Street, Hyde Park, London, W.

THE MIDDLESEX HOSPITAL MEDICAL SCHOOL.

The WINTER SESSION will open on Monday, October 2, at 3 p.m. Mr. JOHN MURRAY, F.R.C.S., will deliver an Introductory Address, after which the prizes gained during the previous year will be distributed.

The ANNUAL DINNER of the Past and Present Students and their friends will take place the same evening at the Trocadero at 7 o'clock. Mr. A. PEARCE GOULD, M.S., F.R.C.S., in the Chair.

HOSPITAL STAFF AND LECTURERS.

Physicians—Dr. Cayley, Sir Douglas Powell, Bart., M.D., Dr. J. K. Fowler, Dr. C. Y. Biss (Out-Patients).

Assistant Physicians—Dr. W. Pasteur, Dr. W. B. Wynter, Dr. A. F. Voelcker.

Obstetric Physician—Dr. W. Duncan. Consulting Physician to the Skin Department—Dr. Robert Living.

Physician to the Skin Department—Dr. J. J. Pringle. Assistant Obstetric Physician—Dr. R. Boxall.

Consulting Surgeons—Mr. Nunn, Mr. George Lawson. Surgeons—Mr. Henry Morris, Mr. Andrew Clark, Mr. A. Pearce Gould.

Assistant Surgeons—Mr. J. Bland Sutton, Mr. John Murray, and Mr. T. H. Kellock.

Ophthalmic Surgeon—Mr. William Lang. Aural Surgeon—Mr. Stephen Paket.

Consulting Dental Surgeon—Mr. J. S. Turner. Dental Surgeon—Mr. Storer Bennett.

Assistant Dental Surgeon—Mr. W. Horn. Other Lecturers—Dr. Robinson, Dr. Young, Dr. Plimpton, Dr. W. J. Muckle, Dr. Wethered, Dr. Crombie, Mr. A. G. R. Foulerton.

The Hospital contains 320 beds. There are Special Departments for Cancer, Syphilis, Diseases of Women and Children, Diseases of the Eye, Skin, Throat, and Ear, and for cases requiring Electrical treatment.

There are eighteen Resident Clinical Appointments open to Students of the Hospital annually.

Two open Entrance Scholarships (value £100 and £60) will be competed for on September 21 and 22, and one Entrance Scholarship (value £60) in Anatomy and Physiology (open to Oxford and Cambridge Students only) on September 21 and 22. Notice in writing to be sent to the Dean on or before September 14.

Composition Fee 135 guineas, or by three yearly instalments of 60 guineas, 50 guineas, and 35 guineas.

Special terms are made in favour of University and other Students who have already commenced their medical studies, and of University of London Students who have passed the Preliminary Scientific Examination.

The New School Buildings, which provide large and fully equipped laboratories for Physiology, Pathology, and Bacteriology, as well as a new Dissecting Room and Chemical Department, are now in regular use.

The Residential College adjoining the Hospital provides accommodation for thirty Students.

For further information apply to

W. PASTEUR, M.D., Dean.

GUY'S HOSPITAL MEDICAL SCHOOL.

The WINTER SESSION will begin on Monday, October 2nd, 1899. Five Open Entrance Scholarships of the combined value of £400 are offered for competition in September next, and numerous prizes, Medals, and Scholarships are awarded annually.

The College accommodates 60 residents, and contains Reading Rooms, Dining Hall, and Gymnasium for the general use of the Students. During last year more than 6,500 patients have been treated in the Wards of the Hospital. The Preliminary Scientific Class for Students who matriculated at London University in July will begin on October 2nd.

The Clubs' Union Athletic Ground at Honor Oak Park is easily accessible from the Hospital. A handbook of information for students about to enter the profession will be forwarded on application. For further particulars, or Prospectus of the School, apply personally or by letter to the DEAN, Guy's Hospital, London Bridge, S.E.

ST. BARTHOLOMEW'S HOSPITAL AND COLLEGE.

The WINTER SESSION will begin on Monday, October 2nd, 1899.

Students can reside in the College within the Hospital walls, subject to the collegiate regulations.

The Hospital contains a service of 750 beds. Scholarships and Prizes of the aggregate value of nearly £900 are awarded annually.

The Medical School contains large Lecture Rooms and well-appointed Laboratories for Practical Teaching, as well as Dissecting Rooms, Museum, Library, &c.

A large Recreation Ground has recently been purchased, and is open to members of the Students' Clubs.

For further particulars apply, personally or by letter, to the WARDEN of the College, St. Bartholomew's Hospital, E.C.

A Handbook forwarded on application.

JOHN JACKSON, F.E.I.S., is now

booking dates for his Lectures during the coming Winter Session on Ambiguity, Arithmetic, and Handwriting, to Schools, Teachers' Guilds, N.U.T. Associations, &c.—List of Lectures on application to The Hollis, West Norwood, S.E.

LONDON UNIVERSITY EXAMINATIONS.

PRIVATE TUITION MAY BE TAKEN UP DURING THE SUMMER VACATION.

University Tutorial College, Red Lion Square, Holborn.

THE HYGIENIC HOME

AND

COLLEGE OF PHYSICAL CULTURE

provides a thorough training for ladies (as teachers) in the principles and practice of Hygiene, Swedish Gymnastics, and Vegetarian Cookery. The course extends over two years, and complete theoretical, as well as practical, training is given. Examinations are held and certificates given to successful students.

There are good openings for qualified teachers, who after training here are assisted to obtain posts. The College is situated in Worcestershire, six miles from Birmingham, and half-a-mile from Halesowen Station; the old historic mansion, The Leasowes, having been adapted for this purpose.

The Leasowes stands in its own extensive grounds, and is surrounded by beautiful woods. Its bracing air, elevated position, and charming situation make it an ideal place for a College of Health. It has an excellent Gymnasium fitted with Swedish apparatus, also fine Gardens.

Elocution, Dancing, Gardening, Games, &c., are also taught as a means of Health and Physical Culture.

Students are admitted in September, age 18 to 30. Apply for particulars to Miss ANSTBY, The Leasowes, near Halesowen, Worcestershire.

A.C.P.,

L.C.P., & F.C.P.

PREPARATION BY CORRESPONDENCE

On a thoroughly individual system, which ensures to each student the closest care and attention. Weak subjects receive special help. Fees may be based on success.

Single subjects may be taken—Latin, Greek, French, German, Italian, Mathematics, Mechanics, Physics, Chemistry, Logic, Psychology, Political Economy, &c.

TUTORS.

The Staff includes a number of Graduates of London, Oxford, Cambridge, and Royal Universities, Science Medallists, and Specialists.

The following are a few extracts from letters of successful pupils:—

"Thank you heartily for your careful preparation, without which I am sure I could never have got through."

"I attribute my success entirely to your coaching, and shall be pleased to recommend you to my friends."

"I was pleased to find that many of the questions given to me by you were actually given in the examination."

"I have passed in every subject in the L.C.P., and am very pleased at the result. May I thank you for your kind and valuable help, which had everything to do with the result, for some of the questions I had were the same as I had previously answered in your papers."

"I have passed my examination (all subjects A.C.P.). I am simply delighted, and feel that it is owing to your excellent tuition."

For Terms, Testimonials, &c.,

Address—Mr. J. CHARLESTON, B.A.
(Honours, Oxon.; and Lond.).

Price 2s., cloth.

PRACTICE AND HELP

IN THE

ANALYSIS OF SENTENCES.

This work contains a careful exposition of the mutual relations of the constituent elements of sentences, with appropriate illustrations and exercises. There is, besides, a large collection of miscellaneous examples of all degrees of difficulty, accompanied by hints and directions for the proper analysis of them.

"This is a very practical and helpful little book. . . . The sections on abbreviated and elliptical sentences, and on the uses of 'as,' 'than,' and 'but,' are particularly good, while the great number of well-chosen bond fide examples from English writers, and the remarks thereon, render the book practically indispensable to any one who wishes to treat the subject with thoroughness and good sense."—*Educational Times.*

By the same Author.

Price 3s. 6d., cloth. **Thirty-ninth Edition** (170th to 176th Thousand).

ENGLISH GRAMMAR,

Including Grammatical Analysis.

"He would recommend to Teachers 'Word-building in English,' by Mason, who had written the best Grammar of which he had any knowledge."—*Address to Teachers at Kendal*, by S. G. TREMENEER, Esq., H.M. Inspector of Schools (Reported in the "Schoolmaster," May 5th, 1883).

Price 3s. 6d., cloth. **Twelfth Edition** (57th to 61st Thousand).

A SHORTER ENGLISH GRAMMAR.

With Copious and carefully Graduated Exercises.

"This book is really a very complete English Grammar, with numerous well-chosen exercises for practice in 'Analysis.' . . . Mr. Mason leaves no difficulty unexplained, and his explanations are thorough and scientific."—*Saturday Review, June 7th, 1879.*

Price 2s., cloth. **Twentieth Edition** (117th to 126th Thousand).

OUTLINES OF ENGLISH GRAMMAR.

FOR JUNIOR CLASSES.

Price 1s. **Eighteenth Edition** (115th to 124th Thousand).

FIRST NOTIONS OF GRAMMAR.

FOR YOUNG LEARNERS.

"For a foundation in Grammar, I know of no better book than Mason's 'First Notions of Grammar.'"—*Address by E. H. B. RICE-WIGGIN, Esq., H.M. Inspector of Schools.*

CODE STANDARD ENGLISH GRAMMAR.

IN PARTS

Adapted to the Standards of the New Code.

BELL & SONS, York Street, Covent Garden.

UNIVERSITY OF ABERDEEN. FACULTY OF MEDICINE. WINTER SESSION, 1899-1900.

The WINTER SESSION commences on Monday, 16th October, 1899. The Preliminary Examination will commence on 30th September.

The Degrees in Medicine granted by the University are—Bachelor of Medicine (M.B.), Bachelor of Surgery (Ch.B.), Doctor of Medicine (M.D.), Master of Surgery (Ch.M.). They are conferred only after examination and only on Students of the University. A Diploma in Public Health is conferred, after examination, on Graduates in Medicine of any University in the United Kingdom.

The total cost for the whole Curriculum, including Hospital Fees and Fees for the Degrees of M.B. and Ch.B., is usually about £120. Bursaries, Scholarships, Fellowships, and Prizes, to the number of 50 and of the aggregate annual value of £1,200, are open to competition in this Faculty.

A Prospectus of the Classes, Fees, &c., together with Regulations for the Preliminary Examination and for Graduation in Medicine and Surgery, may be had free on application to the SECRETARY of the MEDICAL FACULTY.

The University also grants the following Degrees in Arts, Science, Divinity, and Law:—In Arts: Doctor of Letters, Doctor of Philosophy, and Master of Arts. In Science: Doctor of Science, Bachelor of Science (in Pure Science and in Agriculture). In Divinity: Doctor of Divinity (Honorary) and Bachelor of Divinity. In Law: Doctor of Laws (Honorary) and Bachelor of Law (B.L.).

Particulars may be had on application to the SECRETARY of FACULTIES.

TO HEADS OF SCHOOLS AND FAMILIES.

THE SOCIÉTÉ NATIONALE DES PROFESSEURS DE FRANÇAIS

Can recommend fully qualified and competent French Teachers and French Governesses. Apply for Teachers to the SECRETARY, 20 Bedford Street, W.C.; and for Governesses to the LADY SUPERINTENDENT, Maison Nationale Française, 93 St. George's Square, S.W.

Can recommend fully qualified and competent French Teachers and French Governesses. Apply for Teachers to the SECRETARY, 20 Bedford Street, W.C.; and for Governesses to the LADY SUPERINTENDENT, Maison Nationale Française, 93 St. George's Square, S.W.

PRIVATE TUITION, Classes, or Correspondence Tuition for all Examinations. Fee for course of ten lessons in any subject by correspondence, 12s. 6d. (a reduction when more than two subjects are taken at same time). Many recent successes.—F. J. BOBLAND, L.C.P. (Science and Math. Prizeman), Victoria College, 87 Buckingham Palace Road, S.W., and Stalheim, Brunswick Road, Sutton, Surrey. Schools visited and Examinations conducted.

JOINT AGENCY FOR WOMEN TEACHERS.

(Under the management of a Committee appointed by the Teachers' Guild, College of Preceptors, Headmistresses' Association, Association of Assistant Mistresses, and Private Schools' Association.)

Address—74 GOWER STREET, LONDON, W.C.

Registrar—Miss AGNES G. COOPER.

This Agency has been established for the purpose of enabling Teachers to find work without unnecessary cost. All fees have therefore been calculated on the lowest basis to cover the working expenses.

Headmistresses of Public and Private Schools, and Parents requiring Teachers, or Teachers seeking appointments, are invited to apply to this Agency.

Many Graduates and Trained Teachers for Schools and Private Families; Visiting Teachers for Music, Art, and other special subjects; Foreign Teachers of various nationalities; Kindergarten and other Teachers are on the Register, and every endeavour is made to supply suitable candidates for any vacancy.

School Partnerships and Transfers are arranged. Office hours—9.30 a.m. to 6 p.m. Miss Cooper's hours for interviews are from 10.30 a.m. to 1.30 p.m., and 2.30 p.m. to 5 p.m.; Wednesdays to 1.30 p.m. only.

THE JOINT AGENCY FOR MEN TEACHERS.

23 SOUTHAMPTON STREET, BLOOMSBURY SQUARE, LONDON, W.C.

Registrar—Rev. F. TAYLOR, M.A. Cantab.

The Agencies for Assistant-Masters and Tutors hitherto conducted by the College of Preceptors, the Teachers' Guild, and the Assistant-Masters' Association, have been amalgamated and placed under the management of a Joint Committee composed of representatives of the following Bodies:—

- Headmasters' Conference. Incorporated Association of Headmasters. College of Preceptors. Teachers' Guild. Welsh County Schools' Association. Private Schools' Association. Association of Headmasters of Preparatory Schools. Association of Headmasters of Roman Catholic Schools. Assistant-Masters' Association. Association of Technical Institutions. &c. &c.

The rates of commission charged to Assistant-Masters are fixed as low as possible, and it is hoped that all branches of the profession will support an Agency managed by so widely representative a Committee.

Headmasters having vacancies on their staffs, and Assistant-Masters seeking appointments, are asked to communicate with the REGISTRAR.

ST. GEORGE'S CORRESPONDENCE CLASSES.

5 MELVILLE STREET, EDINBURGH. (Established in 1876.)

PREPARATION OF CANDIDATES for the title and diploma of L.L.A. of the University of St. Andrews, also for the Preliminary (Entrance) Examination of the Scottish Universities (all of which grant degrees to women).

B.A. Course, College of Preceptors Examinations, Cambridge Local and Higher, Royal Irish, &c.—Mr. J. LOCKEY, M.A. Lond. (Branch I. and IV.), F.C.P., 106 St. Paul's Road, Camden Town, N.W., prepares for above in Classics, Mathematics, Anglo-Saxon, Mental Science, Education, &c., Orally and by post. Numerous successes every year. Terms moderate.

FROEBEL SOCIETY'S CLASSES.

THE FROEBEL SOCIETY propose to hold a COURSE of CLASSES on Friday Evenings and Saturday Mornings at St. Martin's Schools, Chancery Cross, from September 21 to December 16. The subjects taken will be:—(1) "CHILD NATURE illustrated by the Principles and Methods of Froebel and Pestalozzi"; (2) "NATURE KNOWLEDGE"; (3) "GIFTS AND OCCUPATIONS, and the Principles underlying them"; and (4) "BLACKBOARD DRAWING." Fees, 15s. for each subject (12 Lectures) taken separately; 25s. for any two subjects; 35s. for any three subjects; or 2 guineas for the whole Course.

As the above Classes will not be held unless a sufficient number join, it will be necessary for intending students to send in their names to the SECRETARY of the Froebel Society, 4 Bloomsbury Square, W.C., not later than Wednesday, September 20, stating clearly which subjects they wish to take.

DAY COLLEGE FOR WOMEN.

Term commences 25th Sept.

Classes in Art, Science, Music, Languages, Literature, Elocution, and Domestic Economy. Commercial Training. Training for Lady Secretaries. Physical Training. Complete Preparation for all Exams. of London University. Fees, £15 per annum.

DAY COLLEGE FOR MEN.

Next Term commences 25th Sept.

Course of Mechanical, Electrical, or Civil Engineering, or Applied Chemistry. Thorough Commercial Training. Classes in Art, Science, Music, Languages, Literature, and Elocution. Fees, £15 per annum.

Full illustrated prospectus of men's or women's classes, 2jd. each, post free,

from THE SECRETARY, SOUTH-WESTERN POLYTECHNIC, CHELSEA, S.W.

KING'S COLLEGE, LONDON.—

STUDENTS in ARTS and SCIENCE, Engineering, Architecture, and Applied Sciences, Medicine, and other Branches of Education will be admitted for the NEXT TERM Tuesday, October 3. Evening Classes commence Thursday, October 5.

Students are classed on entrance according to their proficiency, and terminal reports on the progress and conduct of Matriculated Students are sent to their parents and guardians. There are Entrance Scholarships and Exhibitions.

Students may join either for the full course at a composition fee, or be admitted for the separate classes. There are a few vacancies for Resident Students.

For prospectuses and all information apply to the SECRETARY, King's College, London, W.C.

GREAT GRIMSBY SCHOOL

BOARD.—The above School Board require the services of the following Teachers who have been specially trained in Kindergarten Training Colleges, and who have obtained Certificates from the National Froebel Union:—(1) Trained HEAD TEACHER, Certified under the Education Department and with the Higher Certificate of the National Froebel Union, who will be required to give instruction to the other Infants' Teachers of the Board, under such arrangements as the Board may hereafter decide, and at an inclusive salary of £130 per year. (2) Trained ASSISTANT-TEACHER, with the Elementary or the Higher Certificate of the National Froebel Union, at a salary of £80 per year.

A personal canvass of the members of the Board will be a disqualification. Application forms may be had, on receipt of stamped addressed foolscap envelope, from DOUGLAS CHANDLER, Clerk to the School Board.

School Board Offices, Grimsby. 22nd August, 1899.

HELP (BY POST) for Students and

Busy Teachers.—Practical, Successful. Preparation for Examinations. Lessons prepared. Latin, French, English, advanced Arithmetic, &c. Special terms for Students for A.C.P.—E. ROBINSON, A.C.P., Brinklow, Coventry.

ASPIRANT.—College of Pre-

ceptors, Matriculation, Civil Service, and all Students should read the Aspirant, a Weekly Journal, Review, and Coach for these and all Examinations. No student who requires coaching up for his examination should be without the coaching aids afforded by this Journal. Numerous testimonials from subscribers and readers. A Subscriber says: "I have received more benefit, for the price of 1d. weekly, from your Coaching Journal than I did for 30s. for a course of tuition." Saturdays, 1d. Bookstalls, Newsagents, or from the Publishers, TILDESLEY & Co., Lavender Hill, London, S.W.

FRANCIS HODGSON, 89 FARRINGTON STREET, E.C.

COLLEGE OF PRECEPTORS.

Lectures for Teachers.

By P. A. BARNETT, Esq., M.A., formerly Principal of the "Borough Road" Training College, Isleworth.

SYLLABUS.

LECTURE I.

Preparation for Teaching as a Profession.

The meaning and purpose of training; economy of effort; development of capacity. The possibilities of training; the cultivable margin of aptitude. The methods of training; practice in the art of instruction; personal observation and record-making; study of books. Training as it affects the teacher's aim, character, and temperament, appreciation of the scope and difficulties of education, and personal acceptability.

LECTURE II.

The Teacher and a Definition of Education.

The value of the definition of an art; to simplify and inspire purpose; to determine method; to suggest procedure. Education the direction of a force constant in society; the teacher's place as beneficent agent. The historical development of the ideal of education in political and religious societies; its social and psychological consequences as they affect teaching. The effect of prevalent theories of knowledge and conduct on conceptions of education. Misleading ideals. The authorities in education and teaching.

LECTURE III.

Education as a problem in Organization.

What is a liberal education, and who is to have it? The many-sidedness of human nature. Educational needs indicated by common fundamental endowments and destiny; hence interrogation of sociology and psychology. Free access to a liberal education as a test of social and political ideals. Current conceptions of a liberal education. The division of "subjects." The nature of specialization; its limits and social effects. The teacher and his syllabus and time table. Curriculum for boys and for girls.

LECTURE IV.

Education as a problem in Psychology.

The value and scope of psychology in the work of the classroom. Teaching and education. The suggestiveness of physio-psychology. The conflicting doctrines of psycholozers. The mind as a combination or *plexus* of "faculties." Professional pedantry and superstitions of the school-room. Empirical tricks and delusive shortcuts in teaching. The direct lessons of psychology. The teacher and "all-round" cultivation.

LECTURE V.

The Relation of Body and Mind.

Physiological health and psychological health involve each other. The basis of the Kindergarten organization and methods. The dangers of excessive regard for machinery. Youth a process. Stages of development, and necessary growth of curriculum and alteration of procedure. Signs of distress and defect. Training of manual dexterities. The limit of its usefulness: as to age; as to social conditions. Health in the school, school-house, and school-room. The meaning of Play.

LECTURE VI.

School Morals.

School a poor substitute for, but necessary complement to, the home. A definition of School necessary in order to economize and direct effort. Domestic and public virtues. The corporate life of school. Sentiment and conduct. The cultivation of aptitudes for an ideal community. Rewards and punishments. The cultivation of character by the teacher. The effect of surroundings on character. Surroundings and habit. Nagging. The organization and character of school games.

LECTURE VII.

Language as Literature and Rhetoric.

Literature and its definition. Literature in the cultivation of the imagination and emotions. Use of literature in school; as reading, as recitation, as a "study." Literature a compendious study. The order of interest. "Culture" and its relation to literature in school. The investigation of literary masterpieces; dangers of philological treatment. The relation of appreciation and expression. The order of rhetoric or "composition" teaching. The need for *copiousness* of reading.

LECTURE VIII.

Language as Speech.

The meaning of "Self-expression." The relations of intelligence and intelligibility. The cultivation of audible speech; a physical exercise. Procedure in teaching Speech, Reading, Elocution. The place of the Pattern. The rarity and importance of right Emphasis. Oral examination. Foreign speech: the mother method; the analytical method. The differences in the teaching of modern and ancient languages; as to aim; as to procedure. The limits of oral teaching. The application of tests in examination.

LECTURE IX.

Abstraction in Mathematics, Logic, and Grammar.

The capacity for abstraction. Its place in mental development. Mathematical certainty and the necessary qualifications of mathematical certitude; the delimitation of terms used *technically*, in special connexions. The value of cultivating the power to define. The uses and limitations of Arithmetic and formal Grammar; the skeleton of the art of reasoning. Grammar as an inductive science.

LECTURE X.

Training in the power of Discovery.

Science and its definition. False notions of science, and meaningless antithesis between science and other studies. Science as observation and experiment in the school curriculum. The perils of restricted observations and unanalysed experiments. The logical subdivisions of science. Philology as science. Imagination in science. Invention and Design. The place of Geography in the hierarchy of sciences; as a compendious and general study; as a special and applied study.

LECTURE XI.

History as a School Subject.

History as a concrete study, and as a method. The relation of history to literature and other subjects in the curriculum. History as an atmosphere; as a panorama; as the interpretation of the succession of events affecting political societies. The necessary material for basis. The order of teaching. The desirable completeness of each stage. The passage from general to particular and *vice versa*. The need for frequent concrete attachments in school teaching. Ancient and modern history. History as a core or centre of instruction. Suggested courses.

LECTURE XII.

Summaries and general conclusions.

The Fee for the Course of Twelve Lectures is Half-a-Guinea.

* The Lectures will be delivered on Friday Evenings at 7 o'clock, at the College, Bloomsbury Square, W.C.—Members of the College have free admission to the Course.

PROFESSOR MEIKLEJOHN'S SERIES.

THE ART OF WRITING ENGLISH.

A Manual for Students.

With Chapters on Paraphrasing, Essay Writing, Précis Writing, Punctuation, and other matters.

By J. M. D. MEIKLEJOHN, M.A.

Second Edition. Cr. 8vo, 340 pp., 2s. 6d.

"The Art of Writing English' teems with good advice."—*Literary World*.
 "Whatever Prof. Meiklejohn writes is sure to be vigorous and racy, and, on the subject of English composition, he is peculiarly well qualified to speak."—*The Journal of Education*.

One Hundred Short Essays in Outline. By Professor MEIKLEJOHN. Crown 8vo, 110 pp. 1s.

These Outline Essays have been prepared to assist Candidates for Queen's Scholarships, for the Civil Service, and in other Examinations. They show the young students how to put their matter into the right perspective, and how to make clear and brief statements. They treat of such subjects as Athletics, The Bank of England, The Bicycle, Competition, The Navy, Newspapers, &c., &c.—in short subjects generally set in Public Examinations.

The Comparative Atlas. By J. G. BARTHOLOMEW, F.R.G.S., and Edited by Professor MEIKLEJOHN. Containing 64 Plates and a General Index. 2s. 6d.

"No atlas that we know at anything like the price gives so much so well."—*The Teachers' Monthly*.
 "This is certainly the most comprehensive work ever published at the moderate price of half-a-crown. From the attractive frontispiece, representing the flags of all nations, to the final page on geographical etymology, there is not a wasted inch."—*The Teachers' Review*.

A New Arithmetic. By G. A. CHRISTIAN, B.A. Lond., and G. COLLAR, B.A., B.Sc. Lond. Crown 8vo, 562 pp. Third Edition. 4s. 6d.

"We recommend teachers and students to judge for themselves what a powerful auxiliary to success has been given them by the experience and judgment of the able authors."—*The Schoolmaster*.
 "We also welcome it because in several of its chapters—such, for example, as those on factors, decimal fractions, involution and evolution, surds and logarithms—it seems to us to mark a distinct advance on the majority of its predecessors."—*The School Guardian*.
 "We consider it so satisfactory that we have at once placed it on our list of books."—*The Rev. G. H. S. Walpole, D.D., Principal, Bede College, Durham*.

The English Language: its Grammar, History, and Literature. By J. M. D. MEIKLEJOHN, M.A. Eighteenth Edition. Enlarged, with Exercises and additional Analysis. Crown 8vo, 470 pp. 4s. 6d.

"For the first class College of Preceptors your work is most excellent and valuable."—*The Rev. F. Marshall, M.A., Almondbury Grammar School*.
 "I leave it to a girl candidate for an English scholarship; she got first place, and valued the help she got from the book."—*W. Johnson, Esq., B.A., Elmfield College, York*.

A New Geography on the Comparative Method. With Maps and Diagrams and an Outline of Commercial Geography. By J. M. D. MEIKLEJOHN, M.A. Twenty-second Edition. 120th Thousand. Crown 8vo, 630 pp. 4s. 6d.

"A most useful manual for examiners, and full of stimulating matter for students of geography. Its picturesqueness of description and vividness of style make it almost as interesting and enjoyable reading as a book of travels."—*The Journal of Education*.
 "For all that is best worth knowing no better book than this could be studied."—*The Educational News*.

A New History of England and Great Britain. With Maps and Tables. By J. M. D. MEIKLEJOHN, M.A. Fourteenth Edition. Crown 8vo, 740 pp. 4s. 6d.

"I like your History very much. It is suggestive, and does not ignore the social and literary side of things."—*Miss A. F. Andrews, Maids Vale High School for Girls, W.*
 "I am very pleased with the concise statements and orderly marshalling of facts—such an improvement on our ordinary histories."—*R. A. Little, Esq., M.A., The College, Buxton*.

The Principles and Practice of Teaching and Class Management. By JOSEPH LONDON, F.G.S., Vice-Principal in the Salfrey Training College. Third Edition. Crown 8vo, 462 pp. 5s. 0d.

"We have no hesitation in saying that this is one of the best treatises on this subject which has appeared for some time, and we cannot too strongly recommend it to the attention of all interested in the practical work of education."—*The Educational News*.
 "We congratulate Mr. London on the completion of this long-projected and laborious work—a worthy sequel to his 'School Management.'"—*The Journal of Education*.

A School Algebra for Junior Forms. By F. OSCAR LANE, B.Sc. Lond., Assistant-Master, King Edward's School, Birmingham. Crown 8vo, 232 pp. 1s. 6d. With Answers, 266 pp. 2s. 0d.

"A very trustworthy book for beginners, extending to indices, surds, and progressions."—*The University Correspondent*.
 "The scientific method, from known to unknown, from Arithmetic to Algebra, has invariably been adopted, while lucid explanations and proofs precede oral exercises, followed in turn by numerous carefully graduated examples for attaining the necessary mechanical accuracy."—*The Educational News*.

The United States: their Geography, Resources, Commerce, and History. By M. J. C. MEIKLEJOHN, B.A. 92 pp. 6d.

"Useful tables of products, exports, distances, &c., are given, and many valuable hints on map practice. The book is brightened by numerous quotations from travellers, geographers, and historians. A little book of great value to the student."—*The Practical Teacher*.

Australasia: its Geography, Resources, Commerce, and Chronicle of Discovery. By M. J. C. MEIKLEJOHN, B.A. Crown 8vo, 86 pp. 6d.

"This book is up to date in every detail; there is a very good and useful map as frontispiece, and the paragraph arrangement is adopted. The student will find it a very desirable text-book on this portion of Greater Britain."—*The Pupil Teacher*.

Africa: its Geography, Resources, and Chronicle of Discovery up to 1897. By M. J. C. MEIKLEJOHN, B.A. Oxon. Third Edition. Crown 8vo, 76 pp. 4d.

"This little book is, for its size, remarkably full of information about Africa, and gives pithy explanations of such current expressions as 'sphere of influence' and 'hinter-land,' &c."—*The Teachers' Aid*.

The British Colonies and Dependencies: their Resources and Commerce. With Chapters on the Interchange of Productions and Climatic Conditions. By M. J. C. MEIKLEJOHN, B.A. Second Edition. Crown 8vo, 96 pp. 6d.

"This manual is terse and full; intelligently paraphrased and skillfully managed typographically. It does credit to the compiler, and we hope this work may earn the recognition it really merits."—*The Educational News*.

A Short Geography, with the Commercial Highways of the World. Fifteenth Edition. Crown 8vo, 196 pp. 1s.

"Terse, practical, informative, and statistic. This shilling Geography is exactly what a School Geography needs to be."—*The Teachers' Aid*.
 "Clearness and conciseness exemplified."—*The Private Schoolmaster*.

A Short History of England and Great Britain. B.C. 55 to A.D. 1890. Eleventh Edition. Crown 8vo 1s.

"In the 'Short History' there is plenty of anecdote, ballad, and stray gems of literature; and we find, though not with its usual emphasis, the Professor's expertness in the use and disposition of type."—*Education*.

A Short Grammar of the English Tongue, with Three Hundred and Thirty Exercises. Tenth Edition 1s.

This little book is written in the clearest and simplest style for beginners. It contains:—
 i. The Simplest Definitions. iv. Graduated Methods of Parsing.
 ii. Slowly graduated Exercises. v. Bad Grammar Corrected, with Reasons.
 iii. Clearly printed Tables. vi. Analysis, with Plain Diagrams.

A New Spelling Book. With Side Lights from History. Eighth Edition. Crown 8vo, 152 pp. 1s.

"We agree with the main principle here followed—that spelling should be learnt through the eye rather than through the ear."—*The School Guardian*.

The Spelling List. For Civil Service and other Examinations. With a Key to Correct Spelling. Third Edition. Crown 8vo, 146 pp. 1s.

"Your 'Spelling List' is a very decided advance in the right direction, ably conceived, and brilliantly written. We shall certainly strongly recommend it to our pupils."—*The Rev. H. P. Gurney, M.A. (Messrs. Wren & Gurney), Powis Square, London*.

A New Poetry Book for the use of Schools and Families. Fourth Edition. 156 pp. 1s.

"This neatly bound little collection, which is one of Professor Meiklejohn's series of school manuals, may be confidently recommended to teachers in search of new selections for recitation."—*The Schoolmaster*.

MESSRS. BELL'S NEW BOOKS.

Complete Educational Catalogue post free on application.

BELL'S ILLUSTRATED CLASSICS.

Edited by **E. C. MARCHANT, M.A.**,
Classical Master at St. Paul's School.

The special object of the Series is to make the editions as interesting and helpful as possible to the intelligent learner; and, with this end in view, in addition to the usual apparatus of Introductions, Notes, and Vocabularies, **Illustrations** have been introduced wherever it has been thought that they might help to elucidate the text. These will be gathered from the best sources, and will be chosen with a view to explaining the text, and making the reader more familiar with Greek and Roman life. Most of the Illustrations will be specially redrawn.

Maps and Plans will also be inserted as required.

The Volumes are being printed at the Oxford University Press, in pott 8vo size, and will be issued at the uniform rate of **1s. 6d.**, each (with or without Vocabularies).

The following will be ready immediately:—

CORNELIUS NEPOS.—*Epaminondas, Hannibal, Cato.*
By H. L. EARL, M.A., Grammar School, Manchester.

EUTROPIUS.—*Books I. and II.* (One Vol.). By J. G. SPENCER, B.A., St. Paul's Preparatory School.

CÆSAR.—*Book II.* By A. C. LIDDELL, M.A., High School, Nottingham.

CÆSAR.—*Book III.* By F. H. COLSON, M.A., Headmaster of Plymouth College, and G. M. GWYTHYR, M.A., Assistant-Master.

LIVY.—*Book IX., cc. i.—xix.* By W. C. FLAMSTEAD WALTERS, M.A., formerly of Christ's College, New Zealand.

LIVY.—*Hannibal's First Campaign in Italy.* (Selected from Book XXI.) By F. E. A. TRAYES, M.A., St. Paul's School.

HORACE'S ODES.—*Book I.* By C. G. BOTTING, B.A., St. Paul's School.

VIRGIL'S ÆNEID.—*Book II.* By L. D. WAINWRIGHT, M.A., St. Paul's School.

VIRGIL'S ÆNEID.—*Book IV.* By A. S. WARMAN, B.A., Grammar School, Manchester.

OVID'S METAMORPHOSES.—*Book I.* By G. H. WELLS, M.A., Merchant Taylors' School.

Specimen Copies post free to Headmasters on application.

PENDLEBURY'S NEW ARITHMETIC.

Small crown 8vo, 192 pp., 1s.; or, with Answers, 1s. 4d.
The Answers separately (revised), 4d. net.

A SHILLING ARITHMETIC.

By CHARLES PENDLEBURY, M.A., F.R.A.S., and W. S. BEARD, F.R.G.S.

This book is intended for the lower and middle forms of Secondary Schools. It will be found adapted especially for the use of Candidates for the Oxford and Cambridge Junior Local Examinations, the Scotch Universities' Locals, County Council Scholarships, and for Examinations conducted by the College of Preceptors, the Board of Intermediate Education for Ireland, &c., &c.

Throughout the book fully worked-out examples have been inserted to illustrate the theory explained in the text, and to serve as models for the pupil. The examples for exercise are numerous, and are carefully graduated. The sets of miscellaneous examples are mostly taken from examination papers set at the Examinations referred to above. Questions involving unnecessarily long and tedious calculations have been excluded from the book, as unsuitable for the Junior Students for whom it is intended.

CAMBRIDGE MATHEMATICAL SERIES.

New Volumes. Crown 8vo, 3s. 6d.

ELEMENTARY DYNAMICS. By W. M. BAKER, M.A.,
Headmaster of the Military and Civil Department at Cheltenham College.

. A KEY is also in preparation.

In this volume the author has endeavoured to put the elementary parts of the subject in as simple a manner as possible, for the sake of beginners; but, at the same time, the range of work will be found sufficient for Woolwich and Sandhurst Candidates, and for Students reading for Scholarships at the Universities.

Crown 8vo, 2s. 6d.

Lists of WEALE'S CLASSICAL SERIES on application.

CROSBY LOCKWOOD & SON, 7 STATIONERS' HALL COURT, E.C.

MR. EDWARD ARNOLD'S EDUCATIONAL LIST.

New Books:—

ENGLAND IN THE NINETEENTH CENTURY.

By C. W. OMAN, M.A., Author of "A History of England," "The Art of War," &c. One Vol., crown 8vo, 3s. 6d. [Nearly ready.] This is an entirely new work, embracing English history from 1801 to 1899. The want of a concise volume dealing with events of our own times has been long acknowledged, and it is hoped that Mr. Oman's book will fill the gap.

PRACTICAL MATHEMATICS. By JOHN GRAHAM, B.A., Demonstrator of Mechanical Engineering and Applied Mathematics in the Technical College, Finsbury. 3s. 6d.

A MANUAL OF PHYSIOLOGY. By LEONARD HILL, M.D., Lecturer in Physiology at the London Hospital Medical College. With numerous Illustrations and Diagrams. 6s.

LES FRANCAIS EN MENAGE. By JETTA S. WOLFF. With numerous Illustrations. Crown 8vo, cloth, 1s. 6d.

SIMPLE FRENCH STORIES.

An entirely new series of easy Texts, with Notes and Vocabulary, prepared under the General Editorship of Mr. L. VON GLEHN, Assistant-Master at Merchant Taylors' School. Price of each Volume, 9d.

The following are nearly ready:—

UN DRAME DANS LES AIRS. By JULES VERNE.

PIF-PAF. By EDOUARD LABOULAYE.

LA PETITE SOURIS GRISE; and HISTOIRE DE ROSETTE. By MADAME DE SEIGNE.

UN ANNIVERSAIRE À LONDRES, and Two other Stories. By P. J. STAHL.

MONSIEUR LE VENT ET MADAME LA PLUIE. By ALFRED DE MUSSERT.

LA FÉE GRIGNOTTE; and LA CUISINE AU SALON. From Le Théâtre de Jeunesse.

NOW READY.

AN ILLUSTRATED SCHOOL GEOGRAPHY.

By ANDREW J. HERBERTSON, F.R.S.E., F.R.G.S., Lecturer in Geography in the Heriot-Watt College, Edinburgh; and formerly in the Owens College, Manchester. With sixteen pages of Coloured Maps, numerous Diagrams, and Photographs of Relief Maps, and several hundred magnificent Illustrations. Large 4to (about 12 by 10 inches), 5s.

NEW SCIENCE BOOKS.

LECTURES ON THEORETICAL AND PHYSICAL CHEMISTRY. Part I.—CHEMICAL DYNAMICS. By Dr. J. H. VAN'T HOFF, Professor at the University of Berlin. Translated by Dr. R. A. LEHFELDT, Professor at the East London Technical College. One Vol., Demy 8vo, 12s. net.

GEOGRAPHY OF THE BRITISH ISLES. By Sir A. GEIKIE. 1s.
THE ELEMENTARY SCHOOL ATLAS. By J. BARTHOLOMEW. 1s.
CLASS-BOOK OF GEOGRAPHY. By C. B. CLARKE. 2s. 6d.; sewed, 2s.
CLASS-BOOK OF GENERAL GEOGRAPHY. By H. R. MILL. 3s. 6d.
GEOGRAPHY OF EUROPE. By J. SIMS, M.A. 2s.
ELEMENTARY GEOGRAPHY OF THE BRITISH COLONIES. By GEORGE M. DAWSON, LL.D., and A. SUTHERLAND, M.A. 2s.

NEW PREPARATION BOOKS

FOR THE OXFORD AND CAMBRIDGE LOCAL AND OTHER EXAMINATIONS.

The Text-Books known as

Gill's Oxford and Cambridge Edition

contain special new and original features which render them the most successful preparation manuals published.

RELIGIOUS KNOWLEDGE.

The Manuals for this subject included in Gill's Oxford and Cambridge Edition were used by the Schools obtaining the highest results at the recent Cambridge Local Examination. Since the last Editions have been so well appreciated the Editors have extended the list to include other Books of the Bible. The Edition will now include

ST. MATTHEW. 1s. 6d. Now ready.	ACTS. Part I. 1s. 6d. Now ready.	JEREMIAH. 1s. Now ready.
ST. MARK. 1s. 6d. Ready September 15.	ACTS. Part II. 1s. 6d. Now ready.	NEHEMIAH. 1s. Now ready.
ST. LUKE. 1s. 6d. Ready September 21.	ACTS. Complete. 2s. Now ready.	EZRA. 1s. Now ready.
EPHESIANS. 1s. Nearly ready.	PHILIPPIANS. 1s. Nearly ready.	

OXFORD LOCAL EXAMINATIONS, JULY, 1900. COLLEGE OF PRECEPTORS EXAMINATIONS, JUNE, 1900.

George Gill & Sons' (Ltd.) List of Special Text-Books.

SCRIPTURE.—Senior, Junior, Preliminary, and College of Preceptors.

St. Luke. Edited by the Rev. F. MARSHALL, M.A. Cantab. Crown 8vo, cloth	1 6
Containing—	
1. <i>Introduction.</i> —Author, Life and Purpose of Writer; For what Readers, Date, Place, Language, and Characteristics of the Gospel; Kings and Governors; Biographical Notices; Geographical Notes; The Synagogue, Sanhedrin, Jewish Festivals; Sects and Orders of Men; The Nazarene Vow, &c., &c.

5. <i>Appropriately coloured Sketch Maps.</i>	
Acts of the Apostles. Part I. Edited by the Rev. F. MARSHALL, M.A.	1 6
Acts of the Apostles (complete). Edited by the Rev. F. MARSHALL, M.A.	2 6
The Church Catechism. Edited by the Rev. F. MARSHALL, M.A.	1 6
The O. and C. Genesis. With Notes, &c.	1 0
Preparation Papers on St. Luke. Per packet	0 8
Preparation Papers on Acts of the Apostles. Per packet	0 8

The great popularity of this series is evidenced by their adoption for class use in the following Schools and Colleges:—

Wellingborough Grammar School; Mathematical School, Rochester; Dean Close School, Cheltenham; Merehant Taylors' School, Crosby; King's High School, Warwick; Framlingham College; Dunstable Grammar School; The King Edward's Schools, Birmingham; Royal St. Anne's Schools, Redhill; Congregational School, Caterham; Tiffin's School, Kingston; Tommison's School, W.C.; The Grocers' Company School, Hackney Downs; Parmiter's School, N.E.; The Grammar Schools, Ashby-de-la-Zouch; Alderman Newton's School, Leicester; Downside College, Bath; Newport Grammar School, Isle of Wight; Crediton Grammar School; Devon County School; Marling School, Stroud; Newcastle High School; Darlington Grammar School; Maidenhead College; Elmsfield College, York; St. Martin's High School, W.C.; Christ's Hospital Girls' School, Hertford; Retford Grammar School; St. Albans Grammar School; Ipswich Middle School; Clergy Orphan School, Canterbury; Kendrick School, Reading; The Kent Colleges at Canterbury and Folkestone; Maidstone Girls' Grammar School; Rochester Girls' Grammar School; University School, Southport; King Edward's Middle School, Norwich; Bury Grammar School; Bury High School; Bury St. Edmund's School; Rotherham Grammar School; Magdalen College School, Brackley; Queen's School, Basingstoke; Woodhouse Grove School, Apperley Bridge; Rydal Mount, Colwyn Bay; Handel College, Southampton; Tratalgar High School, Winchester; Southampton Grammar School; Farnham Grammar School; Kingswood School, Bath; Spalding Grammar School; Borden School, Sittingbourne; Simon Langton School, Canterbury; Royal Masonic School, S.W.; Tottenham Grammar School; Colfe's School, Lewisham; Hele's School, Exeter; Royal Grammar School, Guildford; Aske's Hatcham School; Wolverley Grammar School; St. John's School, Leatherhead; High School, Middlesbrough; Ringley Grammar School; Truro College; Barbourne College, Worcester; Latymer Upper School, Hammersmith; Alhey's School, Dulwich.

ENGLISH.—Senior, Junior, and College of Preceptors.

Shakespeare's As You Like It. Edited by the Rev. F. MARSHALL, M.A.	1 6
Containing—	
<i>Introduction.</i> —Source, Editions, Date, Scene of the Play; the Unities, Anachronisms, Characters of the Play; Biographical, Historical, Geographical Notes.	
<i>Text,</i> with marginal and footnotes, and paraphrase of difficult passages.	
<i>Appendix.</i> —Full Supplementary Notes, Play on Words, Versification, Grammatical Notes, Classical and other Allusions, Language of the Play, Quotations from other Plays, Glossary, Forty-minute Examination Papers on each Scene.	

ENGLISH (continued).—For the Junior and College of Preceptors.

Scott's Lay of the Last Minstrel. Edited by the Rev. G. PRESTON, M.A., First Class Classical Tripos (Editor of Macaulay's "Lays of Ancient Rome"). Crown 8vo, cloth	1 0
Containing <i>Introduction, Text</i> with marginal and foot notes, <i>Appendix,</i> and <i>Maps.</i>	
For Junior Forms.	
Macaulay's Lays of Ancient Rome. Containing Prophecy of Capys, Ivry, and the Armada. Edited by the Rev. G. PRESTON, M.A. Cloth, crown 8vo	1 6
Containing <i>Introduction, Text</i> with marginal and foot notes, <i>Appendix,</i> and <i>Coloured Maps.</i>	
The O. and C. Grammar. By the Rev. CHARLES BROOKE, M.A.	1 0
Preparation Papers in English Grammar. Per packet of 60 papers	0 8
HISTORY.	
The Imperial History of England. By ROSCOE MORGAN, B.A.	2 6
The O. and C. History of England	1 0
Outlines and Dates of English History. By A. A. GUNNIS	1 0
This edition will be found suitable for the various set periods. Containing constitutional summaries, coloured maps, &c.	
History Notes. By GEORGE GILL, F.R.G.S. With Maps	0 6

BOOK-KEEPING.

Sarll's Practical Book-keeping. 128 pp., cloth	1 0
An Elementary Text-Book, illustrating the arrangement of the Bought, Sales, Cash, Bill Books and Ledger; consisting of Graduated Exercises followed by Examination Papers set by the College of Preceptors, accompanied by <i>full-worked and outline</i> keys.	
Sarll's Double Entry Book-keeping. 256 pp., cloth	2 0
Sarll's Exercises in Double Entry Book-keeping. 128 pp. cloth	1 0
The above with <i>all</i> introductory matter, <i>full</i> explanations, <i>outline</i> keys, &c.	
Manuscript Books published to accompany the above.	
For Practical: —Cash Book ... 5d. Ledger ... 0 7	
Ledger (100 Accounts) ... 7d.	
For Double Entry: —Journal ... 5d. Ledger ... 0 7	
Short and Introductory Exercises ... 7d.	
Key to Double Entry Book-keeping	3 0
Key to Practical Book-keeping	2 0

MATHEMATICS.

Marshall's Student's Euclid, complete. By the Rev. F. MARSHALL, M.A.	2 6
Marshall's Examination Euclid. Books I.—IV.	1 0
The O. and C. Algebra	1 6
Preparation Papers in Algebra. By A. CUDWORTH, M.A.	0 8

GEOGRAPHY (Physical, Political, and Commercial).—Senior, Junior, and Preliminary, and College of Preceptors.

The Student's Geography. By GEORGE GILL, F.R.G.S. 1000 pages	4 6
The Student's Europe. By GEORGE GILL, F.R.G.S.	2 6
The Student's British Isles. By GEORGE GILL, F.R.G.S.	1 6
The British Colonies. By GEORGE GILL, F.R.G.S.	2 6
The Imperial Geography. By GEORGE GILL, F.R.G.S.	2 6
This work has been entirely reset, and is revised down to August, 1899.	
The O. and C. Geography. By GEORGE GILL, F.R.G.S.	1 0
A New Junior Geography. By GEORGE GILL, F.R.G.S.	1 0
This edition is expressly prepared to meet the requirements of the Preliminary and the College of Preceptors' Junior Forms Examinations.	

CLARENDON PRESS, OXFORD.

BOOKS SUITABLE FOR CAMBRIDGE AND OXFORD LOCAL, OXFORD AND CAMBRIDGE CERTIFICATE, LONDON UNIVERSITY, AND OTHER EXAMINATIONS, 1899-1900.

- Lycidas. Edited, with Notes, by O. ELTON, B.A. 6d.
- Paradise Lost. Books I.-VI. Edited by R. C. BROWN, M.A. New Edition. 4s.
- Paradise Lost. Book I. Edited by H. C. BEECHING, M.A. Stiff covers, 1s. 6d.; in parchment, 3s. 6d.
- Paradise Lost. Book II. Edited by E. K. CHAMBERS, B.A. 1s. 6d.
- * * * Books I. and II. combined, 2s. 6d.
- Addison.**—Selections from Papers in The Spectator. With Notes. By T. ARNOLD, M.A. 4s. 6d.
- Burke.**—Reflections on the French Revolution. Edited, with Introduction and Notes, by E. J. PAYNE, M.A. Second Edition. 5s.
- Scott.**—Lay of the Last Minstrel. Edited, with Notes, &c., by W. MITRO, M.A. With Map. Second Edition. 1s. 6d.
- An Anglo-Saxon Reader.** In Prose and Verse. With Grammatical Introduction, Notes, and Glossary. By HENRY SWEET, M.A., Ph.D. Seventh Edition, Revised and Enlarged. 9s. 6d.
- A Primer of Historical English Grammar.** By HENRY SWEET, M.A., Ph.D. 2s.
- A Manual of Current Shorthand.** Orthographic and Phonetic. By HENRY SWEET, M.A. 4s. 6d.
- First Steps in Anglo-Saxon.** By HENRY SWEET, M.A., Ph.D. 2s. 6d.
- A Primer of English Etymology.** Third and Revised Edition. By W. W. SKEAT, Litt.D. Stiff covers, 1s. 6d.
- Principles of English Etymology.** First Series. THE NATIVE ELEMENT. Second Edition. 10s. 6d. By W. W. SKEAT, Litt.D.
- Second Series. THE FOREIGN ELEMENT. 10s. 6d.

RELIGIOUS KNOWLEDGE.

- The Oxford Helps to the Study of the Bible,** comprising Introductions to the several Books, the History and Antiquities of the Jews, the Results of Modern Discoveries, and the Natural History of Palestine. With copious Tables, Concordance and Indices, and a series of Maps. New, Enlarged, and Illustrated Edition. Part I. 16mo, 1s. net; Nonpareil, 8vo, 2s. 6d.; Large-type Edition, 5s.
- Oxford Helps to the Study of the Book of Common Prayer.** By the Very Rev. W. R. W. STEPHENS, B.D. 2s.
- The Greek Testament,** with the Readings adopted by the Revisers of the Authorized Version, and Marginal References. (1) Pica type. Second Edition. Demy 8vo, 10s. 6d. (2) Long Primer type. New Edition. Fcap. 8vo, 4s. 6d.
- Old Testament History for Schools.** By the Rev. T. H. STOKES, D.D. In Three Parts. With Maps. 2s. 6d. each.
- Notes on the Gospel of St. Luke.** For Junior Classes. By Miss E. J. MOORE SMITH. 1s. 6d.

LATIN.

- Tales of Early Rome.** Adapted from the Text of Livy. Edited, with Notes, Latin-English and English-Latin Vocabulary, Introduction, &c. By J. B. ALLEN, M.A. 1s. 6d.
- Caesar.**—Gallic War. Books III.-V. Edited, with Notes, Maps, &c., by C. E. MOBERLY, M.A. 2s. 6d.
- Cicero.**—Speeches Against Catilina. With Introductions and Notes by E. A. URCURT, M.A. Second Edition. 2s. 6d.
- De Amicitia. With Introduction and Notes. By ST. GEORGE STOCK, M.A. 3s.
- Phillippic Orations I., II., III., V., VII. With Introduction and Notes by J. R. KING, M.A. 3s. 6d.
- Pro Marcello, Pro Ligario, Pro Rege Deiotaro. With Introduction and Notes. By W. Y. FAUSSET, M.A. 2s. 6d.
- Pro Milone. With Notes, &c. By A. B. POYN- TON, M.A. 2s. 6d.
- Horace.** With a Commentary. (In a size suitable for the use of schools.) Vol. I. THE ODES, GARMEN SECU- LARE, and EPICURES. By E. C. WICKHAM, D.D. Second Edition. 6s.
- Livy.**—Books XXI.-XXIII. With Introduction and Notes, by M. T. TATHAM, M.A. Second Edition, Enlarged. 5s.
- Book XXI. By the same Editor. 2s. 6d.
- Book XXII. By the same Editor. 2s. 6d.
- Virgil.**—Aeneid. In Four Parts. Books I.-III.; IV.-VI.; VII.-IX.; X.-XII. By T. L. PAPPILLON, M.A., and A. E. HAIGH, M.A. Crown 8vo, stiff covers, 2s. each Part.
- Georgics. Books III. and IV. Edited by C. S. JERRAM, M.A. 2s.
- An Elementary Latin Grammar.** By J. BARROW ALLEN, M.A. New Edition, Revised. 2s. 6d.
- A First Latin Exercise Book.** By the same Author. Eighth Edition. 2s. 6d.
- A Second Latin Exercise Book.** By the same Author. Second Edition. 3s. 6d.
- Tacitus.**—Vita Agricola. With Introduction, Notes, and Map. By H. FURNEAUX, M.A. 6s. 6d.

GREEK.

- Aeschylus.**—Prometheus Bound. With Intro- duction and Notes, by A. O. PRICKARD, M.A. Third Edition. 2s.
- Aristophanes.**—The Clouds. Edited, with English Notes, Introduction, &c., by W. W. MERRY, D.D. Third Edition. 3s.
- Demosthenes.**—Speech on the Crown. By EVELYN ABBOTT, M.A., and P. E. MATHESON, M.A. 3s. 6d.
- Euripides.**—Bacchae. Edited, with Introduction and Notes, by A. H. CRICKSHANK, M.A. 3s. 6d.
- Hecuba. Edited, with Introduction and Notes, by C. H. RUSSELL, M.A. 2s. 6d.
- Medea. Edited, with Introduction and Notes, by C. H. HERBESDEN, M.A. Second Edition. 2s.
- Homer.**—Iliad. Books XIII.-XXIV. With Notes. By D. B. MONRO, M.A. Fourth Edition. Extra fcap. 8vo, 6s.
- Odyssey. Books I.-XII. By W. W. MERRY, D.D. Fiftyeth Thousand. 5s.
- Books I. and II., separately, each 1s. 6d.
- Books VI. and VII. 1s. 6d.
- Books VII.-XII. 3s.
- Plato.**—The Apology. With Introduction and Notes by ST. GEORGE STOCK, M.A. Third Edition. 2s. 6d.
- Sophocles.**—Antigone. Edited, with Introduction and Notes, by LEWIS CAMPBELL, M.A., and EVELYN ABBOTT, M.A. 2s.
- Oedipus Tyrannus. Edited, with Intro- duction, Notes, &c., by the same Editors. 2s.
- Xenophon.**—Anabasis. Book II. With Notes and Map. By C. S. JERRAM, M.A. Extra fcap. 8vo, 2s.
- Anabasis. Books III. and IV. With Notes, &c., by J. MARSHALL, M.A. 2s.
- Anabasis. Books IV. With Introduction, Analysis, Notes, &c., by J. MARSHALL, M.A. 2s.

MODERN LANGUAGES.

- Corneille's Horace.** Edited, with Introduction and Notes, by GEORGE SAUNTSBURY, M.A. 2s. 6d.
- Molière.**—Le Misanthrope. Edited by H. W. G. MARKHEIM, M.A. 3s. 6d.
- Les Précieuses Ridicules. Edited, with Introduction and Notes, by ANDREW LANG, M.A. 1s. 6d.
- Les Femmes Savantes. With Notes, Glos- sary, &c. By G. MASSON, B.A. Cloth, 2s.; stiff covers, 1s. 6d.
- Goethe.**—Egmont. A Tragedy. Edited by C. A. BUCHHEIM. With Notes, Introduction, &c. Fourth Edition. 3s.
- Iphigenie auf Tauris. A Drama. Edited by C. A. BUCHHEIM. With Notes, Introduction, &c. Fourth Edition, Revised. 3s.
- Lessing.**—Minna von Barnhelm. A Comedy. Edited by C. A. BUCHHEIM. With Notes, Intro- duction, &c. Seventh Edition. 3s. 6d.
- Nathan der Weise. Edited by C. A. BUCH- HEIM. With Notes, Introduction, &c. Second Edition. 4s. 6d.
- Niebuhr.**—Griechische Heroen-Geschichten (Tales of Greek Heroes). With English Notes and Vocabulary by EMMA S. BUCHHEIM. Second, Revised, Edition. 2s.; stiff covers, 1s. 6d. Edition A. Text in German type. Edition B. Text in Roman type.
- Schiller.**—Wilhelm Tell. A Drama. Large Edi- tion. Edited by C. A. BUCHHEIM. With Notes, Introduction, &c. With Map. Seventh Edition. 3s. 6d.
- Wilhelm Tell. School Edition. Edited by C. A. BUCHHEIM. With Notes, Introduction, &c. With Map. Fourth Edition. 2s.
- Wilhelm Tell. Translated into English Verse by E. MASSIE, M.A. 5s.
- Historische Skizzen. With Map. By C. A. BUCHHEIM, Ph.D. Seventh Edition, Revised. 2s. 6d.

MATHEMATICS AND NATURAL SCIENCE.

- Geometry for Beginners.** An easy Introduction to Geometry for young learners. By G. M. MURCHIN, M.A. Extra fcap. 8vo, 1s. 6d.
- Euclid Revised.** Edited by R. C. J. NIXON, M.A. Third Edition. 6s.
- Sold separately as follows:—
- Book I. 1s. Books I., II. 1s. 6d.
- Books I.-IV. 3s. Books V., VI. 3s. 6d.
- The "Junior" Euclid.** Books I. and II. By S. W. FINN, M.A. 1s. 6d.
- * * * Books III. and IV. in preparation.
- Elementary Plane Trigonometry.** By R. C. J. NIXON, M.A. 7s. 6d.
- An Introduction to the Mathematical Theory of Electricity and Magnetism.** By W. T. A. KEMPTON, M.A. Second Edition. 7s. 6d.
- An Elementary Treatise on Analytical Geo- metry.** By W. J. JOHNSTON, M.A. Crown 8vo, 6s.
- Woolcombe.**—Practical Work in General Physics. By W. G. WOOLCOMBE, M.A., B.Sc. Crown 8vo, 2s. each Part. Part I.: GENERAL PHYSICS. Second Edition. Part II.: HEAT. Part III.: LIGHT AND SOUND. Part IV.: MAGNETISM AND ELECTRICITY.
- A Class Book of Chemistry.** By W. W. FISHER, M.A. Fourth Edition. 4s. 6d.
- An Elementary Treatise on Heat.** With numerous Woodcuts and Diagrams. By BALFOUR STEWART, LL.D., F.R.S. Fifth Edition. 7s. 6d.

MISCELLANEOUS.

- Elementary Architecture** (Classic and Gothic) for Schools, Art Students, and General Readers. By MARTIN A. BUCKMASTER. With 38 full-page Illus- trations. Crown 8vo, 4s. 6d.
- A Music Primer.** By J. TROUTBECK, D.D., and R. F. DALE, M.A. 1s. 6d.
- The West Indian Colonies.** With 12 Maps. By C. P. LUCAS, B.A. 7s. 6d.
- Elementary Political Economy.** By E. CANNAN, M.A. 1s.
- Bookkeeping.** By Sir R. G. C. HAMILTON and J. BALL. 2s.
- Remarks on the Use and Abuse of Some Political Terms.** By Sir G. CORNFELL LEWIS, Bart. New Edition, with Notes and Introduction, by THOMAS RAWLIGH, D.C.L. 3s. 6d.
- Manual of Current Shorthand.** Orthographic and Phonetic. By H. SWEET, M.A., Ph.D., Litt.D. 4s. 6d.
- The Educational Systems of Great Britain and Ireland.** By GRAHAM BALFOUR, M.A. Crown 8vo, 7s. 6d.

The Educational Times.

THE Board of Education Act has now been *Reorganization.* inscribed in the Statute-book. There is thus, in one sense, an end of the discussions which have more or less constantly engrossed our minds for the past few years; and our thoughts for the future, so far as they are concentrated on the higher interests of education, must henceforth take a new departure. It is no longer a question of making secondary education a concern of the State, with a Central Authority and a responsible Minister—the Authority and the Minister exist. We have no longer to argue for an Education Council, with a clear majority of educational experts—the Consultative Committee exists. We have done with our fifty years' demand for a professional register, and for efficiency guaranteed by inspection—the Board of Education will both register and inspect. So far, the battle is fought and won. It has been in many respects a soldiers' battle; Parliament and the country would have allowed us to go on indefinitely—who can say how many years?—with a haphazard crowd of efficient and inefficient schools, with qualified and unqualified teachers, with wasted competition and overlapping authorities. The first great step towards reorganization has not even been taken in response to a demand of parents claiming the best attainable schools for their children. The effective demand was raised by the teaching profession itself, by secondary schoolmasters and by the Universities. And it will not be out of place in these columns, and at this moment, if we say, as we can honestly say, that the demand for a stricter standard of efficiency, which at the beginning may be expected to tell mostly in favour of endowed, State-aided, and rate-aided public schools, has been loyally endorsed by many masters of private and proprietary schools, who have had sufficient spirit to invite what was best for the country, and sufficient nerve to throw themselves into a new flood of competition.

The Act is in the Statute-book. "Much good may it do you!" has been the comment of some of our friends, the Faint-hearts of the Secondary profession, who have never been able to feel any enthusiasm for the intervention of the State in what has hitherto been the domain of private adventure and of partially organized private foundations. We quite understand

the dubious attitude of those who do not altogether like this new Act of Parliament; and there is a word or two which we should like to say to them to-day. The Act is not a code of regulations, but a framework which needs to be filled in—a skeleton which has yet to be clothed with flesh and blood. It asserts a principle and confers a power. The principle is that efficient teachers shall be backed by the public purse, on the sole ground and condition of their efficiency. The power is that a Cabinet Minister, a Department, a representative Council of men drawn from all ranks of the profession, may—and indeed they must—insist on efficiency, help every efficient school which needs and asks for help, and establish new schools only after proof of deficiency. Now, as to the principle, we make bold to say that all schoolmasters striving for efficiency, and needing nothing but money to satisfy every demand for efficiency, are absolutely in favour of a system based on efficiency; and with men who do not strive for efficiency, and do not care to be efficient, nobody can have any sympathy whatever. Let us add, by way of parenthesis, that the private schoolmaster whose quality is ethical rather than technical, who devotes his genius to the training of a handful of pupils, and who could not square his methods with any formal and prescribed test of efficiency, is often more truly efficient than all the rest of us put together—that no statesman and no Educational Council would dream for a moment of interfering with him, and that under no form of organization is he likely to be disturbed or injured in the pursuit of his vocation.

Now, as to the power which the Board of Education Act has conferred upon the Board and its Consultative Committee, that is still a virtual and an undefined power. Who is to define it? Surely, to a large extent, public opinion, set and guided by the profession, at whose instance the Act has been passed. Public opinion will operate directly upon the Local Authorities, and we do not believe that in the long run these Authorities will be either inequitable or oppressive. If they should be so in exceptional instances, they will be subject to the control of the Central Authority; and this Authority, so far as it deals with matters of secondary education, will take the opinion and follow the advice of its Consultative Committee, on which there will be spokesmen of every class of schools, and a two-thirds majority of "persons representing Universities and other bodies interested in education." The functions of this Committee are not exhaustively defined in the Act. It will create the register, and it will advise as to choice of inspectors, and prob-

ably as to the scope of inspection. But we may anticipate that it will do a good deal more than this. It ought to be at least the assessor in all appeals made to the Central Authority. We confess that our main hope in regard to the new Act is based upon the guarantees which will be provided for secondary education by the existence of a permanent Consultative Committee.

Well, then, the filling in of the framework of the Act is still a matter for discussion; and it is a matter on which the whole profession would now do well to concentrate their attention. The Government will expect us to speak our mind as freely in the future as in the past. They will look for our opinions in regard to registration and inspection, to the constitution of Local Authorities, and to the functions of the Consultative Committee. On the organization of the Board itself, and on its internal economy, the Education Department will give themselves a free hand, and we have not the slightest doubt that they will forge and sharpen a very effective instrument. But, where this Board comes into close contact and relations with secondary schools, they will want, as a matter of course, to know the convictions and wishes of secondary schoolmasters. Would that we could speak to them with one mind and one voice, not for ourselves, and not even for our own interests, except in so far as the interests of education are our own! Then, beyond all question, we should get precisely the organization and the guarantees which we consider essential for the common welfare.

In any case, what we chiefly want to emphasize is that the work of discussion is only half accomplished. All the talk of the past—the Commissions, the Conferences, the Joint Committees, the spoken and written arguments—would lose half their value and justification if we failed within the next seven months to address ourselves to the details of the new organization.

NOTES.

We do not quite see the significance of the proviso inserted by the House of Commons in the fourth (Registration) clause of the Board of Education Act. The Consultative Committee is to frame regulations for the formation of a register of teachers, provided that the names are to be arranged in alphabetical order. It is fortunate that the lawyers are not likely to be called on to interpret the meaning of these simple words. If they are merely held to enjoin a general list of teachers of every kind, arranged for ready reference in the order of the alphabet, surely no one would dream of a complete register in any other form. But there is nothing in the clause as it stands to prevent the Registrar from giving separate lists of teachers in elementary schools, teachers in secondary schools, professors and lecturers at the Universities, teachers of music and drawing, private tutors, and so forth. It matters little so long as the distinctions are noted in the general list—though, when the register becomes an electoral roll, these distinctions will be important. But the oddity of the thing is that this proviso enjoins what no one would think of omitting, and fails to prohibit the separate lists which many think desirable—and a few others, apparently, undesirable.

It may be hoped that the recent conference between the

London School Board and the Technical Education Board will turn out to have been successful in diminishing, if not in abolishing, the serious overlapping of the two organizations in the metropolitan area. The School Board, which seems to have been mainly responsible, by its overweening ambition, for the waste of energy and resources, has undertaken to limit its instruction in science and art in all its evening schools "to such grades as can be conveniently taught in its premises," leaving the Technical Education Board to give advanced instruction in its own premises. It also promises not to conduct classes in technological subjects, and not to "offer instruction specially intended for University degrees." This last self-denying ordinance on the part of a Board which exists to give elementary education to children under the age of fourteen is distinctly amusing. But we will only repeat our hope that the understanding arrived at by the two Boards has put an end to the mischief.

DR. LEWIS LLOYD, late Bishop of Bangor, whose death was recently announced, was not much known out of Wales. Before his elevation to the bishopric of Bangor he had, however, established his reputation as one of the most successful of Welsh schoolmasters during this century. His teaching career began with an assistant-mastership at Ystradmeurig, an old-established Cardiganshire grammar school where, in the good old days, before the modernizing Welsh Intermediate Education Act endeavoured to put new wine into old bottles, boys talked in Latin and thought in Welsh. His next appointment was that of Headmaster of Dolgelly Grammar School, followed after a few years by his appointment to Friars School, Bangor, where at one time he had a sixth form of some dozen boys, every one of whom took a scholarship or exhibition at Oxford or Cambridge. His subsequent success at Christ's College, Brecon, was almost equally striking. Although not a man of any exceptional learning or culture, his power of clear exposition and attention to detail, coupled with a rigid insistence on thorough preparation of lessons by his boys, seemed always to give him a sixth form without a "tail." He had a strong right arm, but, nevertheless, he was always a favourite of his boys, and a good cricketer who played with his school team. Absolutely devoid of educational fads, his method might have seemed to some old-fashioned. It was simply to encourage the willing to do their utmost, and to apply Father O'Flynn's remedy to the lazy ones.

It was probably owing to the fervour displayed at the Conference on Education at the Chicago Exhibition of 1893 that the famous Chatauqua movement made British proselytes. For we note that a fifth annual meeting of the British Chatauqua has recently been held at Saltburn on the Yorkshire coast. This little town, with its fine open beach and pleasant inland woods, is a happy spot to choose for a "plan of systematic self-education." Of course, this peripatetic institute can never reach the standard of its original on the American lake. There you may find a town of many thousand inhabitants, all healthily and happily employed, with secondary schools and kindergartens, outdoor games and gymnasia, popular lectures and magnificent concerts, religious services, and every help to culture, fancied or real, that can be devised. It is inexpensive too, and specially intended for the sober-minded working man, who spends his life in monotonous routine, never having a chance to improve

himself or even indulge in his hobby. We still find it strange and awkward in England to do anything in company with others; perhaps our sense of the ridiculous is too keen. But certainly this method of spending a week's holiday is preferable to the inanities of the ordinary seaside tripper. And Chatauqua may be a good thing in spite of the fact that a highly cultivated man like Prof. James, of Harvard, steps out of it with a cry: "Ouf, what a relief!" and longs for something primordial and savage to destroy the nightmare of that tame paradise.

THE buoyant exuberance of our American friends infuses a freshness even into their educational advertisements, as the following instances taken from current American magazines amply prove; and they incidentally show the existence of popular educational ideals in the States which seem somewhat foreign to the cultured calm and sound learning of Harvard and Yale. Of a boys' school: "We give a useful money-making education. It will pay you. Try it." This suggests the school described in Stevenson's "Wrecker." Of a college of Law: "Students can be self-supporting." Does this mean that the poorer students litigate with the richer and levy execution without the aid of the sheriff? It seems that most things can be "taught by mail," even engineering, and we are not surprised, therefore, to find that degrees may be conferred "by mail." They do not, however, seem to be sent "on approval." Girls' schools are far less prosaic. For instance: "Special attention given to everything that makes for the development of a well-rounded womanhood," "preparation for travel—summer classes in Europe." We thus find the secret why good Americans, when they die, go to Paris; and the following, mostly from Washington, explain how the English aristocracy capitulates so easily to American maidenhood. "The peer of any elsewhere—chaperonage and social advantages for special pupils," "sight-seeing parties every Monday; no nerve-straining examinations; character building; official and social life studied," "all the advantages of the national capital." All buildings and grounds which are not "unsurpassed" are "matchless," and we find that fees only range between £40 and £90 a year. Military academics seem very plentiful, the result, probably, of the Spanish war.

It is interesting to note that the Welsh county intermediate schools are rising into greater prominence each year in the Matriculation lists of the University. This is a good indication that the schools in question are devoting much attention to genuine secondary work. In future, however, it is probable that the names of Welsh intermediate schools will not be so much to the fore in the Matriculation lists, inasmuch as the Senior Certificate of the Central Welsh Board (in certain subjects) will be accepted in lieu of the University Matriculation. The results of the Central Welsh Board Examination are awaited with peculiar interest this year, for the examination was the first upon which the Senior and Junior Certificates of the Board will be granted. The Chief Inspector under the Central Welsh Board, Mr. Owen Owen, has promised to award a gold medal annually to the boy or girl who stands highest in the examinations of the Board.

ONE of the leading aims of the Central Welsh Board is to

encourage the training of boys and girls on the best modern methods, and to discourage the hasty and imperfect assimilation of knowledge merely for examination purposes. Accordingly, in the detailed reports sent to each school, there are a few brief remarks upon the work of each pupil in each paper, written by the actual examiners of the pupils' work. Thus the headmaster is guided in his efforts for the future, not only by the list of marks gained by the pupils, but also by the remarks of the examiners upon the work of the individual children. These reports, together with those upon the work of the classes as a whole, have already been highly appreciated by teachers, and they are one of the best features of the Welsh system.

At a meeting of primary teachers recently held at Aberystwyth, Dr. Macnamara again pointed out the defects of primary education in the Principality. The most thoughtful leaders of education in Wales have long been aware of the evils which he has pointed out, and are only too anxious to remedy them. His utterances will, it is hoped, have a salutary effect in arousing public opinion in Wales to the importance of appointing thoroughly qualified teachers, and to the necessity for regular and punctual attendance on the part of the children. It is clear, as we said last month, that the secondary schools and the University colleges will be greatly hampered in their work unless that of the primary schools is of a thorough character.

THE women students in Dublin are renewing their complaint that they are excluded from the Arts classes of the Royal University College; and we cannot wonder at it. This University was founded expressly for the benefit of both sexes. The statutes make no distinction of sex, except that women graduates are excluded from Convocation. It is pointed out that in Cork, Belfast, and Galway the lectures at the Queen's Colleges were at once thrown open to women, who have ever since had equal advantages with the men students at these colleges, and, moreover, are allowed to compete for the scholarships and prizes offered out of the direct endowments of the Queen's Colleges. But in Dublin nothing of the kind has been done. The persistent prejudice of the Senior Fellows is woefully out of date.

WITH the recent death of an old woman living on the outskirts of a Cornish town, probably the last of the old hedge-schools has disappeared. In a tiny cottage kitchen, with the open door giving straight on to the street, there might any day be found the old dwarf, helpless with rheumatism, perched on a high chair, an open Bible by her side. Around her on little forms sat about ten children, demurely reciting from their spelling-books, which were so black with dirt that the print could hardly be deciphered. For such schooling each child brought about a penny a week, if it could be raised; otherwise the payment was in kind—a Cornish pasty or a little tea. We wonder how the inspectors under the Board of Education Act would report on a school of this type. And yet—if only those books had been cleaner—Ruskin's highest ideal of education, the fostering of honesty, obedience, and cleanliness, was, no doubt, striven for, and sometimes, perhaps, more nearly attained than in many a State-aided school.

SUMMARY.

THE MONTH.

THE Board of Education Act (62 & 63 Vict., c. 33) received the Royal assent on August 9. The Act provides that on April 1, 1900, a Board of Education, consisting of the Lord President of the Council—the Duke of Devonshire will doubtless be the first President of the Board—of the existing Vice-President of the Committee of Council, of the Secretaries of State, the First Lord of the Treasury, and the Chancellor of the Exchequer, shall take the place of the present Education Department, including the Department of Science and Art; and it further provides that the Privy Council may at any time transfer to the Board any of the powers of the Charity Commission or the Board of Agriculture relating to education. The Board is to come into existence on the appointment of the President.

THE definitive form assumed by the third clause of the Act, which, with the fourth clause, is of special interest to secondary teachers, may now be placed on record:—

3.—(1) The Board of Education may by their officers, or, after taking the advice of the Consultative Committee hereinafter mentioned, by any University or other organization, inspect any school supplying secondary education and desiring to be so inspected, for the purpose of ascertaining the character of the teaching in the school and the nature of the provisions made for the teaching and health of the scholars, and may so inspect the school on such terms as may be fixed by the Board of Education with the consent of the Treasury: Provided that the inspection of schools established by scheme under the Welsh Intermediate Education Act, 1889, shall, subject to regulations made by the Treasury under Section 9 of that Act, be conducted as heretofore by the Central Welsh Board for Intermediate Education, and that the said Board shall be recognized as the proper organization for the inspection of any such schools as may be desirous of inspection under this section.

(2) The Council of any County or County Borough may out of any money applicable for the purposes of technical education pay or contribute to the expenses of inspecting under this section any school within their county or borough.

IT will be observed that there can be no inspection by University or other organizations [amongst which Clause 3 (2) virtually includes the County Councils by anticipation, at any rate as paymasters] until after the creation of the Consultative Committee. The creation is provided for by the fourth clause:—

4. It shall be lawful for Her Majesty in Council, by Order, to establish a Consultative Committee consisting, as to not less than two-thirds, of persons qualified to represent the views of Universities and other bodies interested in education, for the purpose of—
(a) framing, with the approval of the Board of Education, regulations for a register of teachers, which shall be formed and kept in manner to be provided by Order in Council: Provided that the register so formed shall contain the names of the registered teachers arranged in alphabetical order, with an entry in respect to each teacher showing the date of his registration, and giving a brief record of his qualifications and experience; and (b) advising the Board of Education on any matter referred to the Committee by the Board.

ON the eve of prorogation, Parliament voted a sum of £65,000 "for the purchase of the buildings now occupied by the Imperial Institute, and for their adaptation in part for use by the London University." The estimate for this vote was accompanied by a Treasury minute, comprising a report from the First Lord and the Chancellor of the Exchequer, and referring in general terms to the arrangements which had been made for acquiring the whole group of buildings from the governing body of the Institute.

These arrangements will enable Her Majesty's Government to offer to the London University accommodation in the building which may roughly be described as follows:—The eastern and central portions of the main block, including the principal entrance, vestibule, and staircase, and the great hall; subject to occasional use by the Institute of certain portions of the central block when not required by the University, under regulations approved by the Chancellor of the University, and subject also to certain reservations in favour of the Government of India. Also a portion of the upper floor of the inner block of building running east and west; and the temporary structure now standing in the south-eastern court. . . . The University will occupy its new quarters under conditions substantially the same as those under which it now occupies the building in Burlington

Gardens. As regards accommodation for the practical examinations of the University in Physics and Chemistry, it has been agreed that this shall be provided in the new buildings about to be erected for the Royal College of Science, subject to arrangement between the two bodies as to dates of user. The Science and Art Department will take charge of, and keep in order, the instruments and appliances for the examinations.

THE Secretary of the Charity Commission has forwarded to the Secretary of the Governors of Grantham Grammar School the following letter, dated August 5, announcing the decision of the Commissioners upon the facts recently inquired into on their behalf by Mr. Selby Bigge:—

SIR,—The Commissioners have had under consideration the report of the Assistant Commissioner, who visited Grantham on May 30, and held a public inquiry, with reference to the recent dismissal of three assistant-masters of Grantham Grammar School.

The Commissioners much regret that an impression should have obtained among those responsible for the administration of the charity that the engagements of the assistant-masters in the school were *ipso facto* terminated by the resignation of the Headmaster. As has already been intimated to you, this impression was without foundation.

Upon a review of all the facts of the case, the Commissioners are of opinion that the three assistant-masters were, in fact, dismissed without notice by Mr. Hutchings, the late Headmaster, by his letters of December 29 and 30, addressed to the assistant masters, taken in conjunction with previous communications between the parties. They are also of opinion that, under the terms of their engagement, the assistant-masters became, by the custom of the profession, entitled to one term's salary in lieu of notice, and that these sums are payable out of the funds of the charity.

The Commissioners are further of opinion that the scheme confers on the Governors no authority to make payments out of the funds of the charity to assistant-masters by way of *honoraria* for past services, and that, consequently, the sum of £155 so paid by the Governors, in pursuance of their resolution of February 27, should be refunded to the endowment by the Governors responsible for the resolution.

In order to avoid any further misapprehension, I am to add that the provisions of the scheme do not appear to impose any personal liability on a headmaster vacating his office by reason of his omitting to give notice to terminate the engagements of the assistant-masters, a step which is neither customary nor, in the interests of the school, desirable.

HER MAJESTY'S COMMISSIONERS FOR THE EXHIBITION OF 1851 have made the following appointments to Science Research Scholarships for the year 1899, on the recommendation of the authorities of the respective Universities and colleges. The scholarships are of the value of £150 a year, and are ordinarily tenable for two years (subject to a satisfactory report at the end of the first year) in any University at home or abroad, or in some other institution approved by the Commissioners. The scholars are to devote themselves exclusively to study and research in some branch of science the extension of which is important to the industries of the country. A limited number of the scholarships are renewed for a third year where it appears that the renewal is likely to result in work of scientific importance. The nominating institution of each scholar follows his or her name in brackets:—Robert John Tainsh Bell, M.A., B.Sc. (University of Glasgow); James C. Irvine, B.Sc. (University of St. Andrews); Henry Leonard Heathcote, B.Sc. (Mason University College, Birmingham); Winifred Esther Walker, B.Sc. (University College, Bristol); Frederick William Skirrow, B.Sc. (Yorkshire College, Leeds); Charles Glover Barkla, B.Sc. (University College, Liverpool); Harriette Chick, B.Sc. (University College, London); Henry James Tomlinson (University College, London); Frank Austin Lidbury, B.Sc. (Owens College, Manchester); William Campbell, B.Sc. (Durham College of Science, Newcastle-upon-Tyne); Louis Jenkens, B.Sc. (University College, Nottingham); James Travis Jenkins, B.Sc. (University College of Wales, Aberystwyth); Robert Duncombe Abell, B.Sc. (University College of North Wales, Bangor); William Caldwell, B.A. (Queen's College, Belfast); William Brown McLean, B.Sc. (McGill University); Bertram D. Steele, B.Sc. (University of Melbourne).

THE Commissioners appointed by the Lord Lieutenant to inquire into the working of the intermediate system of education in Ireland, with a view to its improvement, recommended in their report that a separate examination should be held for students who have passed, but are desirous of competing for honours and exhibitions. They consider that two distinct syllabuses should

be prescribed—the grammar-school course and the modern course, in either of which a student may present himself for examination. There should be a system of inspection, or *viva voce* examination, in subjects where an accurate test of efficiency is not obtained from a written examination. Each intermediate school should receive a yearly grant, not upon the general results of the examination in one year, but upon the average results of the three years immediately preceding the examination; and public general (not competitive) examinations should be retained as a basis for the calculation of this grant.

The quarterly report of the Technical Education Board of the London County Council has been issued. It mentions that a system of co-operation has been established between the Bolt Court School and the Northampton Institute, whereby the pupils of the school will secure the advantages of the optical and electro-depositing laboratories of the Institute, and will also be able to attend special lectures and demonstrations, in which the valuable collection of apparatus belonging to the Institute and the services of the scientific staff of the Institute will be available to the pupils of the school. The attendance at the classes of the Bolt Court School has been well maintained, while the work carried out by the students is much improved in character. Mr. Cecil L. Burns, having received an appointment under the Government of India, has resigned the post of Headmaster of the Camberwell School of Arts and Crafts, and his place has been filled by Mr. W. Dalton, Headmaster of the Huddersfield School of Art. Additional accommodation has been provided for the bookbinding department of the Central School of Arts and Crafts, Regent Street. Negotiations are taking place between the Charity Commissioners, the Board, and the governors of the Hackney Institute with reference to the acquisition by the governors of the premises of the North-East London Institute for the purposes of a technical institute and school of science, art, and music, as well as commercial subjects. It is hoped that when this is accomplished there may be some approximation to a complete polytechnic for Hackney. By the consent of the Statutory Commissioners, the Board has had an opportunity of expressing its views on the statute recently drafted for the government of the reorganized University of London. The Board has expressed its general approval of the Commissioners' proposals, but has asked for further consideration of the provision in respect of two or three matters which affect the institutions in which the Board is specially interested.

The Council of Sheffield University College report that they have made another unsuccessful effort to obtain affiliation to Victoria University. They sent an influential deputation to the University Council, asking their advice as to the best way of attaining their object. Four conditions were mentioned which the University Council thought would be necessary. The College Council saw no difficulty as to three of these conditions; and as to the fourth, which referred to increased accommodation, they expressed themselves as "ready to carry out the requisite improvements to the satisfaction of the University if they could obtain an understanding from the University Council that it would be prepared in such an event to recommend the Court of Governors to accept the College. They expressly stated that they recognized that such an understanding would not bind the Court of Governors of the University in any way, but that they were anxious to obtain an opinion from a body in whose judgment the Court would have confidence as to what provision of buildings, &c. the former would consider adequate." The College Council regret to state that a refusal to meet their wishes in this respect has been received.

PSYCHOLOGY IN TRAINING COLLEGES.

The training of teachers in this country is still a cause, a thing to be defended and argued about, and, perhaps, the majority of teachers, not to mention other people, still oppose it. There are several reasons for this opposition, but one of them seems to be a certain vagueness about psychology and its right position in the course of training—if, indeed, it can be said to have any position at all. The Headmaster of Haileybury, a veteran champion in the cause of training, recently expressed his opinion that psychology is the least obviously useful branch in the course of study, and that the practical side is by far the most important. Coming from such a quarter the remark is very discouraging;

and it may be well to point out some of the mistakes of the past in the matter of teaching psychology which have probably led Canon Lyttelton to this opinion.

First, perhaps, it would have been wiser not to call the subject "psychology" at all. It is absurd to suppose that any grasp of the science can be acquired in the fraction of the training year devoted to it. Some such name as "Studies of the pupils' minds" would be far more appropriate, and would be less likely to excite the ridicule of University professors. But the chief error in training colleges has been the overdoing of book-work. It may safely be asserted that no two text-books of psychology use the same technical terms, and there is no leading book acknowledged to be the best in this matter. Students, therefore, when puzzled by some definition in one, and seeking light on the point in another, only get into worse confusion. As for those books on psychology especially adapted to teachers, most of them seem neither one thing nor the other, but a sorry patchwork of snippets of psychology, followed by snippets of a teacher's experience, as tedious and void of life as the old-fashioned Sunday school lesson, with its extract from the Bible and then its "application," no matter whether applicable or not.

Another error has been the waste of time devoted to those parts of the subject which do not concern the teacher directly; such problems as—the order of development of the senses; which law of association is the fundamental one; the distinction between fancy and imagination, between perception and apperception, and so forth; while some lecturers wander into realms of free-will, and others, again, have been known to put before raw beginners the contradictory opinions of different writers, and even "exploded" ideas. In short, the lecturers have been too ambitious, too academic, one might almost say too thorough, for the purpose in hand. A medical student does not regard his anatomy as a study of theory quite divorced from his practical work on the human body. Why should a teacher regard psychology as a mysterious body of learning far beyond his comprehension, and offering him no light when he has to deal with the human mind? This mistake has been in large part due to the public examination papers, which, although not really above the students' capacities, have had a bookish tone, and are couched in mystifying language. For instance, here are three consecutive questions from a paper set a year or two ago:—

Explain the term "faculty" as employed in current text-books of psychology.

What topics are included under "the psychology of cognition"?

Explain "localization in time."

What I would suggest is that no text-books in psychology be used in a training college. Let those who cannot enjoy a course of training struggle with them as best they can; but they need not be used to handicap and confuse any one who can be in touch with a lecturer who is also an experienced teacher. That is the great point. There must be the utmost living connexion between the lessons given and the psychology taught. All are agreed that psychology at present has a very small range of definite conclusions and established laws—perhaps only some ten or twelve that can be properly presented to students in a year's course. But a large quantity of definite conclusions is not the desideratum. What is necessary is to form a habit of mind, to get the young teacher into the way of always trying to find a cause whenever anything goes particularly well or particularly badly in his lesson. It is half way to the remedy to find the cause of an evil; and this power of making intelligent use of experience is far more valuable than many years of unprofitable experience; it is, in short, the aim of training, and everything else in the year's work is subsidiary.

Now, how can this be managed so as not to become vague and unsystematic? There must, of course, be an introductory lecture dealing with the aims, the methods, and the difficulties of the study of our pupils' minds. The lecturer should then draw up a list of the few leading facts that he wishes his students to grasp, placing earliest those which are most commonly illustrated in ordinary lessons. There seems no need whatever for keeping to any more logical order, and even this chosen order can be altered if circumstances require. He should then settle exactly what technical terms he will use (the fewer the better) and draw up careful definitions. Problems should be set for the students to think out week by week in connexion with each subject. In listening to the lessons given in the practising schools the lecturer should make private notes of all the little points that occur to illustrate the law he is about to expound. For instance, suppose the subject of the lecture is to be Memory and the Law of Association. A week beforehand the students might be set the following questions to think about and make rough notes on:—What is the peculiarity of your own memory? How far does learning by heart seem to improve your own memory? What process do you go through in trying to remember a name? Why should a pupil who is bad at dates easily remember on what day the holidays begin? By the time the lecture hour arrives the students' minds are alive to the subject and ready to benefit by a discussion. Meanwhile the lecturer has been collecting some such material for work as the following:—One student has repeated a purely memory question to a class *ad nauseam*: "What is the date of Waterloo? Oh! surely you know. What I not know the date of Waterloo?" &c., &c. Another student has suggested other events that

will help to recall the wanted date, or has simply given the answer. A blackboard has been arranged so that facts to be remembered are grouped logically, while another has displayed the facts put together anyhow. A certain map of a journey and a genealogical tree have been rendered lucid by means of a coloured chalk. A statesman's character has been described so vividly that he will "never be forgotten." An important point has been hurriedly mentioned at the close of a lesson. Revision questions (specially intended to help the memory) have been so badly managed as to only cover a quarter of the ground. And, of course, in most lessons, too much matter has been put before the class. But, whenever possible, successes, or the germs of successes, should be picked out rather than failures; for, as a rule, one learns far more from one's half successes than from one's failures. After a discussion on these lines, and another on the subject of the problems, filled out by the lecturer's suggestions, and followed by a clear summing up, the students will have understood more about the psychology of memory than from reading the chapter devoted to that subject in a dozen text-books, or from hearing a learned discourse on it. The second term's work can be arranged to cover the same ground, rather more difficult problems being set, such as (to keep to our single illustration of Memory): What is the effect of *rest* in any subject—of letting a rule in arithmetic simmer in pupils' minds for a week before setting examples on it; of dropping a language for a year; and so on? The intellectual drawbacks of a good verbal memory. The value of forgetfulness (illustrated by Mrs. Nickleby). "On songe à tout ce qu'on aime, sans le savoir." The use and abuse of mnemonics. Again, the lecturer's criticism of the practical work might be given from a different standpoint, dealing with the general method of a whole course of lessons, so far as it affected the pupils' memory, rather than with isolated points as in the first term; whether the students formed a practice of referring to and revising back lessons, of giving their pupils the right kind of notes, sufficient examples to work out, appropriate home work, and so on. Of course, if the students contribute problems that have not occurred to the lecturer, so much the better.

And what is to be the third term's work in psychology? The same ground again, from yet another standpoint—the discussion of larger questions of general school method and organization on psychological grounds. For instance:—Why languages require more time to be devoted to them than science. Why it is better to defer beginning a language at all unless several lessons a week can be given to it. The "coming in useful" fallacy, the "what not to teach." What is really necessary to be committed to memory in arithmetic, history, geography, &c. Why all learning by heart of poetry should be as far as possible optional, both as to kind and amount. The effect of examinations on the memory. During this term also the students must be trained to express themselves clearly in describing mental processes—a by no means simple matter even to those who have acquired a great deal in the subject. It is so fatally easy to become over-explanatory and merely wordy, and there is no subject in which ignorance can be so well veiled by a fine phrase as in psychology. The utmost simplicity of statement, as far as possible in words of Anglo-Saxon origin, accompanied by apt illustrations drawn from actual experience in teaching and observation of the minds around them—this should be the students' ideal of style. One of the chief difficulties lies in the fact that the technical terms of psychology are mostly taken from the language of everyday conversation; such terms as perception, sensation, imagination, judgment, feeling, &c. The students must be warned that not only are these terms vague as used by ordinary people, but are not fixed in meaning by a consensus of psychologists, and are, therefore, best avoided, unless defined in each case. Exercises in clear expression can be given in a variety of ways—perhaps the easiest is a description of a student's own state of mind in a given situation; while a favourite one has always been a so-called "child-study." This latter is, no doubt, of great value in forming a habit of regarding pupils as individuals; but it must be acknowledged that it is frequently a very barren exercise in any other direction. The facts noted are often very trivial, even when certain; and it seems almost wiser to leave this branch of the work to the after days, when the teachers will have ample opportunity for studying their pupils. A far better use of the short time would be a study of character in some of our best novelists—notably George Eliot. A written paper on Tito Melema would interest the students, provide plenty of matter for thought, and tend to produce clearness of expression, with no danger of technical terms. Indeed, George Eliot analyzes her characters to such an extent that her books are more like psychological studies than novels, and, therefore, are much easier to understand than, for instance, Shakespeare, who is as complex and puzzling as life itself.

There is no danger that a student trained in this way will fail in the final public examination. A question or two demanding a knowledge of technical terms may have to be left unattempted; but this omission will be easily counterbalanced by the candidate's power of applying his knowledge and illustrating his statements, and certainly there will be none of those excruciating mistakes which irritate an examiner more in this subject, probably, than in any other.

It seems to me that, if this simple and unpretentious course were adopted, a good deal of the opposition to training would disappear.

M. V. HUGHES.

A SELECTION FROM CASSELL'S EDUCATIONAL BOOKS.

HISTORY.

Ready in September, 1899.

FOUNDERS OF THE EMPIRE. By PHILIP GIBBS. 256 pages. Extra crown 8vo, prettily bound in cloth. With 4 Coloured Plates and numerous Illustrations. Price 1s. 8d.

IN DANGER'S HOUR; or, Stout Hearts and Stirring Deeds. With Introduction by H. O. ARNOLD-FORSTER, M.P. With 4 Coloured Plates and numerous Illustrations. Price 1s. 8d.; or, handsomely bound in cloth gilt, 2s. 6d.

"Forty years' experience of reading books, for boys both in large and small schools, tells me that no book will prove to be more popular than 'In Danger's Hour.'"—PRINCIPAL, High School, Thirsk.

Third Edition, Revised. Price 5s.

A HISTORY OF ENGLAND. Fully Illustrated. Extra crown 8vo, 816 pages.

The Scotsman says:—"The picturesqueness of its manner, its fine national spirit, its insistence on those parts of the story that have most use and interest for the modern world, its numerous choice of appropriate and interesting illustrations—all these things make it a book not for the cloistered student, but for everybody who wishes, not merely to be instructed, but to be won to an interest in a study too often made repellent by the Dryasdusts. . . . Few popular histories, if any, have been better done."

THE BEST AND CHEAPEST DICTIONARIES.

CASSELL'S FRENCH DICTIONARY. (French-English and English-French.) 515th Thousand. Revised and Corrected from the Seventh and Latest Edition of the Dictionary of the French Academy. 1,150 pages. Cloth, 3s. 6d.; half-morocco, 5s.

"CasSELL'S French Dictionary" has become a standard work in this country, being used in the best schools, recommended by many of the first professors of the day, and generally found a reference book of the highest value and importance."—*Daily Chronicle*.

CASSELL'S GERMAN DICTIONARY. (German-English and English-German.) 222nd Thousand. By ELIZABETH WEIR. 1,120 pages, demy 8vo. Cheap Edition, cloth, 3s. 6d.; half-morocco, 5s.

"To say this is the best of the smaller German Dictionaries in the field is faint praise; and, were it not for the special merits of one or two, we might, without exaggeration, say that Miss Weir is first, and the rest nowhere."—*Journal of Education*.

CASSELL'S LATIN DICTIONARY. (Latin-English and English-Latin.) 102nd Thousand. Thoroughly Revised and Corrected, and in part Rewritten, by J. R. V. MARCHANT, M.A., Master of St. Paul's School, and formerly Scholar of Wadham College, Oxford; and J. F. CHARLES, B.A., Assistant-Master at the City of London School. Cheap Edition, 3s. 6d.; half-morocco, 5s.

"The new and revised edition of this dictionary is a marvel of cheapness. In its 927 pages will be found everything that a dictionary can be expected to supply to the students of classical Latin. The paper is good, the printing is clear, and the binding strong, yet the price is only 3s. 6d. The book well deserves to command a large sale."—*Board Teacher*.

CASSELL'S NEW LATIN PRIMER SERIES.

Edited by Prof. J. P. POSTGATE, M.A., Litt.D.

Fellow and Classical Lecturer of Trinity College, Cambridge; Professor of Comparative Philology in University College, London.

THE NEW LATIN PRIMER. By Prof. POSTGATE, with the co-operation of C. A. VINCE, M.A. 2s. 6d.

"The outline of the syntax of moods and tenses in Part I. is very clear and good. Especially useful will be found the parts which treat of the translation of English prepositions, and of 'that' and 'to.' The subjunctive, again, and *oratio obliqua* are admirably handled."—*Educational Times*.

"It seems to us the best perhaps of a number of similar books."—*Journal of Education*.

"The book ought to take the place of many Latin manuals."—*Academy*.

"A more concise, comprehensive, and intelligible grammar for the use of all but advanced students of Latin cannot be desired."—*Notes and Queries*.

THE FIRST LATIN PRIMER. By Prof. POSTGATE. 1s.

Fourth Thousand. Price 2s. 6d.

LATIN PROSE FOR LOWER FORMS. By M. A. BAYFIELD, M.A. Being a Series of Exercises adapted to THE NEW and First Latin Primers.

CASSELL'S LESSONS IN FRENCH. An Entirely New and Revised Edition. Part I. Containing 240 pp., crown 8vo, bound in cloth, 2s.

This work (which reached a sale of 141,000 copies in its original edition) has been revised by Mr. JAMES BOELLE, B.A., Examiner in French Language and Literature in the University of London. It is now in all respects suitable for the Oxford and Cambridge Local Examinations and the College of Preceptors' Examinations. The type has been reset in a bold style, and each lesson, with the exercises bearing upon it, has been brought within the compass of an hour's work. * * * The Revised Part II. will be ready during the autumn of 1899.

Thirty-first Thousand. 7s. 6d.

A FIRST SKETCH OF ENGLISH LITERATURE. By Prof. HENRY MORLEY.

"Full of admirable matter, carefully and consecutively arranged, simple and manly in style, accurate in detail, judicious and appreciative in criticism, it forms a summary of special value to the student, and which every reader may consult with advantage."—*Spectator*.

THE STORY OF ENGLISH LITERATURE. By ANNA BUCKLAND. Cheap Edition. Cloth boards, 3s. 6d. Adopted by the London School Teachers' Board as a Reading Book at the Pupil Teacher Centres.

"With great taste, judgment, and skill, Miss Anna Buckland has told the fascinating story of our English literature."—*Literary World*.

Cassell's Educational Catalogue will be sent, post free, on application.

CASSELL & COMPANY, LTD., LUDGATE HILL, LONDON, E.C.

Blackie & Son's Publications.

College of Preceptors and Oxford Locals, 1900.

- AS YOU LIKE IT.** Edited by J. C. SMITH, M.A., Rector of Stirling High School. 1s. 6d. [*The Warwick Shakespeare.*]

- ARMADA, IVY, AND NASEBY.** Edited with Introduction and Notes. Fcap. 8vo, paper, 2d.; cloth, 3d.
- CESAR.—GALLIC WAR.** Book V. Edited, with Introduction, Notes, and Appendices, &c., by Prof. JOHN BROWN. Fully Illustrated. Fcap. 8vo, cloth, 1s. 6d.
- PHŒDEUS.** Books I. and II., Selections from. Edited, with Notes, &c., by S. E. WINBOLT, B.A. Fcap. 8vo, cloth, 1s.
- HORACE.—ODES.** Book III. Edited by STEPHEN GWYNN, B.A., late Scholar of Brasenose College, Oxford. Illustrated. Crown 8vo, cloth, 1s. 6d. [*In the press.*]
- CICERO.—THE CATILINE ORATIONS (Complete).** Edited by Prof. C. H. KEENE, M.A., Queen's College, Cork. Crown 8vo, cloth, 2s. 6d.
- EURIPIDES.—THE MEDEA.** Lyric parts omitted, but an English Translation supplied. Edited by P. B. HALCOMBE, M.A. Illustrated. Crown 8vo, cloth, 1s. 6d.
- THE OXFORD MANUALS OF ENGLISH HISTORY.** General Editor—C. W. C. OMAN, M.A. Six fcap. 8vo Volumes, cloth, 1s. each.
- THE WARWICK ENGLISH HISTORY.** A Sketch of the Development of England and the Empire. From B.C. 55 to the Present Time. Crown 8vo, cloth, 3s. 6d.
- HIGHER ENGLISH.** An Outline of English Language and Literature. By DAVID CAMPBELL. Fcap. 8vo, cloth, 1s. 6d.
- LATIN GRAMMAR PAPERS.** Selected from Oxford and Cambridge Local and London Matriculation Examination Papers. By A. C. LIDDELL, M.A. Fcap. 8vo, cloth, 1s.
- LATIN UNSEENS.** Senior Section. 6d.
- GREEK UNSEENS.** Senior Section. 8d.

New Books. Just Published.

- LANDMARKS IN ENGLISH INDUSTRIAL HISTORY.** By GEORGE TOWNSEND WARNER, M.A., sometime Fellow of Jesus College, Cambridge; Assistant-Master at Harrow. Crown 8vo, cloth, 5s.
- "This book is a godsend. A short account of the chief points in the development of economic life in England has been wanted for long. . . . We have rarely come across a book which so well supplies a definite want. All students of history should at once procure it."—*Cambridge Review.*
- ENGLISH SATIRES.** Selected and Edited by OLIPHANT SMEATON, M.A. Crown 8vo, cloth, 3s. 6d. [*The Warwick Library of English Literature.*]
- THE ELEMENTS OF ENGLISH PROSE.** By W. A. BROCKINGTON, M.A. Crown 8vo, cloth, 2s. 6d.
- A new theoretical and practical treatise on English composition.
- "We have seldom met a more useful and practical treatise. . . . We hope the work will have the wide circulation which it deserves."—*Manchester Courier.*
- SOUTHEY.—BALLADS AND OTHER POEMS.*** Edited, with Introduction and Notes, by C. J. BATTERSBY, M.A. Fcap. 8vo, paper cover, 2d.; limp cloth, 3d.
- MACAULAY.—THE LAY OF VIRGINIA.*** Edited, with Introduction and Notes, by D. NICHOL SMITH, M.A. Fcap. 8vo, paper cover, 2d.; limp cloth, 3d.
- * These little books are the latest additions to Blackie's School Classics, which combine scholarly editing with good type and paper.
- PASSAGES FROM MODERN AUTHORS for Class Reading.** Edited by JOHN DOWNIE, M.A. Crown 8vo, cloth, 1s. 6d.
- LE TRÉSOR DE MONTE CRISTO.** Edited by B. PROPER, Senior French Master in Owen's School, Islington. Illustrated. Crown 8vo, cloth, 1s. 6d.
- The early chapters of Dumas' great romance abridged and adapted as a School Reader, with wood-cut Illustrations, Notes, and a Vocabulary.
- A PRIMER OF HISTORICAL FRENCH GRAMMAR.** By ERNEST WEEKLEY, M.A., Professor of French at University College, Nottingham. Crown 8vo, cloth, 2s. 6d.
- LES DEUX BOSSUS.** By HENRY CARNOY. Edited by EMILE B. LE FRANÇOIS. With a Frontispiece by ALICE B. WOODWARD. Small crown 8vo, cloth, 1s.
- A charming fairy story for School Reading, got up in a quite exceptionally attractive style, with large type, idiomatic Notes, and a Vocabulary.
- SONGS OF BÉBANGER.** Edited, with Introduction, Notes, and Vocabulary, by GEORGE H. ELY, B.A. Small crown 8vo, cloth.
- This volume will prove an interesting introduction to French poetry, the songs being short, and more calculated to attract the English school boy and girl than classical French verse. It includes the famous "Roi d'Yvetot," "Le Marquis de Carabas," "Ma Vocation," "Souvenirs du Peuple," and thirteen other songs.
- ENGLISH ETYMOLOGY.** A Select Glossary, serving as an Introduction to the History of the English Language. By F. KLUGE and F. LUTZ. Demy 8vo, cloth, 5s. net.
- *.* A work indispensable to all students of historical English.

MESSRS. RIVINGTONS LIST

WHAT IS SECONDARY EDUCATION?"

And other Short Essays on Various Aspects of the Problem of Organization. By Writers of practical experience. Edited, with an Introduction, by R. P. SCOTT, LL.D., M.A., Hon. Secretary of the Headmasters' Association. Crown 8vo, 2s. 6d. [Just published.]

This volume is intended to serve as a handbook for public men and for parents on the National Organization of Education in England.

RIVINGTONS' SINGLE TERM LATIN READERS, WITH NOTES, EXERCISES, AND VOCABULARIES.

Suited for a full Term's work, allowing time for revision and examinations.

From 8d. to 1s. 4d. each Book.

FIRST TERM. Three Books, 8d. each.

Separate Sentences, the Simple Sentence, and very easy Constructions only.

SECOND TERM. Three Books, 1s. each.

Continuous Stories, with easy Adverbial Clauses.

THIRD TERM. Three Books, 1s. each.

The Accusative and Infinitive.

FOURTH TERM. Three Books, 1s. each.

Easy Latin pieces, modelled on easy Caesar.

FIFTH TERM. Three Books, 1s. 4d. each.

Easy Latin pieces, similar to Fourth Term, but a little harder.

SIXTH TERM. Three Books, 9d. each.

Easy Selections from Ovid, increasing in difficulty, to be read with the Books of the Fourth and Fifth Terms.

Exercises are given at the end of each Book, except the First and Sixth Terms.

RIVINGTONS' SINGLE TERM GREEK READERS.

With Notes and Vocabulary.

FIRST TERM. Three Books, 9d. each.

Sentences and Short Stories constructed with a view to illustrate the easy Accidence.

SECOND TERM. Three Books, 9d. each.

Easy Stories, with aids given to assist the learner in finding such irregular forms as occur.

THIRD TERM. Three Books, 9d. each.

Easy Selections from Xenophon, simplified.

RIVINGTONS' MIDDLE FORM CLASSICS.

Edited, with Maps, Introduction, and Notes.

Livy, Books I. and II.

By A. F. HORT, M.A., Assistant-Master at Harrow School. Crown 8vo, 2s. Each sold separately.

Scenes from Hercules Furens of Euripides.

By A. F. HORT, M.A. Crown 8vo, 1s. 6d.

The Retreat from Syracuse, from Thucydides, Book VII.

By W. H. D. ROUSE, M.A., Assistant-Master at Rugby School. Crown 8vo, 1s. 6d.

Pylos and Sphacteria, from Thucydides, Book IV.

By W. H. D. ROUSE, M.A. Crown 8vo, 1s. 6d.

The Siege of Plataea, from Thucydides, Books II., III.

By J. M. SING, M.A., Assistant-Master at St. Edward's School, Oxford. Crown 8vo, 1s. 6d.

Brasidas in Thrace, from Thucydides, Books IV., V.

By J. M. SING, M.A. Crown 8vo, 1s. 6d.

SCIENCE AND ART DEPARTMENT EXAMINATIONS.

BOOKS SUITABLE IN THE ORGANIZED SCIENCE SERIES.

FOR THE ELEMENTARY STAGE.

2s. each Volume.

FIRST STAGE MECHANICS (SOLIDS). By F. ROSENBERG, M.A., B.Sc. *Second Edition.*

"Mr. Rosenberg has catered to the wants of South Kensington students with great skill and clearness."—*Educational News.*

FIRST STAGE MECHANICS OF FLUIDS. By G. H. BRYAN, Sc.D., F.R.S., and F. ROSENBERG, M.A., B.Sc.

"This book is intended for the use of candidates for the Elementary Stage in the Science and Art Department Examination; but it will be found a useful manual for any class of beginners in the subject."—*Journal of Education.*

FIRST STAGE SOUND, LIGHT, AND HEAT. By JOHN DON, M.A., B.Sc.

"The facts and phenomena belonging to the branches of physical science named in the title of the book are clearly described and with due attention to experiment."—*Nature.*

"A thoroughly practical book for the Elementary Stage."—*Board Teacher.*

FIRST STAGE MAGNETISM AND ELECTRICITY. By R. H. JUDE, M.A. (Cantab.), D.Sc. (Lond.).

"Dr. Jude's treatment is lucid and able. The book is calculated to initiate the student into the mysteries of the subject thoroughly, and as speedily as is consistent with thoroughness. We hold the book in high esteem."—*Practical Teacher.*

FIRST STAGE INORGANIC CHEMISTRY (Theoretical). By G. H. BAILEY, D.Sc. Lond., Ph.D. Heidelberg. Edited by WILLIAM BRIGGS, M.A., F.C.S.

"A good, straightforward, and accurate manual, written in accordance with the requirements of the Elementary Stage Syllabus of the Science and Art Department."—*Schoolmaster.*

FIRST STAGE PHYSIOGRAPHY. By A. M. DAVIES, A.R.C.S., B.Sc., F.G.S.

"This volume is admirably written and well illustrated. It will form one of the best text-books to be obtained for preparation for the May Examination in the Elementary Stage."—*Teachers' Monthly.*

FOR THE ADVANCED STAGE.

3s. 6d. each Volume.

SECOND STAGE MATHEMATICS. Being the additional Algebra and Euclid with the Trigonometry required for the Second Stage. Edited by WILLIAM BRIGGS, M.A., F.C.S., F.R.A.S.

"Thoroughly suited to the requirements of the examination."—*Guardian.*

ADVANCED MECHANICS. By WILLIAM BRIGGS, M.A., F.C.S., F.R.A.S., and G. H. BRYAN, Sc.D., M.A., F.R.S. Vol. I., Dynamics. Vol. II., Statics. *Second Edition.*

"The student who wishes to face the South Kensington examination with a cheerful countenance should master this well written *rule mecum*, than which no better treatise has come under our notice."—*Practical Teacher.*

ADVANCED HEAT. By R. WALLACE STEWART, D.Sc. Lond. *Second Edition.*

"Students for the Advanced Stage will find this book suitable for their purpose. The statements are accurate, the style clear, and the subject matter up to date."—*Education.*

ADVANCED INORGANIC CHEMISTRY. By G. H. BAILEY, D.Sc. Lond., Ph.D. Heidelberg. Edited by WILLIAM BRIGGS, M.A., F.C.S., F.R.A.S.

"This is a well planned and well executed sequel to the same author's elementary work. The work meets the requirements of the Science and Art 'Advanced Stage,' and we can recommend it."—*Educational Times.*

Price 1s.

FIRST STAGE INORGANIC CHEMISTRY (Practical). By F. BEDDOW, Ph.D., D.Sc.

"The student who conscientiously works through the book will find no difficulty in satisfying the examiners."—*Journal of Education.*

"An excellent guide for the beginner in practical laboratory work. The instructions are very clear."—*Educational Times.*

Price 1s. 6d.

PRACTICAL ORGANIC CHEMISTRY. By GEORGE GEORGE, F.C.S.

"The book is evidently written by one conversant with the subject, and students can depend on the various tests and methods of analysis as those most suitable for the purpose."—*Pharmaceutical Journal.*

FORECASTS AND COMMENTS.

September 1, 1899.

THE BISHOP OF LONDON has consented to take the Fixtures. chair at the next public Distribution of Diplomas, Certificates, and Prizes awarded by the College of Preceptors. The Distribution will take place at the College on October 26, at 3 p.m.

* * *

We repeat our announcements of last month that the next Professional Preliminary Examination of the College of Preceptors will begin on September 5, and that the first of Mr. Barnett's course of lectures on "The Practice of Education" will be given at the College on September 22.

* * *

THE next Certificate Examination of the College of Preceptors has been fixed to begin on December 5, and the next Diploma Examination on January 2.

* * *

THE autumn conference of the Association of Chambers of Commerce of the United Kingdom will be held at Belfast on September 5 and 6. The Birmingham delegates will move that an application should be made to the Government that equally liberal Government grants may be given to commercial subjects as are at present given to the science subjects in all schools to which such grants are voted.

* * *

THE Civil Service Commissioners announce that an open competitive examination will be held in London in October next for two student interpreterships in Her Majesty's Consular Service in the Levant. Candidates must be between eighteen and twenty-four years of age, and physically qualified for service in Eastern countries.

* * *

EVERY ONE, we suppose, except the Governors of Grantham Grammar School, is content with the decision of the Charity Commissioners in regard to the dismissal of the assistant-masters last December. The only wonder is how any one could have supposed that assistants could be legally dismissed without notice on the appointment of a new headmaster. The declaration of the Commissioners may serve to protect other assistant-masters against similar injustice.

* * *

THE raising of the fees at Harrow seems to be an arbitrary proceeding. Whatever may be the supposed necessity for such a step, one cannot have any sympathy in these days with those who increase the cost of education, even in a school professedly adapted for rich men's sons. The vulgarity of plutocrat swagger is doubtless costly, but it has nothing in common with true education.

* * *

THE division lists of the Oxford Local Examinations show that 6,309 candidates have obtained certificates, as against 7,071 last year. The change is manifestly in the right direction. The comparative facility of the Oxford and Cambridge examinations has long been a matter of comment. The total number of candidates examined by Oxford this year was 9,442, so that the percentage of passes is still over 66·8.

* * *

THE Scottish Education Department have acknowledged the

protest of Gordon's College, Aberdeen, against a proposal of the School Board to erect a free higher-grade school in its neighbourhood, and have stated that, if the School Board should submit plans for such a school, the Department would receive a deputation from the Governors of the College.

* * *

THERE is something in the nature of a precedent in this case. The College Governors demand, on grounds of equity, either that the erection of the higher-grade school shall be prevented altogether, or that they shall receive a public grant sufficient to enable them to abolish their fees. In other words, it is not competition which is objected to, but the extinction of efficient fee schools by State-supported free schools.

* * *

WE shall soon have plenty of such cases in England. By all means let us have free secondary schools, built and supported by public money. But, in that case, every existing secondary school which can show its entire efficiency, and which lives by fees, has a right to claim either the barring of a free school in its own district or a grant equivalent to the fees.

* * *

WE need hardly say that the problems in England and Scotland are not identical. Thus, the last report on the inspection of higher-class schools in Scotland, and on the examination for the Leaving Certificate, states that the higher schools inspected were this year 85 in number, of which 31 are higher-class public schools under the management of School Boards, 25 are endowed schools, and the remainder are under private management—whether that of a governing body or a proprietor. The proportion in England, at all events as to higher-grade Board schools, is vastly different from this.

* * *

SCOTLAND affords us another precedent in regard to the public inspection of secondary schools. Sir Henry Craik points out that the Education and Local Taxation Account (Scotland) Act provides funds for the purposes of inspection and examination, and it has thus far been possible, in all ordinary cases, to relieve the schools and the candidates at the Leaving Certificate Examination from the fees formerly exacted. Unfortunately, however, "in view of the increase of the work, it may be necessary, in spite of every effort to curtail expenses, to make such a charge in order to prevent an undue deduction from the amount available for distribution for secondary education."

* * *

THE Research Fellowships founded by the Salters' Company and the Leathersellers' Company for the encouragement of higher research in chemistry in its relation to manufactures, tenable at the City and Guilds Central Technical College, being now vacant, the Executive Committee of the City and Guilds of London Institute will, before the commencement of next session, consider applications and elect candidates. The grant made by each of the companies to the Institute for this purpose is £150 a year. Copies of the schemes under which the Fellowships will be awarded may be had on application to the Honorary Secretary of the Institute, Gresham College.

Appointments
and
Vacancies.

LORD MORRIS has been elected Vice-Chancellor of the Royal University of Ireland, in succession to the late Right Hon. Christopher Redington.

* * *

THE Directorship of the Natural History Department of the British Museum has been vacated by the death of Sir William Flower, F.R.S.

* * *

DR. J. E. H. STARLING, F.R.S., has been appointed to the Jodrell Professorship of Physiology at University College, London, in succession to Prof. E. A. Schäfer.

THE University Court of St. Andrews have appointed Dr. Sutherland, Assistant-Professor of Pathology, Glasgow, to the Chair of Pathology, in succession to Prof. Muir, recently transferred to Glasgow.

* * *

THE death is announced of Dr. Balmain Bruce, Professor of Theology in the Free Church College at Glasgow; also of Dr. David Johnston, Professor of Biblical Criticism in Aberdeen University. Dr. Johnston was recently superseded in his duties by Dr. Gloag, but declined to resign his legal position as Professor.

* * *

THE governing body of the City of London College have elected Mr. Sidney Humphries, LL.B., to be Principal of the College, in succession to Prebendary Whittington, resigned.

* * *

MR. F. W. THURLOCK, B.A., B.Sc., Principal of the Swindon Technical College, has been elected to the Principalship of the Derby Municipal Technical College.

* * *

THE Principalship of King William's College, Castletown, Isle of Man, is vacated by the sudden death of the Rev. F. B. Walters; and the Headmastership of Goole Grammar School by the sudden death of Mr. Biggadike.

* * *

THERE are vacancies for an Assistant-Lecturer in Classics at Mason College, Birmingham, and for an Assistant-Lecturer in Logic and Philosophy at Aberystwyth University College.

* * *

THE Headmastership of Kidderminster Grammar School, worth about £500 a year, which recently fell vacant, has been filled by the election of the Rev. H. de B. Gibbins, Litt.D. Dublin, M.A. Oxford, Headmaster of Liverpool Grammar and Commercial School.

THE "Dictionary of National Biography" reaches this month its sixtieth volume, which brings us towards the middle of the letter W. Three or four more volumes will end the alphabet, and then there is to be a supplement containing the names of men and women who have died too late to take their turn in the original series, which began its course in 1885. A combined index of names, with dates and short descriptions, will complete this splendid work in the second or third year of the twentieth century.

* * *

THE *Times*, in its capacity as publisher of big "remainders," having successfully disposed of an Encyclopædia, and having undertaken to perform the like office for the American "Century Dictionary," has set a host of collaborators on the compilation of a detailed index to the latter work. As a rule, an alphabetical dictionary does not need an alphabetical index; but, no doubt, in this case purchasers will be glad to have an additional guide to a somewhat complicated mass of information.

* * *

WE do not yet seem to have exhausted the zeal of the nineteenth century for voluminous dictionaries and encyclopædias. A new big thing is promised us from America, "considerably larger than any similar publication." The Harper-McClure Encyclopædia is to be estimated, therefore, at least in part, by cubic measure—a sort of preliminary table of contents.

* * *

MR. CHARLES WELCH appeals to the readers of the *American Critic* to supply him with "old nursery rhymes and jingles and descriptions of different kinds of children's playing games" distinctly American in their character. He wants to show "how far America has gone in the way of evolving a national nursery literature of its own." Of nigger lullabies there is, we believe, a great store in Dixie-land. The records of the old colony days, further north, should be rich in nursery lore; but much of it must date back to an English origin.

THE John Rylands Memorial Library at Manchester will be formally opened early in October. The magnificent building in Deansgate, which has been erected by Mrs. Rylands in memory of her husband, contains the famous Althorp Library, which she purchased seven years ago from Earl Spencer, in addition to a large number of valuable books otherwise acquired. We have received an early copy of the catalogue prepared by Mr. Gordon Duff, one of the librarians.

* *

WE mentioned last month the Winchester memorial to Miss Charlotte Yonge. Another memorial to a popular woman writer of stories for the young has been raised in honour of the late Mrs. J. H. Ewing, author of "The Brownies," "Jack-anapes," &c. The fact has been recalled that Mrs. Ewing's husband was the writer of the familiar hymn tune of "Jerusalem the Golden."

* *

THE Society of Comparative Legislation has taken in hand what should be an interesting, and will certainly be a useful, work—the indexing of all the laws of the British colonies. As these laws not infrequently afford precedents and models for Imperial Acts of Parliament, there is good reason why we should know as much about them as possible.

THE AMERICAN SCHOOLGIRL IN 1830.

BOOKS, like other things, find their own level, and, among the books of a household, there are always a certain number which inevitably shrink into modest retirement at the back of our bookshelves. The front places we reserve for those companions, guides, and friends whose advice and comfort, stimulus and entertainment are in constant demand. Here, as elsewhere, of course, there is much diversity in choice of friends. There are some among us who would never dream of having the "Autocrat of the Breakfast Table" out of sight or hearing. The poets should always be within call. Charles Dickens used to be sure of a reserved seat in the front row of the shelf, though it is said that he is moving gradually to the back in the present generation; and nobody can afford to waste time looking for Robert Browning, since all we have at our disposal is needed for his understanding when found. But books bearing such titles as "Youthful Pilgrims," "Lectures to Young Men," and "Watts's Hymns" we can cheerfully dispense with on ordinary occasions; and these are relegated to cool, dark recesses, and left, for the most part, to themselves.

Yet sometimes, in the spring of the year, these neglected volumes are brought once more to the light, and occasionally we find among their number unexpected treasures, relics of a bygone day, which has its own interest, and bears, moreover, a relation to our own time not to be overlooked. Turning over, the other day, such a pile of forgotten books, I came across a quaint little volume bound in red and gold, and bearing the following old-world title: "Mrs. Phelps's Female Student; or, Lectures to Young Ladies on Female Education, for the Use of Mothers, Teachers, and Pupils." Mrs. Elizabeth Phelps was, in fact, the Vice-Principal of Troy Female Seminary (New York, U.S.A.), and this small book consists of a series of lectures delivered by her to the pupils of the institution during the years 1830-31.

To-day America is renowned for the number of her "college-women," and it is interesting to see the small beginnings of women's higher education in America so early as 1831. As some of the two hundred pupils of the "seminary" were preparing themselves to become teachers, and others were quite young children, Mrs. Phelps had to cast her net somewhat wide, and a consideration of the number of subjects dealt with in these lectures is well calculated to have a humbling and chastening effect upon any airy young specialist who confines herself to the teaching of history, mathematics, or modern languages. The object of the lectures, as we learn from the preface, was "to awaken in the minds of the pupils habits of thought with respect to the nature and design of education and the practical application which ought to be made of the various branches."

Besides general remarks on education as a whole, Mrs. Phelps discourses on physical, intellectual, and moral culture, on religious education, and on teaching as a profession. She takes a bird's-eye view of the history and substance of languages, ancient and modern. She discourses with equal ease on history, geography, and heathen mythology (the last with a certain apologetic manner); on astronomy, chemistry, and geology; on mathematics and *belles-lettres*. Nothing, in short, comes amiss to this learned lady, and she confesses to having personally instructed pupils in most of the sciences she surveys in the course of her lectures. Troy Female Seminary was, in fact, a pioneer institution. Its founder was Mrs. Emma Willard,

who, in 1818, published a little book in which she sketched the plan of a girls' public school to be founded and endowed by public money. Mrs. Willard was encouraged to petition the New York Legislature in favour of her scheme, which, though it produced considerable discussion in that body, did not find general favour there.

A few of the more progressive members shared Mrs. Willard's view that girls' education had as much claim on the State as that of their brothers; but the majority feared that "masculine studies would spoil the gentleness of their disposition, produce in them a desire to rival men, and disturb the established order of society." "Learning," said they, "would not help them to knit stockings or make puddings"; and that was considered final. The Bill for endowment of a girls' public school was defeated, and it was left to the generosity and public spirit of Troy City to enable Mrs. Willard to put her schemes into practical form in a suitable building, with proper equipments. By 1830 the institution had so thoroughly established itself that we find Mrs. Willard able to take a holiday in Europe, leaving her two hundred pupils to the charge of Mrs. Phelps.

Perhaps the main interest of the book for us is to be found in the comparison it affords between present day educational manners, if one may so speak, and those of sixty years ago. Morals, we are told, change far less slowly than manners, and Mrs. Phelps's educational manners are certainly not those of our own day. Her instruction is set in an entirely different key from that which we are accustomed to in a modern high school, and it is perfectly impossible to imagine a class of thirty modern matter-of-fact young persons listening to any of Mrs. Phelps's admirable discourses. We find in these lectures, as in many old school-books, a curious mixture of technical information and direct moral instruction—a zeal to "improve the occasion."

In a lecture dealing, amongst other things, with the circulation of the blood, the lecturer remarks: "The good old custom of former times of knitting and weaving woollen has given place to *idleness* and cotton and silk hose. . . . A young lady who, induced by the vanity of displaying a delicate foot, appears abroad in cold or damp weather with a stocking and shoe fit only for walking over a drawing-room carpet may succeed in attracting admiration, but she will not fail of receiving severe censure for her imprudence. What man of sense would wish to marry a female who had no prudence with regard to her health?" That little touch at the end, as to the effect of such conduct on the hypothetical husband of the future, is quite early Victorian. It reminds one of Mr. Ruskin's odd advice on the education of girls: "Speaking broadly, a man ought to know any language or science he learns thoroughly; while a woman ought to know the same language or science only so far as may enable her to sympathize in her husband's pleasures and those of his best friends." Nobody, by the way, has ever suggested how a practical teacher is to decide what will be the problematical interests of that problematical husband and his problematical friends. Mrs. Phelps's language is distinctly ornate, not to say sentimental. One is bound to confess that she is shockingly lacking in a sense of humour. Had she possessed that invaluable quality, she would scarcely have addressed her pupils thus: "We would not that you should be like the butterfly, who, when on giddy wing she has sported away the short summer of youth, sinks into oblivion; but like the evergreen, which seems brightest and most beautiful when frosts prevail," &c. The comparison of a schoolgirl to an evergreen is irresistible, and no modern teacher would risk it if she wished to preserve the gravity of her class.

The adjectives "elegant" and "amiable" have no longer their old and favoured place in our vocabulary, but Mrs. Phelps desires all her pupils to be "amiable." She does not often call a spade a spade. The sky is spoken of as "the brilliant canopy of heaven." Moss is described as "a verdant carpet." The young ladies of Troy are "eager to pluck the rosebuds of delight with which the world is tempting" them. It is all very quaint and old-fashioned, reminding one of flowered chintzes, wool-work pictures, and the days of crinoline.

During the lecture on botany, Mrs. Phelps remarks that "the cultivation of flowers has a most happy effect upon the disposition. To the cheerful they suggest images of hope and happiness, and to the disturbed mind they seem to have a power of imparting serenity." There is evidence that the young ladies did get a little bored sometimes by good Mrs. Phelps's flowery speeches and moral lessons, for she asks sadly on one occasion: "How often are the minds of pupils slumbering in torpid inactivity while others are exerting all their energies to impart instruction to them?" We have, indeed, more than one hint that the young ladies of Troy seminaries were very like their present-day sisters of many an English boarding school. On one occasion, Mrs. Phelps delivers a solemn address on character to her pupils, dividing them into the following four classes: (1) The idle and careless. (2) The gay and fashionable. (3) The moral. (4) The pious. A dark picture is drawn of the idle and careless pupil, who on a Wednesday or Saturday morning might be found "sitting by a basket of nuts, fruit, or confectionery, her dress slatternly, her hair disordered, and the appearance of the apartment in harmony with that of its mistress." The effects of such conduct are traced in the headache with which "our young miss" awakes next morning, and her "degraded sense of her own mental inferiority" at the hour for recitation. We might follow the same pupil to the public examination

and see her exposing her ignorance, to the chagrin of her friends, the mortification of her teacher, and her own confusion.

The "parent," too, seems familiar to us. "Sometimes, one who brings to the seminary a bold and conceited girl informs us that his daughter is excessively diffident, and needs to be brought forward and encouraged. Children of dull intellects are committed to our care as remarkable geniuses, who will be in danger of injuring themselves through an excessive love of study. One, destitute of any natural capacity for comprehending either time or tune, is recommended for her fine talents in music." "These mistakes," adds Mrs. Phelps, "are far from being confined to ignorant parents; parental blindness often falls upon those who, in other respects, are wise and enlightened."

In reviewing the field of knowledge in her series of lectures, Mrs. Phelps is always very careful to note the effect of any particular study upon the "female mind." Ancient languages are not recommended for their study, except where circumstances permit a liberal course of education. Where the circumstances of the parents permit it, "girls as well as boys should be put to the study of Latin as soon as they are able to read intelligibly"; but "it is not to be expected that, among the many pursuits to which the female mind must be directed, many young ladies will acquire that facility in reading Latin which is necessary to the enjoyment of its classical literature." "But," continues Mrs. Phelps, in a burst of enthusiasm and daring, "a knowledge of the principles on which this noble language is constructed and a limited acquaintance with its beauties are invaluable. Why should these be denied to us merely because we are women?" And she looks forward to the time when "females may be allowed to read Virgil, or even Homer, with as little cause for blushes as if they were working lace or embroidering muslin."

Mrs. Phelps is not encouraging in the examples she chooses for her young ladies' imitation. At the end of this lecture we meet with a young lady, "Elizabeth Smith, of England," who early showed a great desire for instruction, and devoted that time which is often spent in trifling amusements to the acquisition of knowledge. We learn that, "under adverse circumstances of fortune, she early learned the Spanish and Italian languages and became familiar with geometry. She acquired the German, Latin, Greek, and Hebrew languages, and made considerable progress in the Persian and Arabian. She was a very fine musician, and remarkable for her attention to domestic employments, and for her delicate taste in dress, displaying as much skill in making a gown or cap as in explaining a problem in Euclid, or a difficult passage in Hebrew."

The mind is paralyzed by the accomplishments and graces of Elizabeth Smith, of England; but one thing yet remains to be told. This paragon of all the virtues was called to an early grave. And small wonder! One can imagine the spirits of the Troy young ladies falling, falling, till this point in the story was reached. Naturally, their faces would brighten appreciably here, because the moral is obvious, viz., that if Elizabeth Smith had devoted more time to trifling amusements, and lopped off half-a-dozen languages or so, she might have been living still and enjoying life. Was it not a solemn warning against undue eagerness for study and linguistic ambition? Poor Mrs. Phelps! But there is no denying that her knowledge was encyclopædic. After a comprehensive lecture on natural science, astronomy, and natural philosophy, she opens next time with the airy announcement: "I shall now proceed to give a general view of chemical science, with an outline of its history." Of geology she remarks: "To females, geology is chiefly important by its effect in enlarging the sphere of thought, rendering them more interesting as companions to men of science, and better capable of instructing the young." Arithmetic is insisted on as a necessary part of female education; for, says Mrs. Phelps, severely, "I should blush for any pupil of this institution who, after having studied arithmetic, even but a short time, should be found ignorant of the proper method of keeping an account or making a bill." But, hastening to do justice to any whom she may have appeared to undervalue, Mrs. Phelps adds: "It is far from my intention to depreciate those many excellent and elevated women who have honourably discharged their duties in life without a knowledge of mathematics."

The "young ladies" of Troy are warned against such employment of their time as the writing of stories, on the ground that "it is better for young ladies to occupy themselves with realities than to stray too much into the dangerous regions of imagination." But, if Mrs. Phelps was tried by the "idle and careless" or the "gay and fashionable" pupil, there were those among the young ladies of the seminary who rejoiced her heart by their virtues and their intellectual worth. Of these, "Jane Vail" may be taken as a shining example—only, alas! like Elizabeth Smith of England, she, too, found an early grave. Writing to her young friends two years after severing her connexion with them, Mrs. Phelps thus laments her loss: "Where is Jane Vail? She was not wont to be absent where instruction was to be had or a duty performed. First in her classes, and first on the conduct list, her presence was ever welcome and encouraging to her teachers. . . . Never, my dear young ladies, did a look or an action unbecoming the occasion appear in Jane Eliza on the public assembling of the school. New scholars will hear of her patient industry, her attention to rules, and her attainments, and many, it is to be hoped, will be emulous to

follow her example." One wonders how far the young ladies of Troy were responsive to Jane Eliza's example, and the sanguine spirit of Mrs. Phelps.

THE SECOND RICHARD.

A HOLIDAY EXCURSUS.

ON August 21, just five hundred years ago, Richard II. of England delivered up his state and crown into the hands of his rival, Henry Bolingbroke. A happy idea prompted Mr. F. R. Benson to celebrate the historic date with a representation by his company of Shakespeare's play in the grounds of Flint Castle. The lovely ruins, dating probably from the days of the first Edward, overlook the estuary of the River Dee, and on this self-same spot the surrender of the ill-fated King did actually take place. It is a far cry from the end of the nineteenth century to the storm and stress of those troublous times; and, if the pathetic figure of Richard Plantagenet stands out for us still, the chief credit is due to Shakespeare.

Among the plays of Shakespeare his "Richard II." is of the lesser known; yet it contains rare gems of utterance, passages and whole scenes whose beauty and pathos are worthy to rank with the finest of the poet's achievements. Despite occasional blemish of style, absent from works of a later date, most readers must endorse the *dictum* of Coleridge, no mean critic: "It is the most admirable of Shakespeare's purely historical plays." For acting purposes it has been almost entirely neglected, falling of late years into complete abeyance. It is practically a one-part piece; but many of the speeches put in the mouth of the deposed monarch are brilliant examples of rhetoric, affording plenty of scope to a tragedian. Some of the scenes are strong in dramatic effect, notably the impressive one in Act iv. where Richard is forced to resign his power. Shakespeare's chief authority throughout was, without doubt, Holinshed, who gives us a graphic and complete picture of all the circumstances leading up to the culminating tragedy.

The whole story of the brief and troubled rule of the unfortunate Plantagenet is one that merits dramatic setting. At the hour of Wat Tyler's rebellion in 1381, we can see the boy-King, son of the well-loved Black Prince, fearless and confident with the sublime confidence of youth, riding out to address the seething, shouting mob: "I am your King and Lord, good people! What will ye?" "We will that you free us for ever, us and our lands," is the cry, "and that we be never named nor held for serfs." "I grant it," said Richard. And, bidding them disperse to their homes, he pledged himself to issue charters of freedom and amnesty. Again, the next morning, when Tyler lay smitten to earth by the blow of Walworth the Mayor, "What need ye?" cried the boy, riding boldly into their midst. "I am your Captain and your King! Follow me." And they followed him in pathetic trust and loyalty. Indeed, the desire to free him from the nets thrown about him by the bad counsellors who, in their eyes, took advantage of his youth was no small cause of their uprising. To his mother, who came weeping to meet the lad, he called out in the flush of his pride: "Rejoice and praise God! for I have recovered to-day my heritage which was lost, and the realm of England." It is a memorable picture, this of the young Richard all aglow with the hopes and the ardour of first youth, at the head of the ignorant, adoring crowd. And it touches hearts the more nearly beside that companion picture of the disgraced, abandoned man, humbled to the dust, sitting forlorn among the ruins of his dream.

As matters fell out, it was not till 1388, when the King was twenty-two years old, that he finally found himself strong enough to demolish the government of his uncles, against which he had made battle so long. Parliament had declared his grant and letters of 1381 to be null and void according to the law. The serfs were their goods, said they, and the King could only take them by their consent. The rebellion was put down with a heavy hand; but such pacification by brute force could be but skin deep. Sedition seethed beneath.

It is admitted that for nine years the young King often wielded his power wisely and well. But the age was one of social revolt, of religious and moral upheaval. The misery of the serfs is limned for us in the living pages of William Langland. Richard's reign had fallen on evil times. Moreover, his generous nature and brilliant capabilities were spoiled by his fickleness and instability of purpose, by overweening ambition, and a spirit of fierce revenge against his many enemies. By making himself to all appearances an absolute monarch, gradually he lost the nation he had won. We are told that he alienated all classes alike. "He had estranged the nobles by his peace policy, the landowners by his refusal to sanction the insane measures of repression they directed against the labourer, the merchant class by his illegal exactions, and the Church by his shelter of the Lollards." So his good deeds and had alike rose up against him.

Shakespeare's play opens with a sketch of the famous dispute between Henry Bolingbroke, Duke of Hereford, and Thomas Mowbray, Duke of Norfolk, and the King's arbitrary adjustment thereof—a ruling that was to cost him dear. He availed himself, we are told, of the quarrel, in which each made accusations of treachery against the other, to banish both. So he produced a clever, unscrupulous

leader to head the national discontent. In the first scene of the second Act we have the old John of Gaunt's fine denunciation of his nephew's abuse of power: "Methinks I am a prophet now inspired," &c., with its panegyric of England: "This precious stone set in the silver sea." The seizure of his estates on the death of the Duke of Lancaster put a fresh match to the fast kindling discontent at the King's illegal measures. Holinshed tells us that Richard's uncle, the Duke of York, "was therewith sore amoued, who before this time had borne things with so pacient a mind as he could, though the same touched him very neare, as the death of his brother, the Duke of Gloucester, the banishment of his nephewe, the said Duke of Hereford, and other mo injuries in greato number, which, for the slippery youth of the king, hee passed ouer for the tyme, and did forget as well as he might."

Act III. brings us up to the crisis. The scene is laid before the "Castell of Flint." The whole of the gradual awakening of the King to the bitter truth is evolved with the masterly touch of the consummate artist. The situation lends itself admirably to dramatic treatment. "The King," says Holinshed, "that was walking aloft on the brayes of the walls . . . myghte see that the Archbysshoppe and the other were come, and as hee tooke it to talke with him: where-upon hee forthwith came down unto them, and, beholding that they did theyr reverence to hym on theyr knees, hee tooke them up, and, drawing ye Archbysshop aside from the residue, talked with hym a good while, and as it was reported, the Archbysshoppe willed him to bee of good comforte, for hee should be assured, not to have any hurte, as touching his person, but hee prophesied not as a Prelate, but as a Pilate, as by the sequela it well appeared." This refers to the cruel trick by which Richard was made to yield up his rights to Bolingbroke. Invited to a conference with the Duke of Lancaster, he found himself hemmed in by the rebel forces.

The speech of Richard in Sc. ii., Act III.—

"No matter where; of comfort no man speak"

--where first he fully realizes the extent of the treachery towards him, is full of pathos. Cf.

"For within the hollow crown
That rounds the mortal temples of a king
Keeps Death his court, and there the antic sits,
Scolling his stato and grinning at his pomp," &c.

And no less memorable is that in Sc. iii.—

"What must the King do now? Must he submit?"

--when he asks but for a grave,

"A little, little grave, an obscure grave," &c.

The tragic elements of the downfall are fully seized by the dramatist. He powerfully attracts our sympathies to the King, and, in his representation, loses no opportunity for sadness, scathing sarcasm, anger, indignation, outraged majesty, wounded pride, bitter humiliation, and despair. It is a rôle to run the gamut of emotion. And through the genius of an artist's brush the face of Richard rises for us out of the mists of the past, sorrow-shrouded and dignified withal.

The passages that cling to the memory are too numerous to quote. The dramatic scene of the deposition, afore-mentioned, abounds in such lines. Cf. the whole of the abdication speech commencing:

"Ay, no; no, ay: for I must nothing be;
Therefore, no, no, for I resign to thee.
Now mark me how I will undo myself," &c.

Also the touching lines:—

"Yet I well remember
The favours of these men: were they not mine?
Did they not sometime cry 'All hail!' to me?
So Julius did to Christ: but He, in twelve,
Found truth in all but one; I, in twelve thousand, none."

And again:—

"Mine eyes are full of tears; I cannot see:
And yet salt water blinds them not so much
But they can see a sort of traitors here.
Nay, if I turn mine eyes upon myself,
I find myself a traitor with the rest;
For I have given here my soul's consent
To undeck the pompous body of a king;
Made glory base and sovereignty a slave,
Proud majesty a subject, state a peasant."

Act v. contains the pathetic parting between the King and his faithful Queen, Isabella, daughter of Charles V. of France. And, in the fifth and last scene, where Richard is a prisoner in Pomfret Castle, he gives utterance to the long contemplative speech containing the fine passage:—

"Music do I hear?
Ha! ha! keep time: how sour sweet music is
When time is broke and no proportion kept!
So is it in the music of men's lives," &c.

The tragedy culminates in the murder of the unhappy monarch by

the knife of Exton, but not before, turning at bay, he has smitten down two of the latter's accomplices, valiant to the end.

There is a true touch in Bolingbroke's subsequent grief and indignation:—

"Though I did wish him dead,
I hate the murderer, love the murdered.
The guilt of conscience take thou for thy labour," &c.

Corruptio optimi pessima. The crimson flower of youth lies grey and withered in the dust; the golden hopes of dawn are faded into night. There were elements of greatness in Richard II. Had Fate willed his reign to fall in smoother days, he might have made a better king. But his position was one to summon out rather his evil tendencies, all more or less the *défauts de ses qualités*.

Aristotle has told us that one of the two greatest means whereby Tragedy casts her spell are the sudden turns of fortune—the *περιπέτειαι*. And by this test the tragic tale of Richard Plantagenet, when we see his

"glory like a shooting star
Fall to the base earth from the firmament,"

his humiliation, imprisonment, and early death, was worthy of dramatic treatment at the hands of our greatest playwright.

REVIEWS.

A GOSSIP ON PSYCHOLOGY.

Talks to Teachers on Psychology, and to Students on some of Life's Ideals. By William James. (Longmans.)

A book from Prof. William James is always welcome to teachers, who, it must be confessed, very rarely get a professional work that is at once useful and flavoured with humour. Such a statement of the leading conclusions of psychology (in so far as they affect the work of teachers), put forth in a readable form with the minimum of technical terms, phraseology, and classification, is exactly what has been needed by students in training and young teachers generally for many years. They have extensively used the author's earlier books, with judicious skipping, and here at last they have the work in a handy inexpensive form, with no need to skip. Indeed, the cutting-down has been rather too rigorous, and we regretfully miss the wealth of illustration and anecdote that makes his larger works on psychology so valuable. Perhaps in a later edition the space now devoted to "Talks to Students" may be used for enlarging the more strictly psychological portion. These "Talks" on the "Gospel of Relaxation," "Blindness in Human Beings," and "What makes Life Significant," however alluring the topics, are out of keeping with the main subject of the work, which, with some modifications, might become a permanently useful handbook.

Prof. James sets out with a very clear definition of the place psychology holds in the equipment of a teacher. He disclaims for it any power in itself to make a good teacher. "Psychology is a science, and teaching is an art; and sciences never generate arts directly and of themselves. An intermediary inventive mind must make the application, by using its originality." And later on: "Psychology can state the laws; concrete tact and talent alone can work them to useful results." It is one of the oddities of the teaching profession that such a disclaimer needs reiteration, when, in a parallel case, no one imagines that the study of medicine will of itself produce the sympathetic voice and touch, the bedside manner, and the hundred things that go to make a good doctor. As for original research, with all the apparatus for child-study and experiments for testing the senses and the memories of pupils and collecting statistics—all this, according to Prof. James, is quite outside the province of a teacher, and he makes some very trenchant remarks as to the net results of these now so fashionable pursuits. He then proceeds to lay down—or, rather, suggest and hint at—some conclusions of psychology on the subjects of Instinct, Attention, Association, Will, &c., in an easy, haphazard way, with delightfully apt illustrations, applications, personal confessions, and moral reflections on things in general. The sins are chiefly sins of omission. The difficult subject of Reasoning, eminently practical and important for teachers, is left untouched; Feeling fares little better (by the way, is Prof. James recanting from his former extreme position in this subject?); the chapter on Apperception is amusing, but totally inadequate for giving the reader any such grasp of the point as was given in the author's earlier text-book under the head of Perception. In short, the book as a whole is tantalizingly meagre, the chapters on Habit and Memory being the only ones that are full enough

to be really useful. Had the other chapters been worked out on this pattern, the book would have left little to be desired.

One small blemish is a very occasional turbidity of language, especially disappointing in a book which tilts against technical formality. For instance, what does this sentence convey?—"Whatever of transmundane metaphysical insight or of practically inapplicable aesthetic perception or ethical sentiment we may carry in our interiors might be regarded as only part of the incidental excess of function that necessarily accompanies the working of every complex machine." But, in spite of such blemishes and omissions and inadequacies, the book is a treat, if only for the incidental hits at many of our modern fads. To take one instance, the namby-pamby methods of some kindergartens are exposed delightfully by this fragment: "I heard a lady say that she had taken her child to the kindergarten, 'but he is so bright that he saw through it immediately.'"

AN ENTOMOLOGICAL PRIMER.

Insects: their Structure and Life. A Primer of Entomology. By George H. Carpenter, B.Sc. Lond. (Dent & Co.)

The author of this book remarks somewhere on the fact that, of all the divisions of animal life, it is the order of insects which more particularly forces itself on our attention, whether indoors or out. Partly owing to this, no doubt, is the existence of a very extensive literature on the bionomics, &c., of this branch of the arthropod family. Moreover, the study of insects is so intimately connected with important practical questions—e.g., with the transmission of disease, the raising of grain, and various branches of commerce—that the place occupied by a seemingly less significant order of animal life is out of all proportion even to the actual room taken by insects in the world. The extreme age, too, of the insect in geological history gives an additional interest. It is hard to realize that when, as Mr. Carpenter says, "the mammals, now the dominant class of land-vertebrates, were small and struggling, and orders of huge reptiles, now quite extinct, lorded it on the continents, insects of the highest orders living to-day—Lepidoptera, Diptera, and Hymenoptera—were already flying through the air." The question of the origin of insects takes us back in point of time to an incalculably remote period.

In his last chapter the author gives an excellent brief summary of the conclusions at which he has arrived as to the place of insects in the animal world. The table on page 376, which shows the suggested relationship between the various insect orders and between insects and other arthropods, is very clear. On the very vexed question as to whether insects were originally aquatic or terrestrial, Mr. Carpenter is at pains to show that insects are primarily creatures of the land and the air. "It may be admitted readily," he says, "that life began in the water, and that to the waters we must go for the remote progenitors of insects. But the class, as we know it now, is composed of typically land animals"—the aquatic forms, it is held, being modified from their land relations—"and we have every reason to believe that its immediate ancestors were air-breathers."

As a handbook, Mr. Carpenter's volume is concise and well planned. He deals, in successive chapters, with the form and structure of insects, their life history, their classification, their various orders, their environment, and their pedigree. The "References to Literature" at the end make a very serviceable, though admittedly incomplete, bibliography of entomological literature: and there is an ample index, always a necessity in a work of this kind.

The plentiful illustrations must not be passed over without praise. Almost without an exception, they are excellently reproduced—some, like Fig. 172, are rather faint—and they furnish a most useful addition to the text. Mr. Carpenter was fortunate enough to secure the use of blocks from Prof. L. C. Miall's monograph on "The Cockroach" and from the publications of the United States Department of Agriculture, to mention only two of the sources from which his figures were obtained. The result is a set of illustrations fit to accompany a valuable text-book.

HISTORY IN SCHOOLS.

The Study of History in Schools. Report to the American Historical Association by the Committee of Seven. (Macmillan.)

Whether due to a lack of system or to the paucity of specialist teachers, history, as Prof. Bryce has said, "is, of all subjects which schools attempt to handle, perhaps the worst taught." This is undoubtedly true of English schools, and on opening this

book we turned to Appendix V., containing the report of Mr. George L. Fox on "History in English Secondary Schools," to find, however, that "the history teaching reflects the general characteristics of the whole school system, thoroughness and virility." That he should have remained to bless after an early discovery that an English master's form-room is his castle shows on his part much perseverance and no little charity. Fortunately we are, to some extent, cognisant of the defects of the provisions made for history teaching in our secondary schools, and masters in search of a remedy may derive much profit from this report made by seven American professors of history on the best means of improving the teaching of the subject in American schools.

The defects and faults in American schools are just those most patent here: no appreciation of the proper relation of general history to national; no system in the formation of the school syllabus; no proper adjustment or logical arrangement of the work done in different years and in different forms; no settled time value, and consequently no trace of uniformity in attainment even in schools of similar type; and, what is perhaps worst of all, no recognized method to guide the footsteps of the non-specialist teacher who at present does most of the history teaching. The advantages of a rigid and general system seem fully borne out by the account given of history in German *Gymnasien*, which appears as an appendix to the report. The German scheme, continued during the nine years of the pupil's career in the secondary school, embraces, firstly, legends from classical and German mythology; secondly, an elementary course of Greek and Roman history, followed by a first course of medieval and modern history; and, thirdly, a complete course of classical, medieval, and modern history, the last two branches being treated with special reference to German history. The first course takes up two years, and the last two courses four and three years respectively. Such an arrangement seems only common sense, and it is somewhat humiliating to have to travel to Germany for such an Anglo-Saxon commodity. It is true that, combined with geography, three hours a week are given up to the subject; but, as the result is a high uniform standard of history and geography knowledge in the students who enter the University, the expenditure of time is well repaid.

The main recommendation in this report is the adoption of a similar scheme for American schools, with the substitution of American history for German. Specialist teachers are strongly recommended wherever available, and the report contains some useful suggestions as to method and material for illustrations.

A PHILOLOGICAL FRENCH GRAMMAR.

A Historical French Grammar. By Arsène Darmesteter. Edited by Prof. E. Muret and Prof. L. Sudre. Authorized English Edition by Alphonse Hartog. (Macmillan.)

No language is more interesting to study for its historical development, from a definite source along plainly indicated lines, than French. To say that French is essentially identical with Latin, and not merely derived from Latin, is a perfectly justifiable statement; the mode and degree of divergence are manifest in the history of almost every word and every syntactical phrase. It was the aim of M. Darmesteter to set forth this divergence, and to exhibit in detail the actual process of development. He originally undertook the task as Professor of Historical French and Medieval French Literature at the Sorbonne, and cast many of his simpler illustrations into the shape of a course of historical grammar for the women students at the Higher Normal School of Sèvres. The subject grew under his hands, and he was preparing his "Grammaire Historique" for the press when he died. The completion and revision of his manuscript were undertaken by two of his Sorbonne pupils, MM. Muret and Sudre, now in their turn professors; and they have done their work very thoroughly, in the spirit of their teacher. It must be admitted that both they and the English translator, Mr. Alphonse Hartog, have put a liberal construction on the duty assigned to them, but mainly in the sense of an ungrudging contribution of labour. The outcome appears to be eminently satisfactory, and this book of nine hundred pages deals with nearly all the main constituents of the French vocabulary. As a rule, so far as etymology is concerned, it has been sufficient to place the Latin (classical or late), the early or medieval French, and the modern equivalent, side by side. Often, however, the development is reasoned out and explained, whilst, of course, the inflexional and syntactical changes are discussed in greater detail. We have little criticism to pass on the manner in which this laborious task has been

accomplished. Any book on the niceties of syntax must afford ample ground for debate on particular points. In M. Darmesteter's treatment of the infinitive we should have liked to see a little more direct appeal to the Latin uses. Some further assistance might have been gained, for instance, in § 449, from a consideration of the accusative-and-infinitive construction, of the prolativ infinitive, and of the simple substantival infinitive. We are not altogether satisfied with this remark: "In il le fait périr, the pronoun *le* is both the direct object of *fait* and the subject of *périr*. It follows that, in compound tenses, the participle *fait* ought to agree with the object when this precedes it." Apart from the doubtful accuracy of the first sentence, the second is scarcely in accord with modern literary usage.

On the whole, we welcome this book as one of the most important recent contributions to the study of historical French, and strongly commend it to the attention of serious grammatical students. The chapters on the Formation of Words and the Life of Words are exceptionally interesting; but, indeed, the volume in its entirety is more interesting and more significant than any recent work on French philology.

UNITED STATES HISTORY.

Source-Book of American History. Edited by A. Bushnell Hart, Ph.D. (Macmillan.)

The Professor of History in Harvard University makes an excellent contribution to the history of his country. He covers the ground by a series of one hundred and forty-five extracts from contemporary sources—in much the same way as Prof. York Powell did it some years ago for English history. His extracts are, on an average, less than three pages in length; they are all pertinent and characteristic, carefully cited and referred to their origins, and sufficiently annotated in the margin. This is the work of a genuine scholar, performed with true historic instinct, and at the same time very readable and attractive. It is not often that one can recommend an American school-book for use in English schools—partly owing to such a trivial cause as the liberties which American writers insist on taking with the normal English language—but we strongly recommend this volume as an aid to the study of American history and as a book for general reading.

The extracts on the period of "The Slavery Contest," between 1851 and 1860, are especially interesting. They include R. H. Dana's account of the rescue of Shadrach, T. H. Benton's criticism of the Kansas-Nebraska Act, Erastus Ladd's "Troubles in Kansas," Justice McLean on the Dred Scott decision, Senator Douglas on Lincoln, John Brown's last speech at the bar, A. Hamilton Stephens's defence of slavery as "the corner-stone of the Confederacy," and Abner Doubleday's narrative of the attack on Fort Sumter. We quote a passage from a speech of Stephens as Vice-President of the Southern Confederacy:—

Our new government is founded upon exactly the opposite idea; its foundations are laid, its corner-stone rests, upon the great truth that the negro is not equal to the white man; that slavery—subordination to the superior race—is his natural and normal condition. This our new government is the first in the history of the world based upon this great physical, philosophical, and moral truth. This truth has been slow in the process of its development, like all other truths in the various departments of science. It has been so even amongst us. Many who hear me, perhaps, can recollect well that this truth was not generally admitted, even within their day. The errors of the past generation still cling to many as late as twenty years ago. Those at the North, who still cling to these errors with a zeal above knowledge, are justly denominated fanatics. All fanaticism springs from an aberration of the mind—from a defect in reasoning. It is a species of insanity. One of the most striking characteristics of insanity, in many instances, is forming correct conclusions from fancied or erroneous premises. So with the anti-slavery fanatics: their conclusions are right if their premises were. They assume that the negro is equal, and hence conclude that he is entitled to equal privileges and rights with the white man. If their premises were correct, their conclusions would be logical and just; but, their premises being wrong, their whole argument fails.

This is a good instance of the historic value of many of these extracts; it illustrates the perverse conviction of the best Confederate partisans. An extract in another section from the narrative of a freed woman slave, who had seen her children "sold away" from her, one after another, by the white woman who owned her, and who, with infinite patience, saved up two hundred dollars in order that she might buy one of them for herself ("Oh, how many times that woman's broke my heart!")

puts the humanitarian side of the same great controversy, proving that white and black were equal after all, to the extent of their common humanity.

Prof. Hart is so keen for the comprehensiveness of his documents that he has introduced a few turbid and ungrammatical newspaper extracts; but it is a fault on the right side, and does not greatly detract from the value of the collection.

GENERAL NOTICES.

MATHEMATICS.

"Arnold's Mathematical Series."—*An Elementary Treatise on Practical Mathematics for Technical Colleges and Schools.* By John Graham, B.A., B.E. (Edward Arnold.)

This book of 280 pages is confined to the analytical methods of algebra and trigonometry, with practical applications and a large number of examples, tables of logarithms and antilogarithms, &c., metric units, and a few easy problems connected with electrical and mechanical engineering. There is a useful chapter on the plotting of curves and the deduction of their laws, and another on the usual approximative methods of finding the areas of plane figures by the "strip," and by Simpson's rule. It is a businesslike and serviceable book.

Elementary Trigonometry. By A. J. Pressland, M.A., and Charles Tweedie, M.A., B.Sc. Part I. (Oliver & Boyd.)

The more novel features of this trigonometry include the use of the "addition theorem" and a decided preference for the method of projection in defining and employing the trigonometrical ratios. By this mode of exposition, which is familiar in French works on the subject, the authors avoid what they call "the hopeless and confusing duplication of definitions and demonstrations which appears to be indispensable to the geometric method." We do not see that much is gained. The geometric methods are themselves indispensable; and, in fact, Messrs. Pressland and Tweedie have used so many of them that they need scarcely have excluded the rest.

The Principles of Mechanics. By Herbert Robson, B.Sc. Lond. (The Scientific Press.)

This is a viewy book, and, as might be expected, some of the views arrest the attention, whilst others are not worth stating. Amongst the latter we should certainly include ninety-nine hundredths of the author's objections to the works of his predecessors. We cannot learn mechanics by being taught pure Robson. Why should a student be constantly encountered by this sort of thing?—"The application of the principle of work to machines, as it is usually done, is, I think, inaccurate. As has been just hinted at . . . As I have already admitted, the truth of the result obtained for the *m. a.* is unquestionable, but I object strongly . . . If the reader will kindly refer back, he will find, if he does not remember it without searching, that I insisted . . . I maintain . . . So far the books are unanimously with me." Too viewy!

Complete Arithmetics. (Longmans.)

A series of simple exercises, adapted to the elementary standards, with answers, in separate paper-covered books. The editor struggles, in a prefatory note, with the significance of the requirements as set forth in the Code. He really cannot make out whether, in Standard II., he may or may not deal with a number higher than 99. And we used to start our babies with "notation and numeration," and tickle their imaginations with millions and billions!

MISCELLANEOUS.

Educational Aims and Educational Values. By Paul H. Hanus. (Macmillan.)

A collection of lectures and articles on contemporary educational problems, dealing, from an American standpoint, with the aims and practical methods of elementary and secondary education. A few chapters are added on the professional training of "college-bred teachers" and on the work of Comenius, "who, in the seventeenth century, advocated nineteenth-century educational reforms." The English reader will find in this book much useful material for comparison and consideration, especially in the chapters on "Secondary Education as a Unifying Force in American Life" and "The Study of Education at Harvard University."

A School Geography, with special reference to Commerce and History. By Prof. Meiklejohn, M.A., and M. J. C. Meiklejohn, B.A. (Holden.)

This is a well planned book, with many good features, and the promise of the title-page is sedulously fulfilled. It will be found useful, but more care might have been exercised in writing and revising the text. On page 195 we read: "Greece is divided into sixteen 'monarchies'" (for "nomarchies"). The spelling of *Salembrina* and *Negropont* is unfortunate. On the same page we find: "Commerce.—The Greeks possess an inborn talent for buying and selling," and "Character.—The Greeks are very fond of bargaining." The

"Acropolis" is wrongly interpreted as "rock-town." Patras is twice on the same page described as the "port for currants." "The imports are cereals and yarns" is a poor way of telling us what the Greeks purchase from other countries. With a little misgiving we turn at hazard to other pages, and find: "The Magyars in Hungary are an Asiatic race. So is their language"; "Warsaw . . . its railways go everywhere"; and so forth. Some of the maps and diagrams are very ingenious.

Physical Geography. By W. Morris Davis and W. H. Snyder. (Ginn & Co.)

This is a comprehensive, painstaking, and very readable volume of physical geography, the writers of which are ambitious to trace physical facts "back to their causes and forward to their consequences." The book is adequately illustrated, and it advances from a general description of the earth and its changes to the distribution of animal and vegetable life. It is not, however, precisely suited for English schools.

The Human Boy. By Eden Phillpotts. (Methuen & Co.)

"The Human Boy" is a very amusing book, being made up of a series of episodes in the school life of Merivale, related by Mr. Phillpotts with an unflinching fund of humour, and with an unmistakable insight into the ways and thoughts of schoolboys. The stories are not all equally natural and convincing, but most of them ring true, and we imagine that a majority of the boys who read them will accept them as faithful transcripts from life. Mr. Phillpotts has probably written this volume for grown-up readers as well as for boys. His main object is to be frankly amusing, and at the same time a little pathetic; and in this he has succeeded beyond question.

The Adventures of Reuben Davidjer; Seventeen Years and Four Months Captive among the Dyaks of Borneo. By James Greenwood. (Ward, Lock, & Co.)

Here is a summer gift-book—or are we to regard it as amongst the first light of the Christmas stories?—which will certainly be welcome to any boy into whose possession it may come. It is freely, though unequally, illustrated, and full of excitements, with plenty of information about the natives and the natural history of Borneo.

Tom Brown's School-days. By an Old Boy. Abridged Edition for Schools. (Macmillan.)

This is, we think, about the sixtieth edition of "Tom Brown." The abridgment makes a rather small book of it, but a good one still. The cutting down has been judiciously done, and a schoolboy fresh to this evergreen schoolboy story will be sure to appreciate it as it stands.

"Famous Scots Series."—*King Robert the Bruce.* By Prof. A. F. Murison. (Edinburgh: Oliphant, Anderson, & Ferrier.)

Prof. Murison, whose life of Wallace in this series we noticed about a year ago, gives us here a complementary volume on Bruce, and so completes a careful and independent narrative of the successful struggle of the Scots against the aggressions of Edward I. and Edward II. "Declining the guidance of modern historians," the author claims to have formed his own conclusions on contemporary or early documents. The story is pleasantly, and we think impartially, told, and the volume would serve very well as a reading-book.

Britain on and beyond the Sea. By Cecil H. Crofts, M.A. (W. & A. K. Johnston.)

This little volume is described as a handbook to the Navy League Map of the World, and it includes a sketch of British naval history from 1588 to 1882. The map itself is separately published as a wall-map, but a good reproduction, reduced to a manageable size, is printed here as a frontispiece.

The Study of Colloquial and Literary French: A Manual for Students and Teachers. Adapted from the German of Dr. Edward Koschwitz by P. Shaw Jeffrey, M.A. (Whittaker.)

Mr. Jeffrey has brought together a remarkable amount and variety of useful information on holiday courses, French pensions, lectures, excursions, and conversation classes, with other modes of popularizing and facilitating the study of French. If his title is somewhat ambitious, he certainly does throw a good deal of light on certain aids and inducements to the acquisition of spoken and written French. In addition to utilizing the work of Koschwitz, Mr. Jeffrey has printed some notes on the present state of modern language teaching in places of higher education, by Dr. Breul, M. Berthon, Prof. Weekley, Miss Stephen, Miss Pope, and Miss Beale.

Literature Readers. Edited by John Adams. Four Books. (Blackwood & Sons.)

These four volumes contain what seems to be, on the whole, an excellent selection of short pieces of English prose and verse. Most, if not all, of them deserve the description of "literature," and they are well calculated to give the young reader a taste for good writing, which should always be one of the main objects of collections of this kind. They are subject, of course, to the usual limitation of having had to be selected from works of which the copyright has expired; though, as the reading of extracts often inspires a wish to read the complete work, we fail to see why publishers of copyright books make any difficulty about the printing of short attractive passages. If they would relax their jealous veto in this respect, they would sell more of

their books, and our school Readers could be made more varied and interesting. The reason for the spelling lists and "exercises" at the end of these volumes is evident, but they do nothing to increase the appropriateness of the title.

The Essentials of School Diet; or the Diet suitable for the Growth and Development of Youth. By Clement Dukes, M.D., B.Sc. Lond. (Rivingtons.)

This second edition of a book published some eight years ago has a prefatory note of commendation by Sir William Broadbent, who emphasizes two points as particularly worthy of attention: that stimulants are wholly unnecessary for young people, and generally harmful; and that the food of the day should be so distributed that any evening meal should be a light one. Dr. Dukes has made use of his professional connexion with Rugby to collect a large number of statistics relating to the effects of diet on physical development. His experience, however, is by no means confined to Rugby, and his deductions and counsels are general in their character throughout. He defines his aim as being not merely to obviate the exorbitant demands of parents, but also to "prevent the possibility of an insufficient supply of food being provided by the masters themselves."

Practical Plane and Solid Geometry: Scales, Curves, and Pattern Drawing. By John S. Rawle, F.S.A. (Simpkin, Marshall, & Co.)

This is a revised edition of a well known book, originally published a quarter of a century ago. The present edition is the sixteenth, representing a sale of a quarter of a million copies. The connected publications include "Class-sheets for Practical Geometry," "Free-hand Drawing Test-Papers," and "Practical Geometry Test-Papers." Mr. Rawle, who was formerly Headmaster of the Nottingham School of Art, evidently knew his business, and this course of geometrical drawing is very well suited to its practical purpose.

WE HAVE ALSO RECEIVED the following publications and new editions:—

Forty-sixth Report of the Department of Science and Art of the Committee of Council on Education, with Appendices. (Eyre & Spottiswoode.)

Professions for Boys, and How to Enter Them, by M. L. Pechell and James L. Nolan (Beeton & Co.)—a second edition, enlarged, of a very serviceable publication.

Descriptive Geography, a Text-book for Pupil-teachers and Scholarship, Certificate, and Matriculation Candidates, by Samuel Brook (Nelson & Sons)—the eighth edition, revised and enlarged, with new maps and diagrams.

"Heath's English Classics."—*The Sir Roger de Coverley Papers from the Spectator; Introductions and Notes* by Prof. W. H. Hudson. *Goldsmith's Vicar of Wakefield.* Edited by the same. (Labister & Co.)

Domestic Economy, by H. Rowland Wakefield (Chambers)—a revised and enlarged edition.

"School Examination Series," edited by A. M. M. Stedman, M.A.—*Examination Papers on the Constitutional and General History of England,* by J. Tait Wardlaw, B.A. (Methuen)—a hundred and eleven papers, conveniently arranged for five successive periods, down to 1888.

Arithmetical Memoranda, by S. W. Finn, M.A. (Manchester: Galt & Co.)

CORRESPONDENCE.

THE CRAZE FOR ATHLETES AS MASTERS.

To the Editor of the Educational Times.

SIR,—I venture to ask you to allow me space for a few words on this subject. I shall best make my meaning clear by giving as a concrete example the case of a friend of mine. In 1892 he was engaged in scholastic work in England, but gave it up owing to the fact that he knew no one subject thoroughly. However, in 1896 he had occasion to go abroad for two years, and occupied his time in studying at a French University.

Returning to England in 1898, he put himself in communication with a scholastic agency, with a view to obtaining a post as a teacher of French, with the ordinary form subjects. As, however, his health is by no means robust, he is unable to take any active part in sports, and finds himself debarred from many otherwise suitable posts on this account. So disheartened, indeed, has he become at his non-success that he now proposes to return to France and teach English.

From what I myself have experienced and observed of the teaching of French in the average secondary school, I should have thought there would have been any number of headmasters only too willing to engage as a master a Cambridge graduate who had had the advantage of studying French in the country for such a considerable period.

It seems, indeed, a pity that the services of this young fellow—whom I know to be a keen educationalist—should be lost to the country because, forsooth, he is unable to take part in athletic sports.—Yours truly,

PATERFAMILIAS.

MATHEMATICS.

14236. (C. E. HILLYER, M.A.)—O is the circumcentre and I the incentre of a triangle ABC; AO, BO, CO meet the circumcircle again in a, b, c respectively; X, Y, Z are the points of contact of the incircle with the sides, and Xδ, Yε, Zζ the perpendiculars of the triangle XYZ. Prove that aδ, bε, cζ are concurrent in I.

Solution by R. F. DAVIS, M.A.; J. A. THIRD, M.A.; and others.

Let AI meet the circumcircle in E and YZ in M. Then

$$\begin{aligned} \angle IX\delta &= \text{OEA} \\ &= \text{OAE}; \end{aligned}$$

therefore

$$\delta M : IX = aE : Aa.$$

But

$$\begin{aligned} IX : IM &= IY : IM \\ &= 2R : EC \\ &= Aa : EI. \end{aligned}$$

Hence

$$\delta M : IM = aE : EI,$$

or aδ passes through I.

[The PROPOSER solves the Question as follows:—If aI meet YZ in δ,

$$\begin{aligned} I\delta : Ia &= IM : IE = IM : IA : IE : IA \\ &= IY^2 : IE \cdot IA = r^2 : 2R \cdot r = \frac{1}{2}r : R. \end{aligned}$$

Similarly, if δI meet ZX in ε, Iε : Ib = $\frac{1}{2}r : R$;

therefore δE is parallel to ab, and δE : ab = $\frac{1}{2}r : R$.

But ab is equal and parallel to AB; therefore δ, ε are the feet of the perpendiculars from X, Y on YZ, ZX; and similarly for ζ, which proves the proposition.]

14090. (G. H. HARDY, B.A.)—Evaluate

$$\int_0^{\pi} \tan^{-1}(p \operatorname{sech} u) du \quad \text{and} \quad \int_0^{\pi} \tan^{-1} \left\{ \frac{1}{2} \left(a - \frac{1}{a} \right) \operatorname{sech}^2 u \right\} du.$$

Solution by H. A. WEBB.

$$(1) \quad I = \int_0^{\pi} \tan^{-1}(p \operatorname{sech} u) du.$$

Put $\operatorname{sech} u = \cos x, \quad x = gdu, \quad du = \sec x dx.$

$$\begin{aligned} \therefore I &= \int_0^{\pi} \tan^{-1}(p \cos x) \cdot \sec x dx = \int_0^{\pi} \left\{ p - \frac{1}{2}p^3 \cos^2 x + \frac{1}{4}p^5 \cos^4 x - \dots \right\} dx \\ &= \left\{ p - \frac{1}{2}p^3 \cdot \frac{1}{2} + \frac{1}{4}p^5 \cdot \frac{1 \cdot 3}{2 \cdot 4} - \dots \right\} \frac{1}{2}\pi = \frac{1}{2}\pi \int_0^{\pi} \frac{dp}{\sqrt{(1+p^2)}} = \frac{1}{2}\pi \sinh^{-1} p. \end{aligned}$$

$$(2) \quad I = \int_0^{\pi} \tan^{-1} \left\{ \frac{1}{2} \left(a - \frac{1}{a} \right) \operatorname{sech}^2 u \right\} du$$

$$= \int_0^{\pi} \sec x \tan^{-1} \left\{ \frac{1}{2} \left(a - \frac{1}{a} \right) \cos^2 x \right\} dx,$$

from same substitution as before,

$$= \int_0^{\pi} \left\{ \frac{1}{2} \left(a - \frac{1}{a} \right) \cos x - \frac{1}{3} \cdot \frac{1}{2^3} \left(a - \frac{1}{a} \right)^3 \cos^3 x + \dots \right\} dx;$$

$$\therefore I = \frac{1}{2} \left(a - \frac{1}{a} \right) - \frac{1}{2^3} \cdot \left(a - \frac{1}{a} \right)^3 \cdot \frac{2 \cdot 4}{3 \cdot 5} + \frac{1}{2^5} \cdot \left(a - \frac{1}{a} \right)^5 \cdot \frac{2 \cdot 4 \cdot 6 \cdot 8}{3 \cdot 5 \cdot 7 \cdot 9} \dots;$$

therefore I is the real part of

$$-i \left\{ \sin^{-1} \left[\frac{i}{2} \left(a - \frac{1}{a} \right) \right] \right\}^2.$$

[The rest in Vol.]

14079. (Professor H. LANGHORNE ORCHARD, M.A., B.Sc.)—Exhibit the product of the two series

$1 - 8 + 27 - 64 + 125 - 216 + \dots$ and $1 - 16 + 81 - 256 + 625 - 1296 + \dots$, each to n terms, as a function of the roots of a quadratic equation.

Solution by Lt.-Col. ALLAN CUNNINGHAM, R.E.

Two cases arise, according as the number of terms (n) is odd or even.

Let $S_3 = 1^3 - 2^3 + 3^3 - \dots + (2m+1)^3$; $S_4 = 1^4 - 2^4 + 3^4 - \dots + (2m+1)^4$;

$S'_3 = 1^3 - 2^3 + 3^3 - \dots - (2m)^3$; $S'_4 = 1^4 - 2^4 + 3^4 - \dots - (2m)^4$.

Then $S_3 = \{1^3 + 2^3 + 3^3 + \dots + (2m+1)^3\} - 2 \{2^3 + 4^3 + \dots + (2m)^3\}$;

$S'_3 = \{1^3 + 2^3 + 3^3 + \dots + (2m)^3\} - 2 \{2^3 + 4^3 + \dots + (2m)^3\}$.

$$\begin{aligned} \text{Therefore } S_3 &= \left\{ \frac{1}{2}(2m+1)(2m+2) \right\}^2 - 2^4 \left\{ \frac{1}{2}m(m+1) \right\}^2; \\ S'_3 &= \left\{ \frac{1}{2} \cdot 2m(2m+1) \right\}^2 - 2^4 \left\{ \frac{1}{2}m(m+1) \right\}^2. \end{aligned}$$

Also $S_4 = \{1^4 + 2^4 + 3^4 + \dots + (2m+1)^4\} - 2 \{2^4 + 4^4 + \dots + (2m)^4\}$;

$S'_4 = \{1^4 + 2^4 + 3^4 + \dots + (2m)^4\} - 2 \{2^4 + 4^4 + \dots + (2m)^4\}$;

and the product of the two series is $S_3 \cdot S_4$ or $S'_3 \cdot S'_4$, according as $n = 2m+1$ or $n = 2m$.

Lastly, S_3, S_4 , or S'_3, S'_4 , are the roots of the quadratic

$$x^2 - (S_3 + S_4)x + S_3 S_4 = 0 \quad \text{or} \quad x^2 - (S'_3 + S'_4)x + S'_3 S'_4 = 0,$$

whose absolute term is the required product.

[The summations for S_3, S'_3 are taken from CHRYSTAL'S *Algebra*, Part I., Chap. xx., Art. 7; those of the parts S_4, S'_4 are also given there.]

14172. (Professor THOMAS SAVAGE.)—ABC is an isosceles triangle; DE, a parallel to BC, intersects AB, AC in D, E respectively. If DE, DB, EC are all equal, show that BC is not one of the equal sides of the triangle.

Solutions by E. WALTER TODD; Prof. LANGHORNE ORCHARD, M.A., B.Sc.; and many others.

Of course the triangle is assumed not equilateral.

Draw EX parallel to BA. Then, since DX is a parallelogram, EX = BD, (by i. 34)

$$= EC, \quad (\text{by hyp.})$$

therefore $\angle EXC = C$. (by i. 5)

But $\angle EXC = B$; (by i. 29)

therefore $\angle B = C$;

therefore BC is base of isosceles triangle ABC, and therefore not one of equal sides.

The theorem is true if $BD = EC$ without each being equal to DE.

14177. (B. N. CAMA, M.A.)—Prove that the locus of the intersection of tangents, including a given angle β , to the spiral $r = ae^{\theta \cot \alpha}$ is the

$$\text{copolar spiral} \quad \frac{r \sin \psi}{\sin \alpha} = ae^{(\theta + \psi - \alpha) \cot \alpha},$$

$$\text{where } \psi \text{ is given by} \quad \cot \psi = \frac{k - \cos \beta}{\sin \beta},$$

and ak is the vertical distance of a point on the original curve whose vectorial angle is β . Show also that the locus touches the circle round the triangle formed by the tangents and the chord of contact.

Solution by Rev. J. CULLEN; G. BIRTWISTLE; and the PROPOSER.

Let $\angle RQO = \text{RPO} = \gamma$

any angle, $\text{ROA} = \phi$, and

$\text{QOA} - \text{POA} = \theta' - \theta = \beta$.

Then $\frac{r}{\rho} = \frac{\sin(\gamma + \theta - \phi)}{\sin \gamma}$,

$$\frac{r'}{\rho} = \frac{\sin(\gamma + \theta' - \phi)}{\sin \gamma}.$$

Therefore $r^2 - 2rr' \cos \beta + r'^2 = \rho^2 \sin^2 \beta \operatorname{cosec}^2 \gamma$;

also $r'/r = k = \sin(\gamma + \beta + \theta - \phi) / \sin(\gamma + \theta - \phi)$;

therefore $\cot(\gamma + \theta - \phi) = (k - \cos \beta) / \sin \beta = \cot \psi$,

if $\psi = \gamma + \theta - \phi$, and $r \sin \gamma = \rho \sin \psi$;

therefore $\frac{\rho \sin \psi}{\sin \gamma} = ae^{(\psi + \gamma - \phi) \cot \alpha}$, since $r = ae^{\theta \cot \alpha}$.

But, if $\gamma = \alpha$, QR and PR become tangents; hence the first result. In this case also the tangent at R to the circle PQR makes an angle α with OR; therefore the locus of R and the circle have a common tangent; hence they touch.

[Some interesting results follow by giving γ different values, e.g., $\gamma = \psi$ or $\frac{1}{2}\pi - \alpha$, &c.]

14139. (Professor NEUBERG.)—Eliminer x, y, z entre des équations

$$\cos x \sin y \sin z = a, \quad \cos y \sin z \sin x = b,$$

$$\cos z \sin x \sin y = c, \quad \cos x \cos y \cos z = d.$$

Solution by Rev. T. ROACH, M.A.; and F. H. PRACHELL, B.A.

$$\tan^2 x = \frac{bc}{ad}; \quad \text{therefore} \quad \cos^2 x = \frac{ad}{ad+bc}$$

Similarly with y, z ; therefore

$$d^2 = \frac{ad}{ad+bc} \cdot \frac{bd}{ac+bd} \cdot \frac{cd}{ab+cd}$$

therefore $abcd = (ad+bc)(ab+cd)(ac+bd)$.

14237. (R. F. DAVIS, M.A.)—The tangent at A to the circumcircle of the triangle ABC meets BC in T and is produced to U so that AT = TU. Prove that the polar of A with regard to any circle through B, C passes through U.

Solutions (1) by J. A. THIRD, M.A., and many others; (2) by G. D. MUGGERIDGE and Professor A. DROZ-FARNY.

(1) Let O be the centre of any circle through B, C; and let OA meet this circle in X and the circle having AU as diameter in Y. Circle T is obviously orthogonal to all circles through B, C; therefore OX = tangent from O to circle T; therefore $OX^2 = OY \cdot OA$; and AYU is a right angle; therefore YU is the polar of A with regard to circle O.

(2) Consider a system of conics passing through the four points B, C, I, J. Of these conics one passes through a given point A. Draw the tangent at A to this conic, meeting IJ, BC in S and T. Take U the fourth harmonic to S, A, T; then AU are the double points of the involution on the line AT formed by the points of intersection of this line and the given system of conics.

Hence A, U are conjugate points for all conics passing through B, C, I, J. In the particular case when I, J are the circular points, all the conics are circles, and S being at an infinite distance, T bisects AU.

14180. (W. C. STANHAM, B.A.)—If O is a fixed point, and PQ is any chord of a conic drawn through one of its foci (S), and if OP, OQ meet the conic again at P' and Q'. P'Q' passes through a fixed point (Σ), and, conversely, if P'Q' is any chord through Σ, and if OP', OQ' meet the conic again at P and Q, PQ passes through S.

Solution by H. W. CURJEL, M.A.; and G. D. MUGGERIDGE.

This theorem is true if S is any point. If OS cuts the polar of O in R, then OR is divided harmonically by PQ, P'Q', i.e., in S and Σ; therefore, if S is a fixed point, Σ is a fixed point, and, conversely, if Σ is a fixed point, S is a fixed point. [The PROPOSER observes that this is the polar form of Quest. 14161 and its converse.]

14137. (Professor CROFTON, F.R.S.)—Prove that $(3n)^{4n} - 1$ is divisible by $24n + 1$, if the latter is a prime number.

Solution by Lt.-Col. ALLAN CUNNINGHAM, R.E.; and H. W. CURJEL, M.A.

Let $24n + 1 = p$ (a prime).
Then $24n + 1 \equiv 0 \pmod{p}$ and $2^3 \cdot 3n \equiv -1 \pmod{p}$;
therefore $(2^3)^{\frac{1}{3}(p-1)} \cdot (3n)^{\frac{1}{3}(p-1)} \equiv (-1)^{\frac{1}{3}(p-1)} \pmod{p}$;
therefore $2^{4(p-1)} \cdot (3n)^{4n} \equiv (-1)^{4n} = 1 \pmod{p}$.
But $2^{4(p-1)} \equiv 1 \pmod{p}$, because $p = 8\alpha + 1$; therefore $(3n)^{4n} - 1 \equiv 0 \pmod{p}$.

[Similarly, it may be shown that $(mn)^{2m-1n} - 1$ is divisible by $(2^m mn + 1)$ if the latter is prime; e.g., $(5n)^{16n} - 1$ is divisible by $(160n + 1)$ when the latter is prime.]

14185. (Rev. T. MITCHELSON, B.A.)—If R is the point of intersection of the normals drawn from the ends of semi-conjugate diameters of an ellipse, show that the distance of R from the centre is

$$x_1 y_1 a^{-3} b^{-3} \{ a^2 - b^2 \} \{ b^2 (bx_1 - ay_1)^2 + a^2 (bx_1 + ay_1)^2 \}^{\frac{1}{2}},$$

(x_1, y_1) being the extremity of one of the diameters.

Solution by G. BIRTWISTLE, B.Sc.; R. TUCKER, M.A.; and others.

CP and CD are semi-conjugates, PN and DN normals intersecting in N.

Thus, N is orthocentre of triangle CPD, and thus, by trigonometry,

$$CN = PD \cot \theta.$$

P is (x_1, y_1) , and therefore D is

$$(-ay_1/b, bx_1/a);$$

therefore

$$PD^2 = (x_1 + ay_1/b)^2 + (y_1 - bx_1/a)^2 = 1/a^2 b^2 [(bx_1 + ay_1)^2 a^2 + (bx_1 - ay_1)^2 b^2],$$

and $CP \cdot CD \cdot \sin \theta = ab$;

therefore $\cot \theta = 1/ab \sqrt{(CP^2 \cdot CD^2 - a^2 b^2)}$,

$$\begin{aligned} CP^2 \cdot CD^2 - a^2 b^2 &= (x_1^2 + y_1^2)(a^2 y_1^2 / b^2 + b^2 x_1^2 / a^2) - a^2 b^2 \\ &= \{ (x_1^2 / a^2 + y_1^2 / b^2) - 1 \} a^2 b^2 + x_1^2 y_1^2 (a^2 - b^2) / a^2 b^2 \\ &= \{ x_1^2 y_1^2 (a^2 - b^2)^2 \} / a^2 b^2, \end{aligned}$$

since $x_1^2 / a^2 + y_1^2 / b^2 = 1$;

$$\therefore CN = 1/ab \{ (bx_1 + ay_1)^2 a^2 + (bx_1 - ay_1)^2 b^2 \}^{\frac{1}{2}} \cdot 1/ab \cdot \{ x_1 y_1 (a^2 - b^2) \} / ab = x_1 y_1 a^{-3} b^{-3} (a^2 - b^2) [a^2 (bx_1 + ay_1)^2 + b^2 (bx_1 - ay_1)^2]^{\frac{1}{2}}.$$

14122. (The late "LEWIS CARROLL.")—It is given that (1), if C is true, then, if A is true, B is not true; and (2), if A is true, B is true. Can C be true? What difference in meaning, if any, exists between the following propositions?—(1) A, B, C cannot be all true at once; (2) if C and A are true, B is not true; (3) if C is true, then, if A is true, B is not true.

Solution by H. W. CURJEL, M.A.

Using the notation of my solutions to Quest. 13234 and 13288 (Vol. LXVI.), (1) gives $CAB = 0$, (2) gives $AB = A$; therefore $CA = 0$; therefore either A or C is not true; therefore C may be true if A is not true.

The statements at the end of the question are equivalent, for

$$ABC = AC \cdot B = A \cdot C \cdot B.$$

14176. (R. F. DAVIS, M.A.)—ABCD is a concyclic quadrilateral, and E, F, G are the intersections (AB, DC), (AD, BC), and (AC, BD) respectively. Show that the focus of the parabola described to ABCD is the foot of the perpendicular from G on EF.

Solution by H. W. CURJEL, M.A.; and Professor SANJANA, M.A.

Let O be the centre of circle ABCD, and let H be the inverse point of E with respect to circle ABCD (H is cut of DE and FG).

$$\angle BHC = OBA + OCD = \frac{1}{2} \{ \text{AOD} + \text{BOC} \} = \text{CGB};$$

therefore B, C, G, H are concyclic, and circle BCGH is inverse of circle BEC, which therefore passes through the inverse of G, i.e., through K, the foot of the perpendicular from G on EF, since EF is the polar of G. Similarly, circle FCD passes through K; therefore K is the focus of the parabola described to ABCD.

13951. (R. KNOWLES, B.A.)—If the diagonals of a polygon, having an even number of sides, inscribed in a conic, concur in a point G, prove that (1) the diagonals of the corresponding circumscribed polygon also concur in G; (2) hence the diagonals of a polygon, having an even number of sides, circumscribed to a conic are concurrent.

Solution by H. W. CURJEL, M.A.

Project the points of intersection with the conic of the polar of G into the circular points at infinity; the conic then becomes a circle with centre G, and the first part of the Question becomes obvious; hence it is also clear that to every conic there may be circumscribed an infinite number of polygons of a given number of sides whose diagonals are concurrent. (2), however, is not true when the number of sides is greater than 6; since, having drawn a circumscribed polygon whose diagonals are concurrent, by displacing a side we cause two of the diagonals no longer to pass through the former point of concurrence, whereas the intersection of the remaining diagonals remains fixed.

QUESTIONS FOR SOLUTION.

14306. (Professor G. B. MATHEWS, F.R.S.)—Prove that, if p, q be odd primes such that p lies between q and $3q$, and if p/q be the penultimate convergent in the expansion of p/q as an ordinary continued fraction, then there is a multiple of pq between $(p+q)pq'$ and $(p+q)p'q$. Show, also, that $p+q$ is the least even number $2n$ such that a multiple of pq lies between $2npq'$ and $2np'q$.

Show, further, that, if $2n$ be an assigned even integer, and if odd primes p, q can be found such that $p > \frac{1}{2}n, q > \frac{1}{2}n$, and a multiple of pq lie between $2npq'$ and $2np'q$ when $pp' - p'q = \pm 1$, then $2n = p+q$.

14307. (Professor NEUBERG).—Soient P, Q, R les symétriques d'un point quelconque M par rapport aux côtés BC, CA, AB du triangle ABC. Démontrer que le centre de gravité des points P, Q, R, chargés respectivement de poids proportionnels à $\sin 2A, \sin 2B, \sin 2C$, est l'orthocentre de ABC.

14308. (Professor E. J. NANSON).—Find the condition that the ruled surface $\theta = 0, \phi = 0, \psi = 0$ may be developable, θ, ϕ, ψ being homogeneous functions of the six coordinates of a line.

14309. (Professor COCHEZ).—Lieu des points d'où l'on peut mener à l'ellipse quatre normales dont la somme des carrés soit constante.

14310. (Professor K. J. SANJANA).—A point moves on the circumference of a given triangle; trace the changes in its distance from the pedal line, and find when this is a maximum. Also, apply the result to the problem of inscribing a maximum parabola in a given triangle. [The distance is a maximum when the algebraical sum of the tangents of the angles made by the pedal line with the sides is zero.]

14311. (Professor U. C. GHOSH).—Points $O_1, O_2, O_3, \dots, O_n$ are taken in order on the circumference of a circle circumscribing a triangle ABC. If $AO_1, AO_2, AO_3, \dots, AO_n, BO_1, BO_2, BO_3, \dots, BO_n, CO_1, CO_2, CO_3, \dots, CO_n$ cut BC at $G_1, G_2, G_3, \dots, G_n, AC$ at $F_1, F_2, F_3, \dots, F_n$, and AB at $H_1, H_2, H_3, \dots, H_n$ respectively, show that (1) $F_1H_1, F_2H_2, F_3H_3, \dots, F_nH_n$ will all pass through the same point A'; (2) $\angle F_r A' F_{r+1} = \angle G_r O G_{r+1}$, O being the centre of the circle; (3) if $N_1, N_2, N_3, \dots, N_n$ be the points of intersection of $OG_1, OG_2, OG_3, \dots, OG_n$ with $F_1H_1, F_2H_2, F_3H_3, \dots, F_nH_n$, they will lie on the circumference of the circle described on OA' as diameter.

14312. (Professor N. L. BHATTACHARYA).—A parabola slides between the two foci of an ellipse, such that the focus of the parabola always lies on the ellipse. Find the envelope of (1) the directrix, (2) the axis, of the parabola.

14313. (D. BIDDLE).—A bag contains n counters, numbered from a to $a+n-1$, and, provided $n \nless m$, m persons draw out in rotation r counters each. Find the probability that the m sums of the numbers on the sets of r counters thus drawn shall be equal.

14314. (R. TUCKER, M.A.).—AC, BD are two parallel straight lines which are cut at right angles by OAB, and obliquely by OCD ($\angle COA = D$). CP, DQ are parallel to OAB, and DP, CA perpendicular to OCD. Prove loci of P, Q to be parabolas. Tangents at extremities of their latera recta are perpendicular (or parallel), and the points of intersection of these tangents lie on a hyperbola when BD varies in position.

14315. (B. N. CAMA, M.A.).—If parabolas be described cutting an equiangular spiral orthogonally, and having their axes in the direction of the polar subtangent, the loci of the focus and the vertex are copolar spirals whose linear dimensions bear a constant ratio.

14316. (R. F. DAVIS, M.A.).—A convex n -gon ABCD...H is inscribed in a circle centre O, radius R, and is of such a shape that a point P (whose distance from O is δ) can be found within it, so that the circumradii of the triangles PAB, PBC, ..., PHA are each equal to r . Investigate the restrictions as to shape and the connexion between R, r, δ .
 $n = 3$; no restriction: $R = r$.
 $n = 4$; rectangle: $2r^2 = R^2 + \delta^2$.
 $n = 6$; ACE, BDF have common orthocentre, $3r^4 = r^2(R^2 + \delta^2) + R^2\delta^2$.
 Note the theorems that may be obtained by inverting these properties with respect to P.

14317. (G. H. HARDY, B.A.).—Prove FRULLANI'S formula

$$\int_0^\infty \frac{\phi(ax) - \phi(bx)}{x} dx = \{\phi(\infty) - \phi(0)\} \log(a/b),$$

extending it so as to apply (1) to cases in which $\phi(x)$, while remaining integrable, has a discrete set of infinities within the range of integration, $\phi(\infty), \phi(0)$ being determinate; (2) to cases in which only the principal value of the integral is determinate. Consider also the case in which $\phi(x)$ oscillates at infinity between finite limits. As examples, evaluate

$$\int_0^\infty \log \left\{ \left(\frac{1-ax}{1-bx} \right)^2 \right\} \frac{dx}{x}, \quad \int_0^\infty \left(\frac{e^{-ax} - e^{-bx}}{x} \right)^2 dx,$$

$$\int_0^\infty \left(\frac{1}{\cos ax} - \frac{1}{\cos bx} \right) \frac{dx}{x}, \quad \int_0^\infty \left(\frac{1}{\cos ax} - \frac{1}{\cosh bx} \right) \frac{dx}{x}.$$

[The last two integrals are given by their principal values.]

14318. (H. MACCOLL, B.A.).—Two intersecting circles A and B are wholly enclosed in a circle E. Six points are marked in A outside B, three points in B outside A, two points in area common to A and B, and x points in E outside both A and B. Out of the total $x+11$ points in E a point P is taken at random. Let α denote the statement that P will be in A, and β the statement that P will be in B. What must be the value of x (1) so that α shall be independent of β , (2) so that the dependence of α upon β shall be $2/105$, (3) so that the dependence of α upon β shall be $-2/95$? [The dependence of α upon β means the increase or (when negative) diminution produced in the chance of α by assuming β .]

14319. (Rev. T. MITCHESON, B.A.).—Solve

$$x^3 + \frac{1}{2}x^2(\alpha^{-1}\beta\gamma + \alpha\beta^{-1}\gamma + \alpha\beta\gamma^{-1}) = \frac{1}{2}\alpha\beta\gamma.$$

14320. (J. J. BARNVILLE, B.A.).—Prove that

$$\frac{1}{1+2} + \frac{1}{13+2} + \frac{1}{233+2} + \dots = \frac{\sqrt{5}+1}{8},$$

$$\frac{1}{2+2} + \frac{1}{34+2} + \frac{1}{610+2} + \dots = \frac{\sqrt{5}}{8},$$

$$\frac{1}{5+2} + \frac{1}{89+2} + \frac{1}{1597+2} + \dots = \frac{\sqrt{5}-1}{8},$$

$$\frac{1}{1+5} + \frac{1}{2+5} + \frac{1}{5+5} + \frac{1}{13+5} + \dots = \frac{5\sqrt{5}}{22},$$

$$\frac{1}{1+1} - \frac{1}{4-1} + \frac{1}{11+1} - \frac{1}{29-1} + \dots = \frac{\sqrt{5}}{10}.$$

14321. (R. F. MUIRHEAD).—Given any two triangles, show how to dissect each into three triangular parts such that they are similar, each to each, i.e., to each part of one triangle there is a part of the other which is similar. Is there any restriction necessary in the data that the solution may apply? Show that, negative triangles being permitted, the problem has at least forty-five solutions. (I call this the Glasgow Dissection Problem.)

14322. (W. C. STANHAM, B.A.).—AA' is a diameter of a circle (C_1) centre Q. On AA' (or on AA' produced) any point P is taken, and with centre P and radius = $PA \cdot PA'/AA'$ a circle (C_2) is described. Show that, if any tangent to (C_2) cuts (C_1) at R and S, $\cos^2 2RPS = \cos^2 \frac{1}{2}RQS$.

14323. (V. DANIEL).—If the images of the vertices A, B, C of a triangle (area = Δ), in the opposite sides, form a triangle of area Δ' , show that $\Delta'/\Delta = 3 + 8 \cos A \cos B \cos C$. Hence show that, when the images are collinear, the triangle ABC has an obtuse angle lying between the limits 120° and $\cos^{-1}(-\sqrt{3})$, i.e., nearly $127^\circ 46'$.

14324. (W. S. COONEY).—P, Q, R are the centres of the insquares of the triangle ABC, to the sides a, b, c respectively. (1) AQ and AR are isogonal lines to b and c , &c. (2) If triangle be right-angled, given P, Q, and centre of inscribed circle, construct triangle. (3) In (2), if P and Q alone be given, area of minimum right-angled triangle equals $36(PQ)^2$.

14325. (R. KNOWLES).—Prove that the sum of the first $(r+1)$ coefficients in the expansion of $(1-x)^{-m/n}$

$$= \frac{(m+n)(m+2n)\dots(m+rn)}{n^r \cdot r!}$$

14326. (H. A. WEBER).—The curve whose intrinsic equation is $d\psi = a \sec^{2n+1}\psi$, where n is a positive integer, is of the $2n$ th degree; it has no asymptotes, double points, or points of inflexion, and consists of one infinite branch resembling a parabola in form. If x, y, z , and ψ vanish together, then, when $\psi = \frac{\pi}{4}$,

$$x = a \left\{ 1 + (n-1) \cdot \frac{1}{2} + \frac{(n-1)(n-2)}{1 \cdot 2} \cdot \frac{1}{2} + \frac{(n-1)(n-2)(n-3)}{1 \cdot 2 \cdot 3} \cdot \frac{1}{2} + \dots \right. \\ \left. \dots + \frac{1}{2n-1} \right\},$$

$$y = \frac{1}{2}a \left\{ 1 + (n-1) \cdot \frac{1}{2} + \frac{(n-1)(n-2)}{1 \cdot 2} \cdot \frac{1}{2} + \frac{(n-1)(n-2)(n-3)}{1 \cdot 2 \cdot 3} \cdot \frac{1}{2} + \dots \right. \\ \left. \dots + \frac{1}{n} \right\},$$

$$z = a \cdot \frac{1 \cdot 3 \cdot 5 \dots (2n-1)}{2 \cdot 4 \cdot 6 \dots 2n} \left\{ \log(1 + \sqrt{2}) + \sqrt{2} \left[1 + \frac{4 \cdot 8}{3 \cdot 5} + \frac{4 \cdot 8 \cdot 12}{3 \cdot 5 \cdot 7} + \dots \right. \right. \\ \left. \left. \dots + \frac{4 \cdot 8 \cdot 12 \dots (4n-4)}{3 \cdot 5 \cdot 7 \dots (2n-1)} \right] \right\}$$

When $n = 1$, the curve is the parabola $x^2 = 2ay$. When $n = 2$, the curve is the quartic $(9x^2 - 12ay + a^2)^2 = a(4y + a)^3$.

14327. (ROBERT W. D. CHRISTIE).—Investigate the easiest method of securing (1) the first primitive root of a prime, and (2) all the rest. E.g., prime = 29; first root 2; $\therefore 2^3 = 8$; $\therefore 8^3 = 19$; $19^3 = 15$, &c.,
 or $2 \cdot 3 \cdot 8 \cdot 27 \cdot 21 \cdot 26 \times 5$
 $10 \cdot 15 \cdot 11 \cdot 19 \cdot 18 \cdot 14 \times 6$

14328. (GEORGE SCOTT, M.A.).—Show that the relation between the square of a right-angled triangle's altitude and the rectangle under the segments of the hypotenuse is a particular case of a property belonging to all triangles: namely, that the rectangle under the altitude of any triangle and the height of its orthocentre is equal to the rectangle of the base segments. When the orthocentre coincides with the vertex, as it does in a right-angled triangle, the particular case occurs.

14329. (J. A. THIRD, M.A., D.Sc.).—L, L', M, M', N, N' are points on a conic. LL', MM', NN' form the triangle ABC; MN', NL', LM' the triangle A'B'C'; and M'N, N'L, L'M the triangle A''B''C''. The straight line AA'A'' meets BC, B'C', B''C'' in X, X', X'' respectively; the straight line BB'B'' meets CA, C'A', C''A'' in Y, Y', Y'' respectively; and the straight line CC'C'' meets AB, A'B', A''B'' in Z, Z', Z'' respectively. Show that the following are triads of concurrent lines:—
 YZ, Z'X', X''Y''; ZX, X'Y', Y''Z''; XY, Y'Z', Z''X'';
 YZ, Z''X'', X'Y'; ZX, X''Y'', Y'Z'; XY, Y''Z'', Z'X'';
 and that the points of concurrence lie on a conic.

14330. (R. CHARTRES).—BC is the fixed base of the triangle ABC, G the centroid, and K the symmedian point. Show that the maximum value of the triangle AGK: its mean value :: $\pi : 2$ if A describe a semicircle.

14331. (H. W. CURJEL, M.A.).—If the series $a_1x + a_2x^2 + \dots = f(x)$ is convergent when $x = \text{or} < 1$, and the series

$u_1x + u_2x^2 + \dots = \phi(x)$, $v_1x + v_2x^2 + \dots = \psi(x)$, $w_1x + w_2x^2 + \dots = \chi(x)$, &c., are convergent when $x < 1$, and if

$$\sum_1^n ar = \sum_1^{m/a} ur + \sum_1^{m/\beta} vr + \sum_1^{m/\gamma} wr + \dots,$$

where m is divisible by α, β, γ , &c., then $a_1 + a_2 + a_3 + \dots = f(1)$
 $= \text{limit} \{ \phi(x^m) + \psi(x^m) + \chi(x^m) + \dots \}$, where $x = 1$, if this limit is finite and has only one value.

14332. (Professor M. W. CROFTON, F.R.S.).—(1) If $4n - 1$ is a prime, $1^2 2^2 3^2 \dots (2n - 1)^2 - 1$ is a multiple of $4n - 1$. (2) If $4n + 1$ is a prime, $1^2 2^2 3^2 \dots (2n)^2 + 1$ is a multiple of $4n + 1$. It hence follows that $4n + 1$ is the sum of two squares.

OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

6021. (E. W. SYMONS, B.A.).—Prove that (1) the cosine of the angle between the planes $Ax + By + Cz = 0$, $A'x + B'y + C'z = 0$, referred to oblique axes inclined at angles α, β, γ , is

$$\frac{AA' \sin^2 \alpha + \dots - (BC' + B'C) (\cos \alpha - \cos \beta \cos \gamma) - \dots}{[A^2 \sin^2 \alpha + \dots - 2BC (\cos \alpha - \cos \beta \cos \gamma) - \dots]^{\frac{1}{2}} \times [A'^2 \sin^2 \alpha + \dots - 2B'C' (\cos \alpha - \cos \beta \cos \gamma)]^{\frac{1}{2}}}$$

and (2) the length of the perpendiculars from the point (xyz) on the plane $Ax + By + Cz + D = 0$ is

$$\frac{(Ax + By + Cz + D) \left(1 - \cos^2 \alpha - \cos^2 \beta - \cos^2 \gamma + 2 \cos \alpha \cos \beta \cos \gamma \right)^{\frac{1}{2}}}{A^2 \sin^2 \alpha + \dots - 2BC (\cos \alpha - \cos \beta \cos \gamma)}$$

6030. (SWIFT JOHNSTON, B.A.).—Prove that the first polars of points on a straight line, with regard to a ruled surface, cut the generators homographically.

6063. (Professor SYLVESTER, F.R.S.).—Let the term simple derivatives of a, b, c, \dots signify the quantities $1, a, b, c, \dots, ab, ac, bc, abc, \dots$; and total derivatives the quantities $1, a, b, c, \dots, a^2b^2c^2, \dots$; in a word, combinations of any powers of a, b, c, \dots

(1) Let p_1, p_2, p_3, \dots be the simple derivatives of a, b, c, \dots at the prime numbers of the form $4k + 3$; Q_1, Q_2, Q_3, \dots the total derivatives of those of the form $4k + 1$. Prove the inequalities $\frac{1}{2} \sum p_i < \sum x^Q < \sum x^p$ for all values of x less than unity.

(2) Again, let p_1, p_2, \dots now denote the simple derivatives of all the primes of the form $6k + 5$; Q_1, Q_2, Q_3, \dots the total derivatives of those of the form $6k + 1$. Prove the inequalities $\frac{2}{3} \sum p_i < \sum x^Q < \sum x^p$ for all values of x less than unity.

(3) Deduce from the first of each of the above pairs of inequalities that the primes of the form $4n + 1$ and the primes of the form $6n + 1$ are both of them infinite in number.

6074. (A. MARTIN).—The bottom of a circular box is covered with an adhesive substance, and two straight rods, each equal in length to the radius of the box, are dropped horizontally into it at random; find the probability that the rods are crossed in the box.

6085. (A. J. C. ALLEN, B.A.).—Through the orthocentre K of a triangle ABC a straight line DEF is drawn meeting the sides BC, CA, AB in D, E, F; and a point P is taken on the line so that

$$\frac{PE \cdot PF}{KE \cdot KF} \sin 2A + \frac{PF \cdot PD}{KF \cdot KD} \sin 2B + \frac{PD \cdot PE}{KD \cdot KE} \sin 2C = \text{a constant.}$$

Show that the locus of P is a circle, and find its centre and radius.

6090. (T. COTTERILL, M.A.).—A curve U (order m and class n) and a point Z not at infinity are given on a plane. Take the pedal curve of a point of U to the point Z, and the antipedal of a tangent to U to the same point, and then find the order of the pedal if the curve U touches the circular asymptotes of Z and the line at infinity Σ times, and the class of the antipedal of U if U passes S times through the origin and the circular points at infinity.

A similar construction holds for oblique pedals.

NOTICE TO CORRESPONDENTS.

It is requested that all Mathematical communications should be sent to

D. BIDDLE, Esq., Charlton Lodge, Kingston-on-Thames.

NOTICE.—Vol. LXX. of the "Mathematical Reprint" is now ready, and may be had of the Publisher, FRANCIS HODGSON, 89 Farringdon Street, E.O. Price, to Subscribers, 5s.; to Non-Subscribers, 6s. 6d.

OLD TESTAMENT MANUALS

Suitable for the Examinations of the College of Preceptors, &c.

BY THE

REV. H. M. CLIFFORD, M.A.

WADHAM COLLEGE, OXFORD; AND ELLESMERE, SALOP.

These are the only Manuals which omit from the Text the passages not usually read in public. Also the only ones that have

- (i.) The Notes opposite the Text.
- (ii.) References to every Person and Place mentioned in each Book.
- (iii.) Questions upon each Book, with References to the Answers.

Over 70,000 copies have been sold in England for educational purposes, and they have been highly commended by the Headmasters of Harrow, Rugby, Shrewsbury, Cheltenham, and 100 other Masters and Mistresses and Clergy. These Manuals are as cheap as any that are published, varying in price from 9d. to 1s. 6d. each. They will be found very suitable for Class Teaching in Day and Sunday Schools, for Family Reading, for Parents with their Children, and for Private Study.

ALSO IN PREPARATION FOR EXAMINATION.

SEELEY'S CHEAP SCHOOL BOOKS.

Conducted by the Rev. A. J. CHURCH, M.A., sometime Professor of Latin at University College, London.

Each Volume contains sufficient matter for the work of one term, with Notes by a competent Editor, of practical experience in tuition; and is well printed, and strongly bound in cloth.

NEW VOLUMES.

LATIN VOCABULARIES. Arranged according to subject. By A. W. RADY, B.A. 16mo, cloth, 8d.

"A judicious selection classified and arranged in alternate columns and under sectional heads, in a very simple and useful form."—*Educational News*.

LATIN EXERCISES. Third Part. By Rev. A. J. CHURCH, M.A. 16mo, cloth, 8d.

"Fittingly succeeds its two predecessors. . . . The notes are much to the point, and the book is further recommended by its cheapness."—*Guardian*.

These two volumes may also be had, bound together in cloth, 1s.

A complete list of the Series will be sent on application.

HANNIBAL AND THE GREAT WAR BETWEEN ROME AND CARTHAGE. By W. W. How, Fellow and Tutor of Merton College, Oxford. With Three Plans. Crown 8vo, cloth, 2s.

"A piece of thorough workmanship. The fascinating story could hardly be better told in short compass."—*Manchester Guardian*.

NICIAS AND THE SICILIAN EXPEDITION. By Rev. A. J. CHURCH, M.A., formerly Professor of Latin in University College, London. Crown 8vo, cloth, 1s. 6d.

"An excellent little book. . . . Professor Church has condensed the immortal chapters of Thucydides with notable skill and sympathy."—*Spectator*.

LONDON: SEELEY & CO., LIMITED, 38 GREAT RUSSELL STREET.

The "NOTABILIA" Series.

These Books (price 1s. each) are expressly designed to economize the time and labour of Students preparing for Examinations.

"NOTABILIA OF ENGLISH HISTORY."

New Edition (29th Thousand), with Addenda.

By WALTER BLANCHARD, I.C.P., F.R.G.S., Principal of the Intermediate School, Lancaster.

"TOPOGRAPHICAL GEOGRAPHY."

Revised Edition (12th Thousand), with Index.

"COMMERCIAL GEOGRAPHY."

Also, Improved Edition. Price Ninepence.

"PATTERN LOGIC."

A clear, but brief, arrangement of "Euclid," Book I.

LONDON:

WHITTAKER & CO., WHITE HART STREET, PATERNOSTER SQUARE.

SHORT FRENCH EXAMINATION PAPERS (110),

Each containing Six Idiomatic Sentences to render into French. Price 2s. 6d. cloth.

Many of the grammatical questions are taken, by permission, from the Oxford and Cambridge Local Examinations, from those of the College of Preceptors, the London Matriculation, the Oxford and Cambridge Joint Board, and from the Cambridge Higher Local Examinations.

"A very useful set of questions."—*Modern Language Quarterly*.
"The English Idioms for translation into French are well chosen. It is a useful little book."—*University Correspondent*.

"The exercises in the use of idioms are specially good."—*Bookman*.
"Will be found serviceable for rapid drill in the hands of a judicious teacher."—*Educational Times*.

"Would afford useful practice for intending candidates."—*Education*.
"We noticed at the time of its appearance this very useful collection of test papers, and need only here add that the key is full and accurate save for some obvious misprints, and one or two slips that we have noticed."—*Journal of Education*.

"We are great advocates of abundant exercises, hence our immediate approval of this book."—*School Guardian*.

"We have much pleasure in recommending this useful collection of papers in grammar and idiomatic sentences. It will save the teacher many an hour of labour, and would be valuable for a class entering for an examination to work through steadily."—*Educational Review*.

A KEY, issued to Teachers and Private Students only, can be obtained from the Publishers. 6s. net. (A list of errata is issued with this.)

By H. R. LADELL, M.A., F.R.G.S.

THE PUBLIC SCHOOL SPELLING CARD.

Thirtieth Thousand. Price 6d. By the same Author.

Containing nearly 1,000 words (in which actual mistakes have frequently been made, as collected from Dictations, Essays, Examination Papers, &c., during a period of more than 15 years), with Rules.

Also, in Book Form, "HOW TO SPELL AND SPEAK ENGLISH." Third Edition. Price 1s.

This also embodies most of the errors in the sentences set for correction in the Examination Papers of the London Matriculation, the Oxford and Cambridge Locals, the College of Preceptors, &c.

French Essentials and French Conversation Sentences.

Second Edition. Price 2s., cloth; 1s. 6d., boards. By the same Author.

"This short grammar is compiled by a master who knows his business. The type is good, the arrangement good, and there is nothing superfluous."—*Journal of Education*.

"Students preparing for examination in French Grammar and Composition will know the worth of this little book. The colloquial sentences at the end are a useful addition."—*Bookman*.

DENT'S MODERN LANGUAGE SERIES.

Edited by WALTER RIPPMANN, M.A.

In fcap. 8vo, cloth, 1s. 6d. net.
DENT'S FIRST FRENCH BOOK. Based on the Hölzel Pictures of the Seasons. By S. ALGE and WALTER RIPPMANN.

In fcap. 8vo, cloth, 1s. 6d. net.
HINTS ON TEACHING FRENCH. With a running Commentary to Dent's First and Second French Books.
 Prof. FREDERIC SPENCER writes:—"Dent's First French Book appears most opportunely, supplying as it does, on the lines of the 'reform' method, a course which is both rational and eminently practical. . . . This little book, with Mr. Rippmann's running commentary, deserves the careful attention of every teacher of French."

In fcap. 8vo, 1s. 6d. net.
DENT'S SECOND FRENCH BOOK. By S. ALGE and WALTER RIPPMANN. Consists mainly of a charming story by JEANNE MAIRET, "La Tache du Petit Pierre."

The Second French Book can be taken with a class, even without previously working through the First Book. It will be found an excellent reading book.
 "We can heartily commend this reader as an exposition of the new method."
Journal of Education, Dec. 1898.

In fcap. 8vo, cloth, 2s. 6d. net.
FRENCH DAILY LIFE: Common Words and Common Things. Adapted by WALTER RIPPMANN from Dr. KRON'S "Le Petit Parisien."
 "For class use it is far better than anything we have previously seen. It is not, of course, intended for beginners. Students who, without much conversational facility, intend to join a French holiday course next midsummer might here find valuable assistance. The Englishman travelling in France will find here all the phrases essential to his comfort—not in formal lists, but strung together in a chatty and interesting narrative, which also contains information as to how and where the phrases are to be used."
Education.

SPECIMEN COPIES AND PROSPECTUSES OF THE ABOVE MAY BE HAD ON APPLICATION.

THE "WALTER CRANE" READERS.

A Series of Books for the Teaching of English Reading. By NELLIE DALE, Headmistress of the Preparatory Part of Wimbledon High School. With numerous Coloured Plates by WALTER CRANE.

- 1. **STEPS TO READING.** 16 pages, 4d. net.
- 2. **SECOND PRIMER.** 48 pages, 6d. net.
- 3. **FIRST PRIMER.** 32 pages, 5d. net.
- 4. **INFANT READER.** 64 pages, 7d. net.
- 5. **ON THE TEACHING OF ENGLISH READING.** Being a study and explanation of the method used in above Readers. By NELLIE DALE, 167 pages, 2s. 6d. net.

"Any one who understands little children, and realizes the great importance of the first steps in education, will recognize immediately that there are certain valuable points in Miss Dale's system of teaching which recommend it to the serious consideration of infant-school mistresses. . . . There is at last a sign of something real in the way of primary education when an artist of Mr. Walter Crane's standing is willing to apply his mind to elementary readers."
Saturday Review.

"We advise our enthusiastic infant teachers to give the method a trial. They will not be disappointed, we feel sure."
Teachers' Aid.

"Another good point about the method, and which augurs well for its early adoption, is that, the more closely it is studied, the less it seems to involve of sudden and troublesome departure from established methods. It appears quite capable of a gradual engrafting of its features upon existing usage."
School Board Chronicle.

HODGES, FIGGIS, & CO., LIMITED, 104 GRAFTON STREET, DUBLIN. LONDON: LONGMANS & CO.

WM. BLACKWOOD & SONS' EDUCATIONAL WORKS.

BLACKWOODS' ILLUSTRATED CLASSICAL TEXTS.

IN CROWN 8VO VOLUMES.

With numerous Plain and Coloured Illustrations.

MESSRS. WM. BLACKWOOD & SONS have pleasure in announcing the issue of the opening volumes of a new Series of **CLASSICAL TEXTS** under the general editorship of **H. W. AUDEN, M.A.**, Assistant-Master at Fettes College, late Scholar of Christ's College, Cambridge, and Bell University Scholar.

Some Leading Features of the Series.

The primary aim of the Series is to supply *cheap, attractive, and practical* editions of the more ordinary school classics.

Introductions are short and interesting, containing (a) a life of the author; (b) some account of his works generally; and (c) a notice of the special work under treatment.

Text.—A sound text is given in every case, but textual criticism has been avoided except where the MS. is of some general interest, historically or otherwise.

Notes are as brief as is consistent with the proper elucidation of the text. In this respect the *practical* aim of the Series as *School Editions* has been strictly kept in view.

Appreciation of Contents.—To this end careful attention has been paid to typographical arrangements. Marginal analyses are given, together with useful summaries (in Appendix) collecting results of what has been read—*e.g.*, tabulation of similes in Vergil, of military terms in Xenophon, and chronological tables.

Realization of Greek and Roman Life.—The publishers have endeavoured to make this a special feature of the Series by numerous maps, plans, and illustrations (both plain and coloured), from the best German and other sources.

General.—Practical hints on translation, &c., are given, and wherever possible the more certain modern results of comparative philology, mythology, and archaeology are touched on.

CÆSAR. GALLIC WAR. Books IV., V. By ST. J. B. WYNNE-WILLSON, M.A., late Scholar of St. John's College, Cambridge; Assistant-Master at Rugby. Price 1s. 6d. [Ready.]

VERGIL.—GEORGIC IV. By J. SARGEANT, M.A., late Scholar of University College, Oxford; Assistant-Master at Westminster. Price 1s. 6d. [Immediately.]

OVID.—METAMORPHOSES (Selections). By J. H. VINCE, M.A., late Scholar of Christ's College, Cambridge; Assistant-Master at Bradfield. Price 1s. 6d. [Immediately.]

Shortly will be published.

CÆSAR.—GALLIC WAR. Books I.—III. By J. M. HARDWICH, M.A., late Scholar of St. John's College, Cambridge; Assistant-Master at Rugby.

CICERO.—IN CATILINAM, I.—IV. By H. W. AUDEN, M.A., late Scholar of Christ's College, Cambridge; Assistant-Master at Fettes College.

HOMER.—ODYSSEY. Book VI. By E. E. SIKES, M.A., Fellow and Lecturer of St. John's College, Cambridge.

OVID.—ELEGIAC EXTRACTS. By A. R. F. HYSLOP, M.A., late Scholar of King's College, Cambridge; Assistant-Master at Harrow.

SALLUST.—JUGURTHA. By J. F. SMEDLEY, M.A., late Fellow of Pembroke College, Cambridge; Assistant-Master at Westminster.

The following are also arranged for:—

HOMER: ODYSSEY, Book VII. By E. E. SIKES, M.A.—**DEMOSTHENES: OLYNTHIACS, I.—III.** By H. SHARPLEY, M.A.—**CICERO: PRO LEGE MANILIA and PRO ARCHIA.** By K. P. WILSON, M.A.—**TACITUS: AGRICOLA.** By H. F. MORLAND SIMPSON, M.A.—**XENOPHON: ANABASIS, Books I.—III.** By A. R. F. HYSLOP, M.A.—**XENOPHON: HELLENICA (Selections).** By G. MIDDLETON, M.A.—**EURIPIDES: HECUBA.** By F. GRIFFIN, M.A.

Other Volumes to follow.

FRENCH AND GERMAN.

French Historical Unseens. By N. E. TOKE, B.A. Crown 8vo, 2s. 6d.

Progressive German Composition. With Copious Notes and Idioms. And First Introduction to German Philology. By LOUIS LUBOVICUS, German Master in the Secondary Schools of the Govan School Board, Glasgow. 3s. 6d.

Also, in Two Parts.

Progressive German Composition. 2s. 6d.

First Introduction to German Philology. 1s. 6d.

* A KEY, available for Teachers only, price 5s. net.

Lower-Grade German: Reading, Supplementary Grammar, with Exercises and Material for Composition. By the same Author. Second Edition, Revised. 2s. 6d.

MATHEMATICS.

A Handbook of Arithmetic: containing Hints on Short Methods, together with copious Examples and Test Papers. By A. VEITCH LOTHIAN, M.A., B.Sc., Lecturer in Mathematics, Church of Scotland Training College, Glasgow. With Answers. [Immediately.]

Modern Geometry of the Point, Straight Line, and Circle. An Elementary Treatise. By J. A. THIRD, M.A., Headmaster, Spier's School, Beith. 3s.

APPROVED SCHOOL BOOKS BY DR. CORNWELL, F.R.G.S.

"We are qualified by ample trial of the books in our own classes to speak to their great efficiency and value. We have never known so much interest evinced, or so much progress made, as since we have employed these as our school-books."—EDUCATIONAL TIMES.

A School Geography. 88th Edition; 3s. 6d., or, with 30 Maps, 5s. 6d.

"Very superior to the common run of such books. It contains a good deal of useful matter of a more practical kind than usual, which the exercises are likely to impress on the mind more deeply than by the parrot system."—*Athenæum*.

A School Atlas. Consisting of Thirty Small Maps. A Companion Atlas to the Author's "School Geography." 2s. 6d., or 4s. coloured.

Geography for Beginners. 67th Edition; 1s., or, with 48 pp. of Questions, 1s. 4d. Questions, 6d.

"A very useful series of Educational Works, of which Dr. Cornwell is either author or editor. It ('The Geography for Beginners') is an admirable introduction. There is a vast difficulty in writing a good elementary book, and Dr. Cornwell has shown himself possessed of that rare combination of faculties which is required for the task."—*John Bull*.

Spelling for Beginners. A Method of Teaching Reading and Spelling at the same time. 4th Edition, 1s.

Allen and Cornwell's School Grammar. 64th Edition; 2s. red leather, or 1s. 9d. cloth.

"The excellence of the Grammar published by the late Dr. Allen and Dr. Cornwell makes us almost despair of witnessing any decided improvement in this department."—*Athenæum*.

Arithmetic for Beginners. Combines simplicity and fullness in teaching the First Four Rules and Elementary Fractions. 9th Edition. 1s.

Grammar for Beginners. An Introduction to Allen and Cornwell's "School Grammar." 87th Edition; 1s. cloth, 9d. sewed.

"This simple introduction is as good a book as can be used."—*Spectator*.

The Book is enlarged by a Section on Word-Building, with Exercises for Young Children.

The Young Composer: Progressive Exercises in English Composition. 48th Edition, 1s. 6d. Key, 3s.

"The plan of the work is very superior. We are persuaded this little book will be found valuable to the intelligent instructor."—*Westminster Review*.

Poetry for Beginners: A Selection of Short and Easy Poems for Reading and Recitation. 13th Edition, 1s.

The Science of Arithmetic. A Systematic Course of Numerical Reasoning and Computations; with very numerous Exercises. By JAMES CORNWELL, Ph.D., and SIR JOSHUA G. FITCH, LL.D. 26th Edition. 4s. 6d.

"The best work on arithmetic which has yet appeared. It is both scientific and practical in the best and fullest sense."—*London Quarterly*.

Key to Science of Arithmetic. With the Method of Solution to every Question. Key, 1s. 6d.

"Eminently practical, well stored with examples of wider range and more varied character than are usually given in such books, and, its method of treatment being thoroughly inductive, it is pre-eminently the book for general use."—*English Journal of Education*.

London: Simpkin, Marshall, Hamilton, Kent, & Co., Limited.—Edinburgh: Oliver & Boyd.

Pitman's Shorthand

ABSOLUTELY UNRIVALLED.

Over 60 years the standard, and to-day is used by 98% of writers; the small balance of 2% being distributed among all the other systems.

The Chair will be taken at 7.30 p.m., and a discussion will follow the reading of the Paper.
Members have the privilege of introducing their friends.

C. R. HODGSON, B.A., *Secretary.*

COLLEGE OF PRECEPTORS.
(Bloomsbury Square, W.C.)

LECTURES FOR TEACHERS

IN THE SCIENCE, ART, AND HISTORY OF EDUCATION.

THE TEACHER AND THE CLASS.

To be delivered by P. A. BARNETT, Esq., M.A., formerly Principal of the "Borough Road" Training College, Isleworth.

The Second Course of Lectures (Twenty-Fifth Annual Series) began on Friday, 22nd September.

These lectures are meant to be of direct service to intending and acting teachers by showing the bearing of questions of theory on the daily practice and the needs of the class-room. The syllabus does not state in detail all the points which will be treated, but indicates the heads under which the most important are likely to present themselves for consideration. References and suggestions for reading will be made from time to time during the progress of the course.

For Syllabus, see page 400.

The Fee for the Course is Half-a-guinea. The Lectures will be delivered on Friday Evenings at 7 o'clock, at the College, Bloomsbury Square, W.C.

Members of the College have Free Admission to this Course.

C. R. HODGSON, B.A., *Secretary.*

UNIVERSITY DIPLOMA FOR WOMEN.
THE UNIVERSITY OF ST. ANDREWS grants Diploma and Title of L.L.A. to WOMEN.

60 Examination Centres in Great Britain and abroad. For Prospectus, apply to the SECRETARY, L.L.A. Scheme, The University, St. Andrews, N.B.

PREPARATION BY CORRESPONDENCE

On a thoroughly individual system, which
ensures to each student the closest care and attention.
Weak subjects receive special help. Fees may be based
on success.

Single subjects may be taken—Latin, Greek,
French, German, Italian, Mathematics, Mechanics,
Physics, Chemistry, Logic, Psychology, Political Eco-
nomy, &c.

TUTORS.

The Staff includes a number of Graduates of London,
Oxford, Cambridge, and Royal Universities, Science
Medallists, and Specialists.

The following are a few extracts from letters of
successful pupils:—

"Thank you heartily for your careful preparation,
without which I am sure I could never have got
through."

"I attribute my success entirely to your coaching,
and shall be pleased to recommend you to my friends."

"I was pleased to find that many of the questions
given to me by you were actually given in the examina-
tion."

"I have passed in every subject in the L.C.P., and
am very pleased at the result. May I thank you for
your kind and valuable help, which had everything to
do with the result, for some of the questions I had were
the same as I had previously answered in your papers."

"I have passed my examination (all subjects A.C.P.).
I am simply delighted, and feel that it is owing to your
excellent tuition."

For Terms, Testimonials, &c.,

Address—Mr. J. CHARLESTON, B.A.

(Honours, Oxon.; and Lond.),

BURLINGTON CLASSES,

27 CHANCERY LANE, LONDON.

JOINT AGENCY FOR WOMEN TEACHERS.

(Under the management of a Committee appointed by
the Teachers' Guild, College of Preceptors, Head-
mistresses' Association, Association of Assistant
Mistresses, and Private Schools' Association.)

Address—74 GOWER STREET, LONDON, W.C.

Registrar—Miss AGNES G. COOPER.

This Agency has been established for the purpose of
enabling Teachers to find work without unnecessary
cost. All fees have therefore been calculated on the
lowest basis to cover the working expenses.

Headmistresses of Public and Private Schools, and
Parents requiring Teachers, or Teachers seeking ap-
pointments, are invited to apply to this Agency.

Many Graduates and Trained Teachers for Schools
and Private Families; Visiting Teachers for Music,
Art, and other special subjects; Foreign Teachers of
various nationalities; Kindergarten and other Teachers
are on the Register, and every endeavour is made to
supply suitable candidates for any vacancy.

School Partnerships and Transfers are arranged.

Office hours—9.30 a.m. to 6 p.m. Miss Cooper's hours
for interviews are from 10.50 a.m. to 1.30 p.m., and
2.50 p.m. to 5 p.m.; Wednesdays to 1.30 p.m. only.

THE JOINT AGENCY FOR MEN TEACHERS.

23 SOUTHAMPTON STREET, BLOOMSBURY
SQUARE, LONDON, W.C.

Registrar—Rev. F. TAYLOR, M.A. Cantab.

The Agencies for Assistant-Masters and Tutors
hitherto conducted by the College of Preceptors, the
Teachers' Guild, and the Assistant-Masters' Associa-
tion, have been amalgamated and placed under the
management of a Joint Committee composed of repre-
sentatives of the following Bodies:—

- Headmasters' Conference.
- Incorporated Association of Headmasters.
- College of Preceptors.
- Teachers' Guild.
- Welsh County Schools' Association.
- Private Schools' Association.
- Association of Headmasters of Preparatory Schools.
- Association of Headmasters of Roman Catholic Schools.
- Assistant-Masters' Association.
- Association of Technical Institutions.
- &c. &c.

The rates of commission charged to Assistant-Masters
are fixed as low as possible, and it is hoped that all
branches of the profession will support an Agency
managed by so widely representative a Committee.

Headmasters having vacancies on their staffs, and
Assistant-Masters seeking appointments, are asked to
communicate with the REGISTRAR.

ASPIRANT.—College of Pre-

ceptors, Matriculation,
Civil Service, and all Stud-
ents should read the Aspirant, a Weekly Journal,
Review, and Coach for these and all Examinations. No
student who requires coaching up to his examination
should be without the coaching aids afforded by this
Journal. Numerous testimonials from subscribers and
readers. A Subscriber says: "I have received more
benefit, for the price of 1d. weekly, from your Coaching
Journal than I did for 30s. for a course of tuition."
Saturdays, 1d. Bookstalls, Newsagents, or from the
Publishers, TILDESLEY & Co., Lavender Hill, London,
S.W.

COLLEGE OF PRECEPTORS.

Lectures for Teachers.

By P. A. BARNETT, Esq., M.A., formerly Principal of the "Borough Road" Training College, Isleworth.

SYLLABUS.

LECTURE I.

Preparation for Teaching as a Profession.

The meaning and purpose of training; economy of effort; development of capacity. The possibilities of training: the cultivable margin of aptitude. The methods of training: practice in the art of instruction; personal observation and record-making; study of books. Training as it affects the teacher's aim, character, and temperament, appreciation of the scope and difficulties of education, and personal acceptability.

LECTURE II.

The Teacher and a Definition of Education.

The value of the definition of an art: to simplify and inspire purpose; to determine method; to suggest procedure. Education the direction of a force constant in society; the teacher's place as beneficent agent. The historical development of the ideal of education in political and religious societies; its social and psychological consequences as they affect teaching. The effect of prevalent theories of knowledge and conduct on conceptions of education. Misleading ideals. The authorities in education and teaching.

LECTURE III.

Education as a problem in Organization.

What is a liberal education, and who is to have it? The many-sidedness of human nature. Educational needs indicated by common fundamental endowments and destiny; hence interrogation of sociology and psychology. Free access to a liberal education as a test of social and political ideals. Current conceptions of a liberal education. The division of "subjects." The nature of specialization; its limits and social effects. The teacher and his syllabus and time table. Curriculum for boys and for girls.

LECTURE IV.

Education as a problem in Psychology.

The value and scope of psychology in the work of the class-room. Teaching and education. The suggestiveness of physio-psychology. The conflicting doctrines of psychologists. The mind as a combination or *plexus* of "faculties." Professional pedantry and superstitions of the school-room. Empirical tricks and delusive shortcuts in teaching. The direct lessons of psychology. The teacher and "all-round" cultivation.

LECTURE V.

The Relation of Body and Mind.

Physiological health and psychological health involve each other. The basis of the Kindergarten organization and methods. The dangers of excessive regard for machinery. Youth a process. Stages of development, and necessary growth of curriculum and alteration of procedure. Signs of distress and defect. Training of manual dexterities. The limit of its usefulness: as to age; as to social conditions. Health in the school, school-house, and school-room. The meaning of Play.

LECTURE VI.

School Morals.

School a poor substitute for, but necessary complement to, the home. A definition of School necessary in order to economize and direct effort. Domestic and public virtues. The corporate life of school. Sentiment and conduct. The cultivation of aptitudes for an ideal community. Rewards and punishments. The cultivation of character by the teacher. The effect of surroundings on character. Surroundings and habit. Nagging. The organization and character of school games.

LECTURE VII.

Language as Literature and Rhetoric.

Literature and its definition. Literature in the cultivation of the imagination and emotions. Use of literature in school; as reading, as recitation, as a "study." Literature a compendious study. The order of interest. "Culture" and its relation to literature in school. The investigation of literary masterpieces; dangers of philological treatment. The relation of appreciation and expression. The order of rhetoric or "composition" teaching. The need for *copiousness* of reading.

LECTURE VIII.

Language as Speech.

The meaning of "Self-expression." The relations of intelligence and intelligibility. The cultivation of audible speech; a physical exercise. Procedure in teaching Speech, Reading, Elocution. The place of the Pattern. The rarity and importance of right Emphasis. Oral examination. Foreign speech: the mother method; the analytical method. The differences in the teaching of modern and ancient languages; as to aim; as to procedure. The limits of oral teaching. The application of tests in examination.

LECTURE IX.

Abstraction in Mathematics, Logic, and Grammar.

The capacity for abstraction. Its place in mental development. Mathematical certainty and the necessary qualifications of mathematical certitude; the delimitation of terms used *technically*, in special connexions. The value of cultivating the power to define. The uses and limitations of Arithmetic and formal Grammar; the skeleton of the art of reasoning. Grammar as an inductive science.

LECTURE X.

Training in the power of Discovery.

Science and its definition. False notions of science, and meaningless antithesis between science and other studies. Science as observation and experiment in the school curriculum. The perils of restricted observations and unanalysed experiments. The logical subdivisions of science. Philology as science. Imagination in science. Invention and Design. The place of Geography in the hierarchy of sciences; as a compendious and general study; as a special and applied study.

LECTURE XI.

History as a School Subject.

History as a concrete study, and as a method. The relation of history to literature and other subjects in the curriculum. History as an atmosphere; as a panorama; as the interpretation of the succession of events affecting political societies. The necessary material for basis. The order of teaching. The desirable completeness of each stage. The passage from general to particular and *vice versa*. The need for frequent concrete attachments in school teaching. Ancient and modern history. History as a core or centre of instruction. Suggested courses.

LECTURE XII.

Summaries and general conclusions.

The Fee for the Course of Twelve Lectures is Half-a-Guinea.

* * * The Lectures will be delivered on Friday Evenings at 7 o'clock, at the College, Bloomsbury Square, W.C.—Members of the College have free admission to the C urse.

UNIVERSITY EXAMINATION POSTAL INSTITUTION.

Manager—MR. E. S. WEYMOUTH, M.A. LOND.

LONDON: GREAT NEW STREET, FLEET STREET, E.C.

NEW PREPARATION BOOKS

FOR THE OXFORD AND CAMBRIDGE LOCAL AND OTHER EXAMINATIONS.

The Text-Books known as

Gill's Oxford and Cambridge Edition

contain special new and original features which render them the most successful preparation manuals published.

RELIGIOUS KNOWLEDGE.

The Manuals for this subject included in Gill's Oxford and Cambridge Edition were used by the Schools obtaining the highest results at the recent Cambridge Local Examination. Since the last Editions have been so well appreciated the Editors have extended the list to include other Books of the Bible. The Edition will now include

ST. MATTHEW. 1s. 6d. Now ready.	ACTS. Part I. 1s. 6d. Now ready.	JEREMIAH. 1s. Now ready.
ST. MARK. 1s. 6d. Ready September 15.	ACTS. Part II. 1s. 6d. Now ready.	JEREMIAH. 1s. Now ready.
ST. LUKE. 1s. 6d. Ready September 21.	ACTS. Complete. 2s. Now ready.	EEZA. 1s. Now ready.
EPHESIANS. 1s. Nearly ready.	PHILIPPIANS. 1s. Nearly ready.	

OXFORD LOCAL EXAMINATIONS, JULY, 1900. COLLEGE OF PRECEPTORS EXAMINATIONS, JUNE, 1900.

George Gill & Sons' (Ltd.) List of Special Text-Books.

SCRIPTURE.—Senior, Junior, Preliminary, and College of Preceptors.

St. Luke. Edited by the Rev. F. MARSHALL, M.A. Cantab. Crown 8vo, cloth	s. d.	1	6

		ASIA.

This Series, consisting of Twelve Maps will be completed shortly.

DENT'S MODERN LANGUAGE SERIES.

Edited by WALTER RIPPMMANN, M.A.

In fcap. 8vo, cloth, 1s. 6d. net.
DENT'S FIRST FRENCH BOOK. Based on the Hölzel Pictures of the Seasons. By S. ALGE and WALTER RIPPMMANN.

In fcap. 8vo, cloth, 1s. 6d. net.
HINTS ON TEACHING FRENCH. With a running Commentary to Dent's First and Second French Books.

Prof. FREDERIC SPENCER writes:—"Dent's First French Book appears most opportunely, supplying as it does, on the lines of the 'reform' method, a course which is both rational and eminently practical. . . . This little book, with Mr. Rippmann's running commentary, deserves the careful attention of every teacher of French."

In fcap. 8vo, 1s. 6d. net.
DENT'S SECOND FRENCH BOOK. By S. ALGE and WALTER RIPPMMANN. Consists mainly of a charming story by JEANNE MAIRET, "La Tache du Petit Pierre."

The Second French Book can be taken with a class, even without previously working through the First Book. It will be found an excellent reading book. "We can heartily commend this reader as an exposition of the new method."—*Journal of Education*, Dec. 1898.

In fcap. 8vo, cloth, 2s. 6d. net.
FRENCH DAILY LIFE: Common Words and Common Things. Adapted by WALTER RIPPMMANN from Dr. KRON'S "Le Petit Parisien."

For class use it is far better than anything we have previously seen. It is not, of course, intended for beginners. Students who, without much conversational facility, intend to join a French holiday course next midsummer might here find valuable assistance. The Englishman travelling in France will find here all the phrases essential to his comfort—not in formal lists, but strung together in a chatty and interesting narrative, which also contains information as to how and where the phrases are to be used."—*Education*.

SPECIMEN COPIES AND PROSPECTUSES OF THE ABOVE MAY BE HAD ON APPLICATION.

THE "WALTER CRANE" READERS.

A Series of Books for the Teaching of English Reading. By NELLIE DALE, Headmistress of the Preparatory Part of Wimbledon High School. With numerous Coloured Plates by WALTER CRANE.

- 1. **STEPS TO READING.** 16 pages, 4d. net.
- 2. **FIRST PRIMER.** 32 pages, 5d. net.
- 3. **SECOND PRIMER.** 48 pages, 6d. net.
- 4. **INFANT READER.** 64 pages, 7d. net.
- 5. **ON THE TEACHING OF ENGLISH READING.** Being a study and explanation of the method used in above Readers. By NELLIE DALE, 167 pages, 2s. 6d. net.

"Any one who understands little children, and realizes the great importance of the first steps in education, will recognize immediately that there are certain valuable points in Miss Dale's system of teaching which recommend it to the serious consideration of infant-school mistresses. . . . There is at least a sign of something real in the way of primary education when an artist of Mr. Walter Crane's standing is willing to apply his mind to elementary readers."—*Saturday Review*.

"We advise our enthusiastic infant teachers to give the method a trial. They will not be disappointed, we feel sure."—*Teachers' Aid*.
"Another good point about the method, and which augurs well for its early adoption, is that, the more closely it is studied, the less it seems to involve of mind and troublesome departure from established methods. It appears quite capable of a gradual engrafting of its features upon existing usage."—*School Board Chronicle*.

KEY TO THE EXERCISES
IN THE TREATISE ON ELEMENTARY TRIGONOMETRY.
With numerous Examples and Questions. Second Edition. Price 3s.

A TREATISE ON
PLANE TRIGONOMETRY.
Containing an account of Hyperbolic Functions, with numerous Examples.
Crown 8vo. Second Edition.

Crown 8vo, price 5s.
A TREATISE ON
SPHERICAL TRIGONOMETRY,
AND ITS APPLICATION TO GEODESY AND ASTRONOMY.
With numerous Examples.

HODGES, FIGGIS, & CO., LIMITED, 104 GRAFTON STREET, DUBLIN.
LONDON: LONGMANS & CO.

BLACKIE & SON'S NEW BOOKS.

ENGLISH ETYMOLOGY. A select Glossary, serving as an Introduction to the History of the English Language. By F. KLUGE and F. LUTZ. Demy 8vo, cloth, 5s. net.

"This book should prove a powerful rival to the well-known 'Concise Dictionary' of Prof. Skeat. The relation of English words to their Teutonic and Romance relatives is very clearly and simply set out, and as the arrangement is alphabetical, the glossary is a much more practical one to consult."—*Academy*.

LANDMARKS IN ENGLISH INDUSTRIAL HISTORY. By GEORGE TOWNSEND WARNER, M.A., sometime Fellow of Jesus College, Cambridge, Assistant-Master at Harrow. Crown 8vo, cloth, 5s.

"This book is a god-send. A short account of the chief points in the development of economic life in England has been wanted for long. . . . All students of history should at once procure it."—*Cambridge Academy*.

"... To the list Mr. Warner has just added a volume which, to our mind, easily outdistances all competitors. It is eminently workmanlike in form and eminently readable in composition. The subjects are clearly mapped out and carefully worked through. . . . We cordially recommend Mr. Warner's work."—*Oxford Magazine*.

A BRIEF SURVEY OF BRITISH HISTORY. By G. TOWNSEND WARNER, M.A. With Tables, Summaries, Maps, Notes, &c. 1s. 6d.

ENGLISH SATIRES. Selected and Edited by OLIPHANT SMEATON, M.A. Crown 8vo, cloth, 3s. 6d.

* * * This is a new volume in the Warwick Library of English Literature.

SPECIMENS OF ENGLISH PROSE. Selected and Edited for Schools by BERTHA SKEAT, Ph.D., late Lecturer at Newnham College, Cambridge.

* * * This will prove an excellent companion to any school history of English Literature.

MACAULAY.—ESSAY ON MILTON. Edited by JOHN DOWNIE, M.A., Lecturer on English in Aberdeen F. C. Training College; Examiner in History to the University of Edinburgh. 2s.

The *Journal of Education*, comparing this edition with another, says:—"Mr. Downie's edition is more definitely intended for school use, or rather for use in the Teacher's Certificate Examination. His book is more severe, though not unduly so, and is very much briefer. The introduction is a clear and satisfactory piece of work, especially as regards its criticism of the style of the essay. We like also his plan of paragraphing the essay."

PASSAGES FROM MODERN AUTHORS, for Class Reading. Edited by JOHN DOWNIE, M.A. Cloth, 2s.

SOUTHEY.—BALLADS AND OTHER POEMS.* Edited, with Introduction and Notes, by C. J. BATTERSBY, M.A. Fcap. 8vo, paper cover, 2d.; limp cloth, 3d.

MACAULAY.—THE LAY OF VIRGINIA.* Edited, with Introduction and Notes, by D. NICHOL SMITH, M.A. Fcap. 8vo, paper cover, 2d.; limp cloth, 3d.

* These little books are the latest additions to Blackie's School Classics, which combine scholarly editing with good type and paper.

POPE'S RAPE OF THE LOCK. Edited by F. RYLAND, M.A., S. John's College, Cambridge.

THE ELEMENTS OF ENGLISH PROSE. A new Theoretical and Practical Treatise on English Composition. By W. A. BROCKINGTON, M.A., formerly Lecturer on English at Mason College, Birmingham. Crown 8vo, cloth, 2s. 6d.

"We have seldom met a more useful and practical treatise. . . . We hope the work will have the wide circulation which it deserves."—*Manchester Courier*.

THE MEDEA OF EURIPIDES. Lyric parts omitted, but an English translation supplied. Edited by P. B. HALCOMBE, M.A., King's College, Cambridge. Illustrated. Crown 8vo, 1s. 6d.

"Mr. Halcombe's book is an attempt to bring the 'Medea' within the reach of young boys. . . . The plan is a good one, as has been proved by the great success of the 'Scenes.' The introduction, with its account of a Greek theatre and play (illustrated), is simple and good."—*Literary World*.

A PRIMER OF HISTORICAL FRENCH GRAMMAR. By ERNEST WEEKLEY, M.A., Professor of French at University College, Nottingham. Crown 8vo, cloth, 2s. 6d.

"An eminently satisfactory historical French grammar. It is a thoroughly workmanlike production, trustworthy in all respects, and resting on a phonological basis. We commend specially the introduction illustrating the growth of French from vulgar Latin, and the chapter (the last) on metre. To one with the memory still young and retentive the task of mastering and retaining all its details should be easy, and its accomplishment would furnish the student with a knowledge such as few, except skilled linguists, can boast."—*Notes and Queries*.

SONGS OF BÉRANGER. Edited, with Introduction, Notes, and Vocabulary, by GEORGE H. ELY, B.A. Small crown 8vo, cloth, 1s.

Including the famous "Roi d'Yvetot," "Le Marquis de Carabas," "Ma Vocation," "Souvenirs du Peuple," and thirteen other songs.

"The notes are concerned with the real difficulties of the text, and the biographical and critical estimate of the poet is written with unusual judgment and care."—*The Speaker*.

LE TRÉSOR DE MONTE CRISTO. Edited by B. PROPER. The early chapters abridged and adapted as a school reader, with Wood-cut Illustrations, Notes, and a Vocabulary. Illustrated. Crown 8vo, cloth, 1s. 6d.

LES AILES DU COURAGE. By GEORGE SAND. Edited by B. PROPER, Editor of "Le Trésor de Monte Cristo"

LES DEUX BOSSUS. By HENRY CARNOY. Edited by EMILE B. LE FRANÇOIS. With a Frontispiece by ALICE B. WOODWARD. Small crown 8vo, cloth, 1s.

MY FIRST FRENCH BOOK. By MARGUERITE NINET. Illustrated. 1s.

A little book of easy anecdote, stories, and sketches, in large type, for very young children, with pictures to each lesson, and complete vocabularies.

PROGRESSIVE LESSONS IN SCIENCE. A Complete and valuable scheme of Experimental Lessons bearing on the Science of Daily Life. By A. ABBOTT, M.A., H.M.I.S., and ARTHUR KEY, M.A., H.M.I.S. With Introduction by T. G. ROOPER, H.M.I.S. Crown 8vo, cloth, 3s. 6d.

"The first part of the book contains a number of graduated experiments which illustrate the properties of water, the solution of gases, the laws of chemical combination, and the like. The second part is designed to show, by actual tests, the distribution of the elements in the animal, vegetable, and mineral kingdoms. We do not remember ever to have met a manual for beginners which shows so clearly as this volume how the principles of chemistry may be brought to bear in a practical manner on the affairs of daily life."—*The Speaker*.

J. & A. CHURCHILL, Publishers.

NEW WORK ON ALGEBRA.

Elementary Algebra (to Quadratics.) By C. H. FRENCH, M.A., and G. OSBORN, M.A., Mathematical Masters at the Leys School, Cambridge, formerly Scholars of Emmanuel College, Cambridge. Crown 8vo, 3s. 6d.; or with Answers, 4s. 6d.

A Handbook of Physics and Chemistry, adapted to the Requirements of the First Examination of the Conjoint Board of the Royal Colleges of Physicians and Surgeons, and also for General Use. By HERBERT E. CORBIN, B.Sc. Lond., and ARCHIBALD M. STEWART, B.Sc. Lond. With 120 Illustrations. Crown 8vo, 6s. 6d.

PROFESSORS CLOWES AND COLEMAN'S ILLUSTRATED CHEMICAL HANDBOOKS.

For Colleges, Technical Institutes, Polytechnics, Organized Science Schools, and Schools generally.

Practical Chemistry and Qualitative Analysis. Seventh Edition. 8s. 6d.

Quantitative Analysis. Fourth Edition. 10s.

Elementary Practical Chemistry and Qualitative Analysis. 3s. 6d.

Introduction to Quantitative Analysis. 4s. 6d.

A Manual of Chemistry, Theoretical and Practical. By WILLIAM A. TILDEN, D.Sc., F.R.S., Professor of Chemistry in the Royal College of Science, London; Examiner in Chemistry to the Department of Science and Art. With 2 Plates and 143 Woodcuts. Crown 8vo, 10s.

Bloxam's Chemistry, Inorganic and Organic, with Experiments. Re-written and Revised by JOHN MILLAR THOMSON, F.R.S., Professor of Chemistry, King's College, London, and ARTHUR G. BLOXAM, Head of the Chemistry Department, The Goldsmiths' Institute, New Cross, London. Eighth Edition. With 281 Engravings. 8vo, 18s. 6d.

Bloxam's Laboratory Teaching; or, Progressive Exercises in Practical Chemistry. Edited by ARTHUR G. BLOXAM, Head of the Chemistry Department, The Goldsmiths' Institute, London. Sixth Edition. With 80 Woodcuts. Crown 8vo, 6s. 6d.

Valentin's Practical Chemistry, Qualitative and Quantitative Analysis. Edited by Dr. W. R. HODGKINSON, Professor of Chemistry in the Royal Military Academy and Artillery College, Woolwich. Ninth Edition. 8vo, 9s. [The Tables separately, 2s. 6d.]

A Manual of Botany. By J. REYNOLDS GREEN, Sc.D., F.R.S., Professor of Botany to the Pharmaceutical Society, Examiner in Botany to the University of London and the Victoria University. In Two Vols., with nearly 1,200 Illustrations. Vol. I. MORPHOLOGY AND ANATOMY. Second Edition. 7s. 6d. Vol. II. CLASSIFICATION AND PHYSIOLOGY. 10s.

LONDON: J. & A. CHURCHILL, 7 GREAT MARLBOROUGH STREET.

NUMBER NINE NOW READY.

THE SCHOOL WORLD.

A Monthly Magazine of Educational Work and Progress.

PRICE SIXPENCE.

CONTENTS.

Archdeacon WILSON, M.A.—Junior Cambridge Local Examination, December, 1899. Monthly Test Papers, No. 1.—Laboratory Arrangements.—Correspondence: Leisure Hour Pursuits. By HEADMASTER.—The Identification of Insects. By ROBERT CHAMBERS.

** The next number of *The School World* will be published on October 3, and all subsequent numbers will appear a few days before the beginning of each month.

MACMILLAN & CO., LIMITED, LONDON.

WORKS

BY THE

Rev. G. HUGH JONES.

Higher Scripture Teaching: St. Luke.

Price 1s. 6d.

Lesson Papers in Religious Knowledge: St. Matthew.

Price 6d.

"Very scholarly work may be brought within easy grasp of those average pupils who seem very impatiently to need a guiding hand in the preparation of their divinity lessons."
The School World.

"Will be found a useful book by those preparing for examinations."
The Christian.

"Should prove eminently serviceable to candidates for examinations in religious knowledge."
The Schoolmaster.

"Mr. Hugh Jones has done well in making his references always to the 'Cambridge Bible for Schools.'"
School Guardian.

"To point out the exact information which University Local examiners consider candidates should possess for 'Pass' or 'Distinction.'"
School Board Chronicle.

"The idea of the book seems to be thoroughly good and useful."
Dean Wickham, D.D.

"Your work favourably impresses me."
Bishop of Calcutta.

"Likely to stimulate to a thoughtful reading of the Gospel."
Rev. A. R. Vardy, M.A.

"Have the great merit of limiting and fixing the attention of the student."
J. M. D. Meiklejohn, M.A.

"I have found your book of real and valuable help with my class."
Headmaster of Gresham Grammar School.

"I have found your 'St. Luke' so helpful in teaching that I should be glad to think we might hope for another Gospel on the same lines."
A Lady Principal (Dorset).

"I was much pleased with your 'St. Luke,' which I used in College last term."
A. C. Dixon, B.A., B.Sc. Lond.

"I have used your book of notes, and found it very helpful in teaching."
Headmistress (Liverpool).

LONDON: SIMPKIN, MARSHALL, & CO.

MACMILLAN & CO.'S NEW EDUCATIONAL BOOKS.

EXERCISES IN PRACTICAL PHYSICS FOR SCHOOLS OF SCIENCE. By R. A. GREGORY, Professor of Astronomy, Queen's College, London, Oxford University Extension Lecturer; and A. T. SIMMONS, B.Sc. Lond., Associate of the Royal College of Science, London. In Two Parts. Part I., First Year's Course. Globe 8vo, 2s.

FRENCH HISTORY FOR SCHOOLS. By KATHARINE STEPHEN, Vice-Principal of Newnham College, Cambridge. With Coloured Maps. Globe 8vo, 3s. 6d.

TOM BROWN'S SCHOOLDAYS. By AN OLD BOY. With Illustrations by ARTHUR HUGHES and SYDNEY PRIOR HALL. Abridged Edition for Schools. Globe 8vo, 1s. 6d.
Secondary Education.—"This edition of a popular work will be welcome in many schools. It is well illustrated, and printed in bold, clear type. It forms an easy reader, suitable for middle forms."

ENGLISH.

Chaucer's Canterbury Tales.—THE SQUIRE'S TALE. Edited, with Introduction and Notes, by A. W. POLLARD. Globe 8vo, 1s. 6d.
[English Classics.]

LATIN.

Cicero.—Pro Cluentio. Edited, with Introduction and Notes, Explanatory and Critical, by W. PETERSON, M.A. Edin. and Oxon., &c. Fcap. 8vo, 3s. 6d.
[Classical Series.]
Educational Times.—"Adds yet another valuable book to the popular 'Red Series of Classics.' . . . The commentary is full of interest, replete with acute explanations, and a very storehouse of the knowledge accumulated by others."

Virgil.—Georgics III. Edited, for the use of Schools, with Vocabulary, by T. E. PAGE, M.A., late Fellow of St. John's College, Cambridge. Pott 8vo, 1s. 6d.
[Elementary Classics.]
Educational News.—"The editor in this issue of the book has fitted it finely for use as an elementary classic."

Virgil.—Æneid XII. Edited, for the use of Schools, by T. E. PAGE, M.A. With Vocabulary by the Rev. G. H. NALL, M.A. Pott 8vo, 1s. 6d.
[Elementary Classics.]
Athenæum.—"Mr. Page is a good editor, who has by this time considerable knowledge of the kind of things boys want explained. His notes are, therefore, short and sensible."

GREEK.

Thucydides. Selections from Book VII. Athenian Disaster in Sicily. Edited by E. C. MARCHANT, M.A. Pott 8vo, 1s. 6d.
[Macmillan's Elementary Classics.]
Educational News.—"A nice, handy, scholarly, and pleasing specimen of the fine Greek of the work which the patriotic author wrote but left unfinished."

An Introduction to Greek Prose Composition, for use in Preparatory Schools and the Lower Forms of Public Schools. By H. PITMAN, M.A., late Scholar of Oriol College. Globe 8vo, 2s. 6d.
School Board Chronicle.—"For Mr. Pitman's 'Greek Prose Composition' we have nothing but praise. It is admirable alike in arrangement and in execution. The examples are simple, easily remembered, and typical. The Greek type, as well as the accents, are fully and clearly presented to the eye."

FRENCH.

A Historical French Grammar. By Professor ARSÈNE DARMESTÈRE. Edited by Professor ERNEST MURET and Professor LEOPOLD SUDBER. Authorised English Edition by Professor ALPHONSE HARTOG. Crown 8vo, 12s. 6d.
Daily Chronicle.—"Darmestère's book has been admirably translated, and we know of none better calculated to ensure a thorough and scholarly familiarity with the origin and development of French. . . . Challenges the attention of the scholar."

Siepmann's Advanced French Series. New Volumes.
About.—Le Roi des Montagnes. Adapted and Edited by ERNEST WEEKLEY, M.A., late Scholar of Trinity College, Cambridge, Professor of French at the University College, Nottingham. Globe 8vo, 2s. 6d.
Guardian.—"Professor Weekley has provided it with a good set of the sort of exercises which have made the earlier numbers of Siepmann's series so well known and popular. His notes show the hand of the scholar and the teacher, and his introduction is commendably brief and to the point."

Vogüé.—Cœurs Russes. Edited by EUGÈNE PELLISSIER, Professeur Agrégé au Lycée du Havre. Globe 8vo, 2s. 6d.

Specimens of Modern French Verse. Edited, with Biographical and Critical Notes, and an Introduction on the Structure of French Verse, by H. E. BERTHOE. Pott 8vo, 2s. 6d.
[Foreign School Classics.]
Public School Magazine.—"The poems are admirably selected from a great variety of authors, while the introduction contains a proper and complete account of the structure of French verse. We wish this book every success in the schools."

Les Violettes Blanches. By EMILE RICHEBOURG. Edited, with Grammatical and Explanatory Notes and a French-English Vocabulary, by F. JULIEN. Globe 8vo, 1s. 6d.
[Primary Series.]
Educational News.—"A very suitable book for a primary class both in matter and editorial skill."

GERMAN.

Goethe's Hermann und Dorothea. With Introduction and Notes, by JAMES TAFT HATFIELD, Professor in the North-western University. Globe 8vo, 3s. 6d.
School World.—"He has given commendable care to the text. . . . The notes are full and satisfactory."

Lessing's Minna von Barnhelm oder Das Soldatenglück. With Introduction and Notes by STARR WILLARD CUTTING, Ph.D. With Portrait. Globe 8vo, 3s. 6d.

COMMERCIAL CORRESPONDENCE AND OFFICE ROUTINE.

Modern Business Methods. By FREDERICK HOOPER and JAMES GRAHAM.

The Home Trade. 2s. 6d.

The Teacher's Companion to the same. 2s. 6d. net.

The Beginner's Guide to Office Work. Sewed, 1s.

Facsimile Modern Business Forms. 6d.

HOW TO DO AN EXPORT TRADE.

The Import and Export Trade. 3s. 6d.

MATHEMATICS AND SCIENCE.

By H. S. HALL, M.A., and F. H. STEVENS, M.A.

An Elementary Course of Mathematics, comprising Arithmetic, Algebra, and Euclid. By H. S. HALL, M.A., and F. H. STEVENS, M.A. Globe 8vo, 2s. 6d.

Girls' and Infants' Mistress.—"This work does what it professes to do, and does it in the best possible manner. . . . Every teacher engaged in evening continuation school work, science classes, where mathematics is a subject of study, and the higher classes of our national schools should immediately write for a copy."

Elementary Practical Mathematics. Adapted to the South Kensington Syllabus. By F. CASTLE, M.I.M.E., Mechanical Laboratory, Royal College of Science, South Kensington. 3s. 6d.

A NEW SCHOOL ARITHMETIC.

A School Arithmetic. By R. F. MACDONALD. Globe 8vo, 2s. 6d.

Guardian.—"The grouping of miscellaneous examples at different stages of the book is a good point not often seen. Besides, the examples are numerous and very well chosen, and the price of the book, which is much below others containing the same amount of material, should guarantee it a trial for school use."

Examples in Arithmetic for Schools, being the Examples in the Arithmetic for Schools. By the Rev. J. B. LOCK, M.A. Globe 8vo, 3s.
Guardian.—"They are a first-rate collection."

The Elements of Euclid. By I. TODHUNTER, D.Sc., F.R.S. New Edition, Revised and Enlarged by S. L. LONEY, M.A. Globe 8vo. Books I. and II., 1s. 6d.; Books I.-IV., 3s.; complete, 4s. 6d.

Educational News.—"We prophesy a new lease of life for 'Todhunter's Euclid' as the result of Mr. Loney's work."

BOOKS III. AND IV. NOW READY.

Euclid's Elements of Geometry. Books III. and IV. Edited for the use of Schools by CHARLES SMITH, M.A., and SOPHIE BRYANT, D.Sc. Globe 8vo, 2s.

School Guardian.—"A handy and well-arranged edition. . . . Useful collections of interesting and important problems and theorems are added at the end of the text proper of each book, together with sets of exercises of some difficulty, while easier exercises are appended to the various propositions themselves. The diagrams are clear, and the varieties of type carefully chosen; indeed, the whole appearance of the pages is a model of what a geometrical text-book should be."

Laboratory Manual Experiments to Illustrate the Elementary Principles of Chemistry. By H. W. HILLYER, Ph.D. Medium 8vo, 4s. net.

Guardian.—"A genuine, well-considered laboratory manual."

The Arithmetic of Chemistry: being a Simple Treatment of the subject of Chemical Calculations. By JOHN WADDELL, B.Sc. Lond., D.Sc. Edin. Globe 8vo, 4s. net.

Nature.—"The author has collected together an excellent set of examples from a variety of sources, which should be useful to teachers in elementary classes."

Botany for Beginners. Adapted to the Elementary Stage of the South Kensington Syllabus. By ERNEST EVANS, Natural Science Master, Mechanics' Institute and Technical Schools, Burnley. 2s. 6d.

Magnetism and Electricity for Beginners. Adapted to the Elementary Stage of the South Kensington Syllabus. By H. E. HADLEY, B.Sc. Lond., Headmaster of the School of Science, Kidderminster. 2s. 6d.

EDUCATION.

Educational Aims and Educational Values. By PAUL H. HANUS, Assistant Professor of the History and Art of Teaching, Harvard University. Crown 8vo, 4s. 6d.

Guardian.—"Eminently sane and reasonable."

CAMBRIDGE UNIVERSITY PRESS.

LIFE AND REMAINS OF THE REV. B. H. QUICK. Edited by F. STORR. With Portrait. Crown 8vo, 7s. 6d.

Athenæum.—"This book will have to be read by all teachers."

Spectator.—"We know of no book which a teacher who wants to do his work thoroughly and faithfully should more certainly keep on some handy shelf."

Poll Mall Gazette.—"There is scarcely a dull page in the whole book of 500 pages."

THE TEACHING OF GEOGRAPHY IN SWITZERLAND AND NORTH ITALY. Being the Report presented to the Court of the University of Wales on a visit to Switzerland and North Italy in 1898, as Gilchrist Travelling Student. By JOAN BERENICE REYNOLDS, B.A., Assistant-Mistress in the Cardiff Intermediate School for Girls. 2s. 6d.

CHAPTERS ON THE AIMS AND PRACTICE OF TEACHING. Edited by FREDERIC SPENCER, M.A., Phil. Doc., Professor of the French Language and Literature in the University College of North Wales; formerly Chief Master on the Modern side in the Leys School, Cambridge. New Edition. Crown 8vo, 6s.

A PRIMER OF FRENCH VERSE FOR UPPER FORMS. Edited by F. SPENCER, M.A., Phil. Doc. Extra fcap, 8vo. (Pitt Press Series.) *Immediately.*

DEMONSTRATIONS IN GREEK IAMBIC VERSE. By W. H. D. ROUSE, M.A., formerly Fellow of Christ's College, Cambridge, a Master at Rugby School. Crown 8vo, 6s.

GRADUATED PASSAGES FROM GREEK AND LATIN AUTHORS FOR FIRST-SIGHT TRANSLATION. Selected and supplied with short Notes for Beginners by H. BENDALL, M.A., and C. E. LAURENCE, B.A., Assistant-Master of Blackheath Proprietary School. Crown 8vo. Part I., Easy, 1s. 6d. Part II., Moderately Easy, 2s. Part III., Moderately Difficult, 2s. Part IV., Difficult, 2s.

PITT PRESS SHAKESPEARE FOR SCHOOLS.—New Volume.

Athenæum.—"The 'Pitt Press Shakespeare' can stand in competition with any of the numerous editions of the sort."

Guardian.—"Mr. Verity is an almost ideal editor of School texts."

School Guardian.—"Mr. Verity's 'Pitt Press' editions of Shakespeare are among the very best of the many editions now appearing."

SHAKESPEARE.—AS YOU LIKE IT. Edited, with Introduction, Notes, and Glossary, by A. W. VERITY, M.A., sometime Scholar of Trinity College. *Nearly ready.*

PITT PRESS SERIES.—New Volume.

AESCHYLUS.—PROMETHEUS VINCTUS. Edited by H. RACKHAM, M.A. 2s. 6d.

THE PITT PRESS MATHEMATICAL SERIES.

EUCLID.—ELEMENTS OF GEOMETRY. Edited by H. M. TAYLOR, M.A., Trinity College, Cambridge. Books I, II, 1s. 6d.; Books III, IV, 1s. 6d.; Books V, VI, 1s. 6d.; Books XI, XII, 1s. 6d.; Books I-IV, 3s.; Books I-VI, 4s.; Books I-VI and XI, XII, in One Vol. complete, 5s.

ARITHMETIC FOR SCHOOLS. By C. SMITH, M.A., Master of Sidney Sussex College, Cambridge. With or without answers. Second Edition. 3s. 6d. Or in Two Parts: Part I., Chaps. 1-VIII, Elementary, with or without Answers, 2s. Part II., Chaps. IX-XX., with or without Answers. 2s.

ELEMENTARY ALGEBRA. By W. W. ROUSE BALL, M.A. 4s. 6d.

ELEMENTARY PLANE TRIGONOMETRY. By E. W. HOUSON, Sc.D., F.R.S., and C. M. JESSOP, M.A. 4s. 6d.

ELEMENTS OF STATICS AND DYNAMICS. By S. L. LONEY, M.A. Fifth Edition. 7s. 6d. Part I., **ELEMENTS OF STATICS.** 4s. 6d. Part II., **ELEMENTS OF DYNAMICS.** 3s. 6d. These books are suitable for the Science and Art Department Examinations in Theoretical Mechanics (Advanced Stage and Honours), London University Intermediate B.Sc. (Pass), B.A. and B.Sc. (Mixed Mathematics), Woolwich Entrance Examination, Cambridge Local Examination (Senior Students), Cambridge General Examination for the Ordinary B.A. Degree, &c.

MECHANICS AND HYDROSTATICS for Beginners. By S. L. LONEY, M.A. Fifth Edition. 4s. 6d. This book is suitable for the Science and Art Department Examination in Theoretical Mechanics (Solids and Fluids), Elementary Stage, The University of London Matriculation Examination, Cambridge Local Examination (Junior Students), and other Elementary Examinations.

CAMBRIDGE NATURAL SCIENCE MANUALS.—PHYSICAL SERIES.

General Editor—R. T. GLAZEBROOK, M.A., F.R.S., Fellow of Trinity College, Principal of University College, Liverpool.

MECHANICS AND HYDROSTATICS. By R. T. GLAZEBROOK, M.A. Crown 8vo, 8s. 6d. Also in separate Volumes. Part I., Dynamics, 4s. Part II., Statics, 3s. Part III., Hydrostatics, 3s.

HEAT AND LIGHT. By R. T. GLAZEBROOK, M.A. Crown 8vo, 5s. And separately, Heat, 3s.; Light, 3s.

CAMBRIDGE SERIES FOR SCHOOLS AND TRAINING COLLEGES.

General Editor—W. H. WOODWARD, of Christ Church, Oxford, Principal of University (Day) Training College, Liverpool, and Lecturer on Education in Victoria University.

School Guardian.—"Exact and scholarly, and at the same time simple, text-books. The University Press are to be congratulated upon having secured as editors such eminent scholars; their names are a guarantee of their work. We are quite sure that the students preparing for the Queen's Scholarship and Certificate Examinations will not be the only students who will find these text-books of value; they will find their way into numberless preparatory schools and lower forms of public schools; they deal so thoroughly and clearly with the subject in each case that nothing better could be desired by master or pupil."

FOR THE CERTIFICATE EXAMINATION OF THE EDUCATION DEPARTMENT, 1900.

THE FORMATION OF CHARACTER: SOME EDUCATIONAL ASPECTS OF ETHICS. By JOHN MAC CENS, Balliol College, Oxford, Professor of Philosophy in University College, Liverpool. *In the press.*

MACAULAY'S ESSAY ON MILTON. Edited by J. H. FLATHER, M.A. (with special reference to Dr. Johnson's "Life of Milton"). 1s. 6d. *Immediately.*

FOR QUEEN'S SCHOLARSHIP EXAMINATION, 1900.

A SHORT HISTORY OF THE EXPANSION OF THE BRITISH EMPIRE. By W. H. WOODWARD, Principal of the University (Day) Training College, Liverpool. *Nearly ready.*

MACAULAY.—ESSAY ON BUNYAN'S PILGRIM'S PROGRESS. Edited, with Introduction and Notes, by A. D. INNES, M.A. 1s.

MILTON.—LYCIDAS AND COMUS. Edited by A. W. VERITY, M.A. 2s. *Educational Times*.—"We can heartily recommend the book."

GRAY.—ODE ON THE SPRING AND THE BARD. Edited, with Introduction and Notes, by D. C. TOVEY, M.A. 1s.

GEOMETRY FOR YOUNG BEGINNERS: an Introduction to Theoretical and Practical Geometry. By F. W. SANDERSON, M.A., Headmaster of Oundle School. 1s. 4d.

Teacher's Monthly (Birmingham).—"We are delighted with this book."

Morning Post.—"The work will commend itself to teachers and students."

Dublin Express.—"It is a thoroughly practical and useful little book."

Each of the following Volumes contains a complete Vocabulary:—

CAESAR.—DE BELLO GALLICO. Books I. (1-29), II., III., IV., and VI. With Introduction, Notes, and Vocabulary, by E. S. SUTHERKIN, M.A. 1s. 6d. each. *Book V., immediately.*

CICERO.—IN CATILINAM I. Edited, with Introduction, Notes, and Vocabulary, by J. H. FLATHER, M.A. 1s. 6d.

School Guardian.—"The simplicity and usefulness of this little volume are wonderful. It is meant for students who have had little experience in reading Latin, and who have not access to books of reference. In itself, therefore, it should be complete, and it is."

VERGIL.—AENEID, I, II, VI, IX, and XII. Edited, with Introduction, Notes, and Vocabulary, by A. SINGWICK, M.A. 1s. 6d. each.

School Guardian.—"For a small edition this is one of the most compact and complete possible. We recommend it to all students who want to read Vergil for the first time, and to read it well."

XENOPHON.—ANABASIS, II, III, and IV. Edited, with Notes and Vocabulary, by G. M. EDWARDS, M.A. 1s. 6d. each.

COMPLETION OF THE EDITION OF "PARADISE LOST."

Guardian.—"This edition will, we feel sure, long continue to be the standard school text of 'Paradise Lost.'"

PARADISE LOST. Books I, II, 2s. Books III, IV, 2s. Books V, VI, 2s. Books VII, VIII, 2s. Books IX, X, 2s. Books XI, XII, 2s.

THE PARALLEL PSALTER—THE BOOK OF PSALMS, containing the Prayer Book Version, the Authorised Version, and the Revised Version in Parallel Columns. Demy 8vo, cloth, red edges, 2s. 6d.; interleaved, with plain paper for MS. notes, 3s. 6d.; and in leather bindings.

THE PARALLEL HISTORY OF THE JEWISH MONARCHY. Printed in the text of the Revised Version, 1885. Arranged by R. SOMERVILLE, M.A., Assistant-Master and Bursar of Harrow School. With an Introduction by S. R. DRIVER, D.D., Regius Professor of Hebrew and Canon of Christ Church, Oxford. Part I.: The Reign of David and Solomon. 1 Samuel xxxi. to 1 Kings xi.; 1 Chronicles x. to 2 Chronicles ix. Demy 8vo, 2s. Part II.: The Divided Monarchy. 1 Kings xii. to 2 Kings xxv.; 2 Chronicles x.-xxxvi. Demy 8vo, 2s.

A MANUAL FOR CONFIRMATION CANDIDATES.

THE CHURCH CATECHISM EXPLAINED. By the Rev. A. W. ROBINSON, B.D., Warden of the Mission College of Alhambros, Barking, E., and Examining Chaplain to the Bishop of Wakefield. Second Edition. Fcap. 8vo, 2s.

Record.—"A really useful manual."

Church Bells.—"A very excellent book; quite one of the best, if not the best, on the Catechism."

Church Times.—"An admirable work, both as to the matter and its arrangement."

Six or more copies of the two following books for class use can be supplied at half the published prices, and may be ordered through any Bookseller.

GOSPEL HISTORY OF OUR LORD JESUS CHRIST in the Language of the Revised Version, arranged in a Connected Narrative, especially for the use of Teachers and Preachers. By Rev. C. C. JAMES, M.A., Rector of Wortham, Suffolk, and late Fellow of King's College. Crown 8vo. Second Edition. 3s. 6d.

A HARMONY OF THE GOSPELS in the words of the Revised Version, with copious references, tables, &c. Arranged by Rev. C. C. JAMES, M.A. Second Edition. Crown 8vo, 5s.

London: C. J. CLAY & SONS, Cambridge University Press Warehouse, Ave Maria Lane.

The Educational Times.

Registration of Teachers. THE demand for an authoritative register of teachers has at last proved effective. We are to have a Board of Education ; the Board are to be advised by a Consultative Committee, of whom two-thirds are to be persons "qualified to represent the views of Universities and other bodies interested in education" ; and the Committee are to frame a register. But, though the battle has been won, the programme of the future is not yet drawn up. No more delicate and important task was ever assigned to a committee than that of deciding what are to be the qualifications for admission to this register—what degrees or other certificates are to be required, what knowledge of the history, theory, and practice of education, and what evidence of practical professional training. Unfortunately, though nearly all sections of teachers and educational bodies demand with one consent that there shall be a register, there is no common agreement as to the minimum of qualification that should be demanded. In fact, it is precisely because there is no such common standard of efficiency that a register becomes of so much importance, and the difficulty of definition so great. The work that lies, then, before the Consultative Committee requires the insight and firmness that go to make true statesmanship, and it behoves us as individual teachers and as members of a corporate body of secondary teachers not to cease maintaining the importance of making the test of qualification a real one. This duty is the more manifest because the conditions have changed since the time of Sir Richard Temple's Registration Bill.

The establishment of a Board charged with the superintendence of both primary and secondary education renders it necessary to have a universal register. Under the former conditions, when it was thought that a new educational authority dealing only with secondary education would be formed, the College of Preceptors pressed only for the registration of secondary teachers. Primary teachers were already trained and under a form of registration ; to admit them at that time to a new register would be to establish an *imperium in imperio*, and it was felt that no Government would agree to such a course. The conditions are altered by the Act. All grades of schools are to be under one governing body ; it follows that all classes of teachers must have

a common register. This appears to us a very desirable result ; it is, in fact, the beginning of the unification of the whole teaching profession. Nor do we think that it will tend to any undue lowering of the minimum of qualification. On this point a comparison of the present Act with the Government Bill of 1896 is instructive.

In this Bill the qualifications for registration are as follows :—
 (a) A degree or certificate of general attainments, granted by some University or other body recognized for that purpose by the Council, and accepted as satisfactory by the Council ; and
 (b) a certificate or diploma of adequate knowledge of the theory and practice of education and of practical efficiency in teaching, granted by some University or other body recognized for that purpose by the Council. These requirements were to apply to all teachers alike, including those engaged in private tuition, and irrespective of the "class or kind of educational institution in which they may be engaged or seeking engagement." On this basis the register would include all classes of teachers, primary and secondary, and would be arranged in two main divisions—the one containing the names in alphabetical order, with the date of registration and a brief record of each teacher's qualifications and experience ; the other arranged "with reference to the kind of educational institution in which they are employed."

According to the Act of 1899, the register is to contain the names in alphabetical order, with an entry in respect to each teacher, showing the date of his registration, and giving a brief record of his qualifications and experience. But sectional lists, which would manifestly be convenient for many purposes, are not in terms excluded.

In both it is left to the Committee of Council to determine the minimum amount of knowledge of the subjects of instruction to be insisted on, and the ways in which teaching ability is to be ascertained. There is no probability that a Committee in which representatives of the Universities and other educational bodies form a majority, will require less than the minimum suggested by the Royal Commission and indicated in the Registration Bills that practically adopted its recommendations. Nor is there anything in the Act to prevent the Committee, if they see fit, from forming, in addition to the general register, lists of persons suitable for employment in secondary schools or for teaching special subjects. Nothing is said in the Act as to the registration of existing teachers who may not be able to produce all the required proofs of their competence. In this, as

in other matters, the Committee are to have a free hand. But here again they are certain to follow the lead of the Bill of 1896, which gave power to the Council to admit all such persons whose names ought, in their opinion, to be placed on the register. On all these questions we do not doubt that the Consultative Committee will be glad to receive the opinions of teaching bodies. The great opportunity for which we have struggled so long has at length been brought about by the influence of the teaching profession itself. It remains for teachers to see that it is rightly used.

NOTES.

We are evidently not yet out of the wood of controversy as to the place of religion in education. From the official programme of the Church Congress we see that one of the sectional meetings on Wednesday, October 11, is devoted to the subject. The papers and discussions are to deal with (1) the inexpediency of an Imperial policy which excludes religious education, and (2) the lines of future progress in elementary and in secondary education; and the readers will be Messrs. T. C. Horsfall and F. C. Holiday and the Rev. G. C. Bell. The meeting will be held at the Kensington Town Hall at 8 o'clock in the evening, with the Bishop of Rochester in the chair. The subject is scarcely a burning one at the moment, and we may, therefore hope that a spirit of sweet reasonableness may be infused into the discussion. At the Bangor Diocesan Conference, held on September 21 and 22, a wail was raised over the lack of definite religious instruction, both in the Welsh elementary schools and in the secondary schools under the Intermediate Education Act; and apparently the Church in Wales is anxious to find some means by which more definite religious instruction can be given to children of Church parents attending these schools.

This faint roll of the "drum ecclesiastic" in itself justifies the discretion of the Government in its determination to save the Board of Education Act from the uneasy freight of a religious controversy; but, although the Bill became law in a clear sky, there are clouds below the horizon. Fortunately the first instalment of secondary education legislation gives no standing ground for a battle of the creeds. That will be provided at a later stage, when future legislation enables the Local Authorities to supply out of public funds the deficiency of secondary schools. Even then, we hope other matters may take precedence. When the statutory schools are in existence, and properly equipped for secular teaching, the religious question will, we fear, be thought to be "ripe for settlement." Either a *modus vivendi* must be agreed upon or the different religious bodies must be prepared for self-sacrifice, by undertaking the religious instruction of their own children at some fixed hour which does not interfere with the ordinary work of the school. Surely, only the lack of a living enthusiasm for religion can make the adoption of one of these courses impossible.

It is with much regret that we hear that the Rev. Richard Alliott, a member of the Council of the College, has been compelled by ill-health to resign the Headmastership of the Non-conformist Grammar School at Bishop's Stortford. Mr. Alliott

has occupied his present post since the foundation of the school in 1868. During the thirty-one years of his Headmastership he has succeeded in winning the affection of many generations of boys, and, by quiet, unostentatious perseverance in what has often been very uphill work, in raising the school to the level of modern requirements, and making it a home of sound learning and religious education.

For some years now there has been a Day Training College in connexion with Owens College, Manchester, but up to now there has been no Professor of Education. Hitherto the work of lecturing to the students on the science and art of education has been in the hands of the Master and Mistress of Method in the Training College. The removal of Mr. Good to London, in order to superintend the new Training Department of the London School Board, having created a vacancy in the post of Master of Method, the Council of the College took the opportunity of creating a Professorship of Education in the University; and they have chosen for the post Mr. H. L. Withers, Principal of the Borough Road Training College. Mr. Withers is no stranger to Manchester. After graduating at Oxford, and teaching for a time in an elementary school, he went to Manchester Grammar School as assistant-master, under Mr. Glazebrook. When the latter left Manchester to become head of Clifton College, Mr. Withers followed him, and thence he came to the Training College at Isleworth.

EDUCATION in Servia is nominally compulsory, but the lack of adequate machinery is responsible for the fact that only about one-third of the Servian children attend school. There are not enough schools and there are not enough teachers for the law to be carried out. In England we have schools and teachers enough, but even here the law of compulsion is not, as we know, generally enforced. For the population of two and a-half millions there are about one thousand elementary schools. These have four classes, or standards, through which the children pass from the age of six to ten years. Religion, the mother tongue, arithmetic, geography, Servian history, nature studies, and singing are the subjects of the curriculum. The secondary schools are intended for children from the age of ten to thirteen, and these have three classes, the main subjects of study being Servian literature and history and one foreign language. There are eleven gymnasiums directed by the State, and some private institutions calling themselves by this name. The gymnasiums are practically reserved for Servian boys, since the few girls who were admitted, at one time, under certain conditions, have now been excluded. There are, however, some high schools for girls, who are admitted at the age of nine, after having passed through the four classes of the elementary schools. Modern languages, needlework, and music form the main part of the curriculum, for accomplishments are still regarded as the most necessary thing in a girl's education. But women have recently been admitted to the Universities in Servia, and there are at the present time more than twenty of them studying philosophy or pedagogy. There is little choice in the matter of study for Servian students, whether men or women, as the only three faculties of the Servian Universities are philosophy, law, and technical science. It is, therefore, small matter of surprise

that many of the Servian young men are to be found studying at the German Universities.

MR. ANDREW CARNEGIE'S gifts to sundry libraries and educational institutions in the United States and in Scotland amount by the beginning of this year to about six millions and a half dollars. Of this amount Scotland claims 563,000 dollars, or £112,600. The Edinburgh Library has benefited to the amount of £50,000, and smaller sums have been given to the libraries at Dunfermline, Ayr, Stirling, Aberdeen, Jedburgh, Inverness, Wick, Peterhead, and Dumfries; and the technical school at Dunfermline received a donation of £10,000. In addition to the amounts above named, Mr. Carnegie contributed £50,000 to the Birmingham University Fund, and he has otherwise broken ground in England which he cannot do better than proceed to cultivate. The sum received by Mr. Carnegie for his Pittsburgh business has been variously estimated at between twenty and thirty millions sterling.

FURTHER particulars reach us as to the bequest of the famous Sloyd School at Nääs to the Swedish Government. By Herr Abrahamson's will it is laid down that the institution is to be maintained for ever on the Nääs estate, for the training of ordinary teachers in the art and principles of Sloyd. For this purpose £20,000 is bequeathed as an endowment. The first floor of the castle at Nääs, and the grand saloon, are to be used for lectures, meetings, and festive gatherings. The other rooms are to be set apart for the entertainment of distinguished educational visitors. The park is to be always open to students and teachers. The present well known director, Otto Salomon, is to be retained in his post until he resigns or dies; and, in the former case, he is to appoint his successor. In the event of his death whilst still at his post, the control of the institution is to be placed in the hands of a committee of three to five persons appointed by the State. In case the funds should, in the opinion of the Swedish Government, cease to be needed for the purpose indicated in the aforesaid will, they are to be handed over to the Royal Agricultural Academy.

MR. POWELL, the English Consul at Philadelphia, keeps an observant eye upon fresh educational developments in the States. In his last report he states that the University of Pennsylvania has drafted a curriculum for a "diplomatic" course of instruction, to extend over two years. Apart from a study of such subjects as international law and modern history, we should doubt the advantage of a special course of study for diplomatists. The formal strategy of the military schools of the eighteenth century was helpless when opposed by the dash and determination of Buonaparte; and we are afraid that a pure scholastic diplomacy would be equally unavailing when pitted against the natural deliberation and caution, let us say, of a Krüger.

THE education of the average man with that *rolle sciolto e pensieri stretti* commended by Wotton to Milton when about to set out on his travels will probably to the end of time be the diplomatist's best equipment. However, the "diplomatic" course is another illustration of the confidence of the American mind in education. It reminds us of an incident we once heard

from the principal of one of the leading American women's colleges. A new student was asked, as usual, what course of study she wished to enter upon. "I want to be fixed up as an all-round good wife for a Chicago lawyer." Of course, the principal was equal to the emergency. Now for the English contrast. An old farmer we knew, being told of the intended establishment of an agricultural college in his county, made this weird comment: "The best college I ever heard of for learning farming is a *rather dear farm*."

How far the habit of cigarette-smoking is prevalent among English schoolboys is difficult to determine; but, judging from observation during holiday time, it is certainly not uncommon among boys of the upper forms. In too many cases, at any rate, the moment a boy leaves school he seems to have the cigarette habit fully developed, which seems to show that its real origin must be traced to his later school-days. A week is hardly long enough in which to learn to roll a cigarette deftly, and a meerschaum holder cannot be well coloured in a night. A moral sanction is hard to find, especially as we must admit the beneficial effects of Raleigh's famous plant as a sedative for the overstrung nerves of schoolmasters. Still, we think a good deal more might be done in schools to combat the growth of the habit among boys in the upper forms. There are, we know, schools where the *esprit de corps* is so keen that a boy in the football team would not dare to touch a cigarette, lest his "wind" should be affected, as it undoubtedly would; and a similar general abstinence prevails during the term devoted to sports. Possibly, if it were impressed upon boys that smoking is injurious to the eyes, the same result might be obtained during the cricket term.

As the result of an inquiry in American schools, it has been found that boys who indulged in cigarette-smoking did not make such good progress as non-smokers; and the evil is considered so serious that it has been suggested that anti-tobacco leagues should be started among schoolboys. English doctors are agreed as to the evil effects of the early use of tobacco upon the eyes and respiratory organs; and probably the listless manner of some boys may be put down to the same cause. In a schoolboy manner is the shadow of a closely attendant reality; and, although we want no anti-tobacco leagues, schoolmasters might well consider how best to meet what may soon become a pressing difficulty.

SUMMARY.

THE MONTH.

MANY subjects of interest from an educational point of view were raised at the Dover meeting of the British Association. Sir Michael Foster, the President for the year, dwelt in his address on the educative and even ethical value of science teaching. The mind, he said, cannot be engaged in pursuing scientific research without being itself modified and invigorated. The features of the fruitful scientific mind were mainly three: an imperious truthfulness, not satisfied with "the nearly" and "the almost," but only with the exact; alertness of mind; and, thirdly, the courage of steadfast endurance. From this mental drill, men of science, though in themselves no better than other men, gain a strength not their own, but that of the science whose servants they are. Had she called to her service the many acute minds who have wasted their strength in trying to solve hopeless problems, how much greater had been her progress, and how

many false teachings would the world have been spared! The value of science as a mental discipline made it important that scientific teaching should, in educational schemes, be given not only to professional students, but to all. He would not exclude the older studies of literature, but let the two disciplines be used side by side. The ethical influence of science was being shown in the international intercourse and brotherhood to which it was giving rise.

A DISCUSSION arose in the Chemical Section on a report of the Committee on the teaching of science in elementary schools. It stated that the progress in this matter which was noted in the last report had been more than maintained in so far as concerned the number of scholars receiving instruction, and a hope was expressed that under the newly constituted Education Department far more attention would be given than heretofore to improving the conditions under which science was taught in schools. Especially was it important that attention should be paid to practical training in scientific methods. The President said that, in undertaking the teaching of science in elementary schools, a great responsibility had been incurred. Good could only come of it if science were properly taught. He thought more attention should be paid to the training of teachers, with regard to which the certificates of the Science and Art Department were no sufficient guarantee. Sir Henry Roscoe remarked that great advance had been made in this matter in the last thirty years, but we were now really at the beginning only of true science teaching. In the towns good work had been done, but in the rural districts the results so far had been practically nil. Prof. Tilden advised that as much latitude as possible should be given to the teachers in their methods of teaching science, and more attention should be paid to the science of common things. It was generally admitted that teachers found great difficulty in getting good training.

SIR PHILIP MAGNUS read a paper in the Section of Economic Science on "The Teaching University of London and its Faculty of Economics." In the developed University, he said, to the older faculties of Law, Medicine, Theology, Arts, and Music will be added the newer faculty of Science and the newest faculties of Economics and Engineering. The Science faculty would occupy a prominent position, and it was hoped that the teaching of the different branches might be duly co-ordinated and entrusted to separate professors, each occupied with his own subject, but all working together in close association.

The possibility of such an arrangement was one of the strongest arguments for locating the new University at South Kensington. Immediately opposite the University offices would be the new buildings of the College of Science, and in close proximity were the City and Guilds Technical College, the Natural History Museum, and the galleries of scientific apparatus. Closely allied to the faculty of Science would be the new faculty of Engineering, and there could be no doubt that the closer union of the teachers of the different engineering schools in a faculty of their own would tend to the better organization of the teaching, and would give to the schools that status and recognition in the University which they were entitled to claim. Another equally important innovation in the reconstitution of the University would be the new faculties of Economics and Political Science, including commerce. The introduction of those two new faculties would differentiate the University of London from other Universities. There could be no doubt that the deepening and expansion of our knowledge of economic science was one of the great desiderata of the present age. It would seem that in many matters practical legislation was in advance of the theory on which it should be founded, and was consequently unnecessarily, and often dangerously, empiric in character.

WE extract another passage from Sir Philip's timely and suggestive paper:—

Surely, in the geography and languages of our Empire, in the political considerations which link our colonies with the mother country, in the laws with which the rulers of such an Empire should be familiar, in the varied circumstances affecting its trade, in the history and habits of the people who dwell within its boundaries—surely, in all this there is subject-matter for the highest learning and research, for studies worthy of a great University. Such a school, fulfilling the functions of a Civil Service and commercial department, would draw students, not only from London and other parts of the United Kingdom, but from our colonies and our great dependencies—students who would be attracted by the unique opportunities it would offer for the study of subjects closely connected with their administrative and commercial duties. If we failed to take advantage of the opportunity which the

reorganization of the University and its removal to the Imperial Institute now presented, we might be sure that we should find ourselves before long behind one other great country at least—the United States—in the knowledge which an Empire should possess of its own conditions, functions, and responsibilities.

IN the Anthropological Section an elaborate report was presented from the Committee who had investigated mental and physical deviations from the normal among children in public elementary and other schools. It was the seventh annual report, and the tables appended showed the conditions of 1,120 children requiring special care and training. The Committee work in conjunction with the Childhood Society, and claim that since their first report in 1893 much attention has been directed to the subject, as evidenced by the Bill now before Parliament to make better provision for the elementary education of defective and epileptic children in England and Wales.

THE quarterly meeting of the Assistant-Masters' Association was held on September 16, at King Edward's School, Birmingham. Mr. Pickford read a paper on "Tenure of Office in Endowed Schools," and a resolution was carried "that the appointment and dismissal of assistant-masters should always be subject to confirmation by the governing body, with a right of appeal on the part of the assistant-masters before the dismissal is confirmed." Mr. Fabian Ware proposed: "That such steps should be taken immediately by the Executive of the A.M.A. as in its opinion would ensure—(a) That among the members of the Consultative Committee should be persons qualified to represent the views of assistant-masters; (b) that Clause 22 of the Endowed Schools Act, 1869, and Clause 4 of the Board of Education Act, 1899, should be amended so as to allow all headmasters and assistant-masters a right of appeal to the Consultative Committee in case of dismissal." Mr. McKinlay moved as an amendment to delete the first paragraph and to substitute: "The Executive be asked to take rigorous steps in the direction of drafting and introducing a Parliamentary Bill embodying either [certain suggested] amendments of the Endowed Schools Act and the Board of Education Act, or such equivalent remedies for insecurity of tenure of office as they may deem advisable." Mr. Ware accepted the amendment.

MR. G. F. BRIDGE read a paper on "Pensions," and concluded by moving: "That this meeting, having in view the inadequate remuneration given to assistant-masters in public secondary schools, and also the fact that they are engaged in the public service, considers that such assistant-masters have a just claim to a pension scheme assisted by public money. That any pension scheme to be satisfactory must be based on the principle of the formation of a central fund by the compulsory contributions of governing bodies and assistant-masters." A paper dealing with inspection was contributed by Mr. Swinstead, who proposed: (1) "That this meeting is of opinion that in secondary schools inspection should be compulsory, that the cost should be borne by the Board of Education, and that the inspectors should have had at least five years' recent experience in those schools." (2) "That the reports that follow an inspection or examination should consist of two parts—(a) a general part for publication, (b) a detailed part for the use of the staff, containing suggestions and advice on the working of the school." (3) "That, in the light of recent events, it appears to be necessary that a representative of the Board of Education should be present at the election of every headmaster of an endowed school and should report on the election to the Central Board." (4) "That the thanks of the A.M.A. are due to the Charity Commissioners for having held the Grantham inquiry, and for the decision they have arrived at." Both resolutions were carried.

ON September 20 Sir William Harcourt opened a new county school at Ebbw Vale, erected under the provisions of the Welsh Intermediate Education Act on a site given by the Duke of Beaufort, and at a cost of £2,600. Occupying an elevated and picturesque situation, it stands out a conspicuous object in the valley. It has accommodation for 60 boys and 40 girls, and includes a chemical laboratory and workshops for the boys, a kitchen and laundry for the girls, and music and art rooms for both. Sir William was rather jocular on the subject of Welsh education, saying that his English friends were almost as tired of the subject as the ancient Greeks were of hearing of the virtue of Aristides, and he thought that some of the English educationalists would be disposed to ostracize Welsh education

on account of hearing so much of its excellence. Indeed, they had some claim to these merits in Wales, for they had at least in experiment done that which in England had not yet been accomplished. They in Wales had completed the Jacob's ladder of education. In both countries there were elementary education and higher education; but in Wales was the missing link.

On the subject of commercial education, Sir William said:

One of the conspicuous deficiencies of English education in every class of the community was the neglect of the study of modern languages. We were very John Bullish, and we were in the habit of thinking that there was no language worth learning except our own. We had long had the monopoly of trade and commerce in the world, due partly to our coal and iron, and still more to the energy of our population and to the sea power which had given us access to every part of the globe. All that had given to England in the past a monopoly which no other country had been able to touch. But in these days there were coal and iron to be found elsewhere. There were other countries which were beginning to have mercantile fleets of great capacity. We were no longer in the era of that monopoly by which we had so much benefited. We had great competitors in our trade. We were told that what hindered our trade was hostile tariffs. But Germany had to meet hostile tariffs as well as we had, and yet Germany was, as people said, going ahead. He did not envy or complain of her doing so; but the reason was that she had, for the last ten years, made a scientific study and practice of commercial education. He had followed the reports of our Consuls abroad, which showed that the mercantile houses of Germany sent all over the world men acquainted with the language of the country to which they were commissioned.

A COMMITTEE of the Birmingham Chamber of Commerce, appointed to consider the best means of providing a sound commercial education, have sent in an elaborate report. Their general recommendations may be briefly summarized:—

Special attention, in all educational institutions, to commercial geography and modern languages. The development of training institutions, so as to provide a greater number of efficient English-born teachers of modern languages, and higher pay for these teachers. Not less than four hours a week to be given to a modern language when first taught. Teaching of Latin to be discontinued for those boys who intend to pursue commercial studies. One branch of the grammar schools to be remodelled as a modern side school.

In the appendix to the report a *résumé* is given of the International Congress for Commercial Education held at Venice. Accounts are also appended of the Municipal Commercial School at Munich and of the school system of Hamburg. It is pointed out that "when higher commercial and industrial education was first introduced in Germany it met with the same or similar difficulties as are now experienced in this country; but, at present, the great benefits which it has bestowed on the nation in general, and especially on the classes most interested, are so well recognized and understood on all sides that the enforced attendance at the higher-grade schools meets with very little opposition, and legal proceedings to enforce the regulations are of very rare occurrence."

THE London School Board have now as many as 368 evening continuation schools open to all comers, of which 12 are special schools for commercial work, and 8 special science and art schools. Lectures in literature are given in 21 schools, gymnastics are taught at 58 centres, and ambulance and home nursing are taught by doctors in upwards of a hundred schools. There are also facilities for women and girls to learn practical cookery, dress cutting and making, and laundry-work, and for men and boys to receive instruction in wood-work. Some form of physical exercise is taught in all schools.

THE National Union of Teachers have collected information concerning 1,015 voluntary and endowed schools, in rural districts of England and Wales, as to the administration of the moneys, at the rate of 5s. per scholar, voted under the authority of the Voluntary Schools Act, 1897. It appears that in 601 of the cases some of the money has gone to improve the school apparatus, and in 281 of the cases some of it has been expended in engaging additional teaching staff; while in 437 of the cases the stipends of teachers have been increased.

THE new draft scheme of the Charity Commissioners for the foundation of a grammar school for girls in Leeds provides that a capital sum of £12,000, together with the accumulations of

income thereon from May 19, 1898, and such a further capital sum out of the endowment of the Leeds Grammar School as may be required, shall be applied to the purchase of the Girls' High School, which shall be part of the foundation, and shall be maintained by the Governors as a day-school for girls, under the title of the Leeds Grammar School for Girls. It is suggested that the Governors shall pay out of the income of the foundation such a yearly sum, being not less than £250 and not more than half of the total net income of the foundation, as the Governors from time to time determine, to the committee to be appointed for the management of the girls' school. As to the constitution of that committee, the Commissioners provisionally propose that, when complete, it shall consist of seventeen persons—fifteen representative members and two co-optative members. The representative members are to be appointed as follows:—Nine by the Governors of the Grammar School from their own body; two women by the City Council (until the establishment of any Local Authority for Secondary Education having power in Leeds, and afterwards one by the Council and one by the said Local Authority); one woman by the Leeds School Board, one woman by the Council of the Yorkshire College, and two women by the Executive Committee of the Yorkshire Ladies' Council of Education.

SIR ROWLAND BLENNERHASSETT reports an increase in the number of students attending the Queen's College, Cork. He speaks highly of the discipline of the College and of the work accomplished in 1898-99; but his report is, in the main, an expression of dissatisfaction at the number of restrictions with which the staff and students have to contend in their effort to keep the College abreast of the times in its educational efficiency and progress. The President has "no hesitation in saying that the College can never accomplish all that it is capable of doing under the present conditions." Its endowment, he asserts, was small at the time of its foundation, and it is now inadequate to meet the requirements. Sir Rowland makes out a strong case for further endowment, especially for the purpose of establishing additional chairs.

AN application has been lodged with the Board of Trade, in compliance with Section 23 of the Companies Acts, 1867, for a licence for the registration, with limited liability, of an association about to be formed under the name of the Midland Clergy College Corporation. The main purpose of the society is stated to be to found, maintain, and conduct a college, and, by means of such college, to provide special training for the ministry of the Church of England for graduates of the Universities of Oxford and Cambridge, and of such other Universities as may be from time to time determined by the governing body, such training to be based on (1) a special devotion to the study of Holy Scripture; (2) a loyal adherence to the Book of Common Prayer, without unauthorized variations, doctrinal or ceremonial; and (3) a large measure of practical training in the work of the pastor and the preacher. The usual powers are sought to acquire, hold, deal with, and dispose of lands and buildings and other property, to found scholarships or exhibitions, to raise money on mortgage or otherwise, and generally to do all such other lawful things as may be conducive or incident to the establishment of the proposed college.

THE City of London College reopened under its new Principal, Mr. Sidney Humphries, on Monday last. Over forty professors are connected with this institution, and one hundred and thirty classes are organized for instruction in about fifty different subjects. The total of attendances for last session was nearly fifty thousand.

A NEW departure is made this term at University College School, classes (not, of course, compulsory) having been formed for instruction in Bible knowledge—English, Greek, and Hebrew. The school, which was founded under the same auspices and on the same basis as University College, has hitherto been without any religious teaching whatever. Last year, however, Mr. Lewis Paton, M.A., of Rugby School (a son of Dr. Paton, of Nottingham), on his appointment as Headmaster of the school, raised the question, and the Council agreed to the formation of classes as stated above, the new departure to come into operation with the present term. The *British Weekly* is "gratified to learn of this attempt to teach religion which is absolutely free from any ecclesiastical bias."

ENCYCLOPÆDIC COLLEGES.

COMENIUS presented encyclopædism as an aim in education. Hartlib carried into practice Comenius's theory by showing an encyclopædic interest in all kinds of social and educational progress. John Milton, in his "Tractate" (1644), advises, amongst the subjects of his courses in instruction, Agriculture, Aristotle on Animals and Physics, Architecture, Geography, Medicine, Natural Philosophy, Mathematics, Fortification, Enginry or Navigation, Anatomy. All these subjects were to be studied by the age of sixteen. Moreover, on all of them authors read were, for the most part, to be in Latin.

But, earlier than these educational writers, Comenius, Hartlib, and Milton, in 1635 an institution was projected and chartered by the King (Charles I.) for classes even more encyclopædic in scope, and through the medium of English. This institution was the *Museum Minervæ*. The founder was Sir Francis Kynaston, who offered his house in Bedford Street, Covent Garden, as the college. He furnished it with books, manuscripts, musical and mathematical instruments, paintings, statues, &c.

"It is sufficiently known," says Sir Francis,* "that subjects of His Majesty's dominions have naturally as well minds and as able bodies as any nation of the earth, and, therefore, deserve all accommodations for the advancing of them, either in speculation or action." Sir Francis takes pains to make clear that there is no injury intended to the Universities, and no desire to detract from the honours due to them. Yet there are many subjects in which a young gentleman or nobleman—and the college is only intended for such—ought to be well grounded, which are not fully provided for by the Universities, such as the "sciences" of Navigation, Riding, Fortification, Architecture, Painting.

"Albeit many of them are taught in London, in dispersed places; yet it cannot but be judged more convenient to reduce and unite them in one certain place: because whereas many men teach them perfunctorily rather for gain than any other respect: it was held necessary to select certain men, who upon oath should undertake to see them learnedly and sufficiently taught: and in brief, whereas in the City of London divers strangers profess to teach sundry, or rather all the liberal arts and sciences, of which many have been found to be upon examination and trial, egregiously ignorant, whereby our youth lose both their time and money: it could not but be thought most necessary for the benefit and convenience of all such virtuous disposed youths as live about the City, as also for the honour of our Nation: that such a house should be erected in which they might be regularly taught to practise the aforesaid sciences and qualities."

Another object Sir Francis Kynaston and his coadjutors had in view. They wished to give instruction in languages to gentlemen before they undertook journeys into foreign parts. Moreover, they proposed to take boys from early age and train them throughout their course. Every one admitted was to bring a "testimonial of his arms and gentry" and his coat-armour to be "tricked on a table to be conserved in the *Museum*." The full course was seven years. There was, however, a shorter course of half the time. No student "shall exercise himself at once about more than two particular sciences, arts, or qualities, whereof one shall be intellectual, the other corporal, to avoid confusion; yet, if the capacity of the scholar be extraordinary, this may be dispensed withal, according to the discretion of the Regent and major part of professors."

"Item: No Professor nor Gentleman . . . belonging to the *Museum Minervæ* shall make any comparisons among themselves, but shall strive to excel in humanity and in giving every one his due for the continuance of concord and amity."

The following are the courses of instruction mapped out:—

- "The Regent shall see these performed: Heraldry, Blazon of Coats and Arms, Practical Knowledge of Deeds and Evidences, Principles and Processes of Common Law, Knowledge of Antiquities, Coins, Medals, Husbandry.
- "The Doctor of Philosophy and Physic shall read and profess these: Physiology, Anatomy, or any other parts of Physic.
- "The Professor of Astronomy shall teach these: Astronomy, Optics, Navigation, Cosmography.
- "The Professor of Geometry shall teach these: Arithmetic, Analytical Algebra, Geometry, Fortification, Architecture.
- "The Professor of Music shall teach these: Skill in Singing and Music, to play upon Organ, Lute, Viol, &c.
- "The Professor of Languages shall teach these: Hebrew, Greek, Latin, Italian, French, Spanish, High Dutch.
- "The Professor of Defence shall teach these: Skill at all Weapons and Wrestling.
- "Also Riding shall be taught, Dancing and Behaviour, Painting, Sculpture, Writing."

Emphasis is laid upon the teaching of these subjects by "demonstration and experiment as much as lieth" in the subjects. It is

* "Constitutions of the *Museum Minervæ*," 1636.

pointed out that frequently learned men, at their death, have written nothing, and their excellencies die with them. In this college each professor is required every New Year's Day to produce some "rarity" in writing, or otherwise, concerning his own profession. The Regent is to see that each of them is rewarded for his contribution according to his deserts. Assistants are to be appointed to the professors. The Professor of Physic and his assistants are to note the effects of experiments, chiefly for medicinal use, and to state "how and in what manner experiment was made and how it failed, that men may not afterwards spend their precious time and means in vain, and that the licentious abuses of impostors hereafter may be detected." Vacancies on the staff are to be filled up by balloting. The voters are the professors and the seven-year students who have passed through the course. Canvassing is forbidden. Professors' salaries are to be paid monthly.

"If any professor find any grievance any way, either in his place or maintenance: he shall propound it to the Regent and rest of the Professors, and they shall redress it as brotherly and charitably, as if themselves were aggrieved, according as the nature of the matter shall permit, being collated with the state of the *Museum*."

There are a very large number of directions in the "Constitutions," but already I have quoted sufficiently to show that this is a remarkable document, and that Sir Francis Kynaston was an educational enthusiast of greater significance than his obscurity of fame would lead one to imagine. I add one more of his suggestions:—

"The Regent* is to remember, as he shall see opportunity from time to time, both publicly and privately to excite the Noblemen and Gentlemen to virtuous and heroic minds by the example of the most renowned, but especially to set before their eyes the images of the Worthies † of our own nation, and of their own Ancestors, in their several families: so that having taken impression in the *Museum* from the best ideas, the whole kingdom of inferior people, in those several counties where they shall be distributed to live, and shine, may find example, help, reason and happiness in and being under them."

Such was the spirit in which this college for gentlemen was thought out. Kynaston's ideas may seem limited to us in the light of the later democratization of education; but they are magnanimous as far as they go, and, personally, Kynaston's zeal and enthusiasm are pure and disinterested. Unfortunately, it proved impracticable. Kynaston, therefore, has been lost in the crowd of noble visionaries.

On December 11, 1635, King Charles I., "as of free gift," sent £100 to the *Museum Minervæ*. On February 27, 1636, "Corona Minervæ," a masque, was performed at the *Museum* before Charles, the Duke of York, and the Princess Mary. But even the royal patronage failed to secure success to the institution. The first and only professors were Edward May, Michael Mason, Thomas Hunt, Nicolas Phiske, John Spiedel, and Walter Salter. Sir Francis Kynaston was born 1587, graduated both at Oxford and at Cambridge, and was one of James I.'s knights. Anthony à Wood says he was "more given to the superficial parts of harmony, poetry, and oratory (wherein he excelled) than to logic and philosophy." He died in 1642.

II. SIR BALTHAZAR GERBIER.

In 1648, a very different man, Sir Balthazar Gerbier, took up the idea of Kynaston, and ran a private encyclopædic academy at Bethnal Green. In the course of the years 1648-49, he issued prospectuses (June 28, 1648; and, in 1649, July 18, August 4, October 31; there may be others), all differing in minor points. With that of July 18, 1649, there is in existence a letter addressed by Gerbier: "Mr. Thomasson, at the Rose and Crown, in Paul Church Yard, is invited on Thursday in the afternoon three of the clock to be present at the opening of the Academy at Bethnal Green, and to bring some notable friend along. There will be a good company and a hearty reception.—Balthazar Gerbier."

The "to bring some notable friend along" discloses the nature of Gerbier's educational zeal. He is a prince of puffers.

The following is the prospectus of June 28, 1648, in full:—

"[June 28, 1648.]

"To all Fathers of Noble Families, and lovers of Vertue.

"Be it known that Sir Balthazar Gerbier, Knight, erects an Academy, wherein forraigne Languages, Sciences and all Noble exercises shall be taught, viz., French, Italian, Spanish, German, and Low Dutch, both Ancient and Modern Histories, joyntly with the Constitution and government of the most Famous Empires and States of the world. Besides, the true experimental Natural Philosophy. As also, what is most necessary and most noble of the Mathematicks, to wit, Arithmetick, the true method of Keeping Bookes of Account, by double parties, as is practised in Italy and other parts of Europe, Geometry, Geography, Cosmography, Perspective, and Architecture, as well for

* He was himself to be the first Regent.

† How much this feeling was shared may be judged by the numerous biographies and collections of biographies of the period, culminating in the delightful "Worthies of England," by Thomas Fuller, 1662.

building as for magnificent shows and secret motions of Scenes, and the like. But, above all, what is most excellent of practical Mathematics, whatsoever belongeth to Fortification, besieging and defending of places, Fireworks, Ordering of Battalia, and Marches of Armes, Musick, playing of all sorts of Instruments, Dancing, Fencing, riding the great Horse, together with the new manner of fighting on Horse-backe. And if there be any lovers of Vertue, who have an inclination to Drawing, Painting, Limning and Carving, either for their curiosity, or to attain unto a greater excellency in severall of the forementioned Sciences (viz., Arithmetick, Fortifications, &c.), they may have them as exactly taught as any of the other Sciences, and by a short method, which shall give them a full insight in the Theoretical part of the said Sciences and Exercises at the self same time that they shall be taught in the Forraigne Languages, whereunto shall serve severall Treatises* held forth by the said Sir Balthazar in the Forraigne Languages aforesaid, the English tongue being joynd thereunto, together with divers excellent Tables of very great use for facilitating the matter, and helping the memory; which Treatises shall be continually at Mistresse Allen's shop at the signe of the Crown in Pope's Head Alley, neere the Old Exchange, London; so that all lovers of these Languages, Sciences, and Exercises, may be pleased to addresse themselves to the said Sir Balthazar's house, at Bednall Green, beyond White Chappell, where Gentlemen, and the sonnes of all such lovers of vertue are received and accommodated to their and their parents' entire satisfaction, being a place most pleasant, healthfull, and fit for the studious, that are disposed to apply themselves, as aforesaid, and there to improve themselves in such a short and convenient time, as that they shall be the sooner enabled to travell as Gentlemen, who conversing with persons of repute and worth, will leave a noble esteem of themselves in forraigne parts, when strangers shall find them to be well verst in Languages, Sciences, and perfect in all noble Qualities; and that they shall not owe to the said strangers, the merit of their education. Besides the other more weighty considerations which conscience and loyalty to our own native Countrey obligeth all parents to preferre, and especially in these evill times, when it proves a generall misfortune that a number of young Gentlemen abroad, are drawn into evill company, whence they heare and learn nothing but meere corruption both of manners and language, besides destructive Principles to their native Countrey, and to their Religion, it being also considerable, that the sending of young Gentlemen to any of the Forraigne Academies (where they shall learn no more qualities than now they may get at home, nor altogether so many) as it is incomparably more expensive, so it exposeth them to many dangers and inconveniences.

"And although the principall scope of the Academie is for the education of young Gentlemen, yet those of more mature Age, may find in it wherewith abundantly to satisfie any laudable curiosity in any kind whatsoever, whether onely for enriching the minde, or for honorable profit."

The time-table of Sir Balthazar's Academy is forthcoming.† "As Aurora is said to be a friend to the Muses," students begin their studies, "the Monday morning with Arithmetic, the key and entrance of Mathematics."

"Study at nine of the clock the languages, until eleven; and then break up for their recreation, and at noon lend their ear to a public reader, who shall entertain them with histories fit for that hour, and being risen from table apply themselves to Sir Balthazar Gerbier (or his Deputy) to hear the exposition of such particulars as shall have been read unto them; which done for one half hour (besides another half hour for their recreation) return about two of the clock to study until four of the clock, the elements of Euclid; until six, Geometry and Music.

"Tuesday Morning: Cosmography, Geography, and Languages; in the afternoon, Fortification, Arithmetic, Fencing, and Vaulting.

"Wednesday Morning: Architecture, Perspective and Language.

"Thursday Morning: Drawing and Language; in the afternoon Painting, Limning [i.e., Drawing], and Music.

"Friday Morning: Natural experimental Philosophy, History, and Language; in the afternoon, Carving, Dancing, Fencing, Vaulting.

"Saturday Morning: Scenes, Fireworks, Marches of Armies, they having been at the riding of the great horse; in summer, early in the morning before the heat of the day. The afternoon studies are to last until six of the clock in summer, and in winter until five.

"The Wednesday afternoon, they are to recreate themselves; as also the Saturday afternoon, especially for preparing to the Sabbath; they shall have a fit vacation in the four seasons of the year."

The rules for the conduct of the institution are, to some extent, clearly modelled on those of the Musæum Minervæ. The admirable provision of the earlier institution that only two subjects should be studied at a time, the one intellectual and the other corporal, is by Gerbier changed to: "It shall be in the pleasure of every scholar in this Academy, to select the prosecution of any [of the lectures] in particular, according

to his genius, or affection, and accordingly lessen, or increase his charge."

Whitelocke* says: "Sir Balthazar Gerbier set up his Academy in Whitefriars† for the teaching of all manner of Arts and Sciences." He significantly adds: "A good design if the conduct and success had been answerable."

Kynaston had begun his college with six professors, whose names are given. Gerbier begins his, professedly, with lecturers to assist; but these, if they existed, were always in the background. His Academy was essentially one-maned. He had no permanent constitution. Its arrangements altered to suit circumstances. Its head was always looking out for "notable" persons. On December 21, 1649, Sir Balthazar issues the notice: "If any lady or virtuous matron will attend his lectures, they will give notice, that they may be better accommodated according to their quality."‡ It was the "quality" he wanted to get at. But, notwithstanding, Sir Balthazar is to be thus credited as the first to encourage the idea of attendance at college lectures of women together with men. At least, I know of no earlier suggestion of this sort.

The following lectures given by Sir Balthazar Gerbier himself are extant:—

1. "The Interpreter of the Academie for Forrain Languages and all noble Sciences and Exercises. . . . The First Part, English and French," 1648. 2. "The Second Part, which includes an account of Military Architecture and Fortifications," 1648. 3. "On Navigation," 1649. 4. "On Cosmography," 1649. 6. Second lecture on "Cosmography," 1649. 7. First lecture on "Geography," 1649. 8. First lecture on "Military Architecture," 1649. 9. "On Justice." 10. "On the Art of Well-Speaking."

The lectures may be dismissed as too sterile for serious treatment. The "Interpreter" gives French and English side by side. The "Art of Well-Speaking" dilates on conversation between the lower animals. Eloquence, he states, is "a gift proceeding from the Holy Ghost, neither from Nature nor from Art." He adds, however: "I do not deny but that a good disposition and the strength of study must contribute thereunto; but that Eloquence or that Science is merely vain that hath not the glory of God for its aim and His gift for a principle." Such a passage serves to support Mr. Bass Mullinger's view that Sir Balthazar wished to profit from a reluctance on the part of Puritans to go to the Universities. It is interesting to note that Sir Balthazar Gerbier was plausible enough to induce Mr. Samuel Hartlib, of Duke's Place, Holborn, the most public-spirited educationist of the day, to act as a reference for him.

With Gerbier, the whole affair was an "expedient"; with Kynaston, "no by-private ends" were sought. But the one, as clearly as the other, shows that encyclopædism, so to say, as an educational aim, was making itself felt. It is important to notice this, because it cannot be said that by 1635 Comenius's influence had won so much support to his views. The fact is that the idea of encyclopædism in education was winning its way in England quite independently and long before the time of Comenius. It had shown itself in the truly English method of practical effort towards realization of encyclopædic colleges; for the attempts of Kynaston and Gerbier were not the first.

The true sources of these are not to be sought for in the theoretical writings of Comenius, or even in Lord Bacon—though he incidentally strengthened the idea. Kynaston and Gerbier are an educational succession from Sir George Buck and Sir Humphrey Gilbert. About 1572 § Sir Humphrey Gilbert wrote his "Queene Elizabethes Achaedemy," in which he required orations to be given in English. The subjects of study are to be Philosophy, Politics, Military Art, Mathematics, Fortifications, Riding, Eubattelings, Cosmography, Astronomy, Navigation, Maps, Physic, Chirurgery, Civil Law, Divinity, French, Italian, Spanish, Defence, Dancing, Vaulting, Music, Heraldry. "Whereas," says Gilbert, "in the Universities men study only school learnings, in this Academy they shall study matters of action meet for present practice, both of peace and war."||

In 1615, Sir George Buck wrote his "Third University of England. Or a Treatise of the Foundations of all the Colledges, ancient Schooles of Priviledge and of Houses of Learning and liberal Arts, within and about the most famous Cittie of London." This appeared as a supplement to John Howe's edition of Stow's "Annales" (1615). In it Sir George Buck gives a "catalogue or table of all the Arts, and Sciences read and taught in this University of London." The following is the list:—Theology, Grammar, Rhetorick, Poetry, Arithmetic, Logic,

* "Memorials of English Affairs" (for 1649), page 441.

† Gerbier removed the Academy from Bethnal Green to Whitefriars for the winter months.

‡ Quoted by Lysons in the "Environs of London," Vol. II., page 31, where will be found most interesting quotations from newspapers as to Gerbier's academy.

§ See article in "Dictionary of National Biography" on Sir Humphrey Gilbert," Vol. XXI., page 329.

|| Cf. Milton's "I call therefore a complete and generous education that which fits a man to perform justly, skilfully, and magnanimously all the offices, both private and public, of peace and war."

* I.e., treatises.

† From the prospectus of August 4, 1649. Brit. Mus., E 1377 (2).

Philosophy, Common Law, Law of Conscience, Civil Law, Canon Law, Physic, Chirurgery, Astronomy, Geometry, Music, Mathematics, Hydrography, Geography, Navigation, Languages, Cosmography, Calligraphy, Brachygraphy, Steganography, Art Gladiatory, Riding, Art Military, Pyrotechny, Artillery, Swimming, Dancing, Painting, Heraldry, Revels, Art Memorative, and others.

After giving his account of the teaching of these subjects in the various educational institutions of London, Sir George Buck says: "Who can deny that London is not only the third University of England, but also to be preferred before many other Universities in Europe, or any other part of the world known?"

Thus, then, the broadening of education was, in England, no mere theory. The effort to accomplish it can be traced, in 1572, to Sir Humphrey Gilbert; in 1615 it was present to the mind of Sir George Buck; in 1635 it takes shape in Sir Francis Kynaston's *Musæum Minervæ*; in 1648 Sir Balthazar Gerbier takes advantage of the spirit which he feels to be abroad in its favour to run his Bethnal Green Academy. All these movements, it is to be noted, are for the benefit of noblemen or the gentry.

NOTE.—At Sir Balthazar Gerbier's Academy, the terms for teaching all these arts and sciences were £6 per month, of which £3 was charged for teaching to ride the great horse. Gentlemen were boarded at £3 per month. No gentleman of age bound to engage to board for more than one month; those of sixteen or eighteen years old for a quarter of a year. (Lysons' "Environ of London," Vol. II., page 30, quoting from "The Perfect Diurnal," February 11, 1650.)

FOSTER WATSON.

CHATS ON CHILD STUDY.

I.—CURIOSITY.

If any headway is to be made in child study, we must pay less attention to the extraordinary and more to the ordinary child. Of course, until there was a science to be ministered to by careful observation of fact, it was only the unusual, the surprising, and the quaint which was worth repeating. Thus we have such misleading statements as: "Children are so curious," "There is no deceiving a child," gaining currency and seriously affecting psychological inquiry. Clearly these generalizations are based on the numerous instances recorded for our delight, and they tend to give the impression that children are more inquisitive and have a greater insight into character than grown-up people. Now it is astounding how very lacking in curiosity the average child is—his well known, trouble-producing, never-ending "why?" is generally a mere appeal for you to go on talking, no matter what; in fact, the more abstruse your language the better he is pleased. When he really does want to know, the flimsiest of reasons will satisfy him. A child's credulity is indeed pathetic, and there is grim truth in Prof. Bain's oft quoted cynical observation that children's curiosity is only fit for affording amusing situations for our comic literature. The desire to see what is in an unopened parcel is very different from that temper of mind which Locke regards as the instrument of all learning. A young teacher frequently relies on the latter to carry through an object lesson, and finds she can only get the former. "What has she got in that other box?" is far more in the children's minds than "I wonder what part of the world this fruit comes from."

We have, then, the subtle problem: How to check a child's useless inquisitiveness, and, at the same time, to fan the spark of intellectual curiosity. As for the first, we can do much by showing that we consider it neither straightforward nor manly to pry into other people's concerns, openly expressing a little horror whenever we hear of any one peeping into drawers, reading postcards, and so on. It is well to feel the horror, but better still to express it in words, for it is almost amusing, if it were not so serious, to note how children love to ape (I use the word advisedly) the feelings of the grown-up. Gradually these sentiments become a part of their moral furniture. What else does being "well bred" mean than living with and imitating people with a fine sense of honour? As Richter says: "Let a child hear his father complain that he has got to do a thing because he promised to." This transparency of the parental mind will do more to check little faults than a great deal of moralizing.

As for the other aspect of the problem, our work is simply a case of fanning the spark and putting on fuel. Give the children plenty of material to think about, plenty of things to analyze (in other words, to pull to pieces), and to every demand for a reason or further information give as simple and direct an answer as possible. If none is possible, tell them so plainly, and never put them off with an untruth. The remark from an adult: "I really do not quite know myself" amply satisfies a child, and, in a dilemma, is always safe and usually true enough. It is often a good plan, when confronted with a sensible question, to suggest that it cannot be answered off-hand, but would take a term's work to make clear, and, better still, to follow up this suggestion with the recommendation of a good book on the subject, or a place to be visited—anything, indeed, that is likely to stimulate to effort and research.

M. V. H.

A SELECTION FROM CASSELL'S EDUCATIONAL BOOKS.

HISTORY.

A New Historical Reading Book.

FOUNDERS OF THE EMPIRE.

By PHILIP GIBBS.

256 pages. Extra crown 8vo, prettily bound in cloth. With 4 Coloured Plates and numerous Illustrations. Price 1s. 8d.

Contents.

- I. Alfred the Great, the Model of English Kings.
- II. Stephen Langton, and The Great Charter.
- III. Simon de Montfort, and The Rise of the English Parliament.
- IV. Sir Francis Drake, and The New World.
- V. John Hampden, and The Defence of English Liberty.
- VI. Admiral Blake, and The Supremacy at Sea.
- VII. Lord Clive, and The Empire of India.
- VIII. General Wolfe, and The Dominion of Canada.
- IX. The Earl of Chatham, and English Statesmanship.
- X. Captain Cook, and The Exploration of Australasia.
- XI. Nelson and Wellington, and The Defence of the Empire.

IN DANGER'S HOUR; or, Stout Hearts and Stirring Deeds.

With Introduction by H. O. ARNOLD-FORSTER, M.P. With 4 Coloured Plates and numerous Illustrations. Price 1s. 8d.; or, handsomely bound in cloth, gilt, 2s. 6d.

"Forty years' experience of reading books, for boys both in large and small schools, tells me that no book will prove to be more popular than 'In Danger's Hour.'"—PRINCIPAL, High School, Thirsk.

Third Edition, Revised. Price 5s.

A HISTORY OF ENGLAND. By H. O. ARNOLD-FORSTER, M.P.

Fully Illustrated. Extra crown 8vo, 816 pages. *The Scotsman* says:—"The picturesqueness of its manner, its fine national spirit, its insistence on those parts of the story that have most use and interest for the modern world, its numerous choice of appropriate and interesting illustrations—all these things make it a book not for the cloistered student, but for everybody who wishes, not merely to be instructed, but to be won to an interest in a study too often made repellent by the Dryasdusts. . . . Few popular histories, if any, have been better done."

THE CHEAPEST DICTIONARIES IN EXISTENCE.

"CASSELL'S FRENCH DICTIONARY is at once the cheapest, the most complete and extensive, the only thoroughly accurate book of the kind in this country."—*The Record*. (553th Thousand; price 3s. 6d.; superior binding, 5s.)

"CASSELL'S GERMAN DICTIONARY is the best in the field."—*Journal of Education*. (222nd Thousand; price 3s. 6d.; superior binding, 5s.)

"CASSELL'S LATIN DICTIONARY is the handiest, the most useful, and certainly the very cheapest to be met with."—*The Rock*. (112th Thousand, price 3s. 6d.)

"CASSELL'S ENGLISH DICTIONARY, in addition to the clear arrangement, legible type, and other advantages, is provided with a common-sense scheme of pronunciation. An excellent dictionary."—*The Pall Mall Gazette*. (Price 3s. 6d.; superior binding, 5s.)

FRENCH.

CASSELL'S LESSONS IN FRENCH. An Entirely New and

Revised Edition. Part I. Containing 240 pp., crown 8vo, bound in cloth, 2s. This work (which reached a sale of 141,000 copies in its original edition) has been revised by Mr. JAMES BOILELL, B.A., Examiner in French Language and Literature in the University of London. It is now in all respects suitable for the Oxford and Cambridge Local Examinations and the College of Preceptors' Examinations. The type has been reset in a bold style, and each lesson, with the exercises bearing upon it, has been brought within the compass of an hour's work. * * * The Revised Part II. will be ready during the autumn of 1899.

CASSELL'S SONG BOOKS FOR SCHOOLS AND COLLEGES.

Edited by JOHN FARMER, Musical Director of Balliol College, Oxford (late of Harrow School).

SCARLET AND BLUE; or, Songs for Soldiers and Sailors. Extra crown 4to, cloth, 5s. Words only, royal 32mo, 6d. paper, 9d. cloth.

GAUDEAMUS. A Selection of Songs for Colleges, Schools, and the Home. Extra crown 4to, cloth, 5s. Words only, 6d. paper, 9d. cloth.

DULCE DOMUM. 134 Songs for Children. Crown 4to (Old Notation and Words), 5s. Also issued in crown 8vo size, in Two Parts (Tonic Sol-fa and Old Notation and Words), 6d. each. For Infant Schools and Kindergartens.

Cassell's School Catalogue will be sent, post free, on application.

CASSELL & COMPANY, LTD., LUDGATE HILL, LONDON, E.C.

MESSRS. BELL'S NEW BOOKS.

BELL'S ILLUSTRATED CLASSICS.

Edited by **E. C. MARCHANT, M.A.**,

Classical Master at St. Paul's School.

ELEMENTARY SERIES.

With or without Vocabularies. Pott 8vo, 1s. 6d. each.

These volumes are edited with introductions, notes, grammatical appendix, &c., and are copiously illustrated with drawings made from authentic sources, as well as maps and plans.

Now ready:

CORNELIUS NEPOS.—*Epaminondas, Hannibal, Cato.* By H. L. EARL, M.A., Grammar School, Manchester. [Ready.]

EUTROPIUS.—*Books I. and II.* (One Vol.). By J. G. SPENCER, B.A., St. Paul's Preparatory School. [Ready.]

CÆSAR.—*Book II.* By A. C. LIDDELL, M.A., High School, Nottingham. [Ready.]

LIVY.—*Book IX., cc. i.-xix.* By W. C. FLAMSTEAD WALTERS, M.A., formerly of Christ's College, New Zealand. [Ready.]

IVID'S METAMORPHOSES.—*Book I.* By G. H. WELLS, M.A., Merchant Tailors' School. [Ready.]

The following will be ready very shortly:

CÆSAR.—*Book III.* By F. H. COLSON, M.A., Headmaster of Plymouth College, and G. M. GWYTHYR, M.A., Assistant-Master. [Immediately.]

LIVY.—*Hannibal's First Campaign in Italy.* (Selected from Book XXI.) By F. E. A. TRAYES, M.A., St. Paul's School.

HORACE'S ODES.—*Book I.* By C. G. BOTTING, B.A., St. Paul's School.

VIRGIL'S ÆNEID.—*Book II.* By L. D. WAINWRIGHT, M.A., St. Paul's School.

VIRGIL'S ÆNEID.—*Book IV.* By A. S. WARMAN, B.A., Grammar School, Manchester.

. OTHERS IN PREPARATION.

Specimen Copies post free to Headmasters on application.

WORKS BY CHAS. PENDLEBURY, M.A.

Second Edition.

Small crown 8vo, 192 pp., 1s.; or, with Answers, 1s. 4d.
The Answers separately (revised), 4d. net.

A SHILLING ARITHMETIC.

By CHARLES PENDLEBURY, M.A., F.R.A.S., and W. S. BEARD, F.R.G.S.

This book is intended for the lower and middle forms of Secondary Schools. It will be found adapted especially for the use of Candidates for the Oxford and Cambridge Junior Local Examinations, the Scotch Universities' Locals, County Council Scholarships, and for Examinations conducted by the College of Preceptors, the Board of Intermediate Education for Ireland, &c., &c.

Throughout the book fully worked-out examples have been inserted to illustrate the theory explained in the text, and to serve as models for the pupil. The examples for exercise are numerous, and are carefully graduated. The sets of miscellaneous examples are mostly taken from examination papers set at the Examinations referred to above. Questions involving unnecessarily long and tedious calculations have been excluded from the book, as unsuitable for the Junior Students for whom it is intended.

Twelfth Edition.

ARITHMETIC FOR SCHOOLS.

Complete, with or without Answers, 4s. 6d. Or in Two Parts, 2s. 6d. each. Key to Part II., 7s. 6d. net.

Tenth Edition, with or without Answers, 3s.; or in Two Parts, 1s. 6d. and 2s.

EXAMPLES IN ARITHMETIC.

8,000 Examples extracted from the above Arithmetic.

Fourth Edition. Crown 8vo, 2s. 6d.

EXAMINATION PAPERS IN ARITHMETIC.

Key, 5s. net.

Second Edition. Crown 8vo, 4s. 6d.

ELEMENTARY TRIGONOMETRY.

Second Edition. Crown 8vo, 2s. 6d.

COMMERCIAL ARITHMETIC.

By C. PENDLEBURY, M.A., and W. S. BEARD, F.R.G.S.

BY THE SAME AUTHORS.

Fourth Edition. Crown 8vo, 1s. 6d. With or without Answers.

ELEMENTARY ARITHMETIC.

FOR PRIVATE AND JUNIOR SCHOOLS.

GRADUATED ARITHMETIC.

In Cloth. Parts I., II., and III., 3d. each; IV., V., and VI., 4d. each; VII., 6d. Answers to Parts I. and II., 4d.; III., IV., V., VI., and VII., 4d. each.

LONDON: GEORGE BELL & SONS, YORK STREET, COVENT GARDEN.

Blackie's Illustrated Latin Series

General Editor—Professor R. Y. TYRRELL, Litt.D.

Examiner to the Universities of London and Glasgow, &c.

This new Series, issued under the accomplished editorship of Prof. Tyrrell, is distinguished by several important features for the first time introduced into English school-books.

Scope.—The volumes are intended mainly for the middle forms of schools, though the series will also include volumes for junior forms on the one hand, and passmen on the other. Each volume is complete in itself, containing biographical, historical, and (where suitable) critical introductions, text, notes, appendices, specimen translations and hints on translation, English exercises, and vocabularies. No references are as a rule made to any particular grammar.

Introduction.—The great aim is to make the Introduction thoroughly readable and interesting.

Illustrations, most of them drawn specially from the originals, are included so as to lend interest to the text, and familiarize the pupil with the results of archæological research. Maps and plans are provided.

Notes.—The notes, besides explaining simply all difficulties in style or allusion, aim at interesting the pupil in the subject-matter of the book and in literature as such.

Appendices.—Textual and other criticism beyond the attainments of the average middle-form pupil but useful to the master, is given in appendices.

Translations.—Wherever standard literary translations are available, a specimen is given: this is specially serviceable in the case of poets. In other cases hints on translation are given.

Exercises.—Each of the prose books contains exercises for retranslation, carefully compiled so as to practise the pupil in the vocabulary and the constructions of the text.

Vocabulary.—Each volume has a complete vocabulary.

Style.—Particular care is devoted to the get-up of the volumes, which are carefully printed and well and tastefully bound.

*** The following Volumes are ready or in preparation:—*

HORACE—ODES. Edited by STEPHEN GWYNN, late Scholar of Brasenose College, Oxford. Books I. and II. *ready*; Book III. in the press; Book IV. ready in October. 1s. 6d. each.

CICERO—THE CATILINE ORATIONS. Edited by C. HAINES KEENE, M.A., Professor of Greek, Queen's College, Cork. 2s. 6d. (*The First Oration separately, 1s. 6d.*) (*Ready.*)

TACITUS—AGRICOLA. Edited by W. C. FLAMSTEAD WALTERS, M.A., formerly of Christ's College, New Zealand. 2s. (*October.*)

LIVY—Books V. & VI. Edited by W. CECIL LAMING, M.A., Assistant Master in Edinburgh Academy. 2s. 6d. each. (*October.*)

EUTROPIUS—Books I. & II. Edited by W. CECIL LAMING, M.A. (*In Preparation.*)

VIRGIL—ÆNEID III. Edited by P. SANDFORD, M.A., Professor of Latin at Queen's College, Galway. (*In the Press.*)

VIRGIL—GEORGICS III. & IV. Edited by S. E. WINBOLT, B.A., Assistant Master in Christ's Hospital. (*In Preparation.*)

SALLUST—THE CATILINE CONSPIRACY. Edited by the Rev. W. E. STONE, M.A., Assistant Master in Bristol Grammar School. (*In Preparation.*)

LIVY—Book I. Edited by JOHN BROWN, B.A., Professor of Latin in Wellington University, New Zealand. (*In Preparation.*)

LIVY—Books XXI. & XXII. Edited by G. G. LOANE, M.A., Assistant Master in St. Paul's School. (*In Preparation.*)

*** A Specimen Copy will be sent post free on application.*

FORECASTS AND COMMENTS.

October 1, 1899.

THE distribution of diplomas, certificates, and Fixtures. prizes awarded at the various examinations of the College of Preceptors during the past six months will take place at the College on Thursday, October 26, at 3 p.m. The chair will be taken by the Bishop of London.

THE annual distribution of medals and prizes obtained by the students of the Royal College of Science will take place in the lecture theatre of the Victoria and Albert Museum on Thursday, October 5, when Prof. A. W. Rücker, F.R.S., will deliver an address.

At University College, London, in the faculty of Medicine Dr. G. F. Blacker will deliver his introductory lecture on October 2. Prof. J. Arthur Platt delivers his introductory lecture in the faculties of Arts, Law, and Science on the following day; Prof. Petrie begins his course on Egyptian History on October 5; Prof. Roger Smith delivers his introductory lecture on Architecture on October 9; Prof. Chadwick delivers his introductory lecture on Municipal Engineering on October 11; the session of the Indian School begins on October 17; Prof. Schechter delivers a public lecture on "Some Rabbinical Parallels to the New Testament" on October 19; and Prof. A. J. Butler delivers his first lecture on Dante's "Il Convito" on October 25. The half term of University College School begins on October 30.

BEDFORD COLLEGE, LONDON, opens on Thursday, October 5. Students attend on Wednesday, October 4, between 2 and 4 p.m. to interview the Principal and lecturers. The inaugural address for the session 1899-1900 will be given on Tuesday, October 10, at 4.30 p.m., by A. W. Ward, Litt.D.; subject: "Some Suggestions of the Renaissance."

At Gresham College Mr. E. Symes Thompson will lecture on Physic from October 3 to 6; Mr. Wagstaff on Geometry, October 10 to 13; Mr. Blakesley on Law, October 17 to 20; Sir Frederick Bridge on Music, October 24 to 27; Mr. Nixon on Rhetoric, October 31 to November 3; the Rev. H. E. J. Bevan on Divinity, November 6 to 10; and the Rev. E. Ledger on Astronomy, November 14 to 17.

PARTICULARS are given in the *London Technical Education Gazette* of forty-five courses arranged for the ensuing term by the London Society for the Extension of University Teaching.

MR. CHARLES FRY announces his sixth series of costume recitals of Shakespeare's plays, with incidental music, on Saturday afternoons, October 7, 14, and 21.

THE next competition for Junior London County Scholarships will be held on October 21 and November 11. There will be about 160 minor scholarships for boys and 115 for girls.

EXAMINATIONS for Magdalen College, Oxford, demysips and exhibitions will be held in History and Natural Science on October 10, and in Classics (in association with New College and Christ Church) on October 31.

ST. JOHN'S COLLEGE, Oxford, will proceed to the election of an Open Classical Scholar (foundation of William Lambe) on Wednesday, October 11. The examination will begin on Tuesday, October 3. Candidates must be under 20 years of age on the day of election, and the elected scholar will be expected to commence residence in Michaelmas term.

* * *

At the Church Congress, in October, papers will be read by Sir Hubert Parry on the Essentials of Church Music; by Sir George Martin on the Training of Choir Masters; and by Professor Villiers Stanford on the Choice of Church Music. The London Church Choir Association and the Gregorian Association, consisting of over two thousand members, will give musical illustrations. The organists and representatives of choirs in all the churches in the diocese of London are invited. In Westminster Abbey the Bishop of Richmond will give an address on English Church Music of the sixteenth, seventeenth, eighteenth, and nineteenth centuries, and the Abbey choir will sing the appropriate examples. In the Great Hall of the Church House, the Dean of St. Davids will speak on Church Music in Wales, and the Welsh choral societies in London will sing the selections. Before each meeting of the Church Congress in the Royal Albert Hall, throughout the Congress week, the leading church organists in London will give organ recitals.

* * *

MR. A. J. BALFOUR will preside at a special festival dinner in aid of King's College, London, at the Whitehall Rooms, on November 28.

* * *

Education Gossip. TECHNICOLOGY—we do not say technology, for there is a distinction between the words—fights hard, as it ought to do, for recognition in the Universities. We hear no more of the German suggestion of "Doctor Rerum Technicarum." Why not, for ourselves, "Doctor of TechnicoLOGY"? The contracted symbol in either case—"D.R.T." or "D.T."—is not peculiarly attractive.

* * *

OWING to the increase in the work of the Scottish Education Department, presided over by Sir Henry Craik, it has been found necessary, besides taking the old premises opposite known as Grindlay's Bank, to build an additional wing on the Downing Street side of Dover House, and on a portion of the garden which faces the Horse Guards Parade.

* * *

THE ancient Bluecoat School at Westminster, founded by William Greene in 1688, is being subjected to the process of rebuilding. Its old-fashioned windows have been replaced by others of modern design, but the statue of a Bluecoat boy over the doorway of the north front and a painting of one of the scholars remain untouched. The *Daily Telegraph* reminds us that the school was recently sold to the local vestry on the condition that it should not be demolished until the expiration of twenty-five years. In addition to the Bluecoat School there were also Blackcoat and Greencoat institutions in Westminster, and there is the Greycoat School for Girls.

* * *

It is understood that Mr. Horace Plunkett, M.P. for the Southern Division of the County of Dublin, will be the first Vice-President of the newly created Department of Agricultural and Technical Instruction in Ireland.

* * *

MORE examinations! The Sanitary Institute announces a series of examinations for school teachers—which should be very serviceable—in practical hygiene.

* * *

THE County Councils are certainly emulating the School Boards by moving a little in advance of legislation in the encouragement, and even in the creation, of secondary schools. £1,500 has been offered by the Kesteven County Council towards the establishment of a college for secondary education at Sleaford. The Sleaford Tradesmen's Association have raised

£540, and the governors of Carres Grammar School £650, leaving £1,100 to complete the sum required.

* * *

FOR the purpose of founding scholarships in the City of London School for Girls, Blackfriars, the Grocers' Company have granted thirty guineas, the Merchant Taylors' Company ten guineas, and the Leathersellers' Company ten guineas. Other City companies have the matter under consideration, and have expressed their desire to help the school in the way suggested.

* * *

WE are glad to note that Mr. R. P. Paranjpye, the Indian Senior Wrangler, has been awarded a special scholarship of £200 by the Secretary of State, partly as a recognition of his remarkable and distinguished success, and partly to enable him to take the M.A. degree.

* * *

A MEETING of the committee of the University College Colston Society was held recently, at which the Bishop of Hereford was appointed president for the year, and Mr. J. W. Arrowsmith hon. secretary. It is expected that Professor Bryce, who is eminently qualified to speak on University matters, will be the chief speaker at the first dinner of the society at Bristol in December.

* * *

MR. OWEN JONES, who lost his life on the Alps early in September, was only thirty-two years of age. He graduated B.Sc. at London with First Class Honours in Physics, and had been since 1892 a science master at the City of London School. Mr. Pollard writes of him as "one of the most successful and most enthusiastic of the school's masters." Mr. Jones had interests beyond the school. He was a devotee of many forms of sport, but mountaineering was his hobby. He wrote a book on "Rock Climbing in Cumberland," and a little handbook on Welsh hill climbing. He was a member of the Alpine Club, and he was contemplating a climbing tour in the Himalayas in 1900.

* * *

THE United States Education Department are endeavouring to put an end to the traffic in bogus musical and other degrees. Only a few weeks ago letters were sent to musicians in England from a bogus American University offering the degree of Doctor of Music for a reduced fee of £10. The Washington Education Bureau thereupon appointed a Commission formed of representative men from the real American Universities, and their report recommends immediate legislation on the subject.

* * *

AN anonymous donor has offered, through the Rev. John Watson, D.D. ("Ian Maclaren"), £1,000 towards the Westminster Presbyterian College at Cambridge, provided that the balance of £8,000 is raised before the opening of the new college at Cambridge on October 17. The sum of £9,000 is needed to open the college free of debt.

* * *

A STAINED-GLASS window, in memory of the late Dr. Lake, who for many years was Dean of Durham, has been placed in the north transept of Durham cathedral. It represents scenes in the life of St. Nicholas, and completes the series in St. Gregory's Chapel.

* * *

THE sympathy of all English teachers must go out at the present time to their fellow-teachers in the South African Republic. Good teaching is one of the things which war makes impossible. Education, it is to be hoped, may some day make war impossible. The Dutch teachers have memorialized certain of the English educational bodies, including the National Union of Teachers, beseeching them to exert every influence with the Government in favour of peace with the Boers. May their best hopes be realized!

MR. WALLACE M. LINDSAY, M.A. of Jesus College, Oxford, has been appointed Professor of Latin at St. Andrews University. The new Professor was educated at the Edinburgh Academy, and at the Universities of Glasgow and Oxford, where he carried off almost every classical distinction open to him. On completing his course at Oxford, he was elected to an open fellowship at Jesus College, and afterwards went for two sessions to Leipsic University, where he studied Latin under Prof. Ribbeck. Since 1883 he has been acting as classical tutor at Oxford, and has acted as examiner for several scholarships. He has published several works on Latin philology, the most important being "The Latin Language." In January 1898, we noticed Mr. Lindsay's scholarly "Handbook of Latin Inscriptions."

THE REV. THOMAS NICOL, D.D., has been appointed by the Crown Professor of Divinity and Biblical Criticism in the University of Aberdeen, in succession to Prof. David Johnston. Dr. Nicol has a wide reputation as a Biblical critic, and the honorary degree of D.D. was conferred on him by the University of Edinburgh in recognition of his theological learning. He is joint translator of Beck's "Pastorallehren des Neuen Testaments"; he contributed largely to Prof. Charteris's well known work on "Canonicity," and, in addition to numerous contributions to periodicals, he is the author of a work entitled "Recent Explorations in Bible Lands," which has passed through several editions.

MR. FRANK OAKLEY SOLOMON, who has been appointed Principal of Dauntsey's Agricultural School, Wilts, has, during the past seven years, occupied the post of Senior Agricultural Lecturer in the University of Durham College of Science, Newcastle-on-Tyne, and has also been Lecturer in Agriculture for the county of Durham. Mr. Solomon is a member of the Royal Agricultural Society of England.

THE REV. J. F. CROSS, B.A. Cambridge, M.A. Toronto, has been appointed Professor of Mathematics at St. John's University, Winnipeg. Mr. Cross, who is twenty-seven years of age, has had a remarkable career. From an elementary school at Seacombe he won a scholarship at Wallasey Grammar School, where he took honours in a local examination. Leaving school early, he spent a couple of years in a Liverpool office, then emigrated to Canada, where, while engaged in business, he graduated at Toronto. He returned to England, entered at Cambridge, and took the sixteenth place in the Mathematical Tripos in 1898.

THERE is a vacancy at Bangor University College for a temporary Assistant-Lecturer in Philosophy.

AMONGST the candidates for the Chair of Natural Philosophy in the University of Glasgow are Mr. C. T. R. Wilson, Mr. J. A. M'Clelland, and Mr. G. F. C. Searle, all demonstrators in the Cavendish Laboratory, Cambridge; Mr. John Sealy Townsend, Cambridge; Mr. George W. Walker, Cambridge; Prof. Andrew Gray, University College, North Wales; Prof. J. C. Beattie, Cape Town; and Mr. Cargill Gilston Knott, Edinburgh University. The following are candidates for the Chair of History in the University of Glasgow:—Prof. John Knox Laughton, London; Mr. Ernest Barker, Oxford; Mr. D. J. Medley, Oxford; Mr. C. S. Fearenside, Cambridge; Mr. Ronald W. Heaton, Cambridge; Mr. H. E. Maldon, Cambridge; Prof. James Mackinnon, St. Andrews; Prof. T. F. Tout, Owens College, Manchester; Mr. C. Sanford Terry, Aberdeen; Mr. T. S. Rogers, London; Mr. E. J. Matthew, late Professor of History and Literature in the University of New Zealand; and the Rev. J. King Hewison, Rothesay.

MR. A. R. WALLER, late Headmaster of the training schools

at St. Mark's, Chelsea, has been appointed Headmaster of the Red Coat Schools, the old Church day schools of Stepney.

MR. J. S. SMART, M.A. St. Andrews, formerly Lecturer in English Literature at the McGill University, Montreal, has been appointed senior assistant-master in the Ayr Academy.

MISS HILDA DIANA OAKELEY, formerly of Somerville College, Oxford, has been appointed Warden of the Royal Victoria College, Montreal. This College has been endowed as a constituent college of McGill University by Lord Strathcona and Mount Royal, High Commissioner for Canada and Chancellor of the University. Miss Oakeley is a daughter of Sir H. E. Oakeley, late Chief Inspector of Training Colleges.

THERE are vacancies in the Chair of Medicine at Queen's College, Belfast, by the death of Dr. Cumming; in the Headmastership of Colchester Grammar School by the resignation of the Rev. J. Thomas, accompanied, we note, by the resignation of the assistant-masters (!?); and in the Headmastership of Bishop's Stortford Nonconformist Grammar School by the resignation of the Rev. R. Alliott.

MISS BEATRICE C. MULLINER, M.A., late assistant-mistress at Cheltenham College, has been appointed Headmistress of the new proprietary High School for Girls at Sherborne.

DR. R. GARNETT told the members of the Library Association at the Manchester Annual Conference that he should rejoice if a copy of the printed catalogue of the British Museum could be placed in every public library, and that every citizen could thus have an opportunity of learning what books were contained in our great national collection. Many persons did not realize that the books in the Museum were the property of every man, woman, and child in the country. To fulfil that wish would be no easy matter. They would never, he was afraid, find a Chancellor of the Exchequer agreeing to provide the necessary funds—and he really could not blame him for not doing so—unless the country were to speak out on the subject.

THE American Mathematical Society, in co-operation with several Universities and colleges, has determined on the publication of a quarterly volume of *Transactions*, at the same time maintaining its *Bulletin*. The editors are Prof. E. H. Moore, of Chicago; Prof. E. W. Brown, of Haverford College; and Prof. T. S. Fiske, of Columbia.

"A. M." (Mrs. Meynell) had an article the other day in the *Pall Mall Gazette* on Victor Hugo and his language. She is enthusiastic for the poems of Hugo; and it seems to us that she is rather acutely discriminative on the genius of the French language:—

What has been written above must be the proof that, if I have a prejudice, it is for French, and that for me magic and the caprice of destiny are on that side. But there are disabilities; and it is not metrical liberty, or the chance medley of masculine and feminine endings, or the ignoring of the *e* mute, or rhymes that are but the suggestion of a jingle, or any other of these new liberties, that can make this language sufficient. It lacks the second part, the other side, the splendour of alternative. It has the strangest blanks. It cannot so much as call an author shallow, nor a teacup, nor a sea. It has to use the worse than languid *peu* to make a negative; for want of the great particle *un* that, in our English, summons in order that it may banish, and keeps the word present to hear sentence and rejection, showing the word "unloved" to be no less than archangel ruined. As it has no alternative of derivation, French has none of time; no place apart for poems and prayers, but everything is at the disposal of the daily grocer and the trade-circular. The French of commerce, merely exaggerated, has tempted poets to make that ready eloquence resound, when the lyric could do no more for lack of strings.

It is noteworthy that the class list of the Final Honour School of English Language and Literature at Oxford contained two Second Classes and two Thirds gained by undergraduates, but ten Firsts, one Second, and four Thirds gained by women students. It would seem that this school is almost exclusively a women's school. Only three women obtained Firsts in all the other schools put together.

* * *

We hear that Mr. Gwenogfryn Evans has made good progress in cataloguing the ancient Welsh manuscripts preserved at Peniarth. Amongst the manuscripts are the "Black Book of Carmarthen," which dates from 1180, and the "Book of Taliesin" (about 1275). The "Black Book of Chirk" ("Llyfr Du o'r Waen") is the oldest copy in Welsh of Howel Dda's laws, a valuable manuscript of the year 1200; another, but a briefer, copy of the same book, in Latin, is of earlier date, being of the last quarter of the twelfth century. The "White Book of Rhydderch" contains the oldest copy of the "Mabinogion." There is also a "Holy Grail," a fourteenth-century translation based on the French.

* * *

A NEW volume by Sir Joshua Fitch, under the title of "Educational Aims and Methods," is announced by the Cambridge University Press. Its predecessor, "Lectures on Teaching," delivered in the University of Cambridge under the auspices of the Teachers' Training Syndicate, has had a large circulation in Great Britain, America, and the Colonies, and has been translated into Spanish and into one of the vernacular languages of India. That book dealt in succession with the principal subjects of ordinary school instruction, and sought to elucidate the principles on which all successful teaching depends. The forthcoming volume is more miscellaneous in character, and consists of lectures and addresses given in Cambridge, or before the Teachers' Guild and other bodies of teachers in England and in America. Its general aim is to direct attention to various aspects of educational theory and of practical work; and it includes several monographs on the lives of distinguished and representative teachers.

* * *

THE new list of the Clarendon Press includes "Homer, Odyssey XIII.-XXIV.," edited by D. B. Monro, M.A.; "Thucydides," translated by the late Prof. Jowett, cheaper and revised edition; "An Elementary Greek Grammar," by J. Barrow Allen, M.A.; "Nova Anthologia Oxoniensis," translations into Greek and Latin Verse, edited by A. D. Godley, M.A. The following texts are in the press, and others are in preparation:—"Æschylus," by A. Sidgwick; "Apollonius Rhodius," by R. C. Seaton; "Aristophanes," by W. M. Geldart and F. W. Hall; "Cæsar," by R. L. A. Du Pontet; "Cicero," by A. C. Clark, S. G. Owen, W. Y. Fausset, and A. S. Wilkins; "Horace," by E. C. Wickham; "Juvenal" and "Persius," by S. G. Owen; "Lucretius," by Cyril Bailey; "Propertius," by J. S. Phillimore. In English Literature the Clarendon Press announces "A Translation into Modern English of King Alfred's O.E. Version of Boethius," by W. J. Sedgefield, M.A.; "The Canon of Chaucer," by W. W. Skeat, Litt.D., D.C.L., Ph.D.; Dryden's "Critical Essays," edited by W. P. Ker, M.A.; "Plays and Poems of Robert Greene," edited by J. Churton Collins, M.A.; "Milton's Poetical Works," edited by E. C. Beeching, M.A.; and "A New English Dictionary, founded mainly on the materials collected by the Philological Society," and edited by Dr. Murray: portions of G, by Henry Bradley, M.A., and of I by James A. H. Murray, M.A., LL.D. In history, the Press will publish "Italy and her Invaders," by Thomas Hodgkin, D.C.L., Vols. VII. and VIII., A.D. 744-814 (completing the work): Book VII., "Frankish Invasions"; Book VIII., "The Frankish Empire," with maps and illustrations.

* * *

A CHEAP edition, in sixpenny weekly parts, is about to be issued of Messrs. Cassell's "Gazetteer of Great Britain and Ireland." The work is very fully illustrated from authentic

photographs, and will contain sixty maps in colours. The first part will be ready on October 4.

* * *

As a means of furthering the course of common sense in arithmetic, Mr. T. B. Ellery, F.R.G.S., has published a discussion on the Metric System suitable for a mock Town Council debate for school and college entertainments in which senior scholars can take part. Specimen copies may be had from Mr. Ellery, Arthington House, Luton.

* * *

MADAME ELODIE L. MIJATOVICH, wife of 'his Excellency the Servian Minister to the Court of St. James, is the author of a series of Servian folk-lore stories, which will be published in one volume by the Columbus Company.

A VISIT TO NÄÄS.

So much has been written about the Sloyd system by those who have themselves taken the course at Nääs, and who are, therefore, much better able to judge of its merits and applicability to the school curriculum than a three days' visitor, a mere bird of passage, that I shall limit my observations to the externals of life at Nääs.

Physiologists are well aware that an immense elevation in the ascent of human reason was effected by the division of labour between the hands and feet, when the former took to handling and the latter to walking as their respective allotment of work. Moreover, as Prof. Marshall and others have demonstrated, the use of the hand has had a wonderful effect upon the development of the brain. All the way our race has trodden is written there; and they who know, men who have traced—or, perhaps, one should say, who are learning to trace—the subtle connexion between muscle and brain, declare that the health of the latter depends upon a due co-ordination of the parts. It has been shown that the defective intellect can be improved by use of the hand. Mr. T. G. Rooper, one of H.M. inspectors of schools, has summed up the whole matter: "More book learning has ceased to suffice; children must be sent out into the world with a trained hand."

It is to attain this end that numbers of teachers of all nationalities repair to Nääs every year. Four courses, each lasting six weeks, are usually held, two in winter and two in summer. The dates are approximately: January 10 to February 20, May 31 to July 13, August 2 to September 12, November 7 to December 18. Besides these, two games courses were held at Nääs during the summer of 1899, one in July and one in August, lasting about a month each. The importance of games is becoming more and more recognized, as one might expect in an age so devoted to amusement as ours. Two special teachers were engaged for this work. Herr August Bruhn worked through a list of seventy-seven games; Herr Julius Hammarlund did more, for his list numbered ninety-eight.

Nääs is beautifully situated on one of Sweden's innumerable lakes, the Säfvelängen. It is only a few miles from Floda, a station twenty-seven kilometres from Gothenburg. It has also direct water communication with that city, the largest in Sweden after Stockholm. The oldest part of Nääs was formerly a royal hunting lodge, which Herr August Abrahamson purchased many years ago, and to which the Swedish Government fell heir on his death last year. The director of the Sloyd courses is Herr Otto Salomon, the nephew of the founder of the Sloyd system, who retains this post during his lifetime, having held it since 1872. Unhappily Herr Salomon has had very poor health for the last year or two, suffering much from overwork and strain.

What strikes a stranger about Nääs is the comparatively large number of houses connected with the work. It is very far from being what architects term a single act of conception, consisting of a large number of unrelated buildings. Chief among them is the Seminarium, where lectures are delivered, students draw, and where there is a large collection of, perhaps, 2,300 wooden models made by students at the end of their course. The Seminarium was built in 1880. Adjoining it is Vänhem, or "friends' home"—a very suitable name, since here all the meals are served. An irreverent lady styled it the *matsal* (meat room), a name common in Sweden for a restaurant. At Vänhem there is also a large common room, with piano, verandah, books, papers, writing materials for the use of students. Two other buildings have excellent workshops, one for the use of the English-speaking contingent, the other for the Swedes. Amongst other notable buildings—all of wood, following the fashion of the country—are Björkenääs (the residence of Herr Salomon), Jacobstorp, Babel, Lilla Nääs, Lyckebo, houses in which men are usually lodged. Ladies live entirely at Mellan Nääs, conveniently within reach of Vänhem and the Seminarium. At Källnääs, besides Sloyd workshops, is an excellent gymnasium, in which dances are frequently held. Beyond the houses

mentioned are two pleasant villas by the side of the hunting lodge. When there is a large contingent of students, the steward, the gardener, and numbers of other dependants let their rooms to those who require them.

The price of a course at Nääs is very moderate. The tuition is given free, Herr Abrahamson's endowment providing it. Students are fed for six weeks at one krone (1s. 1½d.) per day. Coffee after dinner, table napkin, and beer are extras. The food is, of course, quite plain and plainly served. A room or bed can be got for fifteen to twenty kröner for the six weeks' course, so that the total cost of the course, after arrival in Sweden, is not more than £3. 15s.

The hours of the meals are curious according to English ideas: breakfast at 7.30; a simple lunch, 12.30; dinner, 5.15; supper, 8.

The hours for work are 8 to 12 and 1.30 to 5; on several evenings lectures have to be attended. At 10 and 3 work is struck, and all hands devote themselves for ten minutes to Ling's Swedish gymnastics. In former days, Herr Salomon himself exercised the students, but, since his health has been impaired, a young Swedish lady replaces him. The lady's stature was somewhat small, and it was interesting to notice how she reviewed her troops, some of them men six feet high, with the martial vigour and energy of a general, uttering the word of command in no uncertain voice. Ling is compulsory in the elementary schools of Sweden, and much used in colleges and similar institutions. The Swedes submitted to drill with a grace born of long custom; but it was hinted that some of the Englishmen considered drill under a woman as a most curious innovation, and I should not be surprised to learn that some considered the supremacy and dignity of their sex threatened. But, British-like, as the others drilled, they drilled, abiding by the laws of Nääs.

The students are divided into two corps: the Swedes and the English-speaking people. The Swedes seemed very mixed socially, many people being of quite humble rank. The English-speaking contingent was curiously composed. On the occasion of my visit there were no English ladies—a rare occurrence. But there were eight-and-twenty Englishmen, several Americans, a few American ladies, a negro from Carolina, a German lady speaking English, a young Egyptian, who had just completed his training at Isleworth College, and who was going to take up elementary-school work in Cairo, and a Roumanian, much cut off from everybody else, as, though he spoke several languages, only his French placed him in communication with his fellows. Amongst the Englishmen were several elementary-school teachers, a Scottish inspector of schools, a number of manual instructors under the London County Council, and a master in Winchester College. I could not help admiring the devotion of the students; the majority were teachers, and yet gave up a well earned holiday in order to acquire or improve their manual skill, working eight hours daily. Several confessed that they suffered from fatigue at first; but, presently, the fresh air, simple life, and pleasant companionship caused the feeling to pass away and health to improve.

I learned that Miss Hughes, late of Cambridge, Dr. Reichel, the Principal of University College, Bangor, Miss Lord, Miss Walker, of Edinburgh Training College, and many other prominent educationists, had taken the course at Nääs, much as the aristocracy of wealth or leisure take the waters at a fashionable *bad*. I found that on the occasion of my visit there were seven different nationalities represented. When I mentioned this as a surprising fact to Herr Salomon, he quenched my admiration by saying that during one course there had been seventeen; in all, thirty-two nationalities have been represented at Nääs since 1872. The flags of all these nations are kept at Nääs, and I shall mention presently a curious use to which they are put.

At Nääs there is a series of fifty models, graduated in difficulty, which the student has to work through. Hands vary as much as brains, and I found several who had returned a third time to attack the series. On the other hand, there was a phenomenon who had reached the forty-fourth model, and who would certainly reach the fiftieth by the end of the course. I was not surprised to find that he was a carpenter by trade. It is considered satisfactory when a student reaches, say, the thirty-fourth model in a six weeks' course.

I found men and women working side by side, often at the same bench, as each bench accommodates two. I asked Herr Salomon during a talk we had together whether it was quite wise to bring women into competition with men, and whether a six-hour day at the bench were not enough for them. He said that he thought six hours enough, and was wishful that their day should not be longer, but that it was difficult to restrain them. Women are required to bring a medical certificate that they are strong enough for the work, and, as a rule, their health improves with the work. When first Sloyd was begun, the course lasted a year, and the Director found excellent results accrue. But very few, except specialists in manual work, can give so much time, and the aim of the founder was not to train specialists, but to win recognition for manual work at the hands of the general teacher. All persons who have opportunities of teaching or introducing the system have a preference over others when applicants are numerous. As a rule, English students are recommended by the Sloyd Association of Great Britain, the Handwork Union, or some such body.

Herr Salomon's indifferent health compels him to seek assistance from the best of his students for some of the work of the courses; but,

even now, he lectures twice daily—once to the Swedish corps and once to the English. He very frequently apologizes for his bad English, but, all the same, his suggestive remarks are followed with deep interest. If he is hard up for a word, he has a way of looking to students to help him out, which necessitates close attention on their part. Before beginning his lecture he calls on a student to deliver a summary of the last one, and this task was very well done in the three lectures to which I listened.

Life at Nääs is free and pleasant. One evening we witnessed an enjoyable dance in the gymnasium, some of the Swedish ladies being dressed in the picturesque costumes of the different provinces. The English do not always enjoy a reputation for sociability, but the contrary is the case at Nääs. A young Swedish lady informed us that the ladies received far more attention from English gentlemen, such as picnics, boating parties, social evenings, than from any other nationality. Probably this is due to the fact that the English party were of a somewhat higher social rank.

I have said little about the Swedes, as, unless they happened to know English, the bridge of communication was a somewhat narrow plank. The Swedes are undoubtedly a fine people, physically and morally. Great wealth and squalid poverty seem to be unknown; the social gulf between the classes does not exist to the same extent as in Britain. One has the feeling of being amongst an honourable, well educated, intelligent people. Even if grace and polish are not always conspicuous, there are solid qualities which count for much; and it is the realization of this fact that makes life pleasant at Nääs, for socially the students vary much. I fear there cannot be many institutions in Britain where people of such different social rank could meet together and work in amity for so long a time.

Before students leave they must each make a model for the Seminarium, and these become heirlooms and objects of interest for ever to all their successors. The model must fulfil five conditions, two of which are that it must be useful and æsthetic. The English-speaking section were selecting their models on the occasion of my visit, many of them much distracted to find an original idea. A limited time was set after the drawing of the model was sent in to the authorities, and during that time the model had to be dug out of a piece of wood. The certificate a student is awarded partly depends upon his final model, and great anxiety is displayed to reach the highest point of perfection. Think, too, that it is then hung on the wall as a monument to one's genius or clumsiness for all time; a number is put on it, and the worker's name and intention are duly entered in a huge volume. There was held a judgment of some half-score finished models in the large lecture-room the evening before we left. Herr Salomon sat on a throne, all the model students before him with their achievements in their hands; to his left was Herr Jonasson, with L, T, and other squares, rulers, and similar paraphernalia of the trade. He has the reputation of being a champion fault-finder. The maximum mark for utility, æstheticism, &c., is five for each. The student was called on to explain the purpose of his model. Here was a plain board for pasting photos on, here a small rack for post-cards, a stand for pies, a patent ruler with notches for finger and thumb, a card-tray, a book stand, and similar articles. Herr Salomon is a mild and just man, and distributed the maximum mark most lavishly. When it came to Herr Jonasson to determine the quality of the work, even an outsider could not help quaking, and students held their breath; his eyes, nose, hands all seemed to make light of the model. The student was asked to state the intended measurements; woe be to him if estimate and achievement did not correspond. If a right angle was not so, two sides did not correspond, if the measurement varied but a millimètre, Herr Jonasson's eagle eye detected it: the wicked instrument, which he flung on the table with a triumphant bang, proved it beyond doubt. One unhappy student averred that his model was true according to the square he used. He was bidden fetch it, and, after a lengthy absence, during which the idea that he was crooking the square could not but occur to the most unsuspecting mind, it was shown that his own square made less for "truth" than even Herr Jonasson's. Ultimately all the awards were made, and the breathing of students once more became normal.

The morning of our departure the young Egyptian gentleman to whom I have already referred left Nääs for London, to prepare for his departure to Cairo. At Nääs, though the eighty-seventh course has been reached, and probably thousands of persons have passed through the mill, an effort is made to give cohesion to the work, and this is partly achieved by the maintenance of time-honoured customs and the observance of a species of ritual connected with certain events. Thus, when students depart, the ceremony is always the same, and we watched it with interest. All those of the students' section assemble at the Seminarium and form themselves into a procession, a guard of honour for the departing guest. In this particular case the Swedish flag was waving in the breeze, the crescent represented Turkey's suzerainty, and the Union Jack stood for England. The English visitors were marshalled close to it, and thus shared in the great procession. Swedish songs were sung; and when the small launch appeared at the tiny landing stage, "He's a jolly good fellow," "Auld Lang Syne," "Home, sweet home" followed in succession. Then, after a parting handshake with Herr Salomon and his devoted wife, the launch steamed up the lake to Floda Station. C. S. B.

MEETING OF THE COUNCIL OF THE COLLEGE OF PRECEPTORS.

A MEETING of the Council was held on September 16. Present: Dr. Wormell, Vice-President, in the chair; Mr. Barlet, Mr. Bidlake, Rev. A. W. Boulden, Mr. Butler, Mr. Chettle, Mr. Eve, Rev. Dr. Hiron, Miss Jebb, Mr. Leatham, Mr. Milne, Mr. Pinches, Mr. Rushbrooke, Mr. Rule, Rev. Dr. Scott, Mr. Sergeant, and Rev. J. Stewart.

The minutes of the last meeting were read and confirmed. The Secretary reported that the Bishop of London had consented to preside at the public distribution of Diplomas, Prizes, and Certificates to the successful candidates at the last Midsummer Examination of teachers and pupils, to take place on October 26.

Diplomas were granted to the following, who had completed their subjects at the last Midsummer Examination of teachers: *Licentiate-ship*—P. H. Johnson, E. F. W. Mondy, C. H. J. Youens; *Associateship*—G. F. Piggott, Miss T. M. Pike.

The Report of the Examination Committee was adopted. The Report of the Finance Committee was adopted. The following persons were elected members of the College:—Mr. A. P. Starbuck, B.A. Lond., St. John's College, Green Lanes, N. Mr. J. A. Harrison, 4 Kyverdale Road, Stoke Newington, N.

The following books have been presented to the Library since the last meeting of the Council:—

- By the AUTHORS.—Bevan's *Plan for the Production of an Archaeological Map of England and Wales*; Spiers' *Short French Historical Grammar, Practical French Primer, and French Vocabulary for Repetition*.
- By E. ARSOLD.—The Companion Ranger Series of Reading Books, Vols. I.-III.; Arnold's Geographical Handbooks, Nos. I., III., and V.
- By G. BELL & SONS.—Baker's *Elementary Dynamics*; Earl's *Cornelius Nepos (Epaminondas, Hannibal, Cato)*; Liddell's *Caesar's Gallic War, Book II.*; Walters' *Livy, Book IX., 1-19*; Williams' *Aesop's Fables for Young Readers*.

COLLEGE OF PRECEPTORS.

CERTIFICATE EXAMINATION.

JUNE, 1899.

List of the successful candidates at the Colonial Centres—Batticaloa, British Guiana, Buenos Aires, and Colombo.

N.B.—The small italic letters denote that the candidate to whose name they are attached was distinguished in the following subjects respectively:—

- d* = Drawing, *gr* = German,
- e* = English, *sp* = Spanish,
- f* = French.

The small figures 1 and 2 prefixed to names in the Second and Third Class Lists denote that the candidates were entered for the First and Second Classes respectively.

BOYS.

Lee, E. F.	FIRST CLASS.—PASS DIVISION. City College, Colombo.
Wijesinha, J. Pereira, C. A.	SECOND CLASS.—1ST DIVISION. City College, Colombo. Private tuition.
Christian, E. W. De Silva, M. S. Abeyasooriye, S. C. D. Kretser, D. T. Fernandez, S. A. Honiball, W. E. H.	SECOND CLASS.—2ND DIVISION. City College, Colombo. " " " " " " Private tuition. " " " " " "

Peries, S. H. F. Setukavalar, R. N. Banham, R. V. N. Wright, F. E.	SECOND CLASS.—3RD DIVISION. City College, Colombo. Private tuition. Barker Memorial S., Lomas de Zamora, Buenos Aires. " " " " "
Gardom, J. D. f. Gibson, H. B.	THIRD CLASS.—1ST DIVISION. Barker Memorial S., Lomas de Zamora, Buenos Aires. " " " " "
Cadmus, E. O. f. gr. Wigg, J. M. Chappell, H. S. sp. Musson, E. M. Romer, F. W. Bridger, G. T.	THIRD CLASS.—2ND DIVISION. Barker Memorial S., Lomas de Zamora, Buenos Aires. "
Wannigasooriye, D. A. Sinnatamb, S.	THIRD CLASS.—3RD DIVISION. Private tuition. City College, Colombo.

GIRLS.

Cook, E. J. Rodger, E. H. d.	SECOND CLASS.—1ST DIVISION. Barker Memorial S., Lomas de Zamora, Buenos Aires. " " " " "
Gardom, E. B.	SECOND CLASS.—2ND DIVISION. Barker Memorial S., Lomas de Zamora, Buenos Aires.

COLLEGE OF PRECEPTORS.

PROFESSIONAL PRELIMINARY EXAMINATION—PASS LIST.

SEPTEMBER, 1899.

The Supplementary Examination by the College of Preceptors for Certificates recognized by the General Medical Council, the Incorporated Law Society, the Royal College of Veterinary Surgeons, the Pharmaceutical Society of Great Britain, the Education Department, and other bodies, was held on the 5th, 6th, and 7th of September, in London, and at four other local centres, viz., Birmingham, Bristol, Leeds, and Liverpool. The following candidates obtained Certificates:—

FIRST CLASS.

Pass Division.

Birtwhistle, F. P. H.	Higson, W. D.	Tochatti, J.
-----------------------	---------------	--------------

SECOND CLASS.

First Division.

Bennett, R. Biggs, G. N. Coutts, D. K. Dauthwaite, H. S. Green, G. F. O.	Haddock, J. Hambling, C. B. Jackson, H. H. G. Kilby, T. A. Parry, O. B.	Prentis, J. E. Sunderson, A. F. Stacci, A. R. Stocks, R. W. Templer, G. W.
--	---	--

Second Divisio.

Barragry, R. Beckett, C. S. Collinson, G. W. Dennis, M. F. B. Dickson, W. L. Dismorr, C. J. S. Douglas, G. A. Foran, W. R.	Gent, P. W. Holbrooke, C. D. M. James, A. M. A. Leyshon, T. St. L. Nicholson, H. Puxley, C. Rawsthorne, F. Reade, A. G. L.	Robinson, G. C. F. Sadler, R. D. Taylor, H. V. Tucker, L. F. White, A. D. Williams, T. L. Wotton, E.
---	---	--

Third Division.

Anderson, A. C.	Gayton, W. J. G.	Jones, E. C.
Balls, L. C. W.	Gordon, S. O.	Jotham, G. F.
Bullock, F. W.	Grammer, F.	Maglione, R. G.
Calthrop, E. S.	Horton, J. J.	Millar, A. S.
Colenso, J. E.	Jackson, J. E.	Pearson, J. S.
Costobadie, V. A. P.	James, R. R.	Shirvell, E. A.
Crowthier, W. R. D.	Jenkins, T. J.	South, F. M. W.
Elliott, J. E.		

The following qualified for Registration as Medical Students, but did not pass in all the subjects required for a Second Class Certificate:—

Mann, H.	Salisbury, H. K.	Walker, W. H.
Nuttall, E.	Schiele, O. A.	Whitaker, A. G.
Peacock, H. M.		

REVIEWS.

A PSYCHOLOGIST ON SOCIALISM.

The Psychology of Socialism. By Gustave Le Bon.
(T. Fisher Unwin.)

We noticed not very long ago M. Le Bon's volume on "The Psychology of Peoples," in which the author traced and illustrated the influence of character on the evolution of nations. It is but a step from this inquiry to that which he pursues in his new book—an inquiry into the conflict between the ancient hereditary ideas, on which the life of nations and societies have been built up, with certain new ideas, more or less cosmopolitan, born of the new conditions which have been created by the evolution of modern science and industry. Admitting the right of the greater number, of the less fortunate "masses," to ameliorate their condition, is it possible for existing institutions to bring about such an amelioration, or is the real destiny of the masses practically decided by necessities entirely independent of the institutions which have been created by the will (or the evolution) of our fathers and forefathers?

M. Le Bon is not a wild socialist. Perhaps we may define his position not unfairly by saying that he believes it to be quite possible that socialistic theories and methods may virtually replace old-fashioned institutions, but in that case he does not expect that socialism will long retain the supremacy. In other words, the world—or shall we say two or three European nations—have to look forward to a revolution and a counter-revolution: first a descent to a tyrannous socialist supremacy, which will try for a generation or so to make us all equal by a sort of hydraulic pressure from "the State," and then a natural reaction which will bring us back to a modified form of the same old-fashioned institutions. The author seems to regard this prospect with almost complete detachment. His aim is to study socialism from the point of view of the psychologist. The reader will find him all the more easy to follow, and pleasant as a guide, because he is no mere advocate of a cause, but a studious and fairly impartial inquirer.

No apostle has ever doubted of the future of his faith, and the socialists are persuaded of the approaching triumph of theirs. Such a victory implies, of necessity, the destruction of the present society, and its reconstruction on other bases. To the disciples of the new dogmas nothing appears more simple. It is evident that a society may be disorganized by violence, just as a building, laboriously constructed, may be in an hour destroyed by fire. But does our modern knowledge of the evolution of things allow us to admit that man is able to refashion, according to his liking, a society that has been so destroyed? So soon as we penetrate a little into the mechanism of civilizations we quickly discover that a society, with its institutions, its beliefs, and its arts, represents a tissue of ideas, sentiments, customs, and modes of thought determined by heredity, the cohesion of which constitutes its strength. No society is firmly held together unless this moral heritage is solidly established, and established, not in codes, but in the natures of men; the one declines when the other crumbles, and when this moral heritage is finally disintegrated the society is doomed to disappear.

Such a conception has never influenced the writers and the peoples of the Latin States. Persuaded, as they are, that the necessities of nature will efface themselves before their ideal of levelment, regularity, and justice, they believe it sufficient to imagine enlightened constitutions, and laws founded on reason, in order to refashion the world. They are still possessed by the illusions of the heroic epoch of the Revolution, when philosophers and legislators held it certain that a society was an artificial thing, which benevolent dictators could rebuild in entirety.

That passage indicates M. Le Bon's general attitude towards his subject. He holds that the Latin idea is unpractical and un-

tenable; but it is not to be disdained, for it supplies the motives of a distinctive influence which is greatly to be feared, because it is very considerable. Also, we may add on our own part, the Latin idea has not been an absolute failure in the past. In more than a few countries revolutions followed by written constitutions have fairly stood the test of time. Even the great French Revolution is in a manner justified by its result. The manner of a revolution may be that of an unchained tiger, but it may make for peace and justice none the less.

In a few of his middle chapters, M. Le Bon seems to fix his mind less on the psychology of socialism than on certain features of existing institutions, as where he deals with the psychology of the Latin peoples, the Latin conception of the State, and "the Latin concepts of Education and Religion."

The Latin concept of education is the consequence of the Latin concept of the State. Since the State ought to direct everything, it ought to direct education; and, since the State ought to think and act for the citizen, it must take care to imbue his mind with the sentiment of obedience, respect for all the hierarchies, and severely to repress all signs of initiative and independence. The pupil should limit himself to learning by heart the manuals informing him of the decisions of political, religious, philosophic, and scientific authority on all imaginable questions. This was the old ideal of the Jesuits, and it was skilfully completed by Napoleon. The University, as it was created by this great despot, is a most excellent example of the methods to be employed in order to enslave the intelligence, weaken the character, and transform the Latin youth into slaves or rebels.

It is evident that M. Le Bon has written a very readable book. He is at times hasty in his generalizations, and anything but convincing in his argument. He lugs in "the modern Greeks" to show how they have been sterilized and ruined by adopting the Latin concepts; then, quite gratuitously, he puts in a note to show that "the present population" consists almost entirely of Slavs, the ancient Greek type immortalized in sculpture having totally disappeared; next, he says that there are plenty of pure Greeks in the islands; and he continues by giving a list of the general characteristics of the nation which any impartial observer will recognize as belonging far more to a classical than to a Slav type. But no one could be expected wholly to agree with a book which covers so much ground, and is so disquisitive in its method. The main thing is that M. Le Bon is interesting throughout.

THE GAY SCIENCE.

A History of Literary Criticism in the Renaissance, with special reference to the Influence of Italy in the Formation and Development of Modern Classicism. By Joel Elias Spingarn.
(Columbia University Press; Macmillan.)

No one could have a more pleasant and inviting theme than Mr. Spingarn has chosen for himself. The gay science of criticism took a new departure in the sixteenth century, and, in our modern sense, originated in that century. Of course men are critical wherever they are classical. In the golden age of Greece and Rome they weighed books and styles; no one could be more critical than Aristotle, for instance, or Cicero, for another instance. When the members of an intellectual school had begun to write on good models and with definite ideas, they naturally began to compare one achievement with another, declared their likings and dislikings, and then, either for fear or for favour, or from some amiable desire to justify their own opinions, they proceeded to give reasons for their preferences. That was the process of criticism in the classical and post-classical ages; and it was renewed all over again in the ages of Renaissance. Mr. Spingarn holds himself chiefly to the sixteenth century, but he divides his book into three sections, in which he considers successively the features of Italian criticism from Dante to Tasso, of French criticism from Du Bellay to Boileau, and of English criticism from Ascham to Milton; and from them he seeks, in a sufficiently practical manner, to trace the development of critical rules and theories in the debased or late classical literature of the seventeenth and eighteenth centuries. We say "sufficiently practical" in view of what the writer himself has sought to accomplish. He is not elaborate over a wide field, but he is clear and concise within his limits. The essay was written in partial fulfilment of the requirements for the degree of Doctor of Philosophy at Columbia; and we have pointed out more than once that many an excellent book has built itself up on the basis of an academic theme. It is so, we think, with Mr. Spingarn's treatise on the origins of modern literary criticism.

As in duty bound, the author devotes special care to the history of Italian criticism in the sixteenth century, which has received

less attention than it deserved. The Italian Renaissance as a whole, in art, philosophy, science, and creative literature, has been amply studied and richly illustrated—no period more amply and richly—but there has been a certain deficiency in the estimates of the neo-classical literary criticism of the peninsula:—

The growth of classicism in Renaissance criticism was due to three causes: humanism, or the imitation of the classics; Aristotelianism, or the influence of Aristotle's "Poetics"; and rationalism, or the authority of the reason, the result of the modern spirit in the arts and sciences. These three causes are at the bottom of Italian classicism, as well as of French classicism during the seventeenth century. . . . In Vida's "Ars Poetica" there are abundant evidences of the rhetorical and especially the puristic tendencies of modern classicism. The mechanical conception of poetic expression, in which imagination, sensibility, and passion are subjected [subordinated] to the elaborate and intricate precepts of art, is everywhere found in Vida's poem.

Vida, we may remark, is influenced by Horace, as our own Pope was influenced by Vida. The tricks and standards of each are familiar: long preparation for the work of construction and composition, even to the extent of private armonies of phrases and images for use as required—a sort of Roget's dictionary and Sala's commonplace-book, concocted *à propos* of nothing, to be served up *à propos* of something—the heedful exclusion of impulse and morbid subjectivity; and so on, through a hundred or a thousand more or less irritating rules. Vida

impresses upon the poet the necessity of euphemistic expressions in introducing the subject of his poem: for example, the name of Ulysses should not be mentioned, but he should be referred to as one "who has seen many men and many cities," who "suffered shipwreck on the return from Troy," and the like. . . . A little later, in Daniello, we find similar puristic tendencies. He requires the severe separation of *genres*, decorum and propriety of characterization, and the exclusion of everything disagreeable from the stage. In Partenio's "Della Imitazione Poetica" (1560) the poet is expressly forbidden the employment of the ordinary words in daily use, and elegance of form is especially demanded. Partenio regards form as of superior importance to subject or idea; for those who hear or read poetry care more for beauty of diction than for character, or even thought.

From the classical and the late classical to the *paulo-post* and *multo-post* classical there is a lapse of many years, but no great length of stride. Is not Young Oxford in some danger from the Paterization of its prose, the *sui-festidium* of expression, the taboo of the obvious, and so forth? Mr. Spingarn raises some interesting points, and carries his readers into many inviting trains of thought. His little volume will be serviceable to the literary student, and it is a very creditable piece of work.

DR. STOUT'S "PSYCHOLOGY."

"University Tutorial Series."—*A Manual of Psychology*. Vol. II.

By G. F. Stout, M.A. Camb. and Oxon., LL.D. Aberd. (Clive.)

"A man will become angry," says Dr. Stout in his exposition of Emotions, "if you fail to understand his argument or if you unfavourably criticize his book." This, we have reason to believe, is most true. But we hasten to reassure Dr. Stout: we do not propose to make him angry. For it is impossible to misunderstand his argument without self-condemnation, or to pass an unfavourable criticism on a book that is carefully compiled by an experienced teacher out of fullness of knowledge and reflection. By the malevolence of fortune, indeed, we are impelled to remark on a criticism of Dr. Stout's in the very same paragraph as the sentence above quoted. He questions Dr. Bain's statement that anger "contains an impulse knowingly to inflict suffering upon another sentient being, and a positive gratification in the fact of suffering inflicted." We are not so sure that the being need be sentient; we have observed a man let out viciously at a non-sentient object that had offended him. But Dr. Stout takes a different objection. He thinks Dr. Bain's statement "would only apply to a somewhat developed stage of ideational consciousness; and, even then, it would not cover such cases as St. Paul's righteous anger with the foolish Galatians." Might not Dr. Bain hold that his general statement is right, even as applied to St. Paul's righteous anger, the elimination of the impulse and the gratification being due to other considerations which come in to modify the anger in the particular case? St. Paul's anger at the foolish folk does not seem to be a pure example of the emotion. However, it is only in subordinate and incidental points of this sort that Dr. Stout appears to lay himself open to occasional adverse remarks. The book is a piece of careful and solid workmanship, and a real boon to students; and it must prove a valuable basis for more advanced study.

The first and rather smaller division of the volume treats of perception—first, and at some length, of the distinctive characteristics, and then of the principal categories of perceptual consciousness. The other and larger division expounds the ideational and conceptual process, including the ideal construction of the world and of the self (with a very interesting treatment of the breaking-up of the total self into a number of "partial selves," if such an expression is not open to question), and the important problems of belief and the will. The handling is always abreast of the most recent inquiry, German and American psychologists being very frequently cited. It must not be supposed, however, that Dr. Stout has contented himself with the execution of a mere piece of patchwork. He takes up his own point of view, and applies a very frank and fair criticism to the views of the authorities he cites. Thus, indirectly, he impresses on students the important lesson of reading critically, with blue pencil in hand, the works that bear even the highest names in the history of psychology. This is entirely as it should be, and Dr. Stout will not, presumably, object to the reasonable application of the blue pencil to his own work—except, perhaps, in his capacity of examiner, when there is opportunity for reprisals. In any case, the two volumes form one of the very best handbooks for students in the "University Tutorial Series."

A COLONY BUILDER.

"Builders of Greater Britain." Edited by H. F. Wilson, M.A.—*Admiral Phillip: the Founding of New South Wales*. By Louis Becke and Walter Jeffery. (T. Fisher Unwin.)

It was in 1786 that Arthur Phillip, "an obscure naval captain," was sent out to establish a settlement in New South Wales, and he returned to England in 1792. The story of these six years is told in a sufficiently interesting fashion by Mr. Louis Becke and Mr. Walter Jeffery; and it may be said, to begin with, that the actual personal details of Phillip's life are somewhat sparse and inadequate. The authors frankly tell us as much in their preface, and they believe it may be taken for granted that, beyond what personal detail is given in this volume and its appendices, there is little to be found about him. The premier colony of Australia has for some time been searching for materials for a biography of her first governor, but with scanty results. The fact is that Phillip was not a distinguished man apart from the subsequent distinction of the colony. The original notion of Englishmen in respect of the settlement in the South Pacific was that the island might be a very good place for convicts; and Government did not need a very able or brilliant man to go out and make a small and tentative beginning. Phillip had apparently been a captain in the Portuguese service, but it is not known why he was selected to go to the Antipodes. In any case, there is enough evidence to show that he had plenty of grit in him, and that the choice was a fortunate one. He had not been in Australia many months before he declared, in a letter to the Government, that the settlement he was founding—or perhaps he thought of the island-continent as a whole—would be "the most valuable acquisition Great Britain ever made."

The narrative is very readable, for the authors have pressed every available anecdote into their service, and they give us some very amusing accounts of the early settlement days. Phillip took out with him in the "first fleet" 550 male convicts and 150 female, with 200 marines and the crews of eleven ships. They had not got far out to sea when it was found that the major of marines had forgotten his musket-balls. The deficiency was made good at Rio de Janeiro, where the fleet touched on its appointed course from Teneriffe to the Cape of Good Hope.

The seamen of one of the transports clubbed together and handed their metal spoons to a coiner among the prisoners. The fellow turned the spoons into good imitations of the silver dollars of the Brazils, and the sailors tried to pass the counterfeit money. At the first attempt the fraud was detected, and the sailors, to save themselves, confessed. Their grog was stopped, and the coiner was flogged.

The voyage occupied eight months and one week, the zigzag course having stretched it to a length of about fifteen thousand miles. The "second fleet" had a different fortune from that of the first. An eye-witness of the landing at Port Jackson wrote:

Oh! if you had but seen the shocking sight of the poor creatures that came out in the three ships, it would make your heart bleed. They were almost dead. Very few could stand, and they were obliged to sling them like goods and hoist them out of the ships, they were so feeble, and they died ten or twelve a day when first landed. There died in the three ships alone on the way out 347 men and women.

The account of Phillip's governorship of four years is full of interesting detail, and may be read with pleasure apart from its usefulness as a contribution to colonial history.

OVER-STUDY.

The Physical Nature of the Child, and how to Study it. By Stuart H. Rowe, Ph.D. (London and New York: Macmillan.)

Surely the schoolmasters' millennium is at hand. The crooked places of pedagogy are at last to be made straight, and, after reading this book, wayfaring schoolmasters, though fools, shall not err therein. Such is our first reflection after reading Mr. Rowe's carefully written work, in which he sets forth the whole duty of a schoolmaster towards the child in his physical as distinguished from his moral and intellectual nature. Throughout he lays stress on the importance of the study of the individual child's physical characteristics—the red-letter child, not the impersonal child with the big "C." Schoolmasters are, too frequently, prone to assume that all their pupils are normal, and no one can doubt the importance of a knowledge of simple means of detecting the more common physical defects in children, such as defects of sight and hearing, and of fatigue and nervous disorders. Mr. Rowe's book, however, is a counsel of perfection. Half the term would be taken up in finding out all the physical idiosyncrasies of the boys, if all the suggestions of this book were followed. Even the functions of a schoolmaster are limited; something ought to be left for parents, if only for the purpose of preserving a sense of paternal duty in the race.

Without suggesting that schoolmasters should attempt to reach the ideals here described, the book, however, will repay perusal as a means of quickening their powers of marking any serious abnormalities in the physical condition of their pupils. The chapter on Fatigue is practical and wise, and the results given of scientific investigation into the right relation of the different subjects of the school curriculum to periods of greater or less mental activity in the pupil are valuable, especially as they conform to practical experience. That on Nervousness is too slight, and we cannot approve the author's general suggestion that the nervousness of the individual should be met at the moment it is discovered, and that he should be given some diverting exercise apart from his class. It is, we think, far better to identify him with his surroundings, using another boy as a medium of communication, and not to isolate him before his fellows. The chapter on Growth and Adolescence is well worth the attention of parents; but the countenance given to the co-education of the sexes during the adolescent period will never, we hope, find approval in this country. The similar treatment of girls and boys during this period and afterwards is, to girls, a positive cruelty, of which, to express the view of an individual reviewer, there is too much, even in England. How it can be tolerated in America, where they pride themselves upon a superior adaptive lucidity in educational matters, is, to us, an incomprehensible puzzle.

The last chapter, with its string of namby-pamby cossetting test questions for parents to answer, would not do for English fathers. They suggest that the end of hygiene is the "muzzling, cockering, and dandling" of the child, which the common sense of mankind, as well as Montaigne, has disapproved. "Does he wear an overcoat even when the cold is not extreme? Does he sleep dreamlessly?" are a type of the rest. As we have shown, there is better sense in the book than this; but it is not the sense of proportion. A useful bibliography of the subject is appended.

GENERAL NOTICES.

CLASSICS.

Poems of Catullus, edited by Hugh Macnaghten and A. B. Ramsay (Duckworth), is a new school edition of the tenderest of Roman poets. The editors rightly say that in the only school edition some poems, or parts of poems, are unnecessarily omitted. The notes are brief, but they are of remarkably good quality, full of fine scholarship, yet not overloaded with learning. The book is most attractive. Not less so is a little companion volume, entitled *The Story of Catullus*, by Mr. Macnaghten (Duckworth). The author, a master of his subject, has drawn a living portrait of the poet as seen in his works. The prose descriptions and criticisms are interwoven with metrical translations of the poems, some more, some less, successful than others. It must suffice to give one specimen, the version of the poem that Catullus adapted from Sappho:—

"He is the peer of gods for me,
Victor of gods, if that may be,
Who, face to face, at whiles on thee
May gaze and hear

Thy laughter sweet: ah! Lesbia thence
(Unhappy me!) fails every sense,
Fails voice and art, for evidence
That thou art near.

My tongue is numb: the fever flies
From limb to limb: sounds tinkling rise
Within my brain: on both my eyes
The night falls sheer."

Mr. Macnaghten has ably performed a difficult task, which has been to him a labour of love.

Cæsar, Gallic War, Book II., by A. C. Liddell (Bell); *Livy, Book IX.*, c. 1-19, by W. C. F. Walters (Bell); and *Nepos, Epaminondas, Hannibal, Cato*, by H. L. Earl (Bell), may be taken together, as they are the first volumes of a series that marks in some respect a new departure. The volumes are profusely illustrated, and some, at least, of the illustrations are much better than the pictures usually supplied in school-books. Most of them seem to be from authentic sources; but in one or two cases the artist has allowed his imagination to run riot. Mr. Earl's book is the weakest in this respect. The modifications introduced into some well known pictures are judicious; in a few cases they might be carried further, with advantage. The books are excellently printed and bound, and the price (1s. 6d.) is remarkably low. There is a good introduction, a sufficient, but not overwhelming, number of notes; a very useful table of constructions, and a vocabulary. Mr. Liddell's introduction contains a valuable section on the Roman army; Mr. Earl's notes have some good historical parallels that ought to interest pupils, but his vocabulary is marred by one or two misprints that should have been corrected. Mr. Walters has added a list of technical terms that will be of use to masters who want the book for examination purposes. In short, the editors know their business, and the publishers have seconded their efforts in a most spirited fashion. The series is sure to receive a welcome. The books certainly contain at least as much as can be expected; but, perhaps, the addition of a few exercises based on the text might be possible.

Lower Greek Prose, by K. P. Wilson (Blackwood), is a companion volume to the same author's book on "Latin Prose." He begins with rules, vocabularies, and exercises on the simple sentence (pages 1-82). These are followed by rules and exercises on compound sentences (pages 83-153), a closely printed list of "sentences" illustrating Greek constructions (pages 154-164), and a few rules for accentuation. Lastly, we have seventy continuous pieces for translation into Greek, with introductory notes, and a general, but not exhaustive, English-Greek vocabulary. The book is well done; but we cannot help thinking that Mr. Wilson has tried to cover too much ground. His manual is designed to occupy the place of three ordinary books on Greek composition—say, "Arnold" and the two "Sidgwick's"; and the result is that, though the volume contains a vast mass of material, there is not enough practice in the application of each separate rule. It seems to us that the makers of these compendious books on composition go too fast for the learner, and are likely to bewilder him. Depend upon it, the only sound method—the only method that ensures that what is learned will not be instantly forgotten—is contained in the maxim: "Repeat, repeat, without ceasing." Another evil which results from Mr. Wilson's plan is that too much grammar has to be given at once, especially in the earlier stages. The number of words and rules set down at a time is sure to dishearten the beginner.

Livy, Book II., edited by A. F. Hort (Rivingtons), belongs to the now familiar series of "Middle Form Classics." Mr. Hort's object is to supply the minimum amount of assistance, and to leave most of the explanation to the master. The notes contain grammar and translation. The book presupposes a very capable teacher. Therefore it is not for every one. There is no vocabulary.

Virgil, Georgic III., and *Virgil, Æneid XII.* (Macmillan), are two additions by Mr. T. E. Page to the "Elementary Classics." Both contain a vocabulary. We have so frequently praised Mr. Page's work in this column that it is unnecessary to say much of the excellent volumes before us. The notes are by no means confined to what is elementary. Mr. Page writes, we suspect, as much for the master as for the pupil; and, inasmuch as the junior pupil does not readily read notes, there is no doubt much to be said for this method. Mr. Page and Mr. Hort represent absolutely opposite theories on editing for middle forms.

Virgil, Æneid VI. (Clive), appears in a second edition. Besides the usual complement of notes, there is a capital appendix with lists of Greek nouns, archaisms, grammatical peculiarities, metrical irregularities, and so on. Altogether a volume to be recommended.

SCIENCE.

Exercises in Practical Physics for Schools of Science. Part I.

By R. A. Gregory and A. T. Simmons. (Macmillan.)

The opening words of this volume—"you are provided with a foot-rule"—are typical of its thoroughly practical character, and

remind us by contrast of our own school-days, when we were provided only with pencil and paper, and had to supply such trifles as a weight sliding down an inclined plane out of our own imagination. Then we performed mathematical tricks on things we did not understand. Now, pressures, centres of gravity, and the like, are made real to the pupil, and nowhere more fully so than in this little book, or, to be more correct, in the practical work for which it gives clear instructions without the dangerous anticipation of results. It includes measurements of length, area and volume, of mass and density, time and angle, velocity, momentum and force, the "mechanical powers," and the simpler phenomena connected with heat. Under this last head we note with some surprise the use of the inaccurate term "radiation of heat," where "loss of heat by radiation" would have been better; but, as the subject of light is not touched, the point is not very important. The printer is responsible for a few letters dropped out, and an injury to Fig. 47 which rather spoils its effect; otherwise the get-up is as good as usual with its publishers.

An Elementary Course in Practical Physics. By F. Castle. (Nelson.)

The practical course here set out covers a wider ground than is covered by Messrs. Gregory and Simmons, embracing elementary work in sound, light, and electricity, in addition to mensuration and elementary mechanics. Mr. Castle is also thoroughly practical in his methods, though he shows a survival of old-fashioned ideas by the introductory chapter, with its dissertation (fortunately very brief) on matter, extension, impenetrability, and the rest of those wonderful abstractions without a verbal knowledge—we will not say an understanding—of which it was supposed that no boy could measure the length of a piece of string. If these are wanted, they would find their most fitting place in the final chapter, only to be read by those who have gained a concrete knowledge of the properties of matter by methodical practical work. For a book of this size the scheme of work is too ambitious, and the teacher using it will do well to supplement the text by additional experiments; at least, in the earlier part.

Manual of Human Physiology. By L. Hill. (Arnold.)

In this book of 480 pages the author has endeavoured to cover as much of his subject as is of general human interest, and to start from the very beginning. Accordingly, after a somewhat rhetorical introduction, we find a few chapters on general elementary science, giving notions of energy and work, chemical combinations, &c., as clearly as in so short a space can well be done: a number of common facts being appealed to and simple experiments suggested, in illustration. Then we are introduced to the great generalizations on vegetable and animal life, and bacteria. Finally, we are taken through the structure and functions of the various systems of the human body. Prof. Hill knows well how to make his subject interesting without being inaccurate, and how to drive an abstract fact home by an illustration from everyday experience. His method is, on the whole, more suitable for adults than for school-children, who have less experience to be appealed to, though they are quicker at observation of new things. It will serve a useful purpose, either as an advanced text-book for schools and colleges or as a general work for the intelligent adult who has not studied the subject in his youth.

MODERN LANGUAGES.

First Steps in French Reading and Composition. By J. Duhamel, M. ès A. (Rivingtons.)

The preface to this book contains some very sensible remarks: for instance, on the importance of teaching the pronunciation and of giving essentials to the beginner, letting exceptions take care of themselves. It is unfortunate that M. Duhamel did not see his way to a more thorough breach with grammatical traditions; he might, at least, have carried into practice what is now a recognized principle—viz., that rules should follow, not precede, the examples, and that the pupils should be led to discover as much as possible for themselves. The first thirteen lessons are solely devoted to pronunciation; and, indeed, it is not lost sight of throughout the book. Even the most advanced "reformer" would not agree to the exclusive study of the pronunciation of words apart from their meaning. For about three weeks (under favourable circumstances) the children are expected to read French, without understanding it; nor is the French simple. We take an example at random: "Les autres huiles de colza, d'œillette, de lin sont employées dans l'industrie ou en médecine." The second part, which deals with the parts of speech, is well arranged. The third part gives grammar, "translations and idioms," and does not materially differ from the second. There is also an elementary syntax. While appreciating the skill shown in many matters of detail, we cannot help regretting that we have here another "compromise." It is better than most first courses which fall under this heading, and will, no doubt, be used by many teachers.

About, Le Roi des Montagnes. Edited by E. Weekley. (Macmillan.)

Those who believe that French school-texts should not merely amuse, but also give some idea of French life and ways, will view with regret the appearance of another edition of this much too popular book. It is farce, rather than humour, that we have here; there is little refinement in About's art. That Prof. Weekley has supplied brief and good notes need hardly be mentioned. Some of the notes, it is

true, are not well expressed, or not full enough: e.g., the notes on page 3, line 19; page 11, line 23; page 80, line 11. The book appears in Mr. Siepmann's series, and we have the usual appendices. Such sentences as "I must have done my work before I go"; "Is it not more than eight o'clock?"; "Such is the vitality of our institution that no other has stood this crisis better," are not in the kind of English which it will profit a boy to translate. The fourth appendix deals with the formation of adjectives; it is well put together.

A Primer of Historical French Grammar. By E. Weekley, M.A. (Blackie.)

A convenient manual, containing much information in small compass. It has been compiled primarily for the use of candidates taking French at the London B.A. Examination; and Prof. Weekley may be trusted to know how much that means, and to put it before his readers in a clear and concise form. There is very little to cavil at: the term *enclôsed* (§ 27) is unsatisfactory; in § 56 the term *euphonic* might be dropped with advantage; in § 190, note, read *lez* (not *les*). The section on metre is useful and correct, as far as it goes.

Specimens of Modern French Verse. Edited by H. E. Berthou. (Macmillan.)

It was a happy thought to issue an anthology of nineteenth-century French verse; and it is clear that its execution was a labour of love for Mr. Berthou. The introductory remarks on the structure of French verse contain much that is valuable, and not a little that is debatable. But is there any department of literary study about which there is less agreement than the metric? The poets who contribute lyrics are divided into two sections, roughly corresponding with the halves of the century. The selection has been made with care; it was in many cases no easy task. The notes are useful, and the short biographies welcome. The book deserves to be widely read.

Leitfaden für den ersten Unterricht im Italienischen. Von S. Alge. (St. Gallen: Fehr-sche Buchhandlung.)

This is one of a series of manuals of which those concerned with French and German have recently appeared in English dress. They seek to exhibit a method by which each language may be acquired, without the assistance of the mother tongue of the learner, under the instruction of a competent teacher. After 153 pages of reading matter come twenty-two pages of "Grammatica," as an appendix, containing all the more important parts of Italian accidence, to be learnt inductively. Under the "Verbo," the conversational form of the first person of the *imperfetto indicativo* is wisely given, in lieu of the literary form, which may be confounded with that of the first person when the personal pronoun is omitted, as usually in Italian. We approve also the adoption of the form in *-sco* for the *presente indicativo* of the third conjugation. This book may be recommended to English students of Italian.

Moderne Handelsbriefe, in genauer Wiedergabe der Originale. Teil I., *Französische Briefe*; Teil II., *Englische Briefe*; Teil III., *Spanische Briefe*; Teil IV., *Italienische Briefe.* (Cologne: Paul Neubner.)

This series of manuals provides students of commercial correspondence with facsimiles of about a hundred letters in each volume, showing different styles of handwriting, which will be exceedingly useful to teachers of commercial French, Spanish, or Italian in our own commercial schools or continuation classes, for the study of foreign languages. The English part will similarly aid the teaching of commercial German, when used with the separate "Ausführliches Kommentar für die Hand des Lehrers" and Levy's "Facsimile German Letters" (Hachette). Another such teacher's companion is provided with the French part. There is a manifest advantage in working upon letters which have actually passed in the course of business and familiarizing oneself with styles of handwriting other than those customary in the student's own country. The information given in the commentary on the English letters is generally up to date. Would it not, however, be better in any second edition to say (page 14) that "type-writer" is a name now confined to the machine, and that the operator is spoken of as "typist"? Every teacher of one of these languages as used commercially should obtain a copy of the part devoted to the language concerned.

Schilling's Spanish Grammar. Translated and edited by Frederick Zagel. (Francis Hodgson.)

The increased attention which is given in these days to the study of Spanish, especially for commercial objects, has naturally produced a crop of new grammars and reading-books. Mr. Zagel considers—and we think, rightly considers—that Schilling's Grammar, which is very popular in France, Italy, and Germany, is likely to secure favour in English-speaking countries. In Germany, where it was first published, "Schilling" is in its twelfth edition. As the translator says, "el buen paño en el arca se vende"—a good thing needs no puff. We recommend this volume as complete in its grammatical forms, with ample exercises, vocabularies, and illustrative sentences.

MATHEMATICS.

Practical Plane and Solid Geometry. By James Riddel, Headmaster of the Art School, Heriot-Watt College. (Oliver & Boyd.)
An elementary course of plane and solid geometry including, in

addition to the usual practical constructions of plane figures, the beginnings of descriptive geometry, or the representations of planes and lines in space by their traces and projections on two planes of reference. This part of the work is unusually clear and complete.

Elementary Dynamics. By W. M. Baker, M.A. (G. Bell & Sons.)

This is a careful and accurately prepared text-book for Woolwich and Sandhurst candidates and others who have taken Euclid, algebra, and trigonometry. The best parts are those on Harmonic Motion, Impulse and Collision, and Initial Actions.

Commercial Arithmetic. By W. Woodburn. (W. & R. Chambers.)

This book begins with "Long Tots and Cross Tots," and proceeds in succession with Practice, Percentages, Commission, Discount, Averages, Interest, and Exchanges. It is limited to the subjects of the Evening Continuation Code, and does not therefore deal with Compound Interest, and is incomplete in its treatment of Proportion and other aspects of numbers. Under "Duodecimals" we read that "the linear foot is divided into *primes, seconds, thirds, and so on.*" For commercial purposes the foot is divided into inches and either eighths or twelfths. The chapter on Duodecimals is an exercise on multiplication in the duodecimal scale of notation, but is scarcely commercial arithmetic.

Advanced Arithmetic. By William W. Spier. (Ginn & Co.)

If any one wishes to measure the advantages of a decimal system of coinage, he should compare the ease and simplicity of this book on "Advanced Arithmetic" with the tedious complexity of English books treating of the same subjects. The diagrams for illustrating points of theory, and especially the rules of mensuration, are excellent; but occasionally the psychology is vague, as the following typical sentence shows:—"The perceptions necessary to make permanent possessions of the things perceived are not repetitions of words, but ideas, and to get the thought again and again before the pupil is possible only by arousing the mind to activity."

MISCELLANEOUS.

A Plea for the Production of an Archaeological Map and Index for England and Wales, County by County. By the Rev. J. O. Bevan, M.A., F.S.A. (Published by the Author.)

Mr. Bevan has himself compiled an archaeological map of Herefordshire, which is well known and appreciated by all who study the antiquities of that royal shire. His plea for the undertaking of a similar work in every county is well grounded, and will find many sympathizers. He admits that the preparation of the complete map and index would be a very difficult task, but it is one which ought to be achieved in the interests of history, and, if it is not systematically taken in hand, it will never be completed.

The Excelsior Atlas of Europe. (Bacon.)

This is a handy little atlas of twenty-eight coloured maps, including four physical and four historical. The printing is remarkably clear.

A Dissected Model of a Direct Current Dynamo. By Arnold Philip, B.Sc. Lond. (Philip & Son.)

This is a very ingenious and practical flat-model, accompanied by a full description of the various parts of a "direct" dynamo, and an explanation of their mode of action. It is intended for electrical engineering students, and will be interesting also to any intelligent reader with a taste for mechanism.

Pitman's Business Book-keeping Transactions. (Pitman & Sons.)

This shilling packet of natural-sized forms for sundry business transactions—book-keeping, retail trading, banking, &c.—is calculated to be serviceable to a great variety of people, and especially to young men and boys who are entering a cashier's or accountant's office.

St. Paul the Master-BUILDER. By Walter Lock, D.D. (Methuen.)

The Warden of Keble has here collected a series of lectures to clergy, delivered at St. Asaph in the summer of 1897. Their subjects are—"The Missionary," "The Ecclesiastical Statesman," "The Ethical Teacher—Justification by Faith," and "The Moral Law." They are treated in a practical and sensible style, and the book was well worth printing.

(1) *First Guide to Office Work.* (2) *First Guide to Commercial Correspondence.* By J. Austin Jenkins, B.A. (Longmans.)

These handy little books are the pioneers of a series of "First Guides" in commercial education, edited by the Registrar of the University College of Cardiff. They are intended for boys who are to go into business, or who have just entered on a business career. The plan is excellent, and it has been well worked out, though we note a little looseness here and there. Why are "chromograph" and "hektograph" defined as "kinds of ink used for multiplying on gelatine copies of circulars"? The "graph" is the general appliance, not a kind of ink.

Ten Shillings a Head per Week for House Books. By Mrs. C. S. Peel. (Constable.)

Mrs. Peel's clumsy title covers a serviceable book of directions, hints, and recipes for householders who are expected to feed a family of six or more persons on an average of ten shillings a week. We recommend

it to every young housekeeper or young woman who means to marry on a moderate income.

"The Children's Study."—*Canada.* By J. R. McIlwraith. (Fisher Unwin.)

A plain and readable account of the history of Canada, from its discovery to its present national development. The work has been very well done by a competent hand.

Ready-made Romance: Reminiscences of Youthful Adventure. By Ascott R. Hope. (A. & G. Black.)

Mr. Hope provides for young readers, "if there be any such nowadays," and for the general reader, a collection of very interesting narratives of adventure, mainly based on autobiographies, and with youngsters for heroes. It is a capital gift-book for boys.

The Spy in the School: a Tale of Two Chums. By Andrew Home. (Chambers.)

A spirited story of school life and adventure. There is also a good deal of adventure which is met with out of school, and the villain of the piece is a grown man—in fact, one of the masters. These features may or may not be attractive; we mention them for the sake of such as they may concern.

Masterman Ready: or, The Wreck of the Pacific. By Captain Marryat. (Macmillan.)

Marryat wrote this story expressly for young people. It is an old favourite, and many will be glad to have it reprinted in good type, with illustrations. It is exciting, amusing, and harmless.

"Blackie's Continuous Readers."—(1) *A Chapter of Adventures.* By G. A. Henty. (2) *Girl Neighbours.* By Sarah Tytler. (Blackie.)

These volumes are published in the plain inexpensive form suitable for school readers, with a few explanatory notes appended. We think they would serve a better purpose in the usual gift-book form, for they are not solid enough for use in school, where distinct literary merit is a *sine qua non*. It is questionable, too, whether a continuous story is ever good for reading in class, the interest in the tale leading to haste and carelessness, and impatience of correction, while sufficient variety in style can never be attained. "Girl Neighbours" is a quiet domestic story of the friendship of two girls, who represent the old-fashioned and the modern types of maiden. It is certain that the latter, at least, would skim through the tale in an hour or two, and would hardly care for a course of lessons devoted to reading it aloud. While the ideas and events recorded are adapted to younger girls, the diction is often above their heads—a fault which matters little in a gift-book, but is serious in a reader. "A Chapter of Adventures" is well suited to a boy who has a passion for the sea. The pages are stiff with nautical terms. The *minutiae* of sailing a fishing boat, though fascinating to the enthusiast, would, however, prove somewhat tedious to an average class. The chapters referring to the bombardment of Alexandria are interesting, but very much in contrast with the florid imagination of the fictional and larger portion of the book.

French History for Schools. By Katharine Stephen. With Coloured Maps. (Macmillan.)

The Vice-Principal of Newnham republishes a little book written for children eighteen years ago, and takes the opportunity of expanding it, to suit the requirements of somewhat older readers. It is a simple, introductory narrative, proceeding reign by reign, and may be commended as an adequate and fairly accurate text-book for boys and girls who can make time for the study of French history. Miss Stephen works down to the revolution of 1848, adds a page on Napoleon III., and abruptly says: "We have now followed the history of France from the time of Julius Cæsar to the present time (1898)." This is a little off-hand. So is the casual legend at the end of the book: "Remarkable People. (Too many to mention.)"

WE HAVE ALSO RECEIVED the following publications and new editions:—

The Code of Regulations for Evening Continuation Schools (1890-1900). By Thomas Edmund Heller, LL.D. (Bemrose & Sons.)

Object Addresses: The Children's Sunday. By the Rev. A. Hampden Lee. (Oliphant, Anderson, & Ferrier.)

Bacon. *The New Atlantis.* Edited by A. T. Flux. (Macmillan.)

"Chambers's Commercial Handbooks."—*Commercial Correspondence and Office Routine, First Year's Course.* (Chambers.)

"Continuous Readers."—*A Humble Heroine.* By L. E. Tiddeman. (Same publishers.)

"Pitman's Commercial Series."—*Office Routine for Boys and Girls, First Stage, Illustrated* (Sir Isaac Pitman). *Primer of Book-keeping, First Stage, Day School Code, specific subject* (same publishers). *Office Routine Copy Book, No. 1.* (same publishers). *Book-keeping Simplified, Part I.* (same publishers).—These are all useful booklets, which will serve the purpose of many beginners as well as more elaborate volumes.

English for Evening Schools, by James Dickinson. (Macdougall's Educational Co.)

"Bell's Books for Young Readers."—*Æsop's Fables* (G. Bell & Sons).—A little illustrated quarto, for which there should be a demand.

Lessons in Domestic Science, Part III., by Ethel R. Lush (Macmillan)—much to the point, and very clearly set forth.

"The Masterpiece Library."—*Kenilworth*. "The Penny Poets."—*Poems for the Schoolroom and Scholar*. "Books for the Bairns."—*The Seven Champions of Christendom; Eyes and no Eyes*. (Review of Reviews Office.)

Rhymes of Road, Rail, and River. By E. Derry. (Bristol: Arrow-smith.)

Philips' "Handy" *Technical and Evening Continuation Schools Register (Attendance, Residence, Fees)*. By R. Procter Wright. (Philip & Son.)

Excelsior Drawing Books, Familiar Folks (Bacon)—containing twenty-four outline reductions of the figures in Bacon's "Pictures of Familiar Folks."

CORRESPONDENCE.

FRENCH AND ENGLISH.

To the Editor of the Educational Times.

SIR,—In his remarks upon my "Primer" and "French Vocabularies" (page 333), your critic says that the former is "full of tips and neat rules," and that the method of committing vocabularies to memory "may be justified in the case of pupils whose only aim is to pass an examination in the shortest possible time." And he adds: "That, however, is obviously not to learn a language in the true sense of the word, but comes under the head of cramming."

A more unfair criticism upon the "Primer" I could not have seen. There are no tips in the book. "Tip" always implies a tricky way of gaining some advantage—an underhand means undiscovered by the honest worker who is not "in the know," and suggests the quack or the gambler. If clear conjugations and clear rules can be called tips, I plead guilty; but surely no one familiar with the English language would use the word in this sense. But the familiarity of your critic with the English tongue is a point upon which certain doubts may be entertained, as I shall show presently.

As to the "Vocabularies," what is meant by *cramming*? Perhaps your critic has his own ideas on the word; perhaps they are akin to those he owns on the word "tip" and the value of the phrase "so long," to which we are coming. If "cramming" means the getting up of small points that pay, and neglecting important points that do not pay, in examinations, or the forcing indigested and indigestible food, "cramming" is injurious to the cause of education. But I have never heard of a method by which a candidate can be "crammed" for a translation into French prose, or for his irregular verbs, past participles, &c.; and, after many efforts, we have succeeded in getting a "Prose" set in the London Matriculation; and, in all my experience, I have never seen a French examination set, either by colleagues or by myself, in any University or school south of the Tweed, in which "cram" and "cramming" could pay. If, however, by "cramming" is meant compressing the necessary *pabulum*, often made incomprehensible by its exaggerated completeness, into its essential and all-important outlines, making the best use of every minute of the short hours doled out to one's pupils, or getting one's pupils to give their maximum of attention and work, then "cramming" is the ideal that every teacher should set before his eyes. But it is no use hagglng over words. "Cramming" has nowadays a depreciative meaning, and, as such, it is strongly objectionable. We know that for some the passing of an examination is an aim; but the true aim is to make the examination a test of useful knowledge, and it is unseemly to run down examinations or the efforts of those who assist pupils in passing them, and dub them with a word that smacks of underhand, tricky, and uneducational methods.

Moreover, I maintain that to learn a language you must learn a vocabulary, so that your critic's "obviously" is *de trop*. Of course, the best way is to learn passages by heart; but you need the converse test, and you need a book in which the equivalents are set in columns. If texts were published in two one-word columns, down which one could run and test one's knowledge of the equivalent in the other language, the purpose would be served. But one who learns a language must be constantly testing his knowledge of equivalents in order that they should come in handy when he wishes to write or speak. This is not a new method; it is recognized and adopted by all who wish their pupils to make rapid progress, and not dawdle away their year, knowing as much at the end as at the beginning, having advanced no more than a squirrel revolving in its cage.

Now I come to a second point, a very difficult one—that of pronunciation. Of course, pronunciation varies. You can say "ee-ther" or "i-ther"; but there are limits. If you pronounce *cart* like "cat" drawn out, as they do in Norfolk, you stamp yourself as a provincial.

In the "Primer" and "Vocabularies" I give certain rules of pro-

nunciation that I have found of great practical use, the chief of which is that on the *a* or *o*, long or short. The pronunciation of French is, after the rudiments have been mastered, most easy, save for those two vowels which English people always mispronounce. They say *Notre Dame* as if it were spelled *Nôtre Dâine* (probably out of modesty), *plaque* as if the *a* was long, &c.; and, on the other hand, we always say *papier-mâché* as if the *a* was short. This is pure "cussedness," for we, like the Germans, always make the *a*'s and *o*'s long. This being the only real and constant difficulty in the pronunciation of French, I laid a special stress on the point.

Now it is disappointing to see your critic misleading your readers by stating that "the difference in quality between the *a* in *patte* and that in *pas* is not mentioned" (review on the "Primer"). On page 67 I say: "Rule: The *a* and *o* are generally short"; and among the exceptions: "III. *a* is long when it is the last vowel in a word—e.g., *bas*, *jabats* (pronounced *a-bâ*)." On the second line of the page the word *patte* itself is one of the two instances of *a*!

Will you allow me to contradict the other statements on pronunciation, lest they should be taken as correct by the many who read—and believe in the statements of—the *Educational Times*? As I have now the honour of belonging to the College, I feel a particular interest in our work.

1. I maintain *mauvais* pronounced *mö-vê*; the *au* is not long, as it generally is (*au*, *eau*, *chevaux*, &c.).

2. *Automne* and *auberge* should not, as your critic suggests, be placed as exceptions; they are pronounced *ô-tôn*, *ô-berge* only in Marseilles or Italian Switzerland, where *trône* is pronounced *trôn* and *Rhône* *Rôn*.

3. Finally, "in many places" in the "Vocabularies" "the mark to show the length of a vowel is in the wrong place. Thus, the *a* is not long in *parler*, *estomac*, *article*, *barbe*, and many others here printed with *â*."

I maintain that the *a* is long in these words. Of course, it is not as long as in *âge*, *cage*, &c. But in a short, simple, practical book such as the "Vocabularies" are intended to be, I did not go in for minute subdivisions, but chose the two great divisions of "*â* as in *patte*, *masse*," and of "*a* as in *pâte*, *nation*" (page 2). It will be seen that *parler*, &c., were correctly marked.

The other statements are as wrong: "The *o* is long in *port*." The two instances of *ô* given on page 2 are *la rose* and *le flot*. Could any one compare those *ô*'s?

But our friend the critic does not go in for subtleties in distinction, for I see in his *critique* on "La Grammaire" (page 333) "I'll see you again soon" is not a particularly happy rendering of *à bientôt*, for which our nearest equivalent is "So long!" How innocent! The last time I heard "So long!" was in a "variety song," and the words were used by a playful young man in coster clothes to a fascinating damsel at a barrow selling whelks!—Believe me, dear Sir, yours obediently,

VICTOR SPIERS.

ST. GABRIEL'S COLLEGE.

To the Editor of the Educational Times.

SIR,—I shall be grateful if you will give me the opportunity to make it known to your readers that St. Gabriel's Training College for Women Teachers in Elementary Schools begins its work with thirty-two students, the utmost number that can be accommodated in its temporary home. But, as our new buildings, with their much larger accommodation, are to be ready for occupation next year, we are prepared to elect some forty resident students, and an equal number of day students, for admission to the college in September, 1900.

Candidates who wish to sit for admission to St. Gabriel's at the Queen's Scholarship Examination this December must send in their applications before October 1. Those who have qualified, or intend to qualify, for admission by passing one of the University examinations now accepted by the Education Department in lieu of the Queen's Scholarship Examination may apply for admission at any time up to March 25, 1900. But it would be more convenient to us, and safer for them, that they should communicate with us in good time as to their intention. The college prospectus and all necessary forms can be obtained from the Secretary, c.o. Merritt Fox, Esq., 37 St. George's Square, S.W.

We are especially anxious to press upon girls who are just now leaving high schools and colleges the great opportunity for usefulness and the good opening for professional work which elementary teaching offers to them, and the increased facilities for entering the profession which are provided by recent regulations of the Education Department. The crying scarcity of qualified elementary teachers, the national importance of the work, the especial value in it of gifts of culture and refinement and wide education, seem to me to make an almost irresistible appeal to educated young women who still have their field of work to choose, and who want to do good service in their generation. I shall be glad to give information and advice to any such intending candidates, either by letter or personally, if they will call upon me any Monday afternoon between two and five o'clock.

M. E. BISHOP,

Principal of St. Gabriel's College.

MATHEMATICS.

13993. (C. E. HILLYER, M.A.)—AD, BE, CF are the altitudes, H the orthocentre, and I the incentre of a triangle ABC. Prove that the three chords of intersection of the circles AID, BIE, CIE with the incircle meet in the mid-point of IH.

Solution by Professor A. Droz-FARNY and LIONEL E. REAY, B.A.

On sait que
(OH)² = R² - 8R² cos A cos B cos C
= 9R² + 2r² + 8Rr - 2p²,

donc
4R² cos A cos B cos C
= p² - 4R² - r² - 4Rr... (i.),

et
(IH)² = 4R² + 4Rr + 3r² - p².. (ii).

Soit M le point milieu de IH, et représentons par L le second point de coupe de IH avec la circonférence AID. La puissance P de M par rapport au cercle inscrit sera

P = (r + IM)(r - IM)
= r² - 1/4 (IH)².

La puissance P' de M par rapport au cercle AID sera

P' = 1/2 IH (1/2 IH + HL)
= 1/4 (IH)² + 1/2 (IH . HL)
= 1/4 (IH)² + 1/2 (AH . HD) = 1/4 (IH)² + 2R² cos A cos B cos C.

Or, en vertu des formules (i.) et (ii.),

P = P' = 1/4 (p² + r² - 4R² - 4Rr).

La corde d'intersection du cercle inscrit et du cercle AID passe donc par M.

[The rest in Volume.]

14119. (Rev. W. ALLEN WHITWORTH, M.A.)—If out of m cards numbered 1, 2, 3, ..., m we draw n cards at random, the expectation of the lowest drawn is (m+1)/(n+1) and the expectation of the highest is n(m+1)/(n+1).

[COROLLARY.—If n numbers be named at random, the expectation of the highest is n times the expectation of the lowest.]

Solution by H. W. CURJEL, M.A.

The chance that x is the highest number is

(Cn - r-1 Cn) / m Cn;

therefore the expectation of the highest number is

{m Cn - m-1 Cn - m-2 Cn - ... - n Cn} / m Cn
= {(m+1) m Cn - 1 - n+1 - (n+1)(n+2) / 2! - ... - (n+1)(n+2)...m / (m-n)!} / m Cn
= {(m+1) m Cn - m+1 Cn+1} / m Cn
= m+1 - (m+1)/(m+1) = {n(m+1)} / (n+1).

The chance that x is the highest number clearly equals the chance that m+1-x is the lowest; therefore expectation of the lowest is

m+1 - {n(m+1)} / (n+1) = (m+1)/(n+1).

Hence, if the numbers must be all different, the expectation of the highest number is n times the expectation of the lowest, whatever m may be.

5505. (CHRISTINE LADD.)—If, from two points on the directrix, which subtend a constant angle at the focus, tangents to a conic be drawn, they will intersect on another conic having the same focus and directrix.

Solution by Rev. J. CULLEN.

Let FP and F'P' be two tangents intersecting in T. Draw TM and TN at right angles to SP and FK. Then FS and F'S are at right angles to SP and SP'. Hence angle PSP' = angle FSEF' = constant. Also TS bisects angle PSP', therefore angle TSM = constant; so that SM/ST is given. Also

SM : TN :: SA : SX;

therefore ST = kTN, which proves the proposition.

14105. (Professor CHARRON, F.R.S.)—If u = x² + ax + b, and we put

for shortness the symbol DuD = ω, then

D^n u^n D^n = ω(ω-1.2)(ω-2.3)...{ω-(n-1)n}.

Solution by Rev. J. CULLEN.

It is clearly only necessary to show that

D^n u^n D^n v = D^{n-1} u^{n-1} D^{n-1} {1uD - (n-1)n} v.

where v is any function of x. Now

D^n u^n D^n v = D^{n-1}. D^n u^n v = D^{n-1} {nu^{n-1} Du. D^n v + u^n D^{n+1} v};

also

D^{n-1} u^{n-1} D^{n-1} {DuD - (n-1)n} v = D^{n-1} {u^{n-1} D^n u D v - (n-1)n D^{n-1} v};
= D^{n-1} {u^n D^{n+1} v + nu^{n-1} Du. D^n v + 1/2 (n-1) nu^{n-1} D^2 u D^{n-1} v - (n-1)n D^{n-1} v}
but D^2 u = 2;

therefore, &c.

5276. (Professor EVANS, M.A.)—ABC is a plane triangle, and OA, OB, OC are lines making equal angles with one another. Find the least integral values of BC, CA, AB that will make OA, OB, OC integral.

Solution by the PROPOSER.

Let ABC be the triangle; a, b, c its sides, CO = x, BO = y, AO = z.

Then a² = x² + xy + y², b² = x² + xz + z², c² = y² + yz + z².

Solving these equations, we get

x = (a² + b² - c² ± 1/2 {12a²b² - 3(a² + b² - c²)²}¹/²)¹/² / [2(a² + b² + c²) ± 2 {12a²b² - 3(a² + b² - c²)²}¹/²]¹/²
y = (a² + c² - b² ± 1/2 {12a²b² - 3(a² + b² - c²)²}¹/²)¹/² / [2(a² + b² + c²) ± 2 {12a²b² - 3(a² + b² - c²)²}¹/²]¹/²
z = (b² + c² - a² ± 1/2 {12a²b² - 3(a² + b² - c²)²}¹/²)¹/² / [2(a² + b² + c²) ± 2 {12a²b² - 3(a² + b² - c²)²}¹/²]¹/²

Let c = (1+n)b, a = (1-n)b; and then, since a² + b² > c², 2-2n+n² > 1+2n+n² or n < 1/2.

Take n = 2/5, and, using the upper sign, we get x = 1/2 * 2/5 b, y = 3/2 * 2/5 b, z = 3/2 * 2/5 b, a = 3/2 * 2/5 b, b = 2/2 * 2/5 b, c = 4/2 * 2/5 b. When b = 455, we have a = 399, b = 455, c = 511, x = 195, y = 264, z = 325.

14004. (ROBERT W. D. CHRISTIE.)—Let N, an integer, consist of p units when p is a prime > 3. Prove (1) N is of form pq + 1; (2) every factor of N is of like form; (3) the sum of the digits of one factor = pv.

Ex. gr. 1111111111 = 21649 x 513239 = (px + 1)(py + 1) and 2 + 1 + 6 + 4 + 9 = 11 x 2.

Show incidentally that the factors of q in (1) can be written down at sight.

Solution by Lt.-Col. ALLAN CUNNINGHAM, R.E.

Here N = (10^p - 1) / (10 - 1), and properties (1) and (2), that N = pq + 1 and that every factor of N = pq + 1, have been proved by EULER (see Comment. Arithmet., Petrop., 1849, Vol. i., Mem. vii., Art. 38.) Property (3) is not true in general of the prime factors; e.g.,

(10¹³ - 1) + (10 - 1) = 53.79.265,371,653;

and none of these three prime factors has the sum of digits equal to a multiple of 13. Similarly, it is not true of any prime factor of

(10²⁹ - 1) + (10 - 1).

Lastly, q = 1/p (N - 1) = 1/p (10^p - 1 - 1) = (10^p - 10) / (10 - 1)p = 10 (10^p - 1) / (10 - 1)p, where p = 1/2 (p - 1),

whereby several factors of q are evident [one of (10^p - 1) contains p].

[The PROPOSER remarks as follows:—“The SOLVER says: ‘Property (3) is not true in general of the prime factors, e.g.,

(10¹³ - 1) + (10 - 1) = 53 x 79 x 265,371,653.’

This property was not predicated of the prime factors; but it is in general true nevertheless; e.g.,

111 = 37 x 3 where 1 + 1 + 1 = 3r,
11111 = 41 x 271 where 4 + 1 = 2 + 7 + 1 = 5r,
1111111 = 239 x 4649 where 2 + 3 + 9 = 7r,
1111111111 = 21649 + 513239 where 2 + 1 + 6 + 4 + 9 = 11r;

and, finally, 111111111111 = 79 x 14064697609

where $1 + 4 + 0 + 6 + 4 + 6 + 9 + 7 + 6 + 0 + 9 = 13r$,
 In exceptional cases where $N = \text{prime}$, then digits of $N = pr$.
 $(10^\omega - 1) \div (10 - 1)$ provides all the factors of q , since
 $N_1 = (10^\omega - 1) \div (10 - 1)$, where ω is some prime of lower order than p ."]

14195. (Professor NEUBERG.)—Soit A'B'C' la projection du triangle ABC sur un plan faisant l'angle ϕ avec le plan ABC. Démontrer que les angles des deux triangles vérifient la relation

$$\cos \phi + \sec \phi = \cot A \cot B' + \cot B \cot C' + \cot C \cot A' + \cot A' \cot B + \cot B' \cot C + \cot C' \cot A.$$

Solution by R. F. DAVIS, M.A.; and F. L. WARD, B.A.

Let ABC be a triangle; PQR a transversal intersecting BC (produced), CA, AB in P, Q, R respectively. Draw AL, BM, CN perpendiculars on PQR; and let A'L : AL = B'M : BM = C'N : CN = $\cos \phi$: 1, so that A'B'C' may be considered the orthogonal projection of ABC.

Obviously the sides of A'B'C' pass through P, Q, R. Denote the angles C'PN, A'QL, B'RM by α, β, γ respectively.

Then $AL^2 - RL \cdot QL = QR \cdot AL \cot \alpha$,
 $AL'^2 - RL \cdot QL = QR \cdot A'L \cot \alpha'$.

Therefore $A'L^2 (\sec^2 \phi - 1) = A'L \cdot QR (\sec \phi \cot \alpha - \cot \alpha')$,
 or $\cot \beta + \cot \gamma = \tan^2 \phi / (\sec \phi \cot \alpha - \cot \alpha')$.

Similarly, $-\cot \gamma + \cot \alpha = \dots$; $-\cot \alpha + \cot \beta = \dots$

Hence $(\sec \phi \cot \alpha - \cot \alpha')^{-1} + \dots + \dots = 0$;

this, when simplified, gives required result, remembering
 $\sum \cot B \cot C = \sum \cot B' \cot C' = 1$.

If $A' = B' = C' = 60^\circ$, we have $\cos \phi + \sec \phi = 2 \cot \omega / \sqrt{3}$, where ω is the BROCARD angle of ABC. This equation is always possible since $\cot \omega > \sqrt{3}$. It is well known that a triangle will be projected into an equilateral triangle when the maximum ellipse inscribed in the first triangle (touching the sides at its middle points) is projected into a circle. Let a, b be the semi-axes of this ellipse; then it can be easily shown that $a^2 + b^2 = (a^2 + b^2 + c^2) / 18 = 2\Delta \cot \omega / 9$, $a\beta = \Delta / 3\sqrt{3}$.

Hence $\cos \phi + \sec \phi = \beta / (a + a/\beta) = 2 \cot \omega / \sqrt{3}$, as before.

This matter has already been discussed (prior to the invasion of the BROCARD geometry) in the *Reprint*, Vol. XXIX., p. 83; Vol. XXXI., pp. 18-21; Vol. XXXVI., p. 64.

14170. (Professor SANJANA, M.A.)—Let Q be the orthocentre of the pedal triangle of ABC; let S, K, T be the circum-, cosine-, and TAYLOR-centres of ABC. Prove that S, K, T, Q are collinear; that T bisects SQ, and that K divides it in the ratio 1 : 1 + 2 cos A cos B cos C.

Solution by R. TUCKER, M.A.

In the Appendix to Vol. xv. of the *Proceedings of the London Mathematical Society* (p. 280, Christmas, 1884), I have shown that the α (trilinear) coordinates of Q (my J) and T (my ω) are respectively

$$-R \cos 2A \cos (B - C) \text{ and } R \{ \cos A - \cos 2A \cos (B - C) \} / 2,$$

and that these points lie on the circum-Brocardal axis. (See also MILNE'S *Companion*, p. 145, and CASEY'S *Sequel*, 5th edition, p. 241.) It is at once seen that T is mid-point of SQ. For the last property, see MILNE (l.c., p. 145, Quest. 6, by Mr. R. F. DAVIS).

14181. (H. MACCOLL, B.A.)—Let A and B be two events which are not mutually independent. Show that, if the dependence of A upon B is equal to the dependence of B upon A, then the chance of A happening is equal to the chance of B happening. *Definitions.*—The fractional symbol a/β (when a and β are statements) denotes the chance that a is true on the assumption that β is true; the symbol a/e denotes simply the chance that a is true, nothing being taken for granted but the data of the problem. The symbol $\delta a/\beta$ denotes $a/\beta - a/e$, and is called the dependence of a upon β , or of the event A, asserted by a , upon the event B, asserted by β .

Solution by the PROPOSER.

Let the letter z as exponent convert any expression ϕ affected by it into a statement which asserts that ϕ is zero. Thus, $(x - y)^z$ asserts that $x = y$.

The colon symbol (:) is short for the word implies. Let $a = \frac{A}{\epsilon}$, and let $b = \frac{B}{\epsilon}$. We have to prove

$$\left(\delta \frac{A}{B} - \delta \frac{B}{A} \right)^z : (a - b)^z.$$

Assuming the easily proved formulae $\frac{A}{B} = \frac{a}{b} \cdot \frac{B}{A}$ and $\delta \frac{A}{B} = \frac{a}{b} \delta \frac{B}{A}$,

we get $\left(\delta \frac{A}{B} - \delta \frac{B}{A} \right)^z : \left(\frac{a}{b} \delta \frac{B}{A} - \delta \frac{B}{A} \right)^z : \left(a \delta \frac{B}{A} - b \delta \frac{B}{A} \right)^z$
 $: \left\{ (a - b) \delta \frac{B}{A} \right\}^z : (a - b)^z.$

for $\delta \frac{B}{A}$ cannot be zero, since, by hypothesis, A and B are not independent. Hence, finally, $\left(\delta \frac{A}{B} - \frac{B}{A} \right)^z : (a - b)^z.$

[The rest in Vol.]

14243. (G. H. HARDY, B.A.)—If p, m are integers, $p > m$, then, if m is odd,

$$\int_0^\pi x \cos px \sin^m x dx = (-1)^{\frac{1}{2}[m+(-1)^m]} \left\{ \frac{m! \pi}{(\rho^2 - 1^2)(\rho^2 - 3^2) \dots (\rho^2 - m^2)} \right\};$$

and, if m is even,

$$\int_0^\pi x \sin px \sin^m x dx = (-1)^{\frac{1}{2}[m+1+(-1)^m]} \left\{ \frac{m! \pi}{\rho \cdot (\rho^2 - 2^2)(\rho^2 - 4^2) \dots (\rho^2 - m^2)} \right\}.$$

Solution by J. H. DINN, B.Sc.

We know that $\int_0^\pi \sin px \sin^m x dx$ vanishes when m is odd, and

$\int_0^\pi \cos px \sin^m x \cos x dx$, when m is even. Let $f(m)$ denote

$$\int_0^\pi x \cos px \sin^m x dx.$$

Then, integrating by parts, we get

$$f(m) = -\frac{1}{p} \int_0^\pi \sin px (\sin^m x + mx \sin^{m-1} x \cos x) dx$$

$$= -\frac{m}{p} \int_0^\pi x \sin^{m-1} x \cos x \sin px dx.$$

Again integrating by parts,

$$f(m) = -\frac{m}{p^2} \int_0^\pi \cos px \{ \sin^{m-1} x \cos x + (m-1) x \sin^{m-2} x - mx \sin^m x \} dx$$

$$= -\frac{m(m-1)}{p^2} f(m-2) + \frac{m^2}{p^2} f(m);$$

therefore $f(m) = -\frac{m(m-1)}{p^2 - m^2} f(m-2)$

$$= (-1)^{\frac{1}{2}(m-1)} \frac{m(m-1) \dots 2}{(\rho^2 - m^2) \{ \rho^2 - (m-2)^2 \} \dots (\rho^2 - 3^2)} f(1).$$

[The rest in Volume.]

14168. (The late Professor WOLSTENHOLME, D.Sc.)—Given a quadric ($u = 0$) and two fixed points O, O', S, S' denote the plane sections of u by the polar planes of O, O'; prove that, if any straight line through O meet the quadric in points P, P', the two cones whose vertices are P, P' and base the plane section S' will intersect in a second plane section whose locus is the quadric ($v = 0$) containing S, S', and such that O is the pole of S', and O' the pole of S. No also, if QQ' be any chord of u passing through O', the locus of the second plane of intersection of the cones whose vertices are Q, Q' and base S is the same quadric.

Solution by Rev. J. CULLEN.

Let $u \equiv Ax^2 + By^2 + Cz^2 - 1 = 0$, O (x', y', z'), O' (x'', y'', z''), P (α, β, γ) and P' (α', β', γ'). Then

$$S \equiv \Sigma Ax'x' - 1 = 0, \quad S' \equiv \Sigma Ax''x'' - 1 = 0.$$

Also u and S' may be written in the forms

$$u = \Sigma A(x - \alpha)^2 + 2\Sigma A(x - \alpha)\alpha = 0, \quad S' \equiv \Sigma A(x - \alpha)x'' + \Sigma A\alpha x'' - 1 = 0.$$

Therefore the cone having P for the vertex and S' for the base is

$$\Sigma A(x - \alpha)^2 (\Sigma Ax'' - 1) - 2\Sigma A(x - \alpha)x'' \Sigma A(x - \alpha)\alpha = 0,$$

or

$$u (\Sigma Ax'' - 1) - 2S' (\Sigma A\alpha x - 1) = 0 \dots \dots \dots (1).$$

In like manner the cone having P' for the vertex and the same base is

$$u (\Sigma A\alpha'x' - 1) - 2S' (\Sigma A\alpha'x' - 1) = 0 \dots \dots \dots (2);$$

whence we easily find the second plane of intersection to be

$$(\Sigma Ax'x'' - 1)(\Sigma A\alpha x - 1) - S (\Sigma A\alpha x'' - 1) = 0 \dots \dots \dots (3).$$

Therefore from (1) and (3), we have $v = uk - 2SS' = 0$, where $k = 0$ is the condition that O (or O') should lie on S' (or S).

Hence v clearly contains S and S', and, forming the polar plane in the ordinary manner, we see that O is the pole of S', and O' that of S.

[The rest in Volume.]

QUESTIONS FOR SOLUTION.

14333. (Professor G. B. MATHEWS, M.A.)—The six quantities a, b, c, f, g, h are given. Writing, as usual, A, B, C, F, G, H for the minors of the determinant

$$\begin{vmatrix} a & h & g \\ h & b & f \\ g & f & c \end{vmatrix},$$

it is required to find all the values of $a', b', c', f', g', h', \alpha, \beta, \gamma, \delta$ which satisfy

$$\begin{aligned} Aa' + Hh' + Gg' &= \alpha^2, & Hh' + Bb' + Ff' &= 2\alpha\gamma, & Gg' + Ff' + Cc' &= \gamma^2, \\ Ah' + Hh' + Gg' &= \alpha\beta, & Hh' + Bb' + Ff' &= \alpha\delta + \beta\gamma, & Gg' + Ff' + Cc' &= \gamma\delta, \\ Ag' + Hh' + Gg' &= \beta^2, & Hh' + Bb' + Ff' &= 2\beta\delta, & Gg' + Ff' + Cc' &= \delta^2, \end{aligned}$$

$$\alpha\delta - \beta\gamma = 1;$$

and, in particular, to discuss the condition that the solution may be indeterminate.

14335. (Professor E. J. NANSON.)—The congruence determined by $x = f + lr, y = g + mr, z = h + nr$, where f, g, h, l, m, n are functions of p, q and l, m, n are direction cosines, is orthogonal if

$$\frac{\partial(f, l)}{\partial(p, q)} + \frac{\partial(g, m)}{\partial(p, q)} + \frac{\partial(h, n)}{\partial(p, q)} = 0.$$

14336. (Professor COCHEZ.)—Lieu des points d'où l'on peut mener à la parabole trois normales dont l'une est bissectrice de l'angle des deux autres.

14337. (Professor S. SIMCOM, M.A.)—Draw the stream lines for liquid flowing in the direction of OY past the cylinder whose right section is $2x\{(x^2 + y^2)^2 - a^2(x^2 - 3y^2)\} = 3\sqrt{3}a\{(x^2 + y^2)^2 - 2a^2(x^2 - y^2) + a^4\}$ on the side of the curve remote from the nodal portion.

14338. (Professor SANJANA, M.A.)—In Quest. 14110 denote $(2e-1)a^2 + b^2 + c^2$ by a_1 ; take b_1, c_1 similarly; call e the ratio of the TUCKER circle, and let $\lambda = (1-e)\tan\omega$. Then prove that (1) the equation of the TUCKER circle (whose ratio is e) $XX'YY'ZZ'$ is

$\beta\gamma/bc + \gamma\alpha/ca + \alpha\beta/ab - (\alpha/a + \beta/b + \gamma/c)(1-e)\tan\omega + (1-e)^2 \tan^2\omega = 0$, or $(\alpha - a\lambda)(\beta - b\lambda)(\gamma - c\lambda) = \alpha\beta\gamma$; (2) the envelope of this circle, as its ratio varies, is $\alpha^2/a^2 + \beta^2/b^2 + \gamma^2/c^2 - 2\alpha\beta/ab - 2\beta\gamma/bc - 2\gamma\alpha/ca = 0$, or $\sqrt{(\alpha/a) + \sqrt{(\beta/b) + \sqrt{(\gamma/c)}} = 0$, the BROCARD ellipse; (3) the radical axis of two TUCKER circles of ratios f and g is $\alpha/a + \beta/b + \gamma/c = (2-f-g)\tan\omega$, so that the radical axis of the TUCKER circle e with itself is $\alpha/a + \beta/b + \gamma/c = 2\lambda$, which is also its chord of double contact with the envelope; (4) the radical axis of the TUCKER circle e and the circumcircle is $\alpha/a + \beta/b + \gamma/c = \lambda$, and the chord of contact of the circumcircle with the BROCARD ellipse is the LEMOINE line; (5) if $f+g = \text{constant} = 1+e$, the varying TUCKER circles f and g have a fixed radical axis, which is the radical axis of the circumcircle and the fixed TUCKER circle whose ratio is e ; (6) if $f+g = 2\sin^2\omega$, the varying TUCKER circles f and g are of equal area; (7) the polar of the symmedian point with regard to the circle e is $\alpha/a + \beta/b + \gamma/c = (4e-1)/(2e)\lambda$, and, if $fg = \frac{1}{4}$, the varying TUCKER circles f and g have the same polar for this point; (8) the radical centre of the circles round AYZ, ABC , and the TUCKER circle, lies on BC , the radical axis of the first two being $\beta^2/b_1 + \gamma^2/c_1 = 0$; so also for $BZ'X, CX'Y$; and these three radical centres, on BC, CA, AB respectively, are situated on the line $(\alpha a_1)/a + (\beta b_1)/b + (\gamma c_1)/c = 0$; and (9) the radical centre of the circles round $AYZ, BZ'X, CX'Y$ is the point $\alpha/(b_1c_1 \cos A) = \beta/(c_1a_1 \cos B) = \gamma/(a_1b_1 \cos C)$, which lies on the curve

$\beta\gamma \sin 2A \sin(B-C) + \gamma\alpha \sin 2B \sin(C-A) + \alpha\beta \sin 2C \sin(A-B) = 0$, that circum-hyperbola of ABC which is the isogonal transformation of EULER'S line. [The last result has been obtained by Rev. J. CULLEN in Quest. 13921.]

14339. (Professor U. C. GHOSH.)—A particle of mass m is suspended by a fine inelastic string of length a , fastened to a fixed point A. It is attached to another string which passes through a small ring at O (whose perpendicular distance from the vertical through A is b), and carries a mass m' at the other end. Prove that, if the particle m is let go when it is vertically below A, (1) its velocity, when the string to which it is attached has described an angle θ , is

$$\left\{ \frac{2g[m'(b - (b^2 + 4a^2 \sin^2 \frac{1}{2}\theta - 2ab \sin \theta)^{\frac{1}{2}}) - ma(1 - \cos \theta)]}{m + \frac{m'(a \sin \theta - b \cos \theta)^2}{b^2 + 4a^2 \sin^2 \frac{1}{2}\theta - 2ab \sin \theta}} \right\}^{\frac{1}{2}};$$

(2) just at the instant when particle m' crosses the line AO, m' has no velocity, and that of m is

$$(2g)^{\frac{1}{2}} \left[\frac{m'}{m} \{b + a - (a^2 + b^2)\} - a \{1 - a/(a^2 + b^2)\} \right];$$

(3) if v and v' be the velocities of particles m and m' at any instant,

$$v' = \frac{a \sin \theta - b \cos \theta}{(b^2 + 4a^2 \sin^2 \frac{1}{2}\theta - 2ab \sin \theta)^{\frac{1}{2}}} v.$$

14340. (D. BIDDLE.)—All cubic equations of form $x^3 + qx + r = 0$, where q is a minus quantity, are capable of transformation into

$y^3 - ay - a = 0$, by taking $y = (q/r)x$. CARDAN'S method solves such when $a < 6\frac{1}{2}$. Show that it is only needful to find a method of solving those in which a lies between $6\frac{1}{2}$ and $13\frac{1}{2}$ to enable us to solve all.

14341. (J. A. THIRD, M.A.)—K is a conic circumscribed to the triangle of reference and passing through the centroid; K' is another conic passing through the mid-points of the sides and touching K at the centroid; P is the centre of a conic which touches the sides at points which connect with the opposite vertices through a point on K; Q is the point of concurrence of lines drawn from the vertices to meet the opposite sides at points where these sides are touched by a conic whose centre lies on K'. Show that PQ touches K and K' at the centroid.

14342. (R. F. DAVIS, M.A.)—Let ABC be a triangle; and BY, CZ perpendiculars upon the internal bisector of the vertical angle A. Draw any straight line QR parallel to the base BC, meeting CA, AB in Q, R respectively. Join QZ, RY meeting in P. It is required to show that the circumcircle of the variable triangle PQR touches the incircle of the triangle ABC, and also the excircle opposite to A. [This most interesting property is due to Mr. C. E. M'VICHER, M.A., and includes, as a particular case, FEUERBACH'S theorem.]

14343. (W. C. STANHAM, B.A.)—A', B', C' being respectively the images, by reflection, of the angular points of a triangle ABC with respect to the opposite sides, x the area of ABC, a_1 the area of A'B'C', $4m$ the sum of the squares of the sides of A'B'C', and $16n^2$ the product of these squares, show that x is given by the equation

$$16x^3(16x^2 - 2a_1x - a_1^2)^2 = (8mx^2 - 4ma_1x + m^2)(24m^2x^3 + 4ma_1x^2 - 5n^2x - n^3a_1),$$

and that, when x is known, A, B, C can be completely determined.

14344. (J. J. BARNVILLE, B.A.)—Having $u_{n-1} + u_{n+1} = 4u_n$, prove

that

$$\begin{aligned} \frac{1}{1+1} + \frac{1}{3+1} + \frac{1}{11+1} + \frac{1}{41+1} + \dots &= \frac{\sqrt{3}}{2}, \\ \frac{1}{1+3} + \frac{1}{3+3} + \frac{1}{11+3} + \frac{1}{41+3} + \dots &= \frac{3\sqrt{3}}{10}, \\ \frac{1}{1+11} + \frac{1}{3+11} + \frac{1}{11+11} + \frac{1}{41+11} + \dots &= \frac{5\sqrt{3}}{38}, \\ \frac{1}{2+\sqrt{6}} + \frac{1}{4+\sqrt{6}} + \frac{1}{14+\sqrt{6}} + \dots &= \frac{\sqrt{2-1}}{\sqrt{3-1}}, \\ \frac{1}{1+2} - \frac{1}{2+2} + \frac{1}{7+2} - \frac{1}{26+2} + \dots &= \frac{1}{6}, \\ \frac{1}{1+1} - \frac{1}{5-1} + \frac{1}{19+1} - \frac{1}{91-1} + \dots &= \frac{1}{2\sqrt{3}}. \end{aligned}$$

14345. (ROBERT W. D. CHRISTIE.)—In FERMAT'S theorem $x^{p-1} - 1 = pq$ when p is prime, prove that the value of q in terms of p

$$\text{when } x = 2 \text{ is } q \equiv \left\{ 2^{p-3} - \frac{p-3}{2!} \cdot 2^{p-5} + \frac{p-4}{3!} \cdot 2^{p-7} - \dots \right\},$$

and generalize the theorem for all values of x .

14346. (I. ARNOLD.)—A cone of marble, the axis of which is 20 feet and the base diameter 6 feet, stands on the edge of its base, the axis making an angle of 60° with the horizon. What power acting vertically at the top of the cone will sustain it? What will be the direction and intensity of the least force that will keep it in equilibrium, and what inclined position will the cone be in when the sustaining force is a minimum?

14347. (R. KNOWLER.)—Normals to a parabola at P and Q meet in R. Prove that, when R is on the curve, (1) the sum of the ordinates of the poles of PQ, PR, and QR is zero; (2) if PR meets the axis in M, and O is the point on PR through which pass all chords which subtend a right angle at P, the diameter through the mid-point of RQ bisects OM.

14348. (JAMES S. LAWSON.)—Show how to construct a square which shall have two adjacent sides passing through two given points, and the intersection of the diagonals at a third given point. Show that there are generally two solutions.

14349. (SALUTATION.)—A rectangular card lies concealed between the pages of a book, but is so placed that three of its corners are on the inner, outer, and lower edges of the book respectively. The inner corner being used as a fixed centre, the outer corner is wheeled round until it again coincides with the outer edge of the book, when the fourth corner is found on the upper edge. The pages being a by b inches, and the distance between the two positions of the outer corner of the card being $2c$ inches, find the dimensions of the card, and state the necessary limits of the values given.

14350. (Professor N. BHATTACHARYYA.)—If a quadrilateral that is complete can be circumscribed about a circle, prove that the line of collinearity of the middle points of the diagonals passes through the centre of the circle.

14351. (Rev. T. MITCHESON, B.A.)—Show that the sums of the series $\sum \sin n\beta$ and $\sum \cos n\beta$, when carried to $\frac{1}{2}(n-2)$ terms, are equal, n being even and $n\beta = \pi$.

14352. (J. GILBERT SMYLY, M.A.)—(a) A hyperbola H of fixed eccentricity e passes through three given points A, B, C ; through A, B, C are drawn two parabolas having their axes parallel to the asymptotes of H : prove that the locus of the fourth point of intersection of the parabolas is a trinodal circular quartic, and find the position of its double focus. (b) If, instead of parabolas, two hyperbolas of given eccentricity e' be drawn passing through A, B, C , and each through one of the points at infinity on H , find the locus of their fourth point of intersection. (c) If A, B, C be three points on a fixed hyperbola H , and two hyperbolas H_1, H_2 of eccentricity e be drawn passing through A, B, C , and each through one of the points at infinity on H , the locus, when e varies, of the fourth point of intersection of H_1, H_2 is a rectangular hyperbola whose asymptotes are parallel to the bisectors of the angles between the asymptotes of H .

14353. (Lt.-Col. ALLAN CUNNINGHAM, R.E.)—Find a sum of successive odd cubes (all > 1) equal to a square. [This is a continuation of Quest. 14133; the latter part of the PROPOSER'S solution of Quest. 14133 (*Educational Times* of Aug. 1, 1899, p. 335), restricting the possible solutions to series of cubes starting from 1^3 , was erroneous.]

14354. (H. W. CURJEL, M.A.)—If the ordinate of a point P on an ellipse cuts the auxiliary circle in Q , the distance of the focus S from the tangent at $Q = SP$.

14355. (Rev. J. CULLEN.)—Find forms of ϕ and ψ such that $(\sin^2 \theta d\theta)^n \phi(m, \theta) = \phi(m+n, \theta)$, $(\cos^2 \theta d\theta)^{2n} \psi(m, \theta) = \psi(m+2n, \theta)$.

14356. (R. ARCHIBALD, M.A.)—Trace, and discuss the quadrature, rectification, curvature, &c., of the curve

$$\theta = \sin^{-1} r/a + \log r/\sqrt{(a^2 - r^2) + a},$$

which, if it roll on the cardioid $r = 2a(1 + \cos \theta)$, always has its pole at a fixed distance a from that of the cardioid.

14357. (Professor LANGHORNE ORCHARD, M.A., B.Sc.)—From the simultaneous equations

$$x - y - n^2 = n + y, \quad 5x - 3n^4 - 2n^2 = 6n^3 - n - 2y,$$

express x and y each as a series.

14358. (H. J. WOODALL, A.R.C.S.)—Take a common dinner serviette ring and place it edgewise on the table, stroke the near side from the top downwards with the finger, when the ring will "roll" away and then almost immediately return. Required a mathematical solution. (An explanation in ordinary language is very easy, viz., that the first "roll" is against the friction between the ring and the cloth, and then, when the forward momentum is overcome by that friction, the ring rolls back by reason of the angular momentum.)

14359. (W. H. SALMON, B.A.)—Evaluate

$$\int \frac{d\phi}{\sqrt{(\cos 2\phi) \cos(\phi - \alpha)}}$$

OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

6099. (Professor MATZ, M.A.)—If an angle be taken at random, prove that the chance (p) that its cosine is less than its tangent is

$$p = (2/\pi) \cos^{-1} \left\{ \frac{1}{2} \sqrt{2(\sqrt{5}-1)} \right\}.$$

6131. (CHRISTINE LADD.)—Determine a square, having given the sides and one diagonal of a trapezium inscribed therein.

6137. (Dr. HART.)—Describe a conic which shall pass through the four vertices of a given parallelogram, and touch a given conic concentric with the parallelogram.

6144. (C. TAYLOR, M.A.)—If a triangle be circumscribed to a pair of confocal ellipses, prove that the confocal hyperbola through any vertex of the triangle passes through the point of contact of its opposite side.

6150. (H. W. HARRIS, S.T.C.D.)—In the *Quarterly Journal of Mathematics*, Vol. I., Prof. CAYLEY has discussed the locus of the vertex of a triangle circumscribing a given conic and whose vertices move on given curves. In the case of the curves being both conics, the locus is of the eighth degree. Show that, in the case of all three curves being parabolas inscribed in the same triangle, the locus will reduce to a conic; and show how this last is related to the other three.

6152. (A. MARTIN, M.A.)—Find the radii of three equal circles inscribed in a given ellipse, each circle touching the other two and the circumference of the ellipse.

NOTICE TO CORRESPONDENTS.

It is requested that all Mathematical communications should be sent to

D. BIDDLE, Esq., Charlton Lodge, Kingston-on-Thames.

NOTICE.—Vol. LXXI. of the "Mathematical Reprint" is now ready, and may be had of the Publisher, FRANCIS HODGSON, 89 Farringdon Street, E.C. Price, to Subscribers, 5s.; to Non-Subscribers, 6s. 6d.

Clarendon Press, Oxford.

Chaucer.—I. **The Prologue to the Canterbury Tales.** (School Edition.) Edited by W. W. SKEAT, Litt.D. Still covers, 1s.

— II. **The Prologue; The Knights Tale; The Nonne Prestes Tale.** Edited by R. MORRIS, LL.D. A New Edition, with Collations and Additional Notes, by W. W. SKEAT, Litt.D. 2s. 6d.

Spenser.—**The Faery Queene.** Books I. and II. Edited by G. W. KITCHIN, D.D., with Glossary by A. L. MAYHEW, M.A. 2s. 6d. each.

Shakespeare.—**King John.** Edited by W. ALDIS WRIGHT, D.C.L. Price 1s. 6d.

Great Britain and Hanover: Some Aspects of the Personal Union. Being the Ford Lectures delivered in the University of Oxford, Hilary Term, 1899. By A. W. WARD, Litt.D. 5s.

Introduction to Greek Sculpture. By L. E. URCOTT, M.A. Second Edition. Crown 8vo, 4s. 6d.

A Primer of the Gothic Language; with Grammar, Notes, and Glossary. By JOSEPH WRIGHT, M.A., Ph.D. 4s. 6d.

A Middle High German Primer. With Grammar, Notes, and Glossary. By JOSEPH WRIGHT, M.A. Second Edition. 3s. 6d.

German Passages for Unprepared Translation. For the use of Candidates for Army, Civil Service, and other Examinations. Selected and arranged by EDUARD BURKE. Still covers, 3s.

A Grammar of the Bohemian (or Czech) Language. By W. R. MORFILL, M.A. Crown 8vo, 6s.

Homer.—Odyssey. Books I.—XII. By W. W. MERRY, D.D. 5s.

GEORGE PHILIP & SON'S LIST.

MAP DRAWING.

PHILIPS' MAP-BUILDING SHEETS.

An Invaluable Aid for the Teaching of Geography in Elementary Classes.

Each Map in this unique series consists of a **BOLD OUTLINE** printed in permanent colour on a **Blackboard Paper** specially prepared for the use of coloured chalks, which can be wiped out when no longer required, without obliterating the printed outline. The size of each sheet is 42 by 32 inches.

Just published.

Set 1.—THE BRITISH ISLES.

LIST OF MAPS.

- | | |
|-----------------------|--------------|
| 1. The British Isles. | 3. Scotland. |
| 2. England and Wales. | 4. Ireland. |

Price per Set, attached to Wooden Roller, 6s. net.

Set 2.—EUROPE.

LIST OF MAPS.

- | | |
|---|---------------------------------|
| 1. Europe. | 6. Balkan Peninsula. |
| 2. British Isles, with Netherlands, &c. | 7. Austria-Hungary. |
| 3. France and Switzerland. | 8. The German Empire. |
| 4. Spain and Portugal. | 9. Russia and Scandinavia. |
| 5. Italy. | 10. Basin of the Mediterranean. |

Price per Set, attached to Wooden Roller, 15s. net.

Single Maps, mounted on metal ledges, 1s. 6d. each net. Box of 12 Coloured Chalks, specially prepared for use with the Blackboard Map-Building Sheets, price 6d. per box.

"With such a valuable aid, the expert teacher may readily insert with chalk the selected features of his lesson, and build the map before the learner's eyes, a method recognized as most effective in topographical teaching."—*Schoolmaster*.

Detailed Prospectus on application.

SEMI-UPRIGHT WRITING.

Messrs. GEORGE PHILIP & SON were the first to recognise and adopt the advantages of this particular slope (15° from the vertical) in their series of

SEMI-UPRIGHT COPY BOOKS,

which, in spite of all imitations, remains unsurpassed as the very best series for teaching

BOLD, CLEAR, AND RAPID WRITING.

In 15 Books. Price 2d. each.

"It has been a pleasure to look through Philips' Copy Books. The letters are sensibly and simply formed. Altogether it is an admirable series."—*Journal of Education*.

"A complete course of bold characteristic English writing."—*Educational Times*.
Specimen book, containing pages of the whole Series, will be forwarded gratis on application.

BRUSHWORK.

PHILIPS' BRUSHWORK COPY BOOKS.

In Three Parts. Price 3d. each.

The Three Parts bound together in stiff cover, with Instructions to Teachers, price 1s. 6d.

By ELIZABETH C. YEATS, Author of "Brushwork" and "Brushwork Studies in Flowers, Fruit, and Animals." Oblong 4to.

Each Part contains 24 pp. of Simple Exercises and Designs in Brushwork, printed in Sepia, with blank spaces for copying same, and directions.

"A charming book on a most cleverly systematized plan."—*Schoolmaster*.

Prospectus, with specimen pages, gratis.

Complete Educational Catalogue gratis.

LONDON: GEORGE PHILIP & SON, 32 FLEET STREET, E.C.

Liverpool: PHILIP, SON, & NEPHEW, 45-51 South Castle Street.

KINDERGARTEN.

Just published.

PHILIPS' SYSTEMATIC COURSE OF ELEMENTARY DRAWING AND COLOURING.

IN TWO SERIES.

THE "VICTORIA" SERIES OF COLOURED CARDS.
Consisting of Six Packets, Nos. 1-6. Price 6d. each net.

THE "ALEXANDRA" SERIES OF COLOURED CARDS.
Consisting of Four Packets, A-D. Price 6d. each net.

These Packets are carefully graded for Children between 4 and 10 years of age, and contain full Instructions to Teachers, forming the most complete and thorough course published. **OUTLINE AND BLANK CHEQUER DRAWING BOOKS** are also published for use in connexion with each Packet, price 1d. each. **CRAYONS**, specially prepared for use with the above, per box, 1d.

Write at once for Illustrated Prospectus.

NEW GEOGRAPHIES.

- HUGHES' ADVANCED CLASS BOOK OF MODERN GEOGRAPHY.** New and Revised Edition. 866 pp. 6s.
- HUGHES' CLASS BOOK OF PHYSICAL AND ASTRONOMICAL GEOGRAPHY.** Revised and Edited by R. A. GREGORY, F.R.A.S. 328 pp. 96 Illustrations, 7 Diagrams and Coloured Maps. 3s. 6d.
- HUGHES' CLASS BOOK OF MODERN GEOGRAPHY.** Revised and Edited by ALBERT HILL. 472 pp. 56 Illustrations, and large Coloured Map. 3s. 6d.
- HUGHES' ELEMENTARY CLASS BOOK OF MODERN GEOGRAPHY.** With Examination Questions. 260 pp. 39 Maps and Diagrams. New and Revised Edition. 1s. 6d.

Prospectuses on application.

COLLOQUIAL FRENCH.

"An 'open sesame' to colloquial French."—*Journal of Education*.

PSYCHOLOGICAL METHOD OF TEACHING FRENCH.

By VICTOR BÉTIS and HOWARD SWAN.

- FIRST FACTS AND SENTENCES IN FRENCH.** Second Edition. 2s.
- FACTS OF LIFE.** Part I., Second Edition, 3s. Part II., 3s.
- CLASS ROOM CONVERSATIONS IN FRENCH.** 2s. 6d.

* Class Edition on separate sheets may be obtained.

Complete Prospectus, with specimen pages, on application.

NOW READY. Demy 8vo, cloth, 666 pp., price 2s. 6d., free by post.
To Members of the College the price is 1s., or 1s. 6d. free by post.

THE
CALENDAR
OF
The College of Preceptors.

EDUCATIONAL WORKS

By **A. K. ISBISTER, M.A., LL.B.**

(LATE DEAN OF THE COLLEGE OF PRECEPTORS.)

Sixteenth Edition, with Map. 12mo.

CÆSAR'S COMMENTARIES on the GALLIC WAR.

BOOKS I.-V. With Notes Critical and Explanatory,
a Vocabulary of all the Words in the Text, and
Easy Reading Lessons for Beginners price 3s. 6d.

BOOKS I.-VII. do. do. 4s. 6d.
Do. (without the Reading Lessons) 4s. 0d.

Twenty-fifth Edition.

BOOK I. (with Vocabulary, Reading Lessons, &c.) 1s. 6d.

Fourteenth Edition. 12mo, price 3s. 6d.

XENOPHON'S ANABASIS, Books I. to III. With
Notes, Vocabulary of all the Words in the Text, and a Series of
Easy Reading Lessons for Beginners. Designed as a First Greek
Reading Book in Schools.

Ninth Edition. 12mo, price 1s.; or, with Answers, 1s. 6d.

UNITARY ARITHMETIC. Embodying the First Book
of Arithmetic of the Irish National Board. With numerous addi-
tional Examples, and selections from recent Examination Papers;
and a full exposition of the "Unitary" System, or Method of
Working Arithmetic without rules.

* * In this Edition, Questions in Proportion, Practice, Interest,
Stocks, Partnership, Profit and Loss, &c., are, by the "Unitary"
Method, solved by a single rule.

Fifth Edition. Two Quarto Copy Books, price 6d. each.

THE GEOMETRICAL COPY-BOOK. Arranged for
writing out the Propositions of Euclid in the Abbreviated and
Symbolical Form adopted in the Universities and Public Schools.

LONDON: LONGMANS & CO., PATERNOSTER ROW.

Pitman's Shorthand

ABSOLUTELY UNRIVALLED.

Over 60 years the standard, and to-day is used by 98% of writers; the small
balance of 2% being distributed among all the other systems.

Highest Awards wherever Exhibited.

Specimen free to Head Teachers and further information readily given. Send for
D.P. (Descriptive Pamphlet and Catalogue), post free on application.

PITMAN'S "RAPID" SERIES OF MODERN LANGUAGE BOOKS.

An Inspector writes:—"The French Books are admirably suited for Day and
Evening School use, and I am strongly recommending them."

NOW READY.

Pitman's French Course, Part I., 96 pp., 6d.; limp cloth, 8d.
Easy and Advanced French Conversation, each 32 pp., 6d.
French Business Letters, 32 pp., 6d.
Economie Domestique, with three coloured plates, 48 pp., 6d.
German Business Interviews, each forming a complete commercial transaction,
96 pp., 1s.; cloth, 1s. 6d.
Easy and Advanced German Conversation, each 32 pp., 6d.
German Business Letters, 32 pp., 6d.
Examinations in German and how to pass them, 32 pp., 6d.;
and 15 other new and interesting works, pronounced by Teachers and the Press
as being the best, most up-to-date and useful modern language books ever
published. Send for L.T. (Full List and Testimonials), post free on application.

200,000 copies have been issued of

BELL'S STANDARD ELOCUTIONIST, Principles and

Exercises, with a Copious Selection of Extracts in Prose and Poetry, adapted
for Reading and Recitation. By D. C. BELL and ALEX. MELVILLE BELL,
F.E.I.S. With Frontispiece and Diagrams. Roxburgh binding, 616 pp., 3s. 6d.

* * This edition contains 64 additional pages, comprising a NEW SELECTION
OF CLASSIFIED RECITATIONS.

The SCOTSMAN says:—"Far the best of the many books of the kind."

LE PETIT PRÉCEPTEUR; or, First Steps to French
Conversation. By F. GRANDINEAU, formerly French Master to Her Majesty
Queen Victoria. 50 Woodcuts. Sixteenth Edition. Cloth, 1s. 6d.

LONDON: HODDER & STOUGHTON, 27 PATERNOSTER ROW.

Seventh Edition.

MODERN SIDE ARITHMETIC. EXAMPLES ONLY.
By the Rev. T. MITCHESON, B.A., Assistant-Master in the City of London
School.

PART I., crown 8vo, cloth, pp. 119, 1s. (Answers, 1s.; Teachers' Copy, with
Answers, 1s. 6d.)

PART II., crown 8vo, cloth, pp. 200, 1s. 6d. (Answers, 1s.; Teachers' Copy, with
Answers, 2s.)

COMPLETE IN ONE VOLUME, crown 8vo, cloth, 2s. (Answers, 1s. 6d.; Teachers'
Copy, with Answers, 3s.)

Specimen Copies sent post free to Teachers for half the price.

FRANCIS HODGSON, 89 FARRINGTON STREET, E.C.

WILLIAMS & NORGATE'S SCHOOL BOOKS.

THE FRENCH LANGUAGE.

DELBOS.—THE STUDENT'S GRADUATED FRENCH READER. For the Use of Public Schools. I. First Year: Anecdotes, Tales, Historical Pieces. Edited, with Notes and a complete Vocabulary, by LÉON DELBOS, M.A., H.M.S. "Britannia." Twelfth Edition. 186 pp. Crown 8vo, cloth, 2s.

DELBOS.—THE STUDENT'S GRADUATED FRENCH READER. For the Use of Public Schools. II. Second Year: Historical Pieces and Tales. Edited, with Notes, by LÉON DELBOS, M.A., H.M.S. "Britannia." Sixth Edition. 180 pp., crown 8vo, cloth, 2s.

"It would be no easy matter to find a French reader more completely satisfactory in every respect than that of M. Delbos."—*Athenæum*.

"This is a very satisfactory collection from the best authors, selected with great care, and supplied with adequate notes. . . . A thoroughly good book of this kind should, in fact, be calculated to inspire a taste for literature in the student's mind. The volumes edited by M. Delbos fairly meet this requirement."—*Journal of Education*.

"The notes are critical and explanatory. The book is well printed and excellently got up."—*Educational Times*.

DELBOS.—LITTLE EUGÈNE'S FRENCH READER. For Beginners. Anecdotes and Tales. Edited, with Notes and a complete Vocabulary. Third Edition. Crown 8vo, cloth, 1s. 6d.

VICTOR HUGO.—LES MISÉRABLES. (Les Principaux Épisodes.) Edited, with Life and Notes, by J. BOÏLLE, Senior French Master, Dulwich College. Two Vols. Crown 8vo, cloth, each 3s. 6d.

"A worthy addition to our stock of French reading books, which will be welcomed by numberless masters. . . . M. Boëlle's notes are full and to the point, his philology is sound, and his translations idiomatic."—*Journal of Education*.

VICTOR HUGO.—NOTRE DAME DE PARIS. Adapted for the use of Schools and Colleges. By J. BOÏLLE, B.A., Senior French Master, Dulwich College. Two Vols. Crown 8vo, cloth, each 3s.

"Equipped in the same excellent manner as the same author's 'Misérables.' . . . Makes an admirable school book."—*Scotsman*.

EUGÈNE'S THE STUDENT'S COMPARATIVE GRAMMAR OF THE FRENCH LANGUAGE, with an Historical Sketch of the Formation of French. For the use of Public Schools. With Exercises by G. EUGÈNE FASNACHT, late French Master, Westminster School. Twentieth Edition, thoroughly Revised. Square crown 8vo, cloth, 5s. Or, separately, Grammar, 3s.; Exercises, 2s. 6d.

"In itself this is in many ways the most satisfactory grammar for beginners that we have as yet seen."—*Athenæum*.

EUGÈNE'S FRENCH METHOD. Elementary French Lessons. Easy Rules and Exercises preparatory to the "Student's Comparative French Grammar." By the same Author. Sixteenth Edition. Crown 8vo, cloth, 1s. 6d.

"Certainly deserves to rank among the best of our elementary French exercise books."—*Educational Times*.

C. ARTHUR PEARSON'S SCHOOL SERIES.

A COURSE OF EXPERIMENTAL CHEMISTRY.

2/6

(ELEMENTARY.)

2/6

By T. ALEXANDER W. HILL, B.Sc.

The subjects selected are so arranged and treated as to come within the scope of schools organized under any of the ordinary schemes of instruction, such, for instance, as those based upon University Local, County Council Scholarship, Education Department, and South Kensington lines. The work is treated experimentally throughout, and is so written as to form a logical sequence of experiments, affording a sure grasp of the principles at the root of all sound chemical knowledge.

Teachers should make a point of seeing

PEARSON'S EDITION OF

GRAYSTON'S PATENT MAPS

For Reference and Class Teaching,

Which are the best, cheapest, and most useful and durable maps ever published.

Two Maps for the usual cost of one.

A Double Map (48 x 38 in.) with double-faced roller, 12s.

On one side of the Sheet is a superior Wall Map in Colours, and on the other side an outline of the same country on the best black-board cloth ever produced. Any desired portion of the outline map, which is indistinctly seen at a distance, may be traced with chalk as often as desired.

N.B.—Pearson's is the only edition of Grayston's Maps which has an ordinary Map and a Blackboard Map on the same sheet. Unless PEARSON'S EDITION is specially ordered, disappointment may follow.

The following Maps are ready:—

ENGLAND. SCOTLAND. IRELAND.
EUROPE. UNITED STATES.

Others in preparation.

"Cannot fail to be very useful for educational purposes."—Sir CLEMENTS MARKHAM, K.C.B., *President of the Royal Geographical Society.*

C. B. HODGSON, B.A., Secretary.

COLLEGE OF PRECEPTORS.— (Bloomsbury Square, W.C.)

The next Monthly Evening Meeting of the Members will take place on Wednesday, the 15th of November, when the Rev. J. O. Bevan, M.A., F.C.P. will read a Paper on "The Board of Education Bill and its Bearing on Private Schools."

The Chair will be taken at 7.30 p.m., and a discussion will follow the reading of the Paper. Members have the privilege of introducing their friends.

C. B. HODGSON, B.A., Secretary.

COLLEGE OF PRECEPTORS. (Bloomsbury Square, W.C.)

LECTURES FOR TEACHERS IN THE SCIENCE, ART, AND HISTORY OF EDUCATION.

THE TEACHER AND THE CLASS.

To be delivered by P. A. BARNETT, Esq., M.A., formerly Principal of the "Borough Road" Training College, Isleworth.

The Second Course of Lectures (Twenty-Fifth Annual Series) began on Friday, 22nd September.

These lectures are meant to be of direct service to intending and acting teachers by showing the bearing of questions of theory on the daily practice and the needs of the class-room. The syllabus does not state in detail all the points which will be treated, but indicates the heads under which the most important are likely to present themselves for consideration. References and suggestions for reading will be made from time to time during the progress of the course.

The Fee for the Course is Half-a-guinea.

The Lectures will be delivered on Friday Evenings at 7 o'clock, at the College, Bloomsbury Square, W.C.

Members of the College have Free Admission to this Course.

C. B. HODGSON, B.A., Secretary.

The Staff includes a number of Graduates of London, Oxford, Cambridge, and Royal Universities, Science Medallists, and Specialists.

Preparation by Correspondence

FOR

MATRICULATION, B.A., & B.S.C.,

(London Univ., Royal Univ., Dublin Univ.)

L.L.A.

(Degree for Ladies—St. Andrews),

A.C.P., L.C.P., F.C.P.

On a thoroughly individual system, which ensures the closest attention to the needs of each candidate. Full corrections of papers, with time-saving notes, criticisms, summaries, model answers, and solutions.

Fees may be based on success, and paid by arrangement.

Correspondence Courses may begin at any time, the tuition being individual.

Preliminary Courses, carefully arranged, for beginners.

Single subjects may be taken—Latin, Greek, French, German, Italian, Mathematics, Mechanics, Physics, Chemistry, Logic, Psychology, Political Economy, &c.

For Terms, Testimonials, &c.,

Address—Mr. J. CHARLESTON, B.A., BURLINGTON CLASSES, 27 CHANCERY LANE, LONDON.

JOINT AGENCY FOR WOMEN TEACHERS.

(Under the management of a Committee appointed by the Teachers' Guild, College of Precursors, Headmistresses' Association, Association of Assistant Mistresses, and Private Schools' Association.)

Address—74 GOWER STREET, LONDON, W.C.

Registrar—Miss AGNES G. COOPER.

This Agency has been established for the purpose of enabling Teachers to find work without unnecessary cost. All fees have therefore been calculated on the lowest basis to cover the working expenses.

Headmistresses of Public and Private Schools, and Parents requiring Teachers, or Teachers seeking appointments, are invited to apply to this Agency.

Many Graduates and Trained Teachers for Schools and Private Families; Visiting Teachers for Music, Art, and other special subjects; Foreign Teachers of various nationalities; Kindergarten and other Teachers are on the Register, and every endeavour is made to supply suitable candidates for any vacancy.

School Partnerships and Transfers are arranged.

Office hours—9.30 a.m. to 6 p.m. Miss Cooper's hours for interviews are from 10.30 a.m. to 1.30 p.m., and 2.30 p.m. to 5 p.m.; Wednesdays to 1.30 p.m. only.

THE JOINT AGENCY FOR MEN TEACHERS.

23 SOUTHAMPTON STREET, BLOOMSBURY SQUARE, LONDON, W.C.

Registrar—Rev. F. TAYLOR, M.A. Cantab.

The Agencies for Assistant-Masters and Tutors hitherto conducted by the College of Precursors, the Teachers' Guild, and the Assistant-Masters' Association, have been amalgamated and placed under the management of a Joint Committee composed of representatives of the following Bodies:—

- Headmasters' Conference.
- Incorporated Association of Headmasters.
- College of Precursors.
- Teachers' Guild.
- Welsh County Schools' Association.
- Private Schools' Association.
- Association of Headmasters of Preparatory Schools.
- Association of Headmasters of Roman Catholic Schools.
- Assistant-Masters' Association.
- Association of Technical Institutions.
- &c. &c.

The rates of commission charged to Assistant-Masters are fixed as low as possible, and it is hoped that all branches of the profession will support an Agency managed by so widely representative a Committee.

Headmasters having vacancies on their staffs, and Assistant-Masters seeking appointments, are asked to communicate with the REGISTRAR.

OXFORD LOCAL EXAMINATIONS. LONDON COMMITTEE (BOYS).

The Regulations for the Senior, Junior, and Preliminary Examinations for 1900 can be obtained from the Secretary,

DENT'S MODERN LANGUAGE SERIES.

Edited by WALTER RIPPMANN, M.A.

In fcap. 8vo, cloth, 1s. 6d. net.

* **DENT'S FIRST FRENCH BOOK.** Based on the Hölzel Pictures of the Seasons. By S. ALGE and WALTER RIPPMANN.

In fcap. 8vo, cloth, 1s. 6d. net.

HINTS ON TEACHING FRENCH. With a running Commentary to Dent's First and Second French Books.

Prof. FREDERIC SPENCER writes:—"Dent's First French Book appears most opportunely, supplying as it does, on the lines of the 'reform' method, a course which is both rational and eminently practical. . . . This little book, with Mr. Rippmann's running commentary, deserves the careful attention of every teacher of French."

In fcap. 8vo, 1s. 6d. net.

* **DENT'S SECOND FRENCH BOOK.** By S. ALGE and WALTER RIPPMANN. Consists mainly of a charming story by JEANNE MAIRET, "La Tâche du Petit Pierre."

The Second French Book can be taken with a class, even without previously working through the First Book. It will be found an excellent reading book.

"We can heartily commend this reader as an exposition of the new method."—*Journal of Education*, Dec., 1898.

In fcap. 8vo, cloth, 2s. 6d. net.

FRENCH DAILY LIFE: Common Words and Common Things. Adapted by WALTER RIPPMANN from Dr. KRON's "Le Petit Parisien."

"For class use it is far better than anything we have previously seen. It is not, of course, intended for beginners. Students who, without much conversational facility, intend to join a French holiday course next midsummer might here find valuable assistance. The Englishman travelling in France will find here all the phrases essential to his comfort—not in formal lists, but strung together in a chatty and interesting narrative, which also contains information as to how and where the phrases are to be used."—*Education*.

* SPECIMEN COPIES OF THESE MAY BE HAD BY TEACHERS ON APPLICATION.

THE PRACTICAL STUDY OF LANGUAGES. By H. SWEET, M.A., Ph.D., LL.D. Large Crown 8vo, 6s. net.

The object of this volume is to state the general principles on which a rational plan of learning foreign languages should be based, and to criticize the various methods which have been proposed.

A Prospectus of the whole Series will be sent to any address on receipt of a postcard.

MACMILLAN'S SCIENCE CLASS-BOOKS.

NEW VOLUMES.

Adapted to the South Kensington Syllabuses.

Elementary Practical Mathematics. By FRANK CASTLE, M.I.M.E., Mechanical Laboratory, Royal College of Science, South Kensington. Globe 8vo, 3s. 6d.

School World.—"Sure to command a good sale. Fortunately, it deserves this on its own merits. . . Many of the subjects dealt with by the author might be introduced with great advantage into a school course; and his book deserves the careful attention of teachers from this point of view."

Magnetism and Electricity for Beginners. By H. E. HADLEY, B.Sc. Lond., Associate of Royal College of Science, London; Headmaster of the Kidderminster School of Science. Globe 8vo, 2s. 6d.

Mechanical World.—"A welcome is to be extended to such books as that of Mr. Hadley, who has plainly endeavoured to clear the student's path of many obstacles which are too often ignored or superficially dealt with by compilers of elementary science manuals. In particular, a commendable step in this direction is the introduction of an early chapter on force, work, and energy—matters upon which the average elementary student has generally only the haziest of notions."

Botany for Beginners. By ERNEST EVANS, Natural Science Master, Mechanics' Institute and Technical Schools, Burnley. Globe 8vo, 2s. 6d.

Educational News.—"Forms a valuable addition to Messrs. Macmillan's excellent Series of Science Class Books. . . The general character of the work is of a very high order, the subject is made interesting, and the student is provided with every aid to success in his examination, and a thorough and profitable knowledge of the science."

Experimental Science Physiography (SECTION I). An Elementary Course of Physics and Chemistry adapted to the Syllabus of the Science and Art Department. By Prof. E. A. GREGORY and A. T. SIMMONS, B.Sc. Lond. Globe 8vo, 2s. 6d.

Educational News.—"It professes to be not a scientific treatise, but a practical text-book, and as such we can recommend it. The diagrams are good."

Exercises in Practical Physics for Schools of Science. By E. A. GREGORY, Professor of Astronomy, Queen's College, London, Oxford University Extension Lecturer; and A. T. SIMMONS, B.Sc. Lond., Associate of the Royal College of Science, London. In Two Parts. Part I., First Year's Course. Globe 8vo, 2s.

Heat, for Advanced Students. By EDWIN EDSEB, A.R.C.Sc. Lond. Globe 8vo, 4s. 6d.

Inorganic Chemistry for Advanced Students. By Sir HENRY ROSCOE, F.R.S., and Dr. A. HARDEN. With Fifty-four Illustrations in the Text. Globe 8vo, 4s. 6d.

Practical Plane and Solid Geometry for Advanced Students, including Graphic Statics. By J. HARRISON, M.I.M.E., Assoc. M.Inst.C.E., and G. A. BAXANDALL, Assistant in Mechanics and Mathematics at the Royal College of Science, London. Globe 8vo, 4s. 6d.

Chemistry for Organized Schools of Science. By S. PARRISH, B.Sc., A.R.C.Sc. Lond., Central Higher Grade School, Leeds. With Introduction by D. FORSYTH, D.Sc., Principal of the Central Higher Grade School, Leeds. Globe 8vo, 2s. 6d.

CAMBRIDGE UNIVERSITY PRESS.

NEW WORKS ON TEACHING.

EDUCATIONAL AIMS AND METHODS. Lectures and Addresses by Sir JOSHUA FITCH, M.A., LL.D., late Her Majesty's Inspector of Training Colleges, and Author of "Lectures on Teaching," "The Arnolds and their Influence on English Education."

The forthcoming volume consists of lectures and addresses given in Cambridge, or before the Teachers' Guild and other bodies of teachers in England and in America. Its general aim is to direct attention to various aspects of educational theory and of practical work; and it includes several monographs on the lives of distinguished and representative teachers.

CHAPTERS ON THE AIMS AND PRACTICE OF TEACHING. Edited by FREDERIC SPENCER, M.A., Phil. Doc., Professor of the French Language and Literature in the University College of North Wales; formerly Chief Master on the Modern Side in the Leys School, Cambridge. Crown 8vo, 6s.

THE TEACHING OF GEOGRAPHY IN SWITZERLAND AND NORTH ITALY. Being the Report presented to the Court of the University of Wales on a visit to Switzerland and North Italy in 1898, as Gilchrist Travelling Student. By JOAN BERNICE REYNOLDS, B.A., Assistant-Mistress in the Cardiff Intermediate School for Girls. 2s. 6d.

THE TEACHING OF MODERN FOREIGN LANGUAGES IN OUR SECONDARY SCHOOLS. By K. H. BREUL, Litt.D., Ph.D., University Lecturer in German. Crown 8vo, 2s.

Bookman.—"Teachers of modern languages should pay special attention to this book. It is full of wise suggestion and real help."

AN ELEMENTARY OLD ENGLISH GRAMMAR. (Early West Saxon.) By A. J. WYATT, M.A., late Scholar of Christ's College, Cambridge; External Examiner in English to Victoria University. Crown 8vo, 4s. 6d.

Athenæum.—"The book is, on the whole, remarkably accurate and lucid, and will probably be found the most useful elementary grammar of Old English hitherto published."

Educational Times.—"Mr. Wyatt has laid all students of the Early West Saxon speech under a *press* obligation, which he will increase when his promised 'Old English Anthology' sees the light."

THE OLD ENGLISH LAY OF BEOWULF. Edited with Critical and Philological Notes and Alphabetical Glossary by A. J. WYATT, M.A. Second Edition. Crown 8vo, 8s. 6d.

AN ELEMENTARY OLD ENGLISH READER. By A. J. WYATT, M.A.

AN OLD ENGLISH ANTHOLOGY. By A. J. WYATT, M.A.

PITT PRESS SERIES.—STANDARD VOLUMES.

PLATO.—APOLOGIA SOCRATIS. Edited by J. ADAM, M.A., Fellow and Classical Lecturer of Emmanuel College, Cambridge. 8s. 6d.

Classical Review.—"A worthy representative of English scholarship."

By the same Editor.

PLATO.—ORITO. 2s. 6d.

PLATO.—EUTHYPHEO. 2s. 6d.

PLATO.—PROTAGORAS. 4s. 6d. (By J. and A. M. ADAM.)

EURIPIDES.—HECUBA. Edited by W. S. HADLEY, M.A., Fellow of Pembroke College, 2s. 6d.

By the same Editor.

EURIPIDES.—ALCESTIS. 2s. 6d.

Spectator.—"The notes, explanatory and critical, are excellent, and show the sound scholarship of the editor."

EURIPIDES.—HIPPOLYTUS. 2s.

EURIPIDES.—MEDEA. Edited by C. E. S. HEADLAM, M.A., Fellow and Classical Lecturer of Trinity Hall. 2s. 6d.

Educational Times.—"A volume well worthy to form one of the useful series of school editions of Greek plays issued from the Pitt Press. The illustrative notes are more than adequate, and the explanations are full and to the point."

By the same Editor.

EURIPIDES.—IPHIGENEA IN AULIS. 2s. 6d.

Classical Review.—"This is a book of the right sort. The matter of the notes and introduction, whether original or not, bears the stamp of thoughtful and enlightened consideration."

CAMBRIDGE SERIES FOR SCHOOLS AND TRAINING COLLEGES.

General Editor—W. H. WOODWARD, of Christ Church, Oxford, Principal of University (Day) Training College, Liverpool, and Lecturer on Education in Victoria University. *School Guardian.*—"Exact and scholarly, and at the same time simple, text-books. The University Press are to be congratulated upon having secured as editors such eminent scholars; their names are a guarantee of their work. We are quite sure that the students preparing for the Queen's Scholarship and Certificate Examinations will not be the only students who will find these text-books of value; they will find their way into numberless preparatory schools and lower forms of public schools; they deal so thoroughly and clearly with the subject in each case that nothing better could be desired by master or pupil."

FOR CERTIFICATE EXAMINATION OF THE EDUCATION DEPARTMENT, 1900.

MACAULAY'S ESSAY ON MILTON. Edited by J. H. FLATHER, M.A. With special references to Dr. Johnson's "Life of Milton." 1s. 6d.

THE FORMATION OF CHARACTER: SOME EDUCATIONAL ASPECTS OF ETHICS. By JOHN MACCUNN, Balliol College, Oxford, Professor of Philosophy in University College, Liverpool. [In the press.]

NOTE.—The following works are published in the PITT PRESS SERIES, and in the CAMBRIDGE SERIES FOR SCHOOLS AND TRAINING COLLEGES; the editions in the last named series have COMPLETE VOCABULARIES.

AUTHOR.	WORK.	EDITOR.	Pitt Press Series.	Prices.
VERGIL	Aeneid.	A. Sidgwick, M.A.	Books I.—XII., 1s. 6d. each	Books I., II., VI., IX., XII., 1s. 6d. each.
	<i>Guardian.</i> —"Mr. Sidgwick's 'Vergil' is, we believe, on the whole, the best school edition of the poet."			
XENOPHON	Anabasis	A. Pretor, M.A.	{ Books I., III., IV., V., 2s. each. Books II., VI., VII., 2s. 6d. each. }	
"	"	G. M. Edwards, M.A.		Books II., III., IV., 1s. 6d. each.
CAESAR	De Bello Gallico	A. G. Peskett, M.A.	{ Books I., III., IV.—V., VI., VIII., 1s. 6d. each. Books II.—III., VII., 2s. each. }	
"	"	E. S. Shuckburgh, M.A.		Books I. (1-29), II., III., IV., VI., 1s. 6d. each.

London: C. J. CLAY & SONS, Cambridge University Press Warehouse, Ave Maria Lane.

PITT PRESS SERIES.—New Volumes.

A PRIMER OF FRENCH VERSE FOR UPPER FORMS. Edited by FREDERIC SPENCER, Professor of the French Language and Literature in the University College of North Wales; formerly Chief Master of the Modern Side in the Leys School, Cambridge. 3s.

The arrangement of most books which treat of French prosody suggests that they are designed to teach the art of *writing* verse. The object of this Primer is less ambitious, being to associate with interesting extracts from the work of numerous French poets such hints as to the structure of French verse as may tend to secure correct and intelligent *reading* of these extracts themselves, and adequate appreciation of the distinctive qualities of French poetry as therein represented.

AESCHYLUS.—PROMETHEUS VINCITUS. Edited by H. RACKHAM, M.A., Fellow of Christ's College, Cambridge. 2s. 6d.

CAMBRIDGE BIBLE FOR SCHOOLS AND COLLEGES.

New Volumes. Ready immediately.

General Editor for the Old Testament and the Apocrypha: A. F. KIRKPATRICK, D.D., Regius Professor of Hebrew.

Guardian.—"It is difficult to commend too highly this excellent series."

Academy.—"The modesty of the general title of this series has, we believe, led many to misunderstand its character and underrate its value. The books are well suited for study in the upper forms of our best schools, but not the less are they adapted to the wants of all Bible students who are not specialists. We doubt, indeed, whether any of the numerous popular commentaries recently issued in this country will be found more serviceable for general use."

OHENONICLES I AND II. Edited by the Rev. W. E. BARNES, D.D., Fellow of Peterhouse, Cambridge. 4s.

THE BOOK OF PROVERBS. Edited by the Ven. T. T. PEROWNE, B.D., Archdeacon of Norwich. 3s.

THE CAMBRIDGE GREEK TESTAMENT FOR SCHOOLS AND COLLEGES.—New Volumes. Ready immediately.

General Editor: J. ARMITAGE ROBINSON, D.D., Canon of Westminster.

THE PASTORAL EPISTLES. By the Rev. J. H. BERNARD, D.D., Fellow of Trinity College, Dublin. 8s. 6d.

EURIPIDES.—ORESTES. Edited by N. WOOD, M.A., Fellow of King's College. 4s. 6d.

Educational Times.—"Marked by fine scholarship and acuteness of judgment, and is to be classed with the best school editions of single plays that have been published in England."

OIGERO.—DE AMICONTIA. Edited by J. S. REID, Litt.D., Fellow and Tutor of Gonville and Caius College. 3s. 6d.

OIGERO.—DE SENECHUTE. By the same Editor. 3s. 6d.

OIGERO.—DE OFFICIIS. Book III. Edited by the late H. A. HOLDEN, LL.D.

New and Revised Edition. 2s.

HORACE.—ODES AND EPODES. Edited by J. GOW, Litt.D.

Odes. Books I. and III. 2s. each, Books II. and IV. 1s. 6d. each.

Epodes. 1s. 6d.

Odes and Epodes in one Volume. 5s.

Guardian.—"Most admirable little books, by a first-rate scholar and schoolmaster. The notes are brief, clear, accurate, and are just what would be wanted by any ordinary student of Horace. There can, to our thinking, be no question about the satisfactory character of Dr. Gow's work."

VERGIL. Complete Works. Two Vols. Edited by A. SIDGWICK, M.A., Tutor of Corpus Christi College, and Reader in Greek in the University of Oxford. Vol. I.: Text and Introduction. 8s. 6d. Vol. II.: Notes. 4s. 6d.

Or in separate parts as follows:—

— **AENEID.** Books I.—XII. 1s. 6d. each.

— **BUCOLIOS.** 1s. 6d.

— **GEORGIOS.** Books I., II. 2s. Books III., IV. 2s.

A SHORT HISTORY OF THE EXPANSION OF THE BRITISH EMPIRE. By W. H. WOODWARD. [Nearly ready.]

OIGERO.—IN CATILLINAM I. Edited, with Introduction, Notes, and Vocabulary, by J. H. FLATHER, M.A. 1s. 6d.

School Guardian.—"The simplicity and usefulness of this little volume are wonderful. It is meant for students who have had little experience in reading Latin, and who have not access to books of reference. In itself, therefore, it should be complete, and it is."

The Educational Times.

Colleges and Endowments.

THE removal of Westminster College from Queen Square, London, to Cambridge, is an event of some interest, not merely confined to the world of theological students. The new college affords residential accommodation for twenty-six University graduates who desire to study theology, and is chiefly intended for the future ministers of the English Presbyterian body. It was formally opened on October 17, and, although it has cost the great sum of £40,000, including site, furnishing, and the laying out of the grounds, it was opened entirely free from debt. This event may be regarded in two aspects. It induces the reflection that Universities now fully perform their proper function, and open their gates to the sects. It would be a task of some difficulty to find a college of ancient date which has not elaborate provisions for securing its benefits to all comers, and particularly to poor scholars. Indeed, in some colleges "the gentleman commoner" was an afterthought introduced to effect an improvement in the college finances. In the matter of affiliation to the older Universities, of sharing in their culture, their privileges, and the advantages of association with men of high aims, devoted to special and varied fields of work, the English sects show a strong contrast with their Roman Catholic brethren in Ireland. The latter demand seclusion and a University all to themselves. It is not difficult to foresee which policy will be most fruitful for the advancement of learning.

The second reflection which presents itself on the opening of New Westminster College is that a fourth of the sum named has been the donation of the twin sisters Mrs. A. S. Lewis and Mrs. Gibson. The former lady, known in literary circles as Miss Agnes Smith before her marriage, is the fortunate discoverer of the "Codex Lewisianus," one of the oldest versions of the Gospels extant in any language. Mrs. Lewis discovered the palimpsest in the Convent of Mount Sinai. The fourth century is the date assigned to it, but some notable authorities believe it to be earlier. It has been suggested in some quarters that at a time when almost every woman's college in the country requires extension, refurnishing, better payment for its staff, and, in some cases, entire rebuilding, the money might have been spent on women's educational institutions. But, at

least, the Council of Westminster College has no cause to complain of the handsome gifts of Mrs. Lewis and Mrs. Gibson.

The state of the women's colleges, with the almost single exception of Holloway, which is not yet full, may be summarized by the dictum, "Let us pull down our barns and build greater." Girton needs £50,000 for extensions, but intends to pare down its needs to £30,000. Newnham, despite its three halls, is quite full, and desires to build. Bedford College moves always with extreme caution, and collects money, or, at least, receives promises, before doing anything. Although it has extended on every side, it could easily do with more money. A large part of the Government subsidy which was recently granted to the college was immediately absorbed in increasing the salaries of a somewhat underpaid staff. The same need of money exists in the women's colleges at Oxford. Alexandra College, Dublin, is at the present moment in all the miseries of rebuilding, whilst its classes and lectures are still proceeding. It wants £7,000. The London School of Medicine for Women is also rebuilding. It opened in July, 1898, a building that cost £10,000. The Handel Street wing, to be opened this month, is to cost £8,000. When the third wing is completed, the whole cost of the operations will be about £30,000. It is not astonishing, therefore, that women are looking about for a Margaret Beaufort to build and endow their institutions. Perhaps, in fairness, they ought to look to the other sex.

NOTES.

THE Church Congress very naturally discussed the religious education question. Those, however, among both clergy and laity, who hoped for definite counsel to assist them towards a solution of the problem must have been disappointed. The hope which we expressed last month, that a spirit of reasonableness would pervade the discussion, has been fulfilled. Mr. Horsfall, to establish the gravity of the subject, maintained, as is now usual, that the increase of crime in France and the United States is attributable to the absence of religious instruction in the schools of those countries; and Mr. Holiday, while fully recognizing the rights of Nonconformists to consideration, strenuously insisted on the necessity of the Church being enabled to give her own teaching fully and fearlessly to her own children. Criticism antagonistic to the present system was plentiful; but, as we anticipated, few practical suggestions were

made. Mr. Bell, of Marlborough, in the paper which we print this month, admits that the Church of England could not hope to be represented directly on the Local Authorities to be hereafter constituted for Secondary Education; but he conceives it possible by some legislative means to prevent such Authorities from taking up a position detrimental to religious education.

PROF. LODGE, who succeeded Prof. Prothero in the Chair of History at Edinburgh University, gave his inaugural lecture on October 17. He complained of the comparative neglect of history in our elementary and secondary schools. The force of the complaint depends on what one understands by a neglect of history. There is no lack of good text-books, and it is sufficient for most boys and girls in elementary and secondary schools to have read their books carefully, with a view to being tested in them. If a student is to specialize in history, he must be taken into a form, or a school, the master of which is an expert in that subject. Prof. Lodge went on to say:

There were two distinct schools or parties, whose aims or methods appeared at first sight to be quite distinct, and who occupied separate and almost hostile camps. The one looked at history from the point of view of the finished product, and sought to use it as a means of education; the other looked at it from the point of view of the raw material and the sources from which history was drawn, its aim being not so much to produce well educated and intelligent men and women as to train students and researchers.

Again, it seems to be a question of specializing. Any subject may be read, or read about, for the sake of an educative effect upon the mind, or it may be studied with greater application with a view to research or teaching, invention or reproduction.

QUEEN'S COLLEGE, BIRMINGHAM, is *in extremis*, but only, perhaps, as the phoenix is *in extremis* when he has lighted his funeral pyre. The Bishop of Worcester held a visitation of the College last Monday, and his decision will be awaited with curiosity. There was a somewhat stormy meeting of the governors on October 17, presided over by the Bishop of Coventry, who seems to have been more outspoken and critical than the majority of his colleagues liked. After formally presenting the year's report, which showed an excess of expenditure over income, in spite of extensive sublettings of the premises, he regretted to say that—

The report contained no encouraging features at all. His own feeling was that the report did not disclose the whole situation. That opinion he expressed at the Council meeting, but he was overruled, and, therefore, he simply presented the report officially as chairman. At the Council meeting he moved a resolution to the effect that there should be a more clear statement on certain points, so as to show exactly how matters stood; but, that proposal having been rejected, it was for the governors and for the public to form their own judgment upon the report. The admissions in successive years were as follows:—1886, 21; 1887, 9; 1888, 11; 1889, 8; 1890, 11; 1891, 11. The bishop's examinations commenced in 1892, and from that time the number of students has been declining.

It is fatally easy to decline from eleven, after persistently declining to eleven. It remains to be seen what will come of the Bishop's visitation.

Most people who think and care about the matter at all are convinced that the education of our country children is somehow or other defective. But a difference of opinion shows itself when it comes to giving

reasons for the present unsatisfactory state of affairs and suggesting remedies. It has been said that the elementary school does little more than give a path of escape from a rural to a town life. Largely owing to inadequacy of the teaching staff, the low percentage of attendance, and the early age of leaving school, the children in our rural areas are beginning life in the world with an absurdly small stock of general knowledge, and with no adequate technical training for their special work as agriculturists. There is the problem of child labour in summer time, and the question of special arrangements to meet this special condition of affairs; and now an Agricultural Education Committee has been formed to deal with the matter on new lines. At its first meeting, held a few days since, there was a helpful discussion on the necessity for training elementary and other teachers in subjects bearing upon agriculture, the desirability of making the elementary branches of natural science compulsory in rural schools, and the steps to be taken to secure the provision of facilities for higher agricultural education by all County Authorities.

WE welcome the formation of this new Committee, and sympathize with its desire to make rural education serve more directly the ends of rural life, and to give the children a more specialized preparation for their future work. It is quite true, as Mr. Macnamara has pointed out, that at the present time our rural schools are suffering so keenly from want of funds that they are shamefully understaffed and inadequately equipped with teaching apparatus. The teachers are already overwhelmed by the amount of work required of them, and one man has often to teach four or five standards at once, or with the aid of a young and unqualified pupil-teacher. The teacher cannot possibly undertake more subjects, nor can the curriculum be further extended. "Our appeal to Sir W. Hart Dyke," says Mr. Macnamara, "is to press upon the Government, as the very first preliminary to any revision of the curriculum of the village school, the absolute necessity to secure for it more money. Without this it will simply be superlative folly to push forward with the *doctrinaire* idea that school gardens and practical agriculture can be made to flourish into prosperous existence by a mere minute of the Committee of Council." We can well understand Mr. Macnamara's solicitude; but he does not seem to perceive that the reasonable demands put forward by Mr. Hobhouse and his friends will help as much as anything else to secure better provision for the rural schools.

THERE is some talk of a preparatory school for the elementary education of candidates for the Wesleyan ministry. At any rate, the *Methodist Times*, commenting on the meeting of a Conference Committee, appointed to consider the state of the Wesleyan Theological Colleges, says that it is impossible to read without distress the curriculum of these colleges.

There was a great deal of sympathy with the suggestion of Dr. Vinter that the difficulty of dealing with the large number of illiterates who enter our ministry would be met if one of the colleges was made a preparatory college. Those whose knowledge is very elementary might be sent there for one year, or even for two years, in order that they might receive the instruction needed to pass a suitable entrance examination for the colleges. Young laymen might be employed to give that elementary education upon which our most accomplished scholars now waste their time.

Our contemporary urges the necessity of giving to Wesleyan ministers "a theological education which will keep the pulpit abreast of the pew." It would certainly seem to be desirable.

ACCORDING to Mr. Alexander Sutherland, in his interesting article in the *Nineteenth Century* for October, there can be no such thing as an excess of genuine education. In spite of recent improvements in education, he maintains there is still too much information, and too little cultivation of the reasoning faculty. The natural result of "fact cramming" is to develop self-assertion in the pupils, "while the education of ideas ought to make them broad-mindedly competent." Our readers have read something like this before, and are prepared to accept the statement. The fault is not so much that of the system as of the dearth of training and of thinking teachers to carry out existing systems in a reasonable manner. The heart of education is the schoolmaster's head; and, if future developments make this sound, evil systems will soon die a natural death. Mr. Sutherland, with much sense, bids us not fear that education will deprive us of our working classes; for, if science is abolishing occupations at the lower end of the scale, she is constantly creating new ones at the upper.

MR. SUTHERLAND says that, as a rule, candidates in examinations spell and write fairly well, but he gives one amusing instance to the contrary:—"Question: 'Why did Henry VIII. divorce Catherine of Aragon?' Answer: 'Because he wanted an air.' Being doubtful of the spelling of the last word, the examinee struck it out and wrote 'hair.' Finding this, too, unsatisfactory, he substituted for it the novel word 'hier'; but, being still very doubtful, struck out the whole sentence, and to be perfectly safe wrote: 'Because he wanted a mail child.'"

IN spite of the long array of Outlanders' grievances contained in Mr. Chamberlain's three-hour speech on Mr Stanhope's amendment to the Address, he made no mention of the education difficulty. It is, however, one whose existence has never been questioned, and, while not affecting the wealthier inhabitants of the Rand, must have been the source of considerable irritation to the English-speaking working classes. In the schools receiving State grants, for which the Outlanders are taxed, no language other than Dutch may be used in classes higher than that which corresponds to the fourth standard in English elementary schools. Having granted the fullest measure of facilities for learning their language to French Canadians in the schools of Quebec, we may well feel some moral indignation at the lack of sympathy shown by the Boer Government in this respect. Perhaps, however, the philosophical view is to regard such a policy as a justifiable effort of self-preservation; although we hope that, when peace again prevails, more reasonable educational arrangements may be made.

SUMMARY.

THE MONTH.

A MEETING of Convocation of London University was held on October 10. Mr. E. H. Busk in the chair. The chief business was the reception and adoption of a report from a Special Committee appointed on June 27 to make representations to, and to confer with, the Commissioners appointed to draft the Statutes of the reconstituted University, in order that the interests of the graduates of the present University should not suffer under the new regulations. Discussion arose on the proposal of the Committee that teaching in the theory and practice of education

should be given in the Faculty of Arts, which was objected to by some graduates as inadequate. A motion referring the discussion of this point back to the Committee was lost, and the recommendation to the Commissioners accordingly reads: "That this subject (the Art or Profession of Teaching) should find its place as a branch of the Faculty of Arts." Some teachers interested in the matter will avail themselves of Section 4 of the Act, by which any fifty graduates of the University may make direct representations to the Commissioners. A proposal to this effect will be found in our correspondence columns.

A MEETING of the Court of Governors of Owens College was held at Manchester on October 4. The report of the Council stated that the adverse balance remaining on the new medical school buildings amounted to £21,978, and that the Council had no funds in hand for reducing it. It was also reported that a hall of residence for women would be opened this session at Ashburne House, Victoria Park, and ten students had already entered. Sir U. Kay-Shuttleworth moved:

That, subject to such limitations and conditions as the Council may from time to time determine, and subject to the Council being able to make satisfactory provision for a separate instruction in such cases as the Council consider necessary, the Court is of opinion that it would be desirable to admit women students to the course of study which would qualify them for medical degrees and practice.

Dr. Ward seconded the resolution, which was carried by 21 votes to 2, the dissentients being Mr. Kenyon, M.P., and Dr. Thorburn.

ON October 5 Lord Reay made his annual statement as Chairman of the London School Board. In the course of his remarks, Lord Reay said:

It had been a cause of great satisfaction to him to see that the work of the Board met with recognition even from those who were rather inclined to look upon School Boards as a necessary evil. It was only in quarters which were innocent of all knowledge of their work that they heard of the evil influence on children of their system of education. The results of the examination in Scriptural Knowledge were a complete answer to those who alleged that they neglected religious instruction, an allegation which was quite as unfounded as the contention that ruffianism in certain districts of London was due to their mode of teaching! Both assertions were calumnies. Prejudices died hard, but the prejudice against Board schools was gradually disappearing.

ON October 9, the Duke of Devonshire opened a new Pupil-Teachers' Centre at Sheffield. Characteristically enough, the Lord President began by saying that he did not know much about the pupil-teacher system, but went on to show that he knew quite sufficient for his purpose. The Duke's remarks on the religious difficulty are worth quoting:—

Hampered as the Education Department was, and as every Department was, by the want of all the financial provision which it would like to receive, the Education Department had an additional difficulty, and that was a religious difficulty, which was in some way closely connected with the financial difficulty, for it was very difficult to give additional assistance to schools without arousing the susceptibilities of one or other of the parties into which educationists were divided. It was very difficult to give further assistance to schools, or to the training of teachers, without rousing the susceptibilities of those who were in favour of denominational and those who were in favour of undenominational teaching; but he believed that this difficulty was certainly one which was not increasing in intensity. It had been said, and he thought truly said, that the religious difficulty was mainly a political difficulty, which did not exist in the schools themselves. He thought it might be added that it certainly did not exist in some of the School Boards, and one of the most satisfactory features which he had seen and heard that day was the spirit in which the School Board had come forward to offer to the schools of all denominations all the advantages of the centre and other training agencies which it provided for the teachers of its own schools.

THE annual meeting of the Metropolitan Board Teachers' Association was held in the Memorial Hall, Farringdon Street, on October 14, Mr. A. A. Thomas presiding. Mr. T. Gautrey submitted the annual report, which showed that six hundred members had been enrolled during the year, making a total membership of 7,601, or between 80 and 90 per cent. of the whole of the eligible certificated teachers. Mr. T. H. Jones, Headmaster of the Duncombe Road Higher-Grade School, was elected President for the ensuing year. In acknowledging his election, he said there appeared to be a desire in some quarters to confine the education of the working-class children to the

narrowest limits possible, and the present attitude of the Science and Art Department with regard to higher-grade schools and schools of science seemed to him of the most reactionary character.

A MEETING was held in the Mayor's Chamber, Newcastle, on October 16, in support of the scheme for completing the building of the Durham University College of Science, which, it is estimated, will cost £50,000. Earl Grey presided, and said that the Newcastle College of Science stood next to Owens College, Manchester, in number of students. The comparison of the cost of work showed that Newcastle averaged £28 per student, as against an average of £51 per student at other colleges in Britain. He appealed to firms on the Tyne, Wear, and Tees to follow the example of Birmingham, in contributing from their profits, and hoped that before the year was out £100,000 would be raised. The following subscriptions were announced in the room:—Lord Armstrong, £1,000; Earl Grey, £500; Alderman Gibson, £1,000; Bell Brothers, £1,000; Messrs. Swan & Hunter, £1,000; Mr. James Hall, £2,000; the Consett Iron Company, £1,000; Mr. Cruddas, M.P., £1,000; smaller subscriptions, £1,000.

A GIFT of £20,000 has been made to the Birmingham University Fund by Mr. Charles Holcroft. This brought up the total to £315,000. Since September 27, the following gentlemen, mostly residents in Birmingham, have doubled their subscriptions, varying between a thousand guineas and five hundred pounds:—The Lord Mayor of Birmingham; the Right Hon. J. Chamberlain, M.P.; Mr. John Corbett; the Right Hon. William Kenrick; Sir J. C. Holder, Bart.; Messrs. Charles Harding, G. H. Johnstone, Henry F. Osler, and J. A. Kenrick.

UNDER the presidency of Sir W. Hart Dyke, M.P., the first general meeting of the Agricultural Education Committee, a body formed in July last to further the work of education in rural districts, was held on October 20, at the Society of Arts. There was a representative attendance, those present including Sir T. Acland, Sir W. Anson, M.P., Prof. H. E. Armstrong, Lord E. Fitzmaurice, M.P., Principal Hall, Mr. T. F. Halsey, M.P., Sir John Hibbert, Mr. Humphreys Owen, M.P., Prof. Jebb, M.P., Col. Lockwood, M.P., Sir J. Lubbock, M.P., and Sir Henry Roscoe. In his opening remarks the Chairman referred to the position already achieved by the Agricultural Committee. Its members were strongly imbued with a sense of the necessity for change in the method of education in rural schools. Of late years vast improvement had been made in the schools in our great industrial centres; but in the country districts little progress had been made. There had been changes in some instances, but these had been in a direction calculated to draw children away from the villages in which they were born, and from the land on which their fathers laboured. Two practical suggestions he had to make: that a change should be made in the curriculum of rural schools, placing agriculture on the list of grant-earning subjects; and that the County Authorities, working under the new Act, should group schools and give practical lessons in agriculture by a peripatetic teacher.

SIR H. ROSCOE moved a resolution declaring that, in the proposed organization of the new Board of Education, due regard should be had to the interests of agricultural education. This was seconded by Col. Lockwood, M.P. In the discussion which ensued some of the difficulties that were likely to be experienced were mentioned, special stress being laid on the financial aspect and the paucity of the supply of duly qualified teachers. A second resolution was proposed by Sir J. E. Dorington, M.P., and supported by Dr. W. Somerville, urging that provision should at once be made at certain of the teachers' training colleges for giving both theoretical and practical instruction in subjects bearing on agriculture and horticulture. Sir John Lubbock was entrusted with a resolution declaring that instruction in the elementary branches of natural science, bearing on agriculture, should be made compulsory in rural elementary schools, and where practical be accompanied by practical work in plots of ground attached to the schools. A final expression of opinion was recorded that County Authorities should be encouraged to provide experimental and school farms, and to contribute, by scholarships and otherwise, to some agricultural college or department of the first rank.

THE annual meeting of the Council of the National Home-

Reading Union was held on October 20, at the offices of the London School Board. Afterwards, in connexion with the Union, a meeting was held of head teachers of public elementary schools and the responsible teachers of evening continuation schools. Lord Reay, who presided, referred to the interest taken in the Home-Reading Union, and said there was no more useful work than that of making a selection of the books which ought to be read. He could assure them that this Union could add to its usefulness by giving advice as to the books we should or should not read. We were told that at present, with stirring events going on, people only read newspapers, and that, in consequence, writers of books were the most unfortunate class of men; but he hoped that, even at present, people could find time to read one or two books. Mr. Michael E. Sadler said the Union did good work, which had behind it a high social purpose, nobly conceived and faithfully pursued. It gave its members a direction in their reading, and formed for them a personal guidance in the course of their studies. It helped all those who were interested in teaching in increasing their knowledge in the right spirit. Mr. J. Lewis A. Paton, Headmaster of University College School, and Sir Joshua Fitch also spoke.

A MEETING was held at Stafford House, on October 19, in furtherance of Lady Warwick's agricultural scheme for women. The Countess expressed her gratification at the support which her project had received, not only in this country, but in the Colonies, in India, and in the United States; and said she was now in correspondence with ladies on the Continent who desired to work upon the lines on which the Association was founded. A resolution was adopted affirming that it was desirable that duly qualified women should have the advantage of full fellowship in scientific and other learned societies, the Royal, the Linnaean, and the Royal Microscopical.

A REPORT has been issued of the work done during the first year, which ended in July last, of the High School of Commerce affiliated to the University of Leipzig, from which it appears that the number of students was 174, of whom 126 were German subjects and 48 foreigners from Austria-Hungary, Russia, Belgium, Switzerland, Bulgaria, France, Roumania, Great Britain, Italy, Holland, Norway and Sweden, Greece, and Servia. As many as 23 of the students took the course provided for the instruction of intending teachers of commercial science. There were sixteen University professors and lecturers and nine other teachers. The winter session of 1899-1900 began on October 16, for which courses have been provided under five heads:—A. University lectures in Economic Theory, and Economics of Trade and Industry in particular; Practical Economics, Finance, Statistics, and Sociology; History of Trade; Commercial Law, Law of Bills, International Law, and Maritime Law; Law of Insurance; Economic Geography; Chemical Technology; History of the German idea of Unity and Development of Nationality; Chinese and Japanese Languages; Industrial Hygiene; School Hygiene; History of German Literature, and Interpretation of Bürger, Goethe, Schiller, and History of English Literature. B. Practical Drill at the Commercial Institute; Bookkeeping, Correspondence, and Counting-house Work, and Commercial Arithmetic. C. Commercial Teachers' Seminary: Lectures, Discussions, Criticism of Lessons given by Students. D. Language courses: Correspondence in French, English, Italian, Russian, and Spanish, with special drill in French and English Conversation. E. Dexterity: Shorthand (alternative systems) and Type-writing. The libraries of the University and the Chamber of Commerce are placed at the students' command.

UNDER an ordinance of the Saxon Home Office, bearing date January 13, 1899, the first examinations will take place in the ensuing year. These will be conducted by a Commission, the president of which is a representative of the Home Department. The successful students will be awarded Honours of the First or Second Class, or a Pass. The composition fee for the obligatory subjects will be £2. 10s., and 10s. further for each optional subject. The examinations will be in two categories: A, for ordinary student's diploma; B, for teacher's certificate of efficiency. In either case only such candidates will be admitted as have completed four sessions, i.e., two years' study. The obligatory subjects of the general examination are, the "technical": higher commercial arithmetic, bookkeeping, German commercial correspondence, and counting-house work; and the "theoretical":

economics, finance, and commercial history, commercial and bill law, economic geography. The optional are the other subjects taught in the school (correspondence in foreign languages, technology, &c.) There are to both a written and an oral examination; admission to the oral being made dependent on success in the written examination, and the *viva voce* test, extending to all the obligatory subjects, shall for each candidate occupy not less than forty-five minutes. The obligatory subjects of the teachers' examination comprise all those appointed for the other. The candidates must afford proof of having attended the courses of a practical character, and of their acquaintance with the English and French languages.

THE following letter has been addressed to the Secretary of the Decimal Association by the Education Department:—"My Lords are in full agreement with your Association in desiring that instruction in the principles of the metric system should form a part of the regular course of instruction in all public elementary schools in England and Wales. With this object they have caused a special note to be inserted in Schedule I. of the Code pointing out that the scholars in and above Standard IV. should know these principles, and that lessons leading up to these principles may be usefully given in Standard III.; and they have also called special attention to those provisions of the Code by means of a paragraph (par. 22) in the instructions to inspectors. Their Lordships cannot admit that there is ambiguity in the directions of the Education Department on this subject, as is suggested in your letter now under reply. My Lords note your statement that there is a strong feeling among School Boards throughout the country in favour of the metric system being more thoroughly taught in the public elementary schools, and I am to assure you that the Education Department desire to support any movement, &c., for useful and efficient instruction in the system which it may be found possible to set on foot. The remedy for any present neglect of the provisions of the Code is in the hands of the School Boards and school managers. It is their duty to see that provision is made for teaching the subject in the schools controlled by them.—H. I. POOLEY, Education Department."

UNIVERSITIES.

(From our Correspondents.)

Oxford. A NEW term and a new academic year began with an allocation from the President of Corpus, on his appointment as Vice-Chancellor for the ensuing year. He spoke in Latin—when will the old affectation pass away?—briefly summarized his past five months of office, and, after referring gracefully enough to the two royal visits in the summer term, went on to say, almost in terms of regret, that the period during which he had held office had not been eventful. "None of the more eminent members of the University had died, nor had any office fallen vacant," except the Senior Proctorship which had been recently vacated by the election of Mr. Lindsay to the Chair of Humanity at St. Andrews. No new statutes of any importance had been enacted, except perhaps that on the patronage of University livings, "*quod ad mala quadam levanda destinatum utinam ne plura et graviora inducat.*" On the other hand, new buildings were rising in all directions, "*cui quidem spectaculo jam per multos annos adsuefacti sumus.*" The new library for the reception of scientific works was entirely due to the munificence of the Drapers' Company, nor was the gift burdened with any conditions. Two laboratories, one for pathological, the other for morphological study, were also being built on the Museum site, the latter entirely at the expense of the University, the former aided by a munificent gift of £5,000 from an anonymous benefactor. The University Press had not been idle. Of the books, on the learned side, which had been brought out during his short tenure of office, he might specially mention two new parts of the "New English Dictionary," the second series of "Studies in Dante," by Dr. Edward Moore, "An Introduction to the Fifth Book of Hooker's Ecclesiastical Polity," by the Dean of Christ Church; and, lastly, a Catalogue of the Cyprus Museum, a most laborious work, and likely to be of great service to persons interested in ancient art, the joint production of Mr. J. L. Myers, Tutor of Christ Church, and a learned German, Herr Max Richter.

It is noteworthy that two good Oxford men, tutors of their colleges, were snatched away in beauty's bloom (I merely mean that they were very young for professorships) during the long vacation. Mr. Phillimore, Student and Tutor of Christchurch,

was appointed Professor of Greek at Glasgow. I observe that he has already given his first lecture, and that he is appreciated in a Glasgow paper as "quite a handsome man, with a very pleasant face and a heavy moustache." Mr. Lindsay's departure vacated the Senior Proctorship, and the Principal of Jesus College (Mr. Rhys), with whom rests the right of nominating his successor, has appointed the Rev. W. C. Allsebrook, who took his degree from Jesus College in 1891, and, after clerical work elsewhere, returned to Oxford two years ago to be Chaplain at Christ Church and at Jesus College.

The term at Manchester College was opened by the delivery of a public address by the Rev. W. E. Addis, M.A., the new Professor of Old Testament Literature. The session opens with nine full divinity students and seven special students, including two Indians. There are six undergraduates at Oxford colleges or elsewhere who are preparing to enter Manchester College on taking their degrees. The common residence for the students, in the houses belonging to the College in Holywell, is now open, Mr. Addis also being in residence, as Warden, in the adjoining house.

The series of special Sunday evening sermons for members of the University (especially undergraduates) will be delivered this term at St. Mary's as follows:—October 22, the Bishop of Hereford; 29, the Rev. C. G. Lang, vicar of Portsea and Fellow of All Souls; November 5, the Bishop of Stepney; 12, Canon C. Gore; 19, Canon Scott Holland; 26, the Dean of Lincoln.

The Professor of Human Anatomy has notified that the Welsh Prize (not "a Welsh prize," as the *Gazette* has it!) has been awarded to Hubert M. Turnbull, B.A. Magdalen. The vacant Liddon Studentships have been awarded to Alfred C. Paterson, B.A. Trinity; and Philip A. Micklem, Scholar of Hertford. An additional studentship has been awarded to Kenneth D. Mackenzie, Scholar of Hertford. The Examiners for the Hebrew Scholarships have reported to the Vice-Chancellor that they have elected as follows:—To the Junior Kennicott Scholarship: C. A. B. Brockwell, B.A. Wadham College; to the Pusey and Ellerton Scholarships: G. G. V. J. H. T. Stonehouse, Exhibitioner of Exeter College, and G. H. Vasey, St. John's College. The award of the Senior Kennicott Scholarship will be notified subsequently.

A RECORD entry and record weather—we are **Cambridge.** certainly commencing the new academical year under favourable circumstances. Wars and

rumours of wars do not affect us except in a favourable manner, as would-be officers find the path to glory through the University a convenient and pleasant short cut; and University candidates for the Army, though their stay with us is not prolonged, enliven the University during their passage.

The retiring Vice-Chancellor (Dr. Hill, of Downing) made the customary valedictory speech on resigning office, on September 30. He dealt chiefly with two topics: the growth of the Benefaction Fund; and the increase, both in quality and quantity, of the Medical and Scientific Schools. It is left to Dr. Hill to formulate, for the first time, the statement, now universally admitted as correct, to the effect that pure science has lost little from its association with the applied branches, and that work of first-rate importance in the older subjects of University culture is due to those whose principal aims are the promotion of science in its practical form.

Successful as Dr. Hill has been as our Vice-Chancellor, no notice of his Vice-Chancellorship would be complete without a mention of the fact that he is the first responsible officer of the University to give to the world a clear statement on the relation of athletics to bookwork, and to recognize a difficulty which cannot be ignored. He has spoken with no uncertain sound, and distinguished the invaluable training of the athlete, be the prize ever so small, from the valueless craving after spectacle, the debased instinct which looks for its amusement in seeing work done by others—going home and criticizing—or, worst of all, in the latest practice of looking on athletics as a mere vehicle for gambling. There must be something in the position that great athletes enjoy in any University, and our late Vice-Chancellor has given us reasons to show that a healthy public feeling may sometimes be right.

The scandals attendant upon the present mode of presenting to vacant University livings are in a fair way to become things of the past. A Syndicate has reported in favour of future appointments being made by a Board consisting of the Vice-Chancellor and eight members, four of whom are to be selected by the Council and four by the Special Board for Divinity. This

plan, which will probably be adopted in substance, will prevent the unseemly touting for votes which used to go on in the past, and, it is hoped, will be the means of procuring the best men for the vacant benefices.

The Long Vacation has not seen any great changes in the *personnel* of the University. The new Agricultural Professor is at work, and Dr. Woodhead, the recently appointed Professor of Pathology, is rapidly establishing his position in the Medical School as an energetic worker and a capable leader of men. Friends of Dr. Maitland, the Downing Professor of the Laws of England, will be sorry to hear that through continued ill-health he is unable to lecture this term. Beyond this there are few changes. At Trinity, Dr. Verrall resigns the Tutorship which he has held for ten years, and leaves office with heartfelt regrets from those with whom he has been associated. Mr. Duff, his successor, is already justifying his selection. A difficulty which before long will have to be faced at the smaller colleges is that of the tenure of college offices—a tutor who does not possess the requisite tact or special capacity may ruin the prospects of his college in spite of his learning and devotion to duty. Notorious examples of this suggest themselves readily to any one acquainted with Cambridge life; yet in smaller colleges it is practically impossible to eject a well settled Tutor with anything short of dynamite or an earthquake.

The McGill University, of Montreal, has been affiliated to Cambridge, and we shall shortly, without doubt, receive valued additions to the number of our *bona fide* students from that source.

The war, and the negotiations which preceded it, have possessed a peculiar interest for the younger generation of Cambridge men, inasmuch as three former Seniors in the Law Tripos are intimately connected, personally, or through their near relatives, with recent events. The present writer can, from personal knowledge, affirm that the opinions formed of the two leading characters in South African politics of to-day—Sir A. Milner and Mr. Schreiner—by those who knew their undergraduate career, are amply verified by the course of events and the judgments of a larger public.

THE Degree Lists of the University of Wales for Wales. this year show a continued increase in the number of those following successfully the curriculum of the University. An analysis of these lists gives the following results. Taking first of all the Pass Examination in Arts, we find that, in the Intermediate (or first year stage) in Greek, 20 candidates passed from Aberystwyth, 16 from Bangor, and 20 from Cardiff. At the Ordinary (or second year stage) in that subject, 13 passed from Aberystwyth, 12 from Bangor, and 12 from Cardiff. At the Special (or third year stage), 3 passed from Aberystwyth, and 2 from Bangor. In Latin at the Intermediate Stage, 46 passed from Aberystwyth, 24 from Bangor, 30 from Cardiff. At the Ordinary Stage, 22 passed from Aberystwyth, 13 from Bangor, and 14 from Cardiff. At the Special Stage, 2 passed from Aberystwyth, 2 from Bangor, and 4 from Cardiff.

In English, at the Intermediate Stage, 40 passed from Aberystwyth, 17 from Bangor, and 23 from Cardiff. At the Ordinary Stage, 14 passed from Aberystwyth, 18 from Bangor, and 11 from Cardiff. At the Special Stage, 1 passed from Aberystwyth, 5 from Bangor, and 5 from Cardiff. In Welsh, at the Intermediate Stage, 9 passed from Aberystwyth, 11 from Bangor, and 10 from Cardiff. At the Ordinary Stage, 4 passed from Aberystwyth, 11 from Bangor, and 4 from Cardiff. At the Special Stage, 5 passed from Bangor. In French, at the Intermediate Stage, 29 passed from Aberystwyth, 13 from Bangor, and 12 from Cardiff. At the Ordinary Stage, 12 passed from Aberystwyth, 6 from Bangor, and 7 from Cardiff. At the Special Stage, 1 passed from Aberystwyth, 2 from Bangor, and 2 from Cardiff. In German, at the Intermediate Stage, 2 passed from Aberystwyth. At the Ordinary Stage, 2 passed from Aberystwyth and 1 from Bangor. At the Special Stage, 1 passed from Cardiff. In Hebrew, at the Intermediate Stage, 7 passed from Aberystwyth, 8 from Bangor, and 13 from Cardiff. At the Ordinary Stage, 6 passed from Aberystwyth and 7 from Cardiff. At the Special Stage, 1 passed from Cardiff. In Arabic (Ordinary Stage) 1 passed from Aberystwyth. In History, at the Intermediate Stage, 34 passed from Aberystwyth, 21 from Bangor, and 13 from Cardiff. At the Ordinary Stage, 12 passed from Aberystwyth, 7 from Bangor, and 7 from Cardiff. At the Special Stage, 1 passed from Aberystwyth and 1 from Cardiff.

In Philosophy, at the Ordinary Stage (there being no Inter-

mediate Stage in this subject), 11 passed from Aberystwyth, 19 from Bangor, and 12 from Cardiff. At the Special Stage, 3 passed from Aberystwyth, 4 from Bangor, and 2 from Cardiff. In Elementary Logic (a compulsory subject), 54 passed from Aberystwyth, 37 from Bangor, and 38 from Cardiff. In Education, at the Special Stage, 2 passed from Aberystwyth, 2 from Bangor, and 3 from Cardiff. In Political Science, at the Ordinary Stage, 1 passed from Aberystwyth. In Pure Mathematics, at the Intermediate Stage, 24 passed from Aberystwyth, 8 from Bangor, and 6 from Cardiff. At the Ordinary Stage, 7 passed from Aberystwyth, 6 from Bangor, and 3 from Cardiff. At the Special Stage, 1 passed from Aberystwyth and 1 from Cardiff. In Applied Mathematics (taken for the B.A. degree, at the Ordinary Stage), 1 passed from Aberystwyth, 2 from Bangor, and 2 from Cardiff. In Physics (taken from the B.A. degree), at the Intermediate Stage, 1 passed. In Chemistry (taken for the B.A. degree), at the Intermediate Stage, 1 passed from Bangor and 1 from Aberystwyth.

Turning now to the Honours Examinations for the B.A. degree, we find the following results:—In Greek, First Class Honours were gained by 1 from Aberystwyth and 1 from Bangor; Second Class Honours by 2 from Aberystwyth and 1 from Bangor. In Class III. none. In Latin, First Class Honours were gained by 1 from Aberystwyth and 1 from Bangor; Second Class Honours by 1 from Aberystwyth and 1 from Bangor; Third Class Honours by 1 from Aberystwyth and 1 from Cardiff. In English, First Class Honours were gained by 1 from Aberystwyth; Second Class Honours by 3 from Aberystwyth and 2 from Bangor; Third Class Honours by 1 from Aberystwyth, 1 from Bangor, and 1 from Cardiff. In Welsh there were no First or Second Class Honours; Third Class Honours were gained by 1 from Bangor and 1 from Cardiff. In French there were no First Class Honours; Second Class Honours were gained by 1 from Aberystwyth; Third Class Honours by 1 from Cardiff. In German there were no Honours candidates. In Hebrew, First Class Honours were gained by 2 from Cardiff; there were no Second or Third Class Honours. In History, First Class Honours, 1 from Cardiff; Second Class, none; Third Class, 1 from Aberystwyth. In Philosophy, Class I., none; Class II., 1 from Cardiff; Class III., 2 from Cardiff. In Pure and Applied Mathematics, Class I., 1 candidate from Aberystwyth; Classes II. and III., none.

In the Faculty of Science we find the results of the Pass Examinations as follows:—In Mathematics, at the Intermediate Stage, 16 passed from Aberystwyth, 12 from Bangor, and 21 from Cardiff. In Pure Mathematics, at the Ordinary Stage, 3 passed from Aberystwyth, 8 from Bangor, and 6 from Cardiff. At the Special Stage, 1 passed from Aberystwyth, 4 from Bangor, and 5 from Cardiff. In Applied Mathematics, at the Ordinary Stage, 5 passed from Bangor, and 7 from Cardiff. In Physics, at the Intermediate Stage, 16 passed from Aberystwyth, 13 from Bangor, and 19 from Cardiff. At the Final Stage, 6 passed from Aberystwyth, 9 from Bangor, and 5 from Cardiff. In Chemistry, at the Intermediate Stage, 25 passed from Aberystwyth, 14 from Bangor, and 26 from Cardiff. In Organic Chemistry (Final Stage), 7 passed from Aberystwyth, 5 from Bangor, and 3 from Cardiff. In Inorganic Chemistry (Final Stage), 6 passed from Aberystwyth, 5 from Bangor, and 3 from Cardiff. In Biology, Intermediate Stage, 4 passed from Aberystwyth, 6 from Bangor, and 5 from Cardiff. In Zoology (Final Stage), 1 passed from Cardiff. In Botany (Final Stage), 1 passed from Aberystwyth, 2 from Bangor, and 1 from Cardiff. In Geology (Final Stage), 2 passed from Aberystwyth and 1 from Cardiff. In Philosophy (Ordinary Stage), 1 passed from Bangor and 1 from Cardiff. At the Special Stage, 2 from Cardiff. In Elementary Logic (Compulsory), 17 passed from Aberystwyth, 19 from Bangor, and 26 from Cardiff. In Education (Special Stage), 2 passed from Aberystwyth. In Human Anatomy (Final Stage), 1 passed from Cardiff. In Physiology (Final Stage), 2 passed from Cardiff. In Agricultural Science (Final Stage), 1 passed from Aberystwyth and 1 from Bangor. In Mining, 1 passed from Cardiff. In Mine Surveying, 2 passed from Cardiff. In Engineering Drawing, at the Intermediate Stage, 4 passed from Cardiff. At the Final Stage, 4 passed from Cardiff.

The Honours results are as follows:—In Physics, 1 gained Second Class Honours from Bangor and 1 Third Class from Cardiff. No First Class Honours were awarded. In Chemistry, 1 gained First Class and 1 gained Second Class Honours from Bangor. No Third Class Honours were awarded. In Botany, 1 gained Second Class Honours from Bangor. No First or Third Class Honours were awarded.

The annual Collegiate Meeting of the Court of the University of Wales will be held at Bangor on November 2. The annual degree ceremony will take place in connexion with this meeting. A meeting of the Guild of Graduates of the University will also be held for the purpose of electing the officers of the Guild. This meeting was to have been held last April, but was put off owing to the death of the Warden, the late Mr. T. E. Ellis, on the morning of the meeting.

COLLEGE OF PRECEPTORS.

DISTRIBUTION OF DIPLOMAS, PRIZES, AND CERTIFICATES.

The public distribution of Diplomas, Prizes, and Certificates to the successful candidates at the last Midsummer Examinations took place at the College, Bloomsbury Square, on Thursday, October 26. The chair was occupied by the Right Rev. the LORD BISHOP OF LONDON, who was supported on the platform by Mr. H. W. Eve, Dean of the College; Dr. Wormell, Vice-President; Mr. E. Pinches, Treasurer; Mr. Atkinson, Mr. Bidlake, Rev. J. O. Bevan, Rev. F. Besant, Rev. R. H. A. Bradley, Prof. Buchheim, Mr. Butler, Prof. Church, Mr. Hagreen, Rev. G. Henslow, Rev. Dr. Hiron, Dr. Lawrence, Mr. Millar-Inglis, Mr. Mussou, Mr. Nicholson, Rev. R. O. T. Thorpe, Rev. J. T. Watson, Dr. Weymouth, Mr. Wilson, and others.

The CHAIRMAN, in opening the proceedings, said:—

It will presently be my pleasure to distribute to the successful candidates the prizes which they have gained; but I am told that before doing so it becomes my duty to make a few remarks to those who have to receive them. Of course that is a much more difficult thing than giving them their prizes, because it is a very easy matter to give a lecture to those whom you know, but it is very difficult to offer advice to those whose circumstances and conditions you do not know. Now about education it is always perfectly easy to advise anybody else, but I never find that the advice which you give about education is accepted by the person to whom it is given, and no doubt those to whom I speak will not prove exceptions to that general rule.

Now, there are so many things to be said on the subject of education and teaching that, when I begin to talk about it, I do not know where to leave off. You know, there are some people who say that education is the dulllest of all subjects, and that everything has been said about it that can be said. I do not think it is at all a dull subject, except perhaps to those who are the objects of it, and, I believe, they almost universally at the beginning vote it to be dull. Perhaps I may take that observed fact as the starting-point of my remarks. After all, what have you to do as teachers? I believe very often teachers think they can do more than they really can do—not that in this they are unlike any other class of the community, but they do tend to have that impression. No doubt it is forced upon them, not from their own conviction, but from outside opinion, because I believe they are quite as modest as other people. I mean to say that a parent seems frequently to be willing to hand over his child to you to do whatever you like with him, and he is certainly very ready to put down any defects, either physical or mental, that he should afterwards show, at your door, and to say: "My child might have turned out very different if you had dealt with him in some other way." You have impressed upon you the importance of what you are doing from the outside, and the result of that is—it may be because you have not been properly instructed—to make you think that a teacher can do very much more than he can do.

If I venture to talk about teaching, it is because I have spent a great part of my life in teaching. You know, you only begin to be of use as a teacher when you discover how very little it is that you can do. I believe that is the first and most important part of a teacher's equipment—to know how little he can do. What is it that a teacher can do? He cannot by any means get knowledge into a pupil's head unless the pupil is willing to take it in himself—that is to say, all that the teacher can do really is to show cause why the learner should learn; and the sole secret of the art of teaching is to manage to persuade and to exhort, somehow or other, by all the means in your power, those whom you have to deal with to learn; but the learning has to be their own, and not yours, and you cannot make it any easier to them by any dogmas, mechanical or other. Things which are learnt are valuable just in proportion to the amount of trouble which you have taken to learn them; and, if you suppose you can make learning easy to any one, you make a mistake. Learn-

ing must always be a difficult process, and one that is utterly repugnant to the natural man. You, therefore, as teachers, have to grapple with the natural man by kindly and gently showing good cause why he should learn, and kindly and gently showing good cause why he should cease to be so very natural, and become just a little spiritual sometimes. That is the point of view from which you have really to approach everybody with whom you are engaged in teaching. The work of a teacher, after all, is like that of introducing people in a drawing-room. All you have to do for the child who comes to you to be taught is, to take him kindly by the hand, and say: "Let me introduce you to Dame Knowledge: she is an old lady of grim appearance, but, when you come to know her, you will find she is not such a bad sort." On the mode by which you effect that introduction depends really all the subsequent development of the child. It is a very slight thing which you can do in introducing a child to knowledge, but the way in which you do it greatly affects the whole of that child's subsequent life. It is but little, and yet it is very much. It is so little that we can do; but, because we can do so little, it is so exceedingly important that we should do it rightly.

These remarks are suggested to me because the other day I was reading a very old-fashioned book called "St. Augustine's Confessions," and I was struck by the account that he gives of his own childhood there, in which he uses these very striking words: "We love play," he says, "and for this we were punished by those who were doing the same thing; but the follies of our elders are called business, whereas the business of children is punished by grown men." There is no doubt that the follies of elders are called business; that is quite obvious. You see people looking most occupied nowadays, and, if you ask them what they are doing, they say "business"; but you know that half at least of what they are doing must be folly. Do not suppose that a child's eyes are not just as clear as yours, and a child looks at you who are engaged in teaching him, and tests you not by what you say, but by what you are; and a child is quite ready to say that the follies of grown people are called their business, and that they take upon themselves to chastise children for attending to their business, which is the business of play. It cannot be anything else. The first thing that a young child has to do is to grow; this is his first occupation, and the way in which a child physically develops is by means of play. We call play all that which makes up the process of physical development. That must always be the main occupation of a child, and all your modes of teaching must be subordinate to the observance of that rule and to keeping that before your mind. Then you have to watch your time, and you have to consider how you can best kindle interest in the child, because of course you will never succeed in teaching a child unless you show good cause why he should learn—that is to say, unless you attract and kindle his interest.

Of course, in teaching there are many degrees; but let me tell you this, that the highest degree of teaching is very much the easiest. It is, of course, much easier for a college tutor to give a lecture to a picked lot of men who desire to learn: they are there because they want to learn; they are there because they want to adapt themselves to him; he is master of the situation. But, the lower you go down in teaching, the more demands there are upon the teacher; that is to say, the younger the children are whom you are teaching the harder really is the work you have to do. It is not knowledge that goes to make up the teacher—not an enormous amount of knowledge, though I need not say that has not to be neglected—but it is a sympathy with the nature and the life of those whom he is engaged in teaching. Unless you preserve that sympathy keen, and unless you keep your mind fresh, you cannot teach properly. Although, of course, as life goes on with you, the numbers of generations of those of the same age who pass through your hands tend to become appalling, yet still remember this, that with each new pupil who comes to your class the whole thing is new and fresh, and, if you have to cope with that pupil, your mind will have to be fresh and vigorous also.

No knowledge of method, no stereotyped modes of education, will enable you to go on doing your business as it ought to be done, simply applying mechanical moulds of the same shape and size to the minds of those young children who come under your hand. Every child is really different from every other child; you are constantly dealing with a human life, that is alert at every point, that has its own thoughts and its own interests, and that is ready to welcome you if you can speak in a language that can be understood, but that will not listen to you, however wise you are,

if you speak in a far-off and remote manner which does not carry conviction to its mind.

Let me put it to you again. You have to introduce each child anew to Dame Knowledge, and you have to get each child to see that that acquaintance is a desirable and a valuable acquaintance to make, and any means by which you can do that you have to be constantly ready to use, constantly observing the set of the children's minds and the tendency of their thoughts, constantly looking out for some new way in which you can put things so that they are readily acceptable to them; for, as I have said, a good deal of knowledge is required necessarily, even for the simplest and most rudimentary teaching. The reason of that is that, unless you know a good deal about things, you cannot put them into various shapes, so that a stupid person can be taught one formula and can go on repeating it. It is death and destruction to a teacher if he can only say what he has to say in one shape. The very essence of a teacher is that he should know so much, and so readily and clearly, that he can answer any fair and honest question that is asked about the matter that he is teaching, and answer it in the language and according to the mode of thinking of the person who is asking him. You must be ready to say the same thing in an endless variety of ways, and remember, when you start with a class—if the class is twenty, say—what is the material you have to start with—twenty idle and inattentive children who do not want to learn, and who regard you as their natural enemy. That is the normal condition of childhood, and we do not want it to be otherwise. Do not say it comes from human perversity; because it does not. It is natural, and so far as it is natural it is also right; because, after all, the younger a child is, the more cause has to be shown to the child why he should not be kicking his heels in the field instead of listening to you. It is an outrage on the child that that should be the case, and you have to make good that outrage—you have to show that there is a reason, and a good reason, and a sufficient reason, and that the time spent with you really could be made just as agreeable if the child would only stop every day a little bit and submit to a few regulations as if he were kicking his heels outside. Until you have got that notion into the child's head, and until you have settled the problem, you have not begun your educational career.

You will say that it is very easy for me to give you all this good advice, but that I should do it very badly myself if I had to do it as you have. I agree that that would be so. I can only tell you that my own attempts at teaching young children have been disastrous failures when I had a country parish. I was not alone in that, because both my wife and my curate tried the same, and the result was that we all regarded ourselves as intelligent persons, and took great pains in teaching children things that were quite obvious and ordinary. When they came to be inspected, they all failed in all the things to which we had applied ourselves. That raised the question: Who was to blame for that result? Was it the teachers, was it the children, or was it the inspector? Do you know, I was so conceited that I thought the fault was the inspector's. However, that was quite natural. His business was to examine in a kind of knowledge which I was not trying to give.

The importance of a great deal of your teaching must be that it lies beyond the power of any human recognition at all; that an inspector cannot find it out, and that nobody can; but it must be a secret between the children and you. You got the idea into that child's head; he understood what you meant when you were talking to him, but he cannot produce it to anybody else in the form of an answer to anybody's question. He will tell you what he was thinking about, but he could not tell anybody else, and it is not desirable that he should, because the idea that you have given him will have to take root for some time before it can be expressed in any very definite terms at all. You know how desirable it is that we should express our thoughts. It is, perhaps, more valuable that we should first of all form our thoughts, and it is possible that in teaching we may give such entire attention to the mere process of expressing our thoughts that we should forget entirely the more important thing, the mode by which thoughts are formed. If you can teach a child to think, you have done for him the greatest thing you can do; if you have induced him to think for himself, then you have begun an education which will go on through the whole of that child's life. It will not be counted for much in examinations, and no record will be made of it by the inspector; but it will be a life-long consolation that will grow with his growth, it will form the most important part of his life, it will dominate his character and make him what he ultimately becomes.

The Diplomas, Prizes, and Certificates were then distributed,

upon which the DEAN of the College, in proposing a vote of thanks to the Chairman for his presence there that day, and for his very suggestive words, said he remembered the Bishop when he presided at a lecture delivered by Sir Walter Besant two years ago, saying how in the English people there was always a certain vein of pertinacious stupidity, and he (the Dean) could not help thinking there was just a trace of that feeling in the Chairman's mind that day when he told them at the beginning of his address that they were sure to forget all the good advice he gave them. It would have been noticed that the Chairman's remarks were mainly addressed, not to the boys and girls, who were always ready to take good advice, and who always remembered it, but rather to their teachers and the examiners, who he hoped would not forget his good advice, but who, alas! were very likely to do so. He (the Dean) confessed that when he was a teacher the thing he was most afraid of was being dull, and he thoroughly endorsed the sentiment that the teacher should be in sympathy with the pupil. Their Chairman had multifarious engagements; but wherever there was any good and useful work to be done, or kind and encouraging words to be said, there the Bishop of London was to be found. At this moment their thoughts were naturally with the brave men who were fighting their battles on the other side of the Equator, and the motto of the Royal Artillery, "Ubique," came to his mind as peculiarly appropriate to his Lordship, and he might add its companion motto, "Quo fas et gloria ducunt," with its nobler English equivalent, "The path of duty is the way to glory."

Dr. WORMELL, in seconding the vote of thanks, said he remembered meeting the Chairman at Leicester, and hearing him deliver a sermon to teachers in the old church of St. Martin's. On that occasion he wished that the Bishop might soon be translated nearer home, and his conscience was quite at ease, because he was not aware that the Tenth Commandment forbade one coveting one's neighbour's bishop. As an old teacher, he felt very much indebted to the Chairman for the encouragement and counsel he had given to teachers on all occasions when he had the opportunity. The Chairman commenced by saying that he did not know the circumstances and conditions of those who were to receive the prizes. That was quite true as to the individuals; but, as a teacher, he knew the conditions and circumstances of all young people. He was convinced that the schoolboy's expression that learning was dull work was only a form of speech. The other day he had some essays, as examples in composition, to read, and one of the subjects set was "The Subject of Study that you like best." One boy said that he could not write an essay on the subject of study that he liked best; so perhaps it would be as well if he took another subject, namely, "The Subject of Study that he hated least." On reading this essay, he came to the conclusion that, in spite of the form of speech and the desire to be like a schoolboy, and say how much he hated work, he really enjoyed three or four subjects. What the Bishop had said about his own failure was an encouragement to the teachers of the very young. They had difficulties that older teachers did not have. He thought it would be well for the older teachers if they were compelled to begin their training with the youngest. At the same time, for the encouragement of those who had to deal with the youngest, he would say that he thought some of those who succeeded higher up would not find their path so smooth if they had to do with the little ones. His greatest failure as a teacher was similar to the Bishop's experience. A good many years ago a teacher of infants in a Sunday school, in the back parts of Westminster, was suddenly taken ill, and he was asked to act as a substitute. He should never forget the experience. Twenty or thirty little ones got on his knees and got on his shoulders; they pulled his hair left and right, and some of them kissed him both left and right, and, finally, they took away his necktie and the stud from his shirt. He went away humbled. His humility convinced him that, if he had to teach the very young, he must undergo a very different kind of training from that which he had previously had. Therefore, he hoped what the Bishop had said about his little failure would be an encouragement to those who found it sometimes difficult to deal with the very young.

The vote of thanks having been passed by acclamation, the CHAIRMAN, in reply, said: I do not know that I deserve your thanks for coming here this afternoon. There is no greater pleasure to me, or to anybody else in my position, than to look upon the faces of those who are going forth to teach the young of the coming generation. We all of us know how much depends upon you; we know the older we get how much you can do that we cannot do, and it is a delight to think

that anything we can say in any possible way can help you to do your work. I have only this one other thing to say: "Be true to your vocation as a teacher." I am delighted to think that the sense of vocation in teaching is really growing. A little while ago I should have said that teaching was the line of life in which there was the least sense of vocation. That seems to be the reason why it did not advance so rapidly as it might, but I believe that is breaking down. I was delighted recently to see the letter of a young man who had gone to be a schoolmaster. At the end of his first term he wrote that he was very sorry the term was coming to an end, because he enjoyed his work so much that the notion of parting with it was really a perfect agony. The next term he wrote to say that he had a class of twenty, and that he had succeeded in getting hold of nineteen of them, and he thought he could get the other one in process of time. That came under my observation as a thing that was current and passing. If you can get parents in the least degree interested in what their children have done at school, you have done a great deal.

GENERAL CULTURE.

THE writings of Matthew Arnold have, perhaps, tended to throw some discredit on the general culture which that apostle of sweetness and light advocated so fervently. If there had been any fault in the boys that his father sent up to Oxford, it was a certain air of superiority almost akin to priggishness. Perhaps the same fault has been noticed in those who have worshipped at the shrine of the son. The possession of culture may carry with it a certain feeling of superiority in inferior minds; and the world is most severe on anything that rebukes its own shortcomings. Whatever be the cause, the word "culture" is apt to raise a smile on many faces. But, surely, there is no true reason or this. Culture should be the quality of those who have carefully trained themselves; but in practice it is used in a somewhat more limited sense, and this we propose to adopt. There are the two great entities, "Man" and "Nature"; let science be restricted to the study of the latter, and let culture be kept for those studies that are in any way connected with man.

Now, at the present day, there is a very real danger that the study of man may be neglected, though Sir William Hamilton declared that there is nothing great in the world but man. So many new subjects are asserting their right to a place in the curriculum, that old-established studies have to yield. "The old order changeth, giving place to new." The first step was the giving up of Greek: soon the study of Latin may have to go. The Birmingham Chamber of Commerce advocates its dismissal from commercial schools. [See the *Schoolmaster*, September 16, 1899.] But it is surely wrong that knowledge of the Greeks and Romans should vanish. Nowhere can all the qualities that go to make a good man be so well illustrated as from their histories. A great Englishman once traced much that was good and noble in the character of Englishmen to the lessons they had heard when young on the Greek and Roman heroes. If Latin and Greek must go, cannot they be replaced by what may be called "general culture lessons"? Such lessons would form a useful corrective to the utilitarian and materialistic influences of much science teaching. An advocate for the qualities they would train may be found in "What is Secondary Education?" where Mr. Jennings says: "The mind needs to be trained, as well as the memory stored; and no line of life—least of all that great profession which needs so large a knowledge of men and things as commerce—can dispense with general literary culture" (pages 87-8). What is required may be expressed in Emerson's words—an introduction to the universal mind.

In addition to this general plea, a particular one may be put in for more lessons in universal history. Why should the range of the average person be restricted to his native land? Take such a book as "Men of Might." Among the fourteen names with which it deals are Socrates, Mohammed, St. Bernard, Savonarola, Washington, Wesley, and Damien. A boy who has gathered some notion of just these few great men has been widened and liberalized. The Greeks, the Mohammedans, the Italians, are a little more real than they were before; while the story of Damien's life teaches that other things are worthy of man's ambition beside making a fortune. Even more to the point is the list in Miss Stirling's "Torchbearers of History": Homer, Sophocles, Socrates, Alexander the Great, Regulus, Julius Cæsar, Virgil, Hypatia, King Arthur, Charlemagne, Rollo, The Cid, Cæsar de Lion, Dante, Robert Bruce, Joan of Arc, Columbus, Copernicus, Luther. Here are nineteen names, which can be taken in as many lessons, and will form about two terms' work. Yet how many schools do give such lessons? Think what an illuminating influence they might be made to have. At the same time they would give definiteness to names that are floating vaguely in the mind, so well known as to be almost unknown. Not long ago a lady who would have considered herself well educated, and could speak modern Italian well, spoke of Dante in a tone of astonishment that at once revealed her profound ignorance of him. Yet he is one of the world's greatest classics. Such ignorance ought

to be impossible. Easier lessons of the kind advocated will be found in Miss Gardner's "Friends of the Olden Time." Sir E. Creasy's "Fifteen Decisive Battles" also lends itself very well to this object of taking a boy's mind over the world's history.

If "General Science" has a place in curricula, and even in examinations, why cannot "General History" find a place also? If it found a place in regulations, it would find a place in schools. Only examiners would not have to set papers for the special purpose of finding out what boys did not know.

A word may be put in for general papers, as taking very little time, and tending to rouse boys' minds to take a keen interest in all manner of things. Plenty of questions can be set, to make them "all eyes" with regard to their surroundings and what goes on in them. The following will show what is meant; but stock questions on books, characters, and authors have been left out. The questions have all been actually given:—

1. Explain briefly why England needs to keep a firm hold on Egypt.
2. If you were forced to emigrate, where would you go, and why?
3. Name half-a-dozen living novelists, with some of their works.
4. Name the parts of the world that still require to be explored.
5. Mention a score of notable events in the present reign.
6. Mention some great shipping companies, with their main routes.
7. Name the parts of a bicycle.
8. Put down half-a-dozen reasons (one line each) for and against cycling.
9. Name the countries in the world that are vigorous, and those that are decaying.
10. Quote ten proverbs.
11. Name the qualities that help to make a man successful.
12. If you were made a millionaire, how would you use your money?
13. Name a dozen of Scott's novels.
14. Sketch in a few lines the character of a great general.
15. Name some great engineers, with their most famous works.
16. State what the following are:—A Strike, Arbitration, European Concert, Bribery, Free Trade.
17. Name the chief towns connected by the G.W.R.
18. Define *courage*, *honesty*, *candour*, *uprightness*, and give examples of their display from your reading.
19. Name some wars which you consider righteous, and some which you deem unjustifiable.
20. Picture in a few lines the astonishment of Julius Cæsar if he were brought to life and dropped down in the London of to-day.

SOMERSET BATEMAN.

CHATS ON CHILD-STUDY.

II.—IMAGINATION.

MUCH controversy has arisen round the question as to whether or not children are imaginative, as compared with adults. It is really impossible that they can be so. Whether imagination is regarded from the artistic side, when it mainly depends on richness and variety of experience, or from the scientific side, when it depends on the accuracy of the images formed, it must be admitted that the average child falls below the average adult. We hear of children who will spend hours at a time "making believe" to be shipwrecked sailors, railway porters, characters from the Bible, and what not. If they could imagine the sea or a train correctly, they would not be content with the inadequacies of the carpet and an inverted chair. A boy who has experienced a sea-passage finds such an amusement dull, because his better imagination destroys the illusion of the playthings. Who would care for a broomstick if he had ridden a pony? In short, everything to a child is symbolic—it is exactly as he says, "make believe"; his toys are his slaves and become just what he wishes at the moment. This explains the fact so puzzling to parents, that a grand new toy is very quickly discarded for a plain old one. A doll with real hair, broad smile, eyes that close, and so on, is delightful for a short time; but the child soon finds that it can only be a young lady in a happy mood, its features are too pronounced to be overlooked. Now the old doll, with no hair, no features, no shape to speak of, could make believe to be a man, a baby, a corpse, anything; and, moreover, it has gathered round itself such strong associations and modes of behaviour for these diverse characters that the child cannot endure to lose or exchange it. Granted, then, that children have the power of making any given plain object stand for something more complicated, it in no sense follows that a picture of the latter is formed in their minds: with their well known formula "let's pretend," they manipulate and shuffle their dolls and bricks as free from concrete picturing as a mathematician with his x , y , z . Teachers who have relied on this supposed native power of imagination in children have met with the most absurd results, especially in "object-lessons" where the object is omitted. Poetry read aloud to a child often gives him, by its musical cadence, the same sort of pleasure that it gives a savage, but the images, if any, that are formed are quite foreign to the poet's intention, unless well within the child's experience. "For his sheep he doth a steak" is a stock instance of what dictation reveals.

It will be urged that children's imagination is proved by their constant demand for stories to be told them. Compared with an adult's love of the

newspaper, gossip, history, novels, the child's craving for stories sinks into insignificance. But there is a marked difference in kind, as well as in degree. Children prefer an old story to a new one. Is this not because the old story demands only the use of simple memory, the lowest of intellectual faculties, and the children's faculty, *par excellence*? There are no fresh images to be built up, requiring effort, and the slightest deviation from the first edition on the part of the narrator is usually resented and corrected. The fact that children will picture fairies and impossible birds and beasts as readily as they will actual people and commonplace animals is no mark of good imagination, but simply of fancy, unchecked by experience. In short, what imagination a child possesses is characterized by wildness of fancy and feebleness of true creative power. This weakness is especially marked in the matter of *size*. Owing, doubtless, to the smallness of a child's body, the only standard of measurement he possesses, great difficulty is experienced in picturing rooms, gardens, castles, giants, &c., large enough to meet the requirements of the story. But the teacher should remember that everything in the child's mind is roughly to scale; and, if his castle is tiny, his cottages are correspondingly lilliputian.

I have known a child who has just been told that a gate was "very high, as high as this room," immediately ask if it were as high as "that" (making a gesture to indicate a few inches). He had evidently paid no attention to the teacher's aid to imagination, but at once fitted the big gate into his small canvas, in which a few inches would mean to him a considerable space. A teacher will do well merely to assent and pass on in such a case, or the child's mental picture will be confused. There is a story of a London Board-school child who, at the end of a lesson on the cow, was asked how big she thought it was, and pointed to her thumb for a reply. It is doubtful whether the teacher was at fault. A child's imagination is quite primitive, of course, and can only be developed very slowly. The element of accuracy is best trained by drawing and simple measurements in arithmetic lessons; while the elements of richness and variety must be *fed* by story, description, and, above all, pictures.

M. V. H.

MEETING OF THE COUNCIL OF THE COLLEGE OF PRECEPTORS.

A MEETING of the Council was held on October 14. Present: Sir Philip Magnus, Vice-President, in the chair; Mr. Barlet, Mr. Baumann, Rev. J. O. Bevan, Rev. A. W. Boulden, Mr. Brown, Dr. Buchheim, Mr. Butler, Miss Dawes, Mr. Eve, Mr. Harris, Mr. Pinches, Mr. Rushbrooke, Rev. Dr. Scott, Mr. Sergeant, Mr. Armitage Smith, Mr. Storr, Dr. Sully, and Mr. Walmsley.

The minutes of the last meeting were read and confirmed.

It was resolved that, in consequence of the Education Exhibition to take place at the Imperial Institute in January next, and of the series of conferences and demonstrations proposed to be held in connexion therewith, in which the College had been invited to take part, the next Winter Meeting of Teachers should not take place till January, 1901.

The Diploma of Associate was granted to Mr. C. H. Hart, who had passed the required examination.

The Report of the Examination Committee was adopted, and the following additions were made to the examining staff of the College:—*Mathematics*: Mr. J. Blaikie, M.A. Camb.; *German*: Mr. E. L. Milner-Barry, M.A. Camb., and Mr. A. E. Twentyman, B.A. Oxford.

The Report of the Finance Committee was adopted.

The following persons were elected members of the College:—

- Miss G. A. Aldridge, A.C.P., 73 King's Road, Reading.
- Mr. H. R. Leatham, Thanet College, Margate.
- Miss S. Shenessy, A.C.P., Rufford School, near Ormskirk.
- Miss A. Wicks, A.C.P., 3 Hainault Terrace, Ilford.

The following books had been presented to the Library since the last meeting of the Council:—

By the EDUCATION DEPARTMENT LIBRARY.—Preussische Statistik, Nos. 150 and 151. By E. ARNOLD.—Lloyd Jones' Verne's Un Drama dans les Airs; Poole's Laboulaye's *Pif Paf*.

By G. BELL & SONS.—Spencer's *Eutropius*, Books I. and II.; Wells' *Ovid's Metamorphoses*, Book I.

By BLACKIE & SON.—Blackie's English Classics (Macaulay's *Lay of Virginia* and Southey's *Shorter Poems*); Downe's *Passages from Modern Authors for Class-Reading*; Fenn's *Nat the Naturalist*; Smeaton's *English Satires*; Warner's *Brief Survey of British History*.

By W. B. CLIVE.—London University Guide and University Correspondence College Calendar, 1899-1900.

By HACHETTE & Co.—Lazare's *Gems of Modern French Poetry for Reading and Recitation*, and *Petits Chefs-d'Œuvre Contemporains*; Naftel's *Malot's Remi en Angleterre*.

By MACMILLAN & Co.—Castle's *Elementary Practical Mathematics*; Evans' *Botany for Beginners*; Gregory and Simmon's *Exercises in Practical Physics*, Part I.; Hadley's *Magnetism and Electricity for Beginners*; Page's *Virgil's Æneid XII. and Virgil's Georgic III.*; Pellissier's *De Vogue's Coëtis russes*; Peterson's *Johnson's Life of Pope*, and *Life of Dryden*; Pollard's *Chaucer's Squire's Tale*; Roscoe and Harden's *Inorganic Chemistry for Advanced Students*; Stephen's *French History for Schools*; Todhunter and Loney's *Euclid*, Books I.-IV.; Wackley's *About's Le Roi des Montagnes*.

Calendars of University College, Bristol; Mason University College, Birmingham; Durham College of Science, Newcastle.

CASSELL'S NEW BOOKS AND NEW EDITIONS.

FOUNDERS OF THE EMPIRE. By PHILIP GIBBS. 256 pages. Extra crown 8vo, prettily bound in cloth. With 4 Coloured Plates and numerous Illustrations. Price 1s. 8d.; or handsomely bound as Prize Book, 2s. 6d.

OPINIONS JUST RECEIVED:

"'Founders of the Empire' is a most excellent school book, especially at the present time, when it is so needful that the present generation should catch something of the spirit and patriotism of the founders of England's world-wide Empire."—The Rev. LEWIS H. PEARSON, *Market Bosworth Grammar School*.

"The book is beautifully written. Every page is thrilling, and the courageous deeds of the heroes make it just the book English boys like to read."—Mr. T. H. WARREN, F.S.Sc., *The Commercial Boys' School, Somerton*.

"'Founders of the Empire' is entirely admirable both in idea and execution."—Mr. F. S. O. TOMBS, M.A., *The Grammar School, Haverfordwest*.

"'Founders of the Empire' is an ideal history reader. It is on an excellent plan, and excellently carried out."—The PRINCIPAL, *Grammar School, West Park, St. Helen's*.

IN DANGER'S HOUR; or, Stout Hearts and Stirring Deeds. With Introduction by H. O. ARNOLD-FORSTER, M.P. With numerous Illustrations. Blue cloth, 1s. 8d.; or, handsomely bound as Prize Book, 2s. 6d.

"The little reader just issued by Cassells, called 'In Danger's Hour,' at once took hold of boys' fancies, and it would be hard to say which story is most liked."—SOMERSET BATEMAN, in the *Educational Times*.

New and Revised Edition.

CASSELL'S LESSONS IN FRENCH. Part I., containing 240 pages, crown 8vo, bound in cloth, 2s. Part II. ready shortly.

This work (which reached a sale of 141,000 copies in its original edition) has been revised by Mr. JAMES BOILELLE, B.A., Examiner in French Language and Literature in the University of London. It is now in all respects suitable for the Oxford and Cambridge Local Examinations and the College of Preceptors' Examinations. The type has been reset in a bold style, and each lesson, with the exercises bearing upon it, has been brought within the compass of an hour's work.

An entirely New and Enlarged Edition.

OPTICS. By Prof. HAUGHTON. Revised, and to a great extent Rewritten, by the Rev. ISAAC WARREN, of Trinity College, Dublin. With additional Illustrations. 2s. 6d.

A HISTORY OF ENGLAND. By H. O. ARNOLD-FORSTER, M.P. Fully Illustrated. Extra crown 8vo, 816 pages, bound in cloth. Second Edition, Revised, price 5s.

The *Spectator* says:—"No one by whom or to whom this book is read will fail to realize, if he has a normal amount of reason and imagination, the continuity of English history, the connexion of the present with the past, and the profound abiding significance of the internal and external struggles of our forefathers."

THE CHEAPEST DICTIONARIES IN EXISTENCE.

"CASSELL'S FRENCH DICTIONARY is at once the cheapest, the most complete and extensive, the only thoroughly accurate book of the kind in this country."—*The Record*. (555th Thousand, price 3s. 6d.; superior binding, 5s.)

"CASSELL'S GERMAN DICTIONARY is the best in the field."—*Journal of Education*. (222nd Thousand, price 8s. 6d.; superior binding, 5s.)

"CASSELL'S LATIN DICTIONARY is the handiest, the most useful, and certainly the very cheapest to be met with."—*Rock*. (112th Thousand, price 3s. 6d.; superior binding, 5s.)

"CASSELL'S ENGLISH DICTIONARY, in addition to the clear arrangement, legible type, and other advantages, is provided with a common-sense scheme of pronunciation. An excellent dictionary."—*Pall Mall Gazette*. (Price 3s. 6d.; superior binding, 5s.)

Cassell's School Catalogue will be sent, post free, on application.

CASSELL & COMPANY, LTD., LUDGATE HILL, LONDON, E.C.

BELL'S ILLUSTRATED CLASSICS

Edited by E. C. MARCHANT, M.A., Classical Master at St. Paul's School.

THE special object of the Series is to make the editions as interesting and helpful as possible to the intelligent learner; and, with this end in view, in addition to the usual apparatus of Introductions, Notes, and Vocabularies, **Illustrations** have been introduced wherever it has been thought that they might help to elucidate the text. These will be gathered from the best sources, and will be chosen with a view to explaining the text, and making the reader more familiar with Greek and Roman life. Most of the Illustrations will be specially redrawn.

Maps and Plans will also be inserted as required.

The Volumes are being printed at the Oxford University Press, in pott 8vo size, and will be issued at the uniform rate of **1s. 6d.** each (with or without Vocabularies).

THE ENGLISH LANGUAGE. Its History and Structure. By W. H. LOW, M.A. Lond. *Fifth Edition, revised.* 3s. 6d.
FRENCH COURSE, THE PRECEPTORS'. By E. WEEKLEY, M.A. Lond. 2s. 6d.
FRENCH COURSE, BARLET'S PRECEPTORS' JUNIOR. By STÉPHANE BARLET, B. & Sc. 1s. 6d.
FRENCH READER, THE PRECEPTORS'. With Notes and Vocabulary. By ERNEST WEEKLEY, M.A. *Second Edition.* 1s. 6d.
LATIN COURSE, THE PRECEPTORS'. By B. J. HAYES, M.A., and F. L. D. RICHARDSON, B.A. 2s. 6d. *[In the press.]*
LATIN READER, THE PRECEPTORS'. *[In preparation.]*
MECHANICS, THE PRECEPTORS'. By F. ROSENBERG, M.A., B.Sc. 2s. 6d.
TRIGONOMETRY, THE PRECEPTORS'. By WILLIAM BRIGGS, M.A., LL.B., F.R.A.S., and G. H. BRYAN, Sc.D. 2s. 6d.

SCIENCE AND ART DEPARTMENT EXAMINATIONS.

SUITABLE BOOKS IN THE
Organized Science Series.

For the **ELEMENTARY STAGE.**
2s. each Volume.

- First Stage Mechanics (Solids).** By F. ROSENBERG, M.A., B.Sc. *Second Edition.*
First Stage Mechanics of Fluids. By G. H. BRYAN, Sc.D., F.R.S., and F. ROSENBERG, M.A., B.Sc. *Second Edition.*
First Stage Sound, Light, and Heat. By JOHN DON, M.A., B.Sc.
First Stage Magnetism and Electricity. By E. H. JUDE, M.A. Cantab., D.Sc. Lond. *Second Edition.*
First Stage Inorganic Chemistry (Theoretical). By G. H. BAILEY, D.Sc. Lond., Ph.D. Heidelberg; edited by WILLIAM BRIGGS, M.A., F.C.S.
First Stage Physiology. By A. M. DAVIES, A.E.C.S., B.Sc., F.G.S.

Price 1s.

- First Stage Inorganic Chemistry (Practical).**

For the **ADVANCED STAGE.**
3s. 6d. each Volume.

- Second Stage Mathematics** (being the additional Algebra and Euclid, with the Trigonometry required for the Second Stage). Edited by WILLIAM BRIGGS, M.A., F.C.S., F.R.A.S. *Second Edition.*
Advanced Mechanics. By WILLIAM BRIGGS, M.A., F.C.S., F.R.A.S., and G. H. BRYAN, Sc.D., M.A., F.R.S. **Vol. I., Dynamics. Vol. II., Statics.** *Second Edition.*
Advanced Heat. By R. W. STEWART, D.Sc. *Second Edition.*
Advanced Magnetism and Electricity. By R. W. STEWART, D.Sc.
Advanced Inorganic Chemistry (Theoretical). By G. H. BAILEY, D.Sc. Lond., Ph.D. Edited by WILLIAM BRIGGS, M.A., F.C.S.

Price 1s. 6d.

- Practical Organic Chemistry.** By GEORGE GEORGE, F.C.S.

Complete Catalogue of the University Tutorial Series, and List of Books classified for COLLEGE OF PRECEPTORS', London University, Science and Art Department, and other Examinations, free on application.

London: W. B. CLIVE, 13 Booksellers Row, Strand, W.C.

FORECASTS AND COMMENTS.

November 1, 1899.

THE Committee of the Modern Language Association Fixtures. tion has arranged for a course of lectures on Phonetics, especially intended for teachers of English, French, and German, to be delivered in London during the present term and the Lent term, 1900. The lectures will be given by Prof. Walter Rippmann, at Queen's College, 43 Harley Street, Cavendish Square, on the following Wednesday evenings at 8.30:—November 8 and 22, December 6, January 31, February 14 and 28, March 14 and 28. Each lecture will be followed by a discussion. Application for tickets should be made to W. G. Lipscomb, M.A., Hon. Secretary of the Modern Language Association, University College School.

* * *

HERE are the scholarship fixtures at Oxford for the month of November:—November 7: Exeter, Brasenose, Christ Church—Classics. November 14: Merton, Pembroke, Worcester—Classics; Wadham—Hebrew. November 21: Queen's, St. John's, Keble—Classics; Balliol, Queen's, Corpus Christi—Mathematics; Balliol, New College, Queen's—History; Balliol, Christ Church, Trinity—Science. November 23: Balliol—Classics. November 28: Brasenose, Christ Church, Pembroke, Worcester—Mathematics. November 30: Trinity and Wadham—Classics.

* * *

MR. A. J. BALFOUR will preside at a special festival dinner in aid of King's College, London, at the Whitehall Rooms, on November 28.

* * *

THE next competition for Junior County Scholarships will be held on November 11.

* * *

THE Annual Preliminary Examination for Scholarships under the London School Board will be held on December 4 and 5, 1899. This year there will be 63 scholarships and exhibitions—38 for boys and 25 for girls. This number includes 10 places for boys in the Christ's Hospital School, London (Blue Coat School) and 5 places in their Girls' School, Hertford, and 19 places for boys and 16 for girls whose parents have resided for a year in certain London parishes.

* * *

EIGHT entrance scholarships, from £75 to £50, tenable for three years, will be offered for competition at the Royal Holloway College, Egham, in July next. For further information application should be made to the Secretary, Royal Holloway College, Egham, Surrey.

* * *

THERE will be no Winter Meeting of the College Education of Preceptors in January next. The English Gossip. Education Exhibition, preliminary to the transfer of educational exhibits to Paris, has been fixed for the first fortnight of 1900. In connexion with this exhibition there is to be a series of conferences and lectures, in which the College has been invited, and has consented, to co-operate. Under these circumstances the Council has resolved to suspend its Winter Meeting for the year.

THURSDAY, October 12, being Founder's Day at Harrow, was chosen as a suitable occasion to uncover the reredos which has been placed in the school chapel in memory of Dr. Vaughan. It has been provided by a subscription among Old Harrovians, and is a beautiful piece of work. At the evening service the Rev. Dr. Butler, Master of Trinity, referred to the special and splendid influence of Dr. Vaughan on the boys, and on the fortunes of the school during his headmastership.

LORD KELVIN's successor in the Chair of Natural Philosophy at Glasgow will receive an income of about £1,500. Prof. Gray, who is a Scotchman and fifty-two years of age, was educated at Glasgow University; and from 1875 to 1884 he was Lord Kelvin's assistant. He has written some works on electrical measurements—a subject on which his predecessor is one of our greatest authorities.

THE London School Board seems to be disposed to show fight over the question of higher-grade Board schools. At its meeting on October 19, a recommendation of the Works Committee for the erection of a higher-grade mixed school at Hackney was met by an amendment that in view of the recent decision of the auditor, disallowing expenditure by the Board on science and art teaching, certain parts of the proposed school, to be devoted to such teaching, should be abandoned. After some discussion the amendment was rejected by 29 to 15 votes, and the motion was agreed to. The Board also decided to appeal to the High Court against the surcharges made by the auditor in connexion with art and science teaching. Probably the Board relies on the *fait accompli*, and expects that every school which it establishes will be maintained by some one or other.

CRICKET is undoubtedly an educational topic, but Mr. Alfred Lyttelton's jeremiad over the decadence of the game in the *National Review* for October has but little application to school cricket. He says that first-class cricket has become dull, and when a "blue," and such a brilliant all-round athlete as he is, suggests that the despicable stone-wall tactics of the new cricket school accounts for the rise of golf, it is perhaps high time to cry "wolf."

MR. LYTTELTON suggests an increase in the height of the wicket, or (better still) a decrease in the width of the bat. *Tempora mutantur!* When we played cricket at school and college, the wickets were too high and too broad, the bat was too narrow, the ball too small, and the game was never, never dull. But then we did not play for gate-money.

THE Sesame Club continues its discussion of matters bearing more or less closely on education. Among other lectures in its autumn session may be mentioned one on "Early Umbrian Art," by Miss March Phillips, and one on "Schools and Scholars in India," by Mrs. F. A. Steele. The debate on "The Obsolescence of Education" should prove suggestive and spirited, since it is to be opened by Mr. Bernard Shaw.

At a meeting of the Council of the College of Preceptors held on October 14, the following were appointed to Examinerships:—In Mathematics, J. Blaikie, M.A., Fellow of Gonville and Caius College, Cambridge, an Examiner for the Oxford and Cambridge Joint Board; in German, E. L. Milner-Barry, M.A. Cambridge, an Examiner for the Cambridge Modern Language Tripos, and A. E. Twentyman, B.A. Oxford.

At a recent meeting of the Glasgow University Court, Mr. Andrew Gray, Professor of Physics in the University of North Wales, was elected to succeed Lord Kelvin in the Chair of Natural Philosophy. Mr. D. J. Medley, of Keble College, Oxford, was appointed to the Chair of History, vacant through

the resignation of Professor Lodge, now of Edinburgh University.

THE Professorship of Music at Oxford, in succession to Sir John Stainer, resigned, will shortly be filled. Sir Hubert Parry is a candidate for the position.

THE Principalship of University College, Liverpool, is vacant by the resignation of Mr. Glazebrook.

IN the new legal department of the Yorkshire College, Leeds, wherein Mr. Walter R. Phillips, LL.M., has been appointed the Professor, the Lecturers on Law are Mr. G. Glover Alexander, M.A., LL.B., Mr. Albert Earnshaw, M.A., and Mr. C. J. Haworth, B.A., LL.B. Mr. Arthur J. Grant, M.A., has been appointed Professor of Ancient History, and Mr. C. M. Gillespie, M.A., has been appointed Lecturer on Logic.

THE REV. W. E. ADDIS, M.A., has been appointed Lecturer on Old Testament Literature in Manchester College, Oxford, in succession to Mr. J. Estlin Carpenter, M.A., now Hibbert Lecturer on the Comparative Study of Religions.

THE REV. H. C. BEECHING has been elected Clark Lecturer on English Literature at Cambridge. Mr. W. L. Duckworth is appointed Lecturer in Physical Anthropology in the same University.

MISS WINIFRED L. JAMES, B.A. London, has been appointed to be Headmistress of the Perth Intermediate School.

THERE is a vacancy in the headmastership of Aldenham School, Herts. Applications should be made on or before November 11. There is also a vacancy in the Headmastership of the Rhondda Intermediate School.

THE death is announced of Mr. E. J. Marshall, who had been for nearly fifty years Headmaster of Brighton Grammar School.

APPLICATIONS for the Principalship of the Borough Road Training College, Isleworth, should be sent in not later than November 10.

It is proposed to found a Lectureship on English Literature at University College, London, to be known as the Stopford Brooke Lectureship, and with Mr. Stopford Brooke as the first Lecturer. The project has been approved by the Council of University College, and the committee which has been formed to promote it includes Mr. Bryce, Mr. Gosse, Dr. Blake Odgers, Miss Anna Swanwick, Miss Kate Warren, and Prof. Ker. Subscriptions are invited.

ON this subject the *Daily Chronicle* says:

University College is one of the principal constituent bodies of the new University of London, which promises in the course of a few years to stand conspicuous amongst the Universities of the world. The nation must endow its metropolitan University until it is not merely efficient, but "exceeding magnificent." The liberality of the State must be supplemented by the generosity of the private benefactor. We cannot imagine a better form in which to give expression to such generosity than the endowment of a chair for Mr. Stopford Brooke, whose name is familiar to students of English, and whose lofty and elegant discourses have stood for many years past with English audiences as models of a picturesque and poetical prose.

A CORRESPONDENT of the *Times* at Rome tells us that a profound impression was produced in the Oriental Congress by a letter from Prof. Max Müller. In pathetic but dignified terms the venerable scholar bade farewell to the Congress, on the ground that his illness precluded any hope that he would again take part in its proceedings. He spoke of the approaching completion of the translation of the "Sacred Books of the East," and

presented a copy of that magnificent series to the Congress as a testimony of his good will, and of the encouragement and help which he had during many years received from its members. "The communication," we are told, "was received with deep emotion, for the amiable personality of Prof. Max Müller, the wide range of his scholarship, and his rare combination of genius with learning have given him a unique place among the Orientalists of Europe."

* * *

GREAT BRITAIN seems to have been well represented at the Congress. Its general President, Count di Gubernatis, who, under the King of Italy as patron, organized the work of the session, is intimately acquainted with India by personal travel, and has taken care that Indian interests should be strongly represented in the directing body. The presidents of sections include Sir Charles Lyall, delegate of the Government of India; Sir William Hunter, delegate of the University of Oxford; Sir Raymond West, and other distinguished scholars on behalf of the Royal Asiatic Society, Colonel Temple, Mr. Cecil Bendall, and Mr. Pinches, of the British Museum.

* * *

DR. HEINRICH ZIMMER, Professor of Sanscrit at the University of Greifswald, has been spending some weeks in Wales. The learned professor is known as one of the most eminent of living Celtic scholars. He is a fluent speaker in each of the four Celtic languages, and his articles in the German *Quarterly* some time ago displayed a comprehensive knowledge of Welsh literature.

* * *

THE most noticeable article in the *English Historical Review* for October is Dr. Gardiner's paper on "The Transplantation to Connaught," and what is known as Cromwell's Settlement. The writer has worked upon a large number of authorities, and throws much light on the almost incredible scheme of packing away the irreconcilable Irish Papists in "Connaught and Clare." Dr. Gardiner's conclusion is that "we may still fairly talk of the Cromwellian settlement of Ireland, because it was Cromwell's sword and Cromwell's power which gave it life." But the scheme was apparently not Cromwell's original device, and he did something to qualify its severity.

* * *

THE *Oxford Magazine* says that the Daniel Press has been very active this summer. "A Selection of Hymns from the Yattendon Hymnal," put together by Mr. Robert Bridges; a sylvan drama by Michael Field, called "Noontide Branches"; and a brochure entitled "Outlines," by a known but anonymous writer, an old Oxford man who signs himself W. S., represent the recent output. The promised "Sonnets by Mary Queen of Scots" have been delayed, but are in hand; and one or two more very interesting additions to the now long list of the Worcester House impressions are in contemplation.

* * *

MR. R. S. RAIT, who has just been elected to a fellowship at New College, Oxford, is Stanhope Prizeman in the University, and took First Class Honours at the Finals three months ago. He has already published a pamphlet on "The Kingis Quair," an article on "Andrew Melville and the Revolt against Aristotle in Scotland," besides a book on "Mary Queen of Scots" (which, within six months, is entering on its second edition), and a school history for one of Messrs. Blackie's series. He also last year visited Hanover and Berlin at the instance of the New Spalding Club, and made investigations (which he embodied in a report to the Club) regarding the Burnet MSS. preserved in the Staats-Archiv at Hanover, and the Marshal Keith letters in the Royal Library at Berlin.

* * *

PROF. MEDLEY, who has been appointed to the Chair of History in Glasgow University, was educated at Wellington and at Keble College. His age is thirty-eight. His first published work was "A Student's Manual of English Constitutional History," which was originally issued in 1894, and

reached a second edition four years later. At Cambridge it was placed among the books recommended to undergraduates by the Board of History and of Law, and was largely used in American Universities. At present he has in hand a "History of the Empire and Papacy in Mediæval Times."

* * *

THE death is announced, at a ripe old age, of the Rev. C. Cadwallader Adams, formerly Fellow of Magdalen College, Oxford. Dr. Adams was an industrious and prolific writer. Among his works were "The Twelve Foundations and other Poems," a Greek and a Latin "Delectus," "Wykehamica," "Perils in the Transvaal," "A History of the Modern Jews," &c. But he was best known as the author of stories for boys. Such tales as "The Cherry-Stones," "The First of June," and "Schoolboy Honour" went through numerous editions and enjoyed a wide and long popularity.

* * *

THE MS. of Milton's minor poems, which has been preserved for upwards of two hundred years in the Library of Trinity College, Cambridge, has been reproduced in facsimile by Mr. Dew-Smith, and printed by the collotype process. The MS., of which the greater part is in Milton's own hand, consists of 47 pages, and contains the "Arcades," "Comus," "Lycidas," and several of the "Sonnets," besides the first sketch of "Paradise Lost" as a drama, and notes for poems from sacred and profane history. Each page of the facsimile is accompanied by a literal copy in ordinary type. By the request of the Council of Trinity College, the work has been superintended by Mr. William Aldis Wright, Vice-Master.

* * *

"THE MATRICULATION HISTORY OF ENGLAND," by Mr. C. S. Fearenside, who is already known as the joint author of "The Intermediate Text-book of English History," is to be published shortly by Mr. Clive. The book is intended for use by candidates preparing for London University Matriculation, one of the requirements of that examination being "the History of England to the end of the seventeenth century." Particular attention has been given to the arrangement of the narrative and to the avoidance of loose and inaccurate expressions, and care has been taken not to confuse the learner with unimportant names and details. Here and there introductory and summary chapters indicate the characteristics and tendencies of each period. Maps, plans, and tables have been freely introduced. The narrative of events before 1066 is unusually full, owing to the importance attached to this portion of our history at the Matriculation Examination. Mr. Fearenside will shortly proceed with a continuation of the above work, bringing the narrative down to the present time; the whole will then be issued under the title of "The Tutorial History of England."

* * *

A COMPANION volume—"The Tutorial History of English Literature"—may be expected early in 1900. The author is Mr. A. J. Wyatt, who recently completed the late Mr. W. H. Low's "Intermediate Text-book of English Literature," and who has edited several English classics in the "University Tutorial Series." Mr. Wyatt will concern himself only with the really great names in our literature, the book being intended as a primer on the subject, suitable for the middle forms in schools and for candidates for London University Matriculation. Illustrative extracts will enter largely into the work.

* * *

AMONGST the new announcements of the Cambridge University Press are: "Bacchylides, the new poems and fragments," a revised text, with introduction, critical notes, and commentary, by R. C. Jebb, Litt.D., Regius Professor of Greek in the University of Cambridge; "Herondas, the Mimes," edited with a commentary by Walter Headlam, M.A., Fellow of King's College, Cambridge; "Two Greek Grammars of the Thirteenth Century," now first edited with introduction and notes, by the Rev. Edmond Nolan; "The Early Age of Greece," by William

Ridgeway, M.A., Disney Professor of Archæology in the University of Cambridge; and the second volume of a "Catalogue of the Greek Manuscripts on Mount Athos," edited by Spyr. P. Lambros, Professor of History in the University of Athens.

* * *

IN Mathematics and Science, the same Press announces:—The "Scientific Papers" of John Couch Adams, M.A., Sc.D., D.C.L., LL.D., F.R.S., &c., late Lowndean Professor of Astronomy and Geometry in the University of Cambridge. Vol. II., edited by W. G. Adams, Sc.D., and R. A. Sampson, M.A.; and other "Scientific Papers" by Lord Rayleigh, Sc.D., F.R.S.; by the late John Hopkinson, M.A., D.Sc., F.R.S.; by Osborne Reynolds, M.A., F.R.S., Professor of Engineering in the Owens College, Manchester; and by P. G. Tait, M.A.

SCIENCE TEACHING AND INSPECTION.

THE FUNCTIONS OF SCIENCE TEACHING BEST TESTED BY EXAMINATION AND THOSE BEST TESTED BY INSPECTION.

MR. H. W. EVE, Dean of the College of Preceptors, took the chair at the evening meeting of members on Wednesday, October 18, when Dr. WORMELL read the following paper:—

In mountaineering, every stage we reach as we climb upwards invites us to survey our surroundings from the new level, and to modify our plans with the new light thus obtained. So it is with educational progress. The new Act just passed is such a stage, and presents its invitation to pause and look forward. So it happens that, although I have spoken frequently here on questions connected with the teaching of science, and thought I had spoken my last word on the subject, I find new reflections suggested by the new conditions.

The most important feature of the Act, as regards my subject, is the recognition in it of the value of inspection of schools. I am persuaded that the emphasizing of inspection is the emancipation of science teaching. The effort to restrain this work to that which can be examined in the ordinary way, like arithmetic, geography, or literature, has narrowed and stultified our science work. There are functions of science as an educative instrument that may be fully and safely tested by examination, but there are other functions peculiar to itself that are best tested by inspection, that is to say, by the observation of experienced and skilled inspectors in the laboratories and workshops. In some of its functions science work cannot subject itself to the ordinary forms of examination without being stultified. Examinations sufficiently test knowledge, but inspection is needed to test skill and power.

"Knowledge dwells in heads replete with thoughts of other men."

But, in one main part of science work, it is the operator's own investigations and operations that require estimating, not simply his knowledge of what has been done by others. Examination, in a sense, is, of course, a necessary accompaniment of inspection, for an inspector must ask what is being done and why; but this questioning is not examination as ordinarily understood. Examination is a silent process carried out under the vigilant eye of a bull-dog or of a pack of bull-dogs, the examiners themselves being *in nubibus*. By the extension of inspection it must not be supposed we shall necessarily lower the value of examinations; on the contrary, we shall strengthen it by limiting it to its natural offices.

In order to confirm this statement let me consider in some detail the uses of science in education. The advocates of science work have used a great variety of argument and illustration, and urged very varied reasons for their opinions. The fact is the matter may be viewed from many distinctly different standpoints, and the number is increased by the fact that different sciences are capable of serving different purposes as educational instruments. It has been a fad of mine to take two sciences, usually considered to resemble each other or to be nearly allied, and to contrast them as regards their effect as means of discipline.

Let us examine this point a little more closely. The physicist and the chemist have to pursue paths quite distinct from those of the mineralogist and botanist, or any other devotee of the descriptive natural sciences. Chemistry and physics are most intimately related; yet, even as compared with physics, as I have often pointed out, chemistry has its own special functions. Different types of mind progress in them with varying facility. When I find that students excel in chemistry who without much greater labour would not excel in physics, and *vice versa*, I conclude that, "though each resembles each in every part," there is a difference as regards the special function of physics and chemistry in education. In addition to the nature of the manipulations and observations exercised by chemistry, there are three special purposes the teaching of it serves. It teaches the possibility and value of economy—(1) economy of power, (2) economy of time, (3) economy of material.

Chemistry reveals very early methods of utilizing products apparently worthless, and of endowing bodies with properties which render them of increased value to man. The teaching of chemistry is a check upon waste. Would you encourage thrift? Then you will teach chemistry, for she, like a prudent housewife, economizes every scrap. Now, physics has a special influence on language that chemistry has not. The nomenclature of chemistry is by far the most concise and expressive of all scientific nomenclatures. Its symbolization is comparatively an ideal shorthand. But it does not mix well with ordinary literature. Such a word as sulphocyanide of potassium, for instance, cannot serve as a flower of rhetoric. How different is the case with the language of physics! It is born of the language of the people; its terms are amongst the most forcible in daily use. Take a few examples: dense, density, cohesion, porosity, tenacity, torsion, luminosity, compensation, capacity, elasticity, impulse, effort, force, gravity, moment, friction, lubrication, concord, discord, harmony, interference, resonance, energy, its conservation, dissipation, and transmutation, and a hundred others. Physics gives suitable clothing to many thoughts in fields of philosophy, speculation, and fiction. It may be that the primary object in introducing the study of physics to scholars in schools is one which applies to science generally. But the student of science, in addition to becoming exact in his manipulation and exact in his habits of thought, has to cultivate a habit of exactness in the use of language; and when, as in physics, the language is that of ordinary use, the latter result is an important aid to language teaching. Look at the force of the analogies drawn from physics. The composition of alcohols and acids furnishes neither simile nor metaphor, but Faraday's description of the rainbow over a waterfall, like hope, always prismatic, ever changing, but ever clinging to the rock, is eloquence itself. In very early days the use of analogies from the laws and processes of nature was understood, certainly ever since it was written that, "as iron sharpeneth iron, so a man sharpeneth the countenance of his friend." The very old Book of Job is inlaid with the notions of physics. Light and darkness, the molten looking-glass, the treasures of the snow, the hoar frost of heaven, the dew and the rain, springs of water and floods, the course of lightning, the clouds and the whirlwinds. Carlyle, with the instinct of genius, says of these descriptions: "So true every way, true eyesight and vision of all things; material things not less than spiritual." It is evident, therefore, that this bearing of physics is not dependent on depth of knowledge: it begins with the first clear perceptions of actions of Nature and the first successful attempts to express them in definite and exact terms. The conditions of a profitable use of language in physics, and physics in language, are that these actions shall themselves have been thoroughly observed and tested. But the mutual aid of each to the other never ceases to grow as long as knowledge grows. The literary influences of some sciences are fit subjects for examination.

Again, first and foremost, perhaps, amongst the services which are common to most sciences is the influence on the growth of mind and reasoning powers. The successful student of science becomes ready at all times to correct or amend his conclusions in the face of new facts. He can never be guilty of an arrogant assumption of infallibility. It is not the student of science who says: "What I know not is not knowledge."

Goethe, when an old man about seventy, wrote some thoughts on education. He thought men were striving more to get power of speech—glibness of tongue and pen—than to be careful for the truth of what they spoke or wrote; that it was becoming common to find excellent speakers discoursing fluently on what was not true—having found a wrong judgment in regard to fact. Hence Goethe sketched a scheme of mute education under the direction of an overseer.

Now science is the overseer, and no other need be devised for the direction of Goethe's plan, and the study of science will naturally develop the three reverences, each distinct from fear, which Goethe thought all needed, which no child brings into the world with him, but without which all other things are useless. This outcome of science study is again a fit subject for examination.

Again, the study of science expands the aspirations. Science has not, like literature and art, a standard of excellence. It is as infinite as the wisdom of God, from whom it emanates. All ordinary powers decrease as you depart from the centre; but the power of scientific research augments the further it is removed from the human source from which it starts. Students who have no science in their curricula may be content to imitate what they cannot surpass; students of science have no such temptation.

Then, again, education is always being charged by those who think more of other spheres of knowledge with the duty of providing for leisure hours as well as business hours. But, surely, scientific studies fulfil this duty. Very much mental gratification comes from trying to understand and apply to human uses the laws of Nature. The philosopher of Scripture has said: "It is the glory of God to conceal a thing, but the honour of kings to search out a matter." Undoubtedly literature has no monopoly of the right or power to provide an elevating recreation for hours of leisure. Scientific research supplies its quota of delight for the leisure both of youth and of mature years.

In regard to all these functions, science work can be, to a great

extent, tested by examination—some, however, less so than others; those of chemistry, for instance, less than those of physics. Then there is the history of the sciences. To this we may easily give undue attention. It is worse than profitless to dwell on the errors of our forefathers; but it is rarely profitless to compare the conditions of men of one period with those of another period. Tracing back these respective conditions to their causes, we behold the head-springs of the influences which have given such diversity to the character and fortunes of different portions of the race. We are able to commune with the great principles which bear the future destinies of mankind in their bosom. Whatever now is, whether weal or woe, is the effect of causes that have existed; whatever is to be, whether of glory or debasement, will result from the causes put into operation by ourselves. The past is a unit fixed, irrevocable, about which there is no longer either option or alternative; but the future presents itself to us as an infinity of possibilities. For the purposes of duty, prosperity, and happiness to-morrow is in the control of the weakest; but yesterday is beyond the dominion of the mightiest potentate. The future, then, is our field of action. The past is only valuable as furnishing lights by which that field can be more successfully entered and cultivated.

It is easy, therefore, to pay too much attention to the history of any science; but there is one aspect in which the history is useful. The best order for elucidating the principles of the various successes is, as a rule, the historical order of discovery. The facts that are first found in order of time are those that are most palpable and lie nearest to hand; while, on the other hand, the discoveries of recent years are drawn from the most intricate and obscure phenomena, and require to be searched after. The growth of an individual mind or intellect resembles the growth of the general mind and intellect of man as a race, and hence the historical order of phenomena is the best order for teaching. We begin the study of electricity, for example, not with dynamos and telephones, the latest inventions, but with a bit of amber and piece of cloth, or a cake of indiarubber and dried sheet of cartridge-paper.

All this time, however, I am but beating about the bush and have scarcely touched the main purpose of science teaching. It is (I have the courage to say it)—it is the utilitarian purpose. Eyes and hands have to be trained, minds have to be braced, sinews have to be strengthened for the hard struggle of industry. Men often make grave mistakes as to the right and logical order of such duties as this, and hence exhaust themselves on non-essentials. Let me ask which is the first virtue in the order of necessity? Certainly it is industry, for by it we now have homes, food, and the means of a comfortable existence; and, if all men and women possessed all other and higher virtues—were absolutely truthful, for instance—but were absolutely idle, the race would soon be extinct, one part dying of famine the other of rheumatism.

Again, what is the first commandment given by the Creator to man?—"Replenish the earth and subdue it." To hear the gabble of Babel of our day one might think it was—Chatter. You have the power of speech—chatter. No; the first commandment to man was to use the intelligence with which he was endowed to subdue the forces of the earth and to bring them into his service. As civilization advances, the demands on intelligent research increase, and the competition in industry becomes a competition of intellect. Experimental science then becomes the life and soul of industry. The searchers after truth for eternal truth's own sake are the horses of the chariot of industry; those who usefully apply the truths are the harness by which the motion is communicated to the chariot. The chief object in science teaching should be to increase the number of the searchers after scientific truth, and to multiply the number of those who can apply the principles for the development of industry.

This is, however, exactly the kind of work which is crippled by examination. We have but to trace the effects of the mincing, halting, and narrow efforts in the Local and other similar examinations to bring experimental science into the examination net to confirm this criticism. A little test-tubing is generally all that is attempted, but it is sufficient to lead schools to conclude that a little test-tubing is all that need be attempted in the schools themselves. It would have been better to leave the practical work free to develop by a kind of natural selection than to have constrained it by the limitations of the examination possibilities. But emancipation is at hand: it comes with the recognition of inspection as for some purposes a more efficient test than examination, the fact that examination and inspection should be twin powers.

Let me now inquire a little further into the differences of operation of inspection and examination. The impression of individual pupils, conveyed by the sham practical examinations I have referred to, have been notoriously erroneous, and the inspector of the future should seek rather to gain a correct, adequate, and just general impression. He will take an accurate and leisurely survey of appliances and results. He will watch the work and inform himself of the extent to which the operators understand it; but he will not spend his time in marking papers, neither will he trouble about the placing of scholars. The business of an inspector is not to place or mark, but to judge and report on general results. Even if to the duty of inspection be added that of

awarding certificates, this will not impose the duty of placing. Such certificates must be in grades or degrees, but should not attempt an order of merit.

I am aware that some teachers have feared the imposition of inspection, fearing lest it should degrade us to a Chinese uniformity or deprive us of freedom. I think this fear may now be dismissed entirely. With wise impartiality our legislators in the new Act provide for the acceptance of inspection by such institutions as the Universities, the College of Preceptors, and similarly qualified agents. We may rest assured, therefore, that the new progress will not deprive us of freedom. Indeed, my contention is that, as regards science work in particular, I will restore to us a freedom we had partially lost. Science will be the better able to fulfil the demands made upon her by industry.

Mobile and steady hands guided by clear vision are everywhere in demand. The hope of science is the hope of the world. Hence my last word on this subject is a plea for free scope for science in education. Science the infinite is part of that which will live for ever. Let us continue to amend our systems. Science will live through the changes. In the world of science there is a constant system of regeneration. Theories exist for a time, but, like the phoenix, die and rise yet more glorious from their ashes. In all this there is no discontinuity, no incongruity. A phoenix does not from its ashes produce an eagle, but a phoenix, as before. When perfect freedom is given to our system we shall find that thousands of minds with keen, passionate, undaunted enthusiasm will fling their whole energy into the toil of science, and thereby add year by year to the sum of human knowledge and to the power of humanity to keep the first commandment. Then will industry escape the punishment of Arachne of old which threatens it. Arachne, you know, was wonderfully skilled in needlework, but presumptuously challenged Minerva to a trial of skill. Minerva united science to her handicraft skill, and this combination secured her success. Arachne was cast from her proud position among mortals by being changed into a spider, ever spinning the same web the same way—the same for wintry blasts as for gentle summer zephyrs. With an emancipated system of science teaching, our industries will resemble Minerva the triumphant.

Dr. GLADSTONE thanked Dr. Wormell for again bringing forward the claims of science, and remarked that the historical method of teaching natural science commends itself on the ground that the mind of the individual followed, to some degree, the same order of development as that of the race, and that it was appropriate to commence the study with the observation of substances near at hand, and which were more accessible than those more recently discovered. The objects of the study of science were very numerous, and it was desirable to determine which were the more valuable. Perhaps the lowest aim was to derive amusement therefrom. Another was the teaching of science as affording material for mathematical problems. More important than these, however, was the mental discipline to be derived from careful and systematic investigation. The study of science developed the power of observation and comparison, and of drawing deductions, and it also trained the judgment. During the century just closing there had been a marvellous adaptation of science to the needs of mankind; but this need hardly be considered in relation to the study of science as an educational question. Science required different treatment from other subjects, both in teaching and in examination. It could not be learned from text-books, and it could not be tested efficiently by means of examination papers. The teacher had to impart a knowledge of certain facts and of the principles connecting those facts, and then to utilize these facts and principles for the general development of the mind. It was important that, from the very beginning, children should be encouraged to make their own experiments. They were thus led to use their own observation and judgment, and they could not fail to take delight in making discoveries for themselves. A competent inspector should ascertain what had been the main object of the teacher in carrying on the class—whether it had been merely to impart scientific knowledge to the pupils, or whether he had also taught the pupils to observe the application of this knowledge intelligently. It would be well for him always to look at the note-books of the pupils, so as to gain the means of judging the nature and quality of the teaching, as well as of the progress of the individual scholar.

Mr. SAPAT considered that the lecturer had laid too much stress on the utilitarian value of the study of science. It was possible to overrate the advantage derived from the application of scientific discoveries to the improvement of material comfort. But it was of far more importance to regard scientific study as a means of discovering truth, and it might also be of use in the teaching of moral lessons.

Mr. ORCHARD remarked that science text-books, even some of the best, were defective in their method of explaining first principles, and thus progress in scientific study was hindered. He agreed with Dr. Gladstone that the study of science was invaluable as a mental discipline, and that inspection should not be confined to the manner in which the work was done, but should extend to the note-books of the students. He did not think that the historical method could profitably be applied to the study of science, as it would involve much waste of time. He was glad that the lecturer had drawn attention to the moral

value of science teaching. To recognize how much one did not know compared with what one did know was a most valuable lesson.

Mr. FOAT said that a fundamental error in the teaching of science, as in the teaching of some other subjects, was that too much attention was paid to dry details, and too little to the great principles that were of far more importance to the young student. It thus happened that pupils left school under the impression that the study of chemistry consisted in the acquirement of a number of formulæ, and that geometry was only another name for Euclid's propositions—often learnt by heart, and without any intelligent apprehension. It followed that such pupils would have distaste for these branches of education, which they might have respected had they been induced to contemplate their glorious possibilities; and when they grew up they could hardly be expected to encourage the study of them by their own children. Unfortunately the exigencies of examinations did not favour the more intelligent plan, but he hoped that teachers would not allow that to divert them from the right path.

Mr. BROWN remarked that there was an important difference between examination and inspection; for, while the former was a test of the pupil's knowledge, the latter was a test of the method by which that knowledge had been obtained. As a test of school work, he considered inspection to be the more satisfactory, because it was less liable to be affected by the idiosyncrasies of examiners. A further objection to examination was that, although a boy might be well taught, and possess an adequate knowledge of his subject, he might be deficient in the power of setting out his knowledge on paper. The best test that could be applied would be for the inspector to hear lessons given by the teachers.

The CHAIRMAN, after illustrating Dr. Wormell's references to chemical nomenclature by a few lines from "Exeter Change,"—

Time was when trimethylamine seemed long,
And phosphammonium all unfit for song. . . .
Until at last the gasping chemists come
To methyl-ethyl-amyl-phenyl-ammonium,

said that, to whatever danger the efficiency of the examination might be liable from the vagaries of examiners, there was no less ground for apprehension in the case of inspection, and that in the latter case the results might be more prejudicial. Dr. Gladstone had touched on a number of objects that might be aimed at in teaching science in schools; but, whatever might be the main object, it seemed essential that boys and girls should go out into the world with clear ideas of how the progress in science had been made, and should understand how to apply scientific method to whatever they might have to deal with. The progress of science had greatly influenced other studies the votaries of which knew very little about science. There were classical scholars, historians, and political economists who could not describe the common pump or write out the binomial theorem, but who had been largely influenced by the methods of science. Fifty or sixty years ago, for example, the interpretation of classical authors proceeded too much upon *a priori* principles. But the application of scientific method had resulted in more minute observation of the facts of language, greater caution in drawing inferences, and more care in testing conclusions. Mr. Foat had put before them a very difficult ideal. It was right to give young pupils large ideas of the science they were studying, but, at the same time, they must not be allowed to think that they knew things of which they were profoundly ignorant. A good teacher should, no doubt, relieve the necessary drudgery of some parts of the study by giving his pupils glimpses of the great results they might ultimately obtain. It was not easy to exactly define the scope of examination and the scope of inspection. Examination was a useful mode of testing knowledge of mathematics and power of translating unseen passages, and it might also be applied to those parts of science which were bound up with mathematics, as well as to descriptions of mechanical and scientific appliances. Then, too, there were certain parts of scientific study that could be tested by practical examination—some parts of qualitative analysis, such problems as finding the angle of a prism or working out questions by means of Atwood's machine. But there was a considerable field where examination did not answer so well. At the point where a student began to observe for himself it failed entirely, for the heuristic method did not lend itself to examination. There must also be a large field of biological study where examination was extremely difficult, and examination of abstruse biological matters without books of reference at hand did not give a good test of powers.

Dr. WORMELL having replied to the remarks of the various speakers, a vote of thanks to the lecturer concluded the proceedings.

THE LINES OF FUTURE PROGRESS IN SECONDARY EDUCATION.

By the Rev. G. C. BELL, Headmaster of Marlborough College.

We print below the substance of a contribution read by the Headmaster of Marlborough College at the Church Congress in London. It deals very helpfully with some of the main

problems raised by the reorganization of secondary education, and our readers will be glad to have a fuller report of this paper. Mr. Bell, who is a member of the College Council, began by saying that his subject was suggested to him by the Bishop of London, and he deprecated the suggestion that he was endowed with prophetic power.

WHAT IS PROGRESS?

Progress is a vague, subjective word; its definition varies with the wishes and aims of the definer. Yet all, reserving the right of private interpretation, might agree that the aim of educational progress is to make boys and girls more fit for their duties as men and women in the home and family, in civic and social life. Now, for progress of any kind there is need of motive power, and also of machinery, or agencies for converting the power into movement. There is no lack of motive forces that might contribute to educational progress; but, as we shall see, each has its own defects, and, as they do not act in parallel lines, some partly neutralize the moving power of others.

If I mention first (a) the reforming impulse of some part of the teaching profession, it is because this force has actually been the chief mover of recent legislation, which has opened new avenues for progress. Indeed, if the pressure of this force had been relaxed during the past Session, the Education Bill would almost certainly have been dropped by the Government.

(b) The steadfast zeal of many who hold that the future welfare of England depends on nothing so much as on education, at once liberal and religious; and that increase in wealth, power, and knowledge can be of no permanent advantage to a nation unless the children of all classes of the community receive a training such as will not only develop intellect, but also mould character by morality rooted in religion. The immense network of voluntary schools is evidence of the power of this conviction in the sphere of primary education. The new departure in secondary education will open fresh channels for its influence: our prayer will be that our Church and other religious denominations may be guided to a policy which shall avoid barren and exasperating strife, and lead to an amicable and equitable settlement.

(c) The desire of the industrial and mercantile classes for such improvements in education as may enable British commerce and industry to retain or recover their position amid the growing competition of the world. The potency of this force is evinced by the activity of the Science and Art Department and of many County Councils; but it is not seldom misdirected and even detrimental to real progress. Technical and scientific knowledge, imparted prematurely and by wrong methods, tends to sterilize faculty instead of developing it. Such knowledge cannot be fruitful unless an adequate liberal education has prepared the soil for it to grow in.

(d) I will mention but one more motive force which ought to be far more potent than it is—viz., public opinion. It should be like the steady current of a full flowing river, such as the St. Lawrence, which supplies resistless power for driving machinery of every kind. There is, indeed, urgent necessity for an immense reinforcement of public interest in educational matters. The new legislation will demand the help of multitudes of educated men and women, not only to serve on County Councils, Local Authorities, and governing bodies, but also to control, correct, or stimulate them by the influence of intelligent public opinion. No legislation can effect the needful reforms, unless such men and women combine to remedy the prevalent ignorance and apathy about educational questions, and recognize more generally that, as parents and citizens, they are bound to fit themselves for active co-operation or intelligent criticism by acquainting themselves with the aims and principles of educational progress and its bearing on the welfare of the family, the nation, and the Empire.

AGENCIES BY WHICH MOTIVE FORCES MAY BE APPLIED.

I.—The Central Authority established by the Education Act: its action is awaited with hopefulness, tempered by anxiety. Excellent intentions are professed, but certain incidents have stirred an uneasy fear lest the Education Board should be unduly influenced by traditions or by personal questions at a time when consummate knowledge and discretion are needed for evolving order out of the present chaos and anarchy; for classifying and registering schools and teachers; for the training of teachers, and the inspection of schools; for negotiations with Universities and other educational organizations; and for controlling and guiding Local Authorities and governing bodies all over England.

In some of these duties the Central Authority will be aided by a Consultative Committee, about which little information could be extracted; but enough is known to indicate that its weight and power will largely depend on its own act and discretion. The Minister may consult it as little or as much as he pleases; if it attempts to dominate, it will be neglected.

Attempts were made by friends of the Church to secure that those who are interested in religious education should be adequately represented on this Committee. But, in view of circumstances which threatened the very life of the Bill, it was wisely contended that, if the

thorny religious question were imported into the discussion in Parliament, the Bill would disappear from the Ministerial programme.

This was an overwhelming argument of practical policy; of another argument the truth remains to be tested, viz., that for taking securities on behalf of religious education the fitting time would come when the question of the constitution and functions of Local Authorities was discussed in Parliament and elsewhere.

II.—This question, of the most pressing and urgent importance, has now come into the immediate foreground: it must be settled on comprehensive principles in the next Session. Those who are interested in the maintenance of religious education cannot expect that, in constituting the Local Authorities, Parliament will provide for direct representation of the Church of England and other religious bodies; and, if such provision could be made, local circumstances would often render it ineffective. But Parliament may be induced to accept such legislation as will debar all Local Authorities from a policy detrimental to religious education; and, at this stage, no time must be lost in agreeing upon proposals which, while effective for this purpose, are also likely to be acceptable to the majority in both Houses.

In framing such proposals Churchmen will doubtless follow the statesmanlike policy of the Archbishop of Canterbury. He said in the House of Lords, April 24, 1899: "I do not claim for the Church of England anything in the nature of special treatment: I do not ask that any preference should be given to the Church as compared with any other religious body." Following the lead of the Archbishop, and asking for an equitable settlement of this vital question in common with other religious bodies, the Church will be reinforced by a body of opinion which should make defeat impossible.

III.—Improvements in the methods and mutual relations of examining bodies may largely contribute to progress. It is to be hoped that by agreement and consolidation examinations may be largely reduced in number, and, in part, replaced by well devised systems of inspection; that there will be clearer views about the standards and curricula suited to different kinds of schools; and that examiners will act in closer accord with teachers. It is common complaint that examinations tend to impair the educational value of many subjects: in no subject has their depraving influence been more seriously felt than in the teaching of religious knowledge or "divinity." I need not enter into details, having already expressed in print candid opinions on this question. Interesting schemes for the improvement of divinity examinations are afoot in several dioceses, and notably in Canterbury, under the guidance of the Archbishop.

IV.—Parliament may help progress, not only by laws which secure the due relations between the religious, moral, and secular elements of education, but also by removing some grave defects which lie outside the jurisdiction of Central or Local Authorities; in particular the system of allocating enormous emoluments at Universities and elsewhere for the endowment of scholarships, under conditions which fail to produce commensurate results: large sums of money are spent in diminishing the University expenses of sons of well-to-do parents, or in encouraging premature specialization at the schools to the lasting detriment of many who gain these emoluments. Much of this money might be more profitably assigned to such objects as larger aid to able students of moderate means; aid to University Extension studies or students; the encouragement of post-graduate study; and the establishment of faculties at Universities for the training of teachers.

V.—The Church of England and other religious bodies will forward progress by steadily insisting that the first essential in education is moral training and the discipline of character, and that the heart of morality is religion; by urging applications of this fundamental principle on Parliament, Central and Local Authorities, governing bodies, examining Boards, teachers, and parents; by applying expert knowledge to formulate schemes of religious teaching on the lines best suited to young people at different stages of mental growth; by preparing manuals for teachers and pupils on Scripture teaching, Church history, Christian doctrine, and ethics; by taking part in the inspection of the methods, conditions, and quality of religious teaching in schools, with the assent of the authorities; by promoting the establishment of training courses for teachers, in which due weight shall be given to religious teaching, and to right methods of imparting it; and by urging parents first to fulfil their own duty of religious education in the home, and then to insist that religious teaching shall have its due place in the schools.

VI.—For parents might help progress far more than they commonly do; not seldom their one aim seems to be to select such schools as are most likely to prepare their sons successfully for given examinations. The time may be coming when parents will more generally seek to understand the aims, ideals, and principles of higher education, and then will apply their knowledge in home education, in the choice of schools, in their relations to teachers, and in their civic or political action in questions affecting education.

VII.—One result of recent legislation is that some kind of training will probably in the near future become a condition of entering the teaching profession, and many improvements will follow. Practical knowledge of the best methods of organization and instruction will in no way fetter the independence and originality of the teacher; it will give him more confidence and a fuller choice of expedients; he will

be like a well taught craftsman who has many good devices and knows the use of all in turn. In teaching language, much time and care will be devoted to the mother tongue; classical authors, ancient and modern, will be regarded not merely as quarries from which words, phrases, and idioms may be extracted, but also as masters of thought, form, and style; science, including mathematics, will be taught in such stages and by such methods as shall best develop faculties of observation and powers of reasoning; and there will be fuller recognition of the value of manual instruction in early years for developing faculties used in higher stages of intellectual progress. The trained teacher will be skilled in the use of these and other expedients, because he has some scientific knowledge of the mutual relations of the physical and mental powers; he moves on scientific lines in his practical application of means for awakening and maintaining interest and attention; for developing in due order and proportion the powers of observation, memory, imagination, and reasoning; and so training his pupils that well ordered and assimilated knowledge acquired in the school course shall be rich in promise of capacity and fruitage in the season of maturity.

Mr. Bell concludes his interesting paper with the following sentences:—"I have enumerated some of the agencies which may contribute to future progress. There is much reason for hopefulness as we trace the possible lines of movement; yet it is natural that some misgivings should be felt by those who watch the play of conflicting interests, opinions, and prejudices, and forecast the dangers of the onward course. We have to beware lest improvements in organization, equipment, and intellectual attainment may directly or indirectly impair the special qualities of English higher education. Improved curricula, or methods framed on foreign models, would be dearly bought if they weakened those influences of our higher schools which discipline the heart, and form the character, and fit our young people to take their part in those duties towards the country, the Empire, and the world at large which the providence of God has laid upon English men and women of our generation."

ON LIBRARIES.

THE famous Althorp collection, numbering as many as 40,000 volumes, finds a fitting and worthy home in Manchester in the beautiful Gothic building which has just been completed after nine years' work of architect and mason. Every one now knows how this magnificent gift has been given to the city of Manchester by Mrs. Rylands, who secured Earl Spencer's library at a cost of £250,000, and then planned this building as a memorial of her late husband in the city in which he had lived and worked. Such a "temple of peace" is not to be found in many cities outside London and our great Universities.

To be turned loose amongst books is to have a rare opportunity of culture, and it is one which the young people of an earlier generation enjoyed, perhaps, more frequently than the modern schoolboy and schoolgirl, with all their systematically organized schooling. Present-day education may be said to suffer somewhat from the want of a margin. Speaking of his sister, Charles Lamb says in one of his essays: "Her education in youth was not much attended to, and she happily missed all that train of female garniture which passeth by the name of accomplishments. She was tumbled early into a spacious closet of good old English reading, without much selection or prohibition, and browsed at will upon that fair and wholesome pasturage. Had I twenty girls, they should be brought up exactly in this fashion. I know not whether their chance in wedlock might not be diminished by it; but I can answer for it that it makes (if the worst come to the worst) most incomparable old maids."

Browsing among books is certainly a delightful and luxurious occupation. The drawback of an ordinary lending or reference library is that this is made impossible by the well meant, but amazing, intervention of the middleman in the form of a librarian, who comes between you and your books when you would fain choose and pull them down for yourself, as you can in the Reading Room of the British Museum or in the Camera at Oxford. In the latter you may spend hours of luxurious quiet, with no sound to disturb you save the occasional footfall of fellow-readers and the gentle, steady sound of stone-cutting outside, where the workmen are, as usual, busy on the tower of St. Mary's. The special delight of the Camera is that one can go down on one's knees before the low shelves of books—economics, philosophy, poetry, what you will—and pull down any book that takes one's fancy—to a certain extent, that is. All the books are not thus available for the browsing student; for many he must conform to the ceremonial prescribed, and specify his wants on slips of paper according to the accepted usage. The Camera is in other ways a delightful reading place. You are so hospitably received and generously treated once inside the noiselessly closing door. Here you find not only desk and pen and ink at your disposal; there is paper, too, and positively a paper basket—crowning luxury of the literary scribbler—one of the neces-

sary luxuries, let us say. He must be a half-hearted student who cannot study here. To my mind it is ideal as a place of reading.

The Bodleian proper has another atmosphere entirely—more solemn, more exclusive, more awe-inspiring. There is, or was, a venerable guardian of the books, who was apt to look with some suspicion at the youthful reader who applied for entrance within Duke Humfrey's gates. The look suggested that the Camera might surely serve your purpose, and it was with no trace of real relenting that he showed you to a place among the manuscripts.

The ceremonial of book getting, too, both here and at the British Museum, is sufficiently alarming, and the vast tracts of written catalogue are a trifle perplexing and disquieting to the new comer. No casuals need apply; that is made very clear to the duller intelligence, and the effect of the place is extremely sobering to the mind. The British Museum has been called "the Valley of the Shadow of Books," and, perhaps, no better name could be found to describe it.

It is interesting and instructive to watch the readers at a public library. In one which I often frequent there is a constant stream of readers of all sorts and conditions. There is the schoolboy, who comes in for "cribs," and the student who supplements his private library. The man of business hurries in to look up a patent or read up other facts for his business. In one corner, night after night, you may see a shabby old working man dressed in corduroy clothes and in an old red neck-cloth. He invariably takes from the open shelf a large Bible and Matthew Henry's "Commentaries," and alternately reads and sleeps over them in the warmth till such time as he departs for his supper and his bed. I have often wondered and speculated about my friend of the "Commentaries." Does he seek warmth or consolation most? Is he a theologian working out a new found creed, or is the large-print Bible but a pretext for light and warmth and shelter? I do not know. Two young people were as regular as he; but they came for literature without a doubt. They were, I think, true lovers of books, as well as of each other, and they spent many hours side by side in company with the poets. They looked very happy, and yet they were undoubtedly poor. Yet had they great riches.

REVIEWS.

THE NATION AS SCHOOLMASTER.

Our National Education. By the Hon. E. Lyulph Stanley, Vice-Chairman of the London School Board. (James Nisbet & Co.)

This is a series of essays on educational topics of the day, exhibiting throughout the well known qualities and abilities of the Hon. Lyulph Stanley as an educationalist. The whole is marked by the author's exactness and thorough grasp of simple facts and figures; but, at the same time, is as strongly marked by his individual mental form and his bias in favour of universal School Boards, with power to absorb or swallow up all other educational agencies in the country. He shows a contempt, often only thinly veiled, for everything that stands in the way of the realization of his ideal.

The first chapter, entitled "Technical Instruction," opens with a definition as wide as the world of business, according to which "the physician, clergyman, lawyer, . . . the infant in Bethnal Green who helps his parent to make match-boxes by the gross, the girl of twelve who goes to a dancing-school with a view to entering the *corps de ballet*, are all receiving technical instruction." The range of the inquiry, is, however, at once narrowed to the forms of technical instruction which need and deserve public organization and support.

Then follows an account of the Act of 1889, which is both clear and complete, and with which few reasonable persons would disagree. "Apparently," says the writer, "what was in the mind of the framers of this Act of 1889 was such a specialized secondary instruction as may by a liberal construction be of material service in fitting young people for industrial or commercial life; but the giving of a marked and definite course of instruction closely connected with a trade was not approved." This is the plain unvarnished truth of the matter, but when we come to the comments on it we see the mark of the Hon. Lyulph Stanley. "While certain subjects have been capriciously allowed and disallowed by the Science and Art Department on applications of Local Authorities, no clear principle can be laid down." The author clearly charges the Authorities with inconsistency because certain employments, like naval architecture, are recognized by them, while the trades for which the usual apprenticeship is entered on are excluded. But, the principle of action is here quite clear, though unrecognized by Mr. Stanley. If the ordinary rules of supply and demand in regard to any of the ordinary trades are disturbed by State intervention, there

would certainly be a disastrous glut in the supply of artisans of the trades thus artificially recruited. In such a matter as naval architecture there is no such danger.

A similar illustration of rational explanation with which all agree, followed by comments which show the bias of the writer, occurs in connexion with the Local Authorities: "The danger is that, if the School Boards and the County Councils do not work in association with each other, there may be friction and a waste of effort and a failure to make each school work so as to lead naturally to a higher one." This is excellent, but it is discounted by the claim of School Boards to take charge of the technical training of those who are already at work, and by an attack on the Science and Art Department. The author says that "the manner in which the Science and Art Department, already doomed to death, is bestirring itself to prejudice the future in favour of County Councils, so far from helping the solution of the educational problem, is making it more difficult. For, in a moment when Local Authorities should try and unite, the County Councils are being egged on, by departmental inspiration, to apply for powers which the great School Boards have protested against unanimously." This is an example of "friendly co-operation" as advocated by Mr. Stanley. We recognize the same genius in the comments on the endowed schools and the Universities. The voluntary system in all its phases is abhorrent to this member of the London School Board. How does he wipe them out of his path? By reviving a paradox often stated thirty years ago by Robert Lowe—"endowments have been the curse of secondary and higher education."

Pity the shades of the pious founders, of the magnificent public benefactors, of the far-seeing philanthropists whom our country has had the glory of producing and whose memory it delights to honour. Oxford and Cambridge so fascinate visitors by the beauty of the buildings and by their historic importance that these visitors, according to the author, "fail to realize how inadequate they are to the needs of the day." "Cambridge has to sue for alms to enable it to perform a national duty." Individuals subscribe their ten thousands; but, "if the higher education is a national need, the nation should not make it depend on almsgiving." We may take it for granted that nothing short of a penal Act prohibiting voluntary contributions towards any part of our educational work would satisfy the writer. Mr. Chamberlain's great effort to raise a Midland University by voluntary impulse is to be regarded as a curse, not a blessing. When this becomes the view of our countrymen as a whole the social atmosphere will be so cold and selfish, so miserably unsympathetic, that life in it will not be worth living. Fortunately, we see no signs of the decay of philanthropy, although the channels in which it operates are necessarily changed by the altered conditions of life.

The best chapter in the book, from our point of view, is that on the training of teachers. With the exception of a little cynicism directed against the schoolmasters in secondary schools, there is little in it with which we cannot heartily agree. Mr. Stanley is certainly at his best when he deals with the proper work of School Boards, and we wish we had here more information respecting this work and its cost.

Although reminded that "the County Councils have the whisky money," which, no doubt, Mr. Stanley covets, and that "non-educational authorities are now specially aided by a State subvention of £700,000 a year," we are not treated to any analysis of the State subvention to the London School Board, or of the distribution of the wealth it gathers from the rates. The chief reference to the London School Board is one in which Diggle and Riley are slain once more. In "the outlook," which concludes the volume, the author predicts the adjustment of the new and the old, the transition from private speculation to public supply, from private denominational and clerical management to representative lay management. He also tells us that "the teachers and professors who have hitherto reigned supreme unobserved, and, therefore, uncriticized, will have to submit like others to popular government." There are many educationalists who desire as earnestly as Mr. Stanley to "see a system adapted to the traditions and habits of our country yet willing to learn from others," but who are convinced that our author's plan of a universal and uniform pabulum is not such a system.

IAMBICS.

Demonstrations in Greek Iambic Verse. By W. H. D. Rouse. (Cambridge University Press.)

It is but a few months since we noticed Mr. Rouse's cleverly devised lessons in Latin elegiacs. The volume now before us

is a companion treatise on Greek verse, and, like its predecessor, is remarkably fresh and stimulating. In an introduction, extending over seventy-five pages, the author has set down a large collection of useful hints on the structure and usage of Greek tragic verse, and has given some valuable tables of classified examples. Several points that he makes have not appeared, so far as we are aware, in any other manual of the kind. Amongst these are his remarks on rhythm and the verse pause. He gives an interesting and reasonable account of various phenomena connected with the *cæsura*, and his advice to the beginner, in this as in other matters, is generally such as we can heartily subscribe to. He insists, most properly, that the pupil who would acquire facility must be prepared to make catalogues of classified words for himself. It is herein we are convinced that the secret lies of acquiring ease in Greek iambic composition. The vocabulary of Latin elegiacs is small and differs but little from the vocabulary of Latin prose. But in iambic verse, in spite of its far greater affinity in some respects to prose writing, the diction employed is wholly different from the diction of ordinary prose; and on this great and fundamental difference of language Mr. Rouse rightly insists.

Among the most ingenious lessons is his demonstration how a passage of Herodotus may be readily turned into tolerable verse. Therefore, if he (the beginner) can put English into simple Greek prose, it is only a step from this to simple Greek verse; and his aim should always be to make the verse simple until his knowledge increases and he feels sure of his own power. Half the mistakes of verse writers come from attempting to write finely before they can write simply. This is most true, and it is upon the sound principle of starting with what is plain and bald in language, and advancing gradually to the elaborate and decorated, that Mr. Rouse proceeds. For special commendation we may further single out the remarks on Antithesis, Repetition, and Abstract Terms. Occasionally, we are unable to accept the Greek offered in the worked-out versions as sound, and we cannot imagine why Mr. Rouse quotes the imperfect fragment of Sophocles

πάντ' ἐκκαλύπτων ὁ χρόνος εἰς φῶς ἄγει

as an example of the unusual lengthening of a short final before aspirate followed by ρ . If Brunck's $\tau\acute{o}$ $\phi\acute{o}\varsigma$ is correct, then the \acute{o} is short. As it stands the line cannot be scanned. The dropping of the $\tau\acute{o}$ is easily accounted for by the fact that the line grew into a proverb in the form πάντα τὰ καλυπτόμενα ὁ χρόνος εἰς φῶς ἄγει. The corruption reappears in the version of the line as given among the "Sentences" of Menander, where $\pi\rho\acute{o}\varsigma$ is substituted for the unmetrical $\epsilon\iota\varsigma$. In the useful list of verse inflexions we miss the forms $\delta\iota\nu\alpha$, $\acute{\epsilon}\pi\iota\sigma\tau\alpha$, $\acute{\epsilon}\pi\iota\sigma\tau\omega$, $\pi\acute{\epsilon}\pi\iota\sigma\theta\iota$. The important subject of *asyndeton* does not seem to be adequately treated; for, though in the index reference is given to page 71, there is nothing about the matter there; and on page 72 a very few lines are devoted to but one aspect of the matter, the *asyndeton* of epithets.

However, on the whole, we are in such hearty agreement with Mr. Rouse that we do not wish to cavil at small blemishes in his book, and can only hope that his book will find its way into the hands of many teachers, to the certain benefit both of themselves and of their pupils.

THE STORY OF THE WORLD.

The International Geography. By Seventy Authors. With 488 Illustrations. Edited by H. R. Mill, D.Sc. (Newnes.)

Dr. Mill has gathered round him a large staff of competent assistants, who have collaborated with him under a detailed general scheme, with the result that the 1,090 pages of this compact "summary of geography" are notably consistent and uniform. The first part of the volume is occupied by ten chapters on the principles of geography, dealing with mathematical, political, and applied geography; maps and map-reading, the "plan of the earth," the origin of land-forms, the oceans, climates, and the distribution of plants, animals, and mankind. The second part, comprising more than four-fifths of the text, treats of the countries of the world as they are. Though the book is neither a gazetteer nor an encyclopaedia, it has some of the features of both, being comprehensive without attempting to be exhaustive. It is written in a straightforward, readable form, without lists or tables, except a few statistics at the end of each chapter; and, though the writers are careful to give us the essential details of information in every case, they are not over-technical or inconsiderately learned. The pages are dotted thick with little maps and plans let into the text, and illustrating it in

an admirably varied manner. To any one who learned his geography at school, in the ordinary (and, perhaps, inevitable) fashion of comparative lists and tabulated statistics, this "International Geography" should be very welcome and serviceable as a means of reviving his knowledge, and, at the same time, co-ordinating and digesting it.

The distribution of the work amongst the various contributors has been careful and appropriate. In most cases an important foreign country is described by natives of that country, and their contributions have been translated by the Editor, or by Mrs. Mill, or another. English writers dealing with foreign countries derive their credentials from the fact of residence in, or intimate connexion with, the lands which they describe. Some of Dr. Mill's selections have been peculiarly happy. Thus, Sir George Robertson writes of Afghanistan, Mr. G. G. Chisholm deals with the Chinese Empire, Mrs. Bishop with Korea, Mr. W. P. Reeves with New Zealand, Mr. J. Rodway with the West Indian colonies, Sir H. Johnston with Tunisia and British Central Africa, Mr. Bryce with Natal, the Transvaal, and the Orange State; Sir W. Martin Conway treats of "the Arctic Record," whilst Prof. F. Nansen takes the Arctic Regions. Geography treated in this reasonable manner could not fail to be interesting; and that word very fairly expresses the prevailing note of the volume as a whole. Mr. Selous, the well known traveller and hunter of big game, describes Southern Rhodesia and Bechuanaland. Dealing with the Zambesi River he writes:

The fall known as *Mosi-a-tunya* (Smoke-sounding) by the natives, which was discovered by Dr. Livingstone in 1851, and named by him the Victoria Falls, is second to none in the world in magnificence; for, although I will not say that it is finer than Niagara, it yet surpasses that stupendous cataract in some respects, and, as a whole, appeals quite as powerfully to the imagination. The magnitude of these falls will be understood from the bald statement that they are 2,000 yards in width, and 450 feet in perpendicular height. The vast volume of water falls, not into an open gorge like Niagara, but into a narrow rift, whence the escape is by a still narrower zigzag ravine through a mass of hard rock. The falls are about two hundred and twenty-five miles distant from Bulawayo, in a direct line, and will probably be connected by rail with that town within the next few years.

We do not find much inducement to be critical in regard to the plan and execution of this volume. It is rather a reading-book than a school-book; but, accepting the design, it is an excellent achievement.

BRITISH HISTORY.

- (1) *England in the Nineteenth Century.* By C. W. Oman. (Edward Arnold.) (2) *A Brief Survey of British History.* By George Townsend Warner, M.A. (Blackie.) (3) *History of Great Britain from B.C. 55.* (McDougall.)

These three reading-books are approximately equal in size, though they differ in scale. Mr. Oman deals with ninety-eight years in over two hundred and sixty pages, thus giving himself space to enter somewhat fully into matters of special importance. He tells the story of the century with much spirit and picturesqueness, and he makes his text both clear and attractive. He is anything but wooden in style, and is not above sacrificing the precise meaning of words for the sake of an easy and fluent narrative. At the beginning of the century, he says, the National Debt "was piling itself up at the most fearful rate." The difference of revenue between thirty-nine and sixty-three millions he calls "immense." War, he says, "is such a fearful burden"; Bonaparte professed "magnificent" sentiments; Englishmen looked forward to a period of "economy and retrenchment," as though one could economize without retrenching. The author does not hesitate over such sentences as this: "The longer the First Consul studied the problem . . . the more difficult it began to appear." But these are comparatively trivial matters. Mr. Oman's book is not put forward as a model of style, and, as an historical summary, it has many excellent qualities. There is a series of very good maps.

Mr. Warner, who dates his preface from Harrow School, has written an admirable volume, which he fitly calls "A Survey of British History," and which is thoroughly bright and pleasant to read. There is scarcely a page without some personal detail or quoted phrase or sentence, and the dramatic instinct of the writer is manifest throughout. Mr. Warner's plan is to select some of the most important factors in each period, omitting the rest, and treating those which he chooses as a chain of causes and effects. He arouses the interest of his readers by a graphic narration, and appeals to their intelligence by showing how the events of one year spring out of, and lead up to, the events that

precede and follow them. The character of his successive chapters is indicated by their titles—"The Unlucky House of Stuart," "Mary Stuart and the Reformation in Scotland," "Royal Marriages," "Elizabeth and the Armada," "The Stuarts and their Difficulties," "War between King and Parliament," "Britain Governed by an Army." There is a useful summary at the end of the book, and it is illustrated by several maps and plans.

McDougall's "Complete Historical Reader" is somewhat more elementary in its treatment than Mr. Warner's "Survey," and it is not so philosophical in its arrangement; but it proceeds on the same plan of selected passages and chronological summary. It is a well executed work, very suitable as a reader, and rendered more attractive by a hundred and twenty-five illustrations and maps.

SENSIBLE LECTURES.

Object Addresses. By the Rev. A. Hampden Lee. (Edinburgh: Oliphant, Anderson, & Ferrier.)

As the title of this book implies, Mr. Lee's method is to take various objects likely to interest and attract children, and to use these as illustrations of truths to be impressed on their minds. The writer shows himself to be at once a shrewd man and a lover of children. He does not fall into the mistake of supposing that the abstractions of religion are any more intelligible to a childish mind because they are abstractions. Knowing how a child's mind works always among things tangible and concrete, he, very sensibly, decides to work in the same material, and therefore chooses for his texts such things as a piece of chalk, a bunch of keys, a magnet, a wild nettle, and a model of a lighthouse. The freshness, reality, and imaginative sympathy in these talks must have won the attention and reached the hearts of the audience they were meant for. It is just as possible to be dull and foolish in dealing with nettles and magnets as with anything else. But quick eyes and the gift of seeing associations between different things tend to eliminate foolishness, and both are possessed by Mr. Lee. His illustrations are apt, and his anecdotes to the point. Moreover, he has a convincing way of treating his subject, and a really poetic manner of presenting it to children.

Some of the best addresses in the book are those entitled "The Divine Magnet," "The Thread of Habit," and "The Lighthouse of Life." The last of the series, entitled "Who shall be Tenant?" is illustrated by a card bearing the inscription "This House to Let." "Every boy and girl is like a house," says the writer; "You are to let, and there are many who want to come to live with you, and remain always in your life-house." The various would-be tenants are then introduced and described: Idleness, with his hands in his pockets; Envy with green eyes, thin, and queer-looking; Pride and Strong Drink. "Thus we come finally to the point:—"Behold, I stand at the door and knock." The book may well be recommended to those who are looking for something suggestive and practical, and are anxious to avoid what is stereotyped and lifeless.

GENERAL NOTICES.

CLASSICS.

Ovid, Metamorphoses, Book I., edited by G. H. Wells (Bell); and *Eutropius, Books I. and II.*, edited by J. G. Spencer (Bell), belong to Messrs. Bell's new "Illustrated Classics," the first volumes of which we noticed in this column last month. The two books before us leave nothing to be desired, in point either of fullness or of appearance. Both editors have performed their task with much care, and with a perfect appreciation of the wants of beginners. The notes are supplemented by a grammatical appendix, in which the more important points are conveniently tabulated. The list of proper names is valuable, and the illustrations, drawn from genuine sources, add greatly to the attractiveness of the volumes. In the comments learning is rightly eschewed; but some interesting parallels from English literature are cited. The introductions are brief, simple, and to the point. The "Eutropius" is undoubtedly the best on the market. Altogether, the volumes cannot be too highly commended.

Cæsar, De Bello Gallico, Book VI., edited by E. S. Shuckburgh (Cambridge University Press), belongs to the "Series for Schools and Training Colleges"; and it is almost needless to say that the editor has provided a thoroughly satisfactory set of notes. The introduction seems to us to be too long and overloaded with facts.

Æschylus, Prometheus Vincit, edited by H. Rackham (Cambridge University Press), an addition to the long list of commentaries on this play, is less elaborate than the edition of Messrs. Sikes and Willson (with which it is natural to compare it); but it is full of learning. The editor displays a thorough knowledge of the work of his predecessors; and the critical notes are enriched with some hitherto unpublished suggestions by Mr. Walter Headlam. We miss a *conspectus* of the lyrical metres.

Euripides, Hippolytus, edited by J. E. Harry (Ginn), is an interesting edition, not only on account of the illustrations that it contains, but also because Prof. Harry has incorporated in his notes many references to English literature. There are also many grammatical notes, bearing marks of the teaching of Prof. Gildersleeve, and many references to prose diction and idiom. Some of the notes—such as those on suicide and exile—are amusingly discursive; but, on the whole, the commentary is illuminating and decidedly entertaining. Prof. Harry occasionally falls foul of Mr. Hadley, as when the latter has the temerity to call κέρταται a *perfect*. We have seen this statement in other English, school books; but, though as a matter of form it is, of course, correct, as a matter of *usage* it is wrong. Prof. Harry's work is scholarly and sound throughout. It is unfortunate that the poet's name is twice mis-spelt on the cover.

Cicero, De Officiis, translated by G. B. Gardiner (Methuen), is a new volume in the "Classical Translations" series. "It may at once be conceded," says the translator, in a burst of confidence, "that as a scientific treatise the 'De Officiis' has little merit"; and it might therefore, be questioned whether it was worth while to make a new English translation. Dr. Gardiner holds, however, that the lofty morality that is inculcated on every page largely atones for the lack of profundity; and he rightly points out that the historical interest of this homily is considerable. To a modern Englishman it seems odd enough that the greatest Roman thinkers should have thought to cure the waywardness of the young by addressing "goody-goody" books to them. But, inasmuch as this work remains a prescribed subject in the French *collèges*, we must presume that our low estimate of the practical value of such treatises must be the consequence of a radical difference of temperament. The truth is that no Englishman was ever persuaded to do right by reading anything that was not based either on religious teaching or on sound—not sham—philosophy. Cicero's popular penny philosophy was, doubtless, the best substitute for religion that could be provided at the time; but the interest of the thing has evaporated, and the work has long since served its turn, save only as a piece of Latinity. We cannot think that Dr. Gardiner's version, praiseworthy as it is, will induce any one to read the "De Officiis" who can possibly avoid it.

There are several points to be noticed about Mr. St. J. B. Wynne Willson's edition of *Cæsar, Gallic War, II.-V.* (Blackwood.) It is illustrated, not only with maps of Gaul and south-eastern Britain, the latter, by the way, showing forests and marshes, but also with pictures of Roman soldiers, a besieged town, and various military appliances. Next, there is a list of phrases connected with fighting extracted from the two books, which ought to be very useful in adding to the schoolboy's vocabulary, generally so deficient. Lastly, many of the notes are written with the avowed object of pointing out differences of idiom between English and Latin, with a view to the writing of Latin prose. It is a pity that this idea is not so completely carried out as the preface might lead one to expect. For example, *quibus vendant* is well translated "a market," but it is not pointed out that the same form is most useful in rendering English nouns which really disguise a clause. Again, *in consiliis capiendis mobiles* is excellently rendered "impulsive," but the opportunity of calling attention to the Latin equivalents of modern adjectives is missed. The grammatical notes, which in the early part are intentionally numerous, are clear and often suggestive. The edition is evidently the work of a practical schoolmaster, and is likely to be especially useful to teachers who have had no opportunity of hearing scholarly classical lessons given to the middle forms of schools.

Second Year Latin, by J. B. Greenough, B. L. D'Ooge, and M. G. Daniell, (Ginn & Co.) is a book of nearly seven hundred pages, and hardly what one would put in the hands of English schoolboys. It seems rather to be adapted, and well adapted, for those who begin Latin rather late, and who must content themselves with very moderate scholarship and some knowledge of Roman history and antiquities. It is almost entirely a reading book. The early part consists chiefly of stories and fables; a few taken from classical writers, but the majority from modern German text-books (Meurer, Perthes, &c.), drawn up for the lower classes of schools. These are followed by the story of Ulysses from Ritchie's "Fabulae Faciles" and lives of Marius and Cæsar by Lhomond, whose "De Viris illustribus Urbis Romæ" should, by the way, not be called "Viri Romæ." Then come a very few pages of poetical selections. The bulk of the book is taken up with extracts from Cæsar's "Gallic War," including, among other passages, the whole of the Second Book, the invasions of Britain, and the sieges of Avaricum and Alesia. There is

a full vocabulary, and a good supply of practical notes. An important feature of the book is the wealth of illustrations, mostly connected with Roman warfare, but also including several reproductions of Greek antiquities, in connexion with some of the anecdotes in the earlier part.

MODERN LANGUAGES.

Gems of Modern French Poetry. Edited by J. Lazare. (Hachette.)

This is an interesting selection from poets of this century, including some old favourites, like Theuriet's "La Chanson du Vaunier," De Vigny's "La Pégote," "La Sérieuse," and Victor Hugo's "Les Pauvres." Victor Hugo is well represented, and there are pieces by Coppée and Verlaine; but we miss Leconte de Lisle and De Hérédia—perhaps on grounds of copyright. There is a short and useful introduction on French metre, which would be more complete if it told us in what combinations *i* and *u* are vowels and consonants respectively. This always presents a difficulty to English students. Short biographical notices of the authors are given. The notes are the weakest part of the book. They consist almost exclusively of mere translations of words and phrases, most of them quite unnecessary. Some are good; others—as, for example, *jetant vingt-quatre éclairs*, "firing twenty-four shots"; *se tordrait sous elle*, "reeled about on the same spot"—are poor.

Grammar Tables. By J. Oliphant. (Macniven & Wallace.)

The object of this little book is to set out side by side the chief grammatical forms of English, French, and German. Thus, one double page shows the personal pronouns as inflected in the three languages, with notes pointing out how far each language has discarded inflexions of gender, case, &c. The tables include most of what it is absolutely necessary to commit to memory in the way of accident, and, with the notes, might be utilized by a good teacher to enforce some elementary notions of the science of language.

Jules Verne, Un Drame dans les Aïrs. Edited by J. G. Lloyd Jones. (Arnold.)

Another volume in the same series. The text is, however, less happily chosen, for we have here little beyond a history of the exploits of aeronauts. Most of it is in dialogue. There is a profusion of signs of exclamation, which in the end get on one's nerves. The notes and vocabulary are carried out in the same way as those to "Pif Paf." We notice that in the latter the words from *coûter* to *curieux* have slipped in between *condamner* and *condition*; that there should be no quotes in page 9, line 9; and that *jeun* in the vocabulary should have no accent. In page 32, line 22, the rendering "to arrive" or "to reach" will not fit the text; nor is the adjectival value of "trouble" (e.g., in page 8, line 6) noticed in the vocabulary.

Rules of French Grammar at a Glance. By O. F. Camphuis. (Marlborough.)

There are many of the rules of elementary grammar in this book, which is clearly printed. It will do as well as a good number of other books. There is nothing sufficiently novel about the book for us to give it special commendation.

Songs of Béranger. Edited by G. H. Ely. (Blackie.)

It does not seem to us likely that the ordinary English child will appreciate these songs. The lyricism of Béranger—if, indeed, his verse is lyric at all—is so different from anything to be found in the English verse a child usually reads that he will derive little pleasure from these poems. The editor's introduction gives a good account of Béranger, and the notes and vocabulary are carefully done—worthy, indeed, of a better subject.

Children's Guide to the French Language. By A. G. Ferrier. (Blackwood.)

We gather from the preface that this book presupposes a preliminary course of one, if not two, months; and it seems a pity that not more guidance is given to the teacher how to get over the early difficulties of pronunciation, seeing that Miss Ferrier attaches so much importance to this matter. The lessons consist of sentences which are connected, and present little scenes which are calculated to interest young children. Here a good deal of skill is displayed. In matters of pronunciation, however, the "guidance" is not always safe. No distinction is made between long and short vowels, between the two kinds of *a* and of *eu*; in *fille* the *lle* is said to be mute, which is misleading, to say the least; *ou* and *oi* are classed together under the same heading as "double or compound vowels." The second edition of the book contains grammatical notes to the first section, and the third section gives "important grammatical rules and verbs."

Tutorial Handbook of French Composition. By A. Mercier. (Blackwood.)

The French Lecturer at St. Andrews has produced a very useful little book, which admirably accomplishes its modest object of helping students preparing for examinations, especially those who have to rely on their resources. It is on rather novel lines, which commend themselves at once to any one who has had to teach the subject. We are confident that many students will buy this book, and will derive great benefit from it.

Carnoy, Les Deux Bossus. Edited by E. B. Le François. (Blackie.)

A short fairy-tale (twenty-eight pages of text in large type), which beginners will read with pleasure. The editor has done his modest work well; he has furnished notes, a vocabulary, and a table of irregular verbs. We are not familiar with the form "Ashasvérus" as the name of "this legendary unfortunate man," the Wandering Jew.

Petits Chefs-d'œuvre Contemporains. Edited by J. Lazare. (Hachette.)

Mr. Lazare has chosen six stories by well known authors, averaging about a hundred and fourteen pages. They have not, we believe, been used as school texts before, at any rate in England. They are one and all well suited for this purpose, and the book is a welcome addition to our "intermediate" readers. The notes (chiefly renderings) are quite satisfactory. The vocabulary is unfortunately incomplete. A page was taken at random, and it was found that twenty-five words (in twenty-four lines) were absent.

Laboulaye, Pif Paf. Edited by W. Mansfield Poole, M.A. (Arnold.)

This short text is meant for pupils of thirteen and fourteen, according to the General Editor's preface to the volumes in "Arnold's French Reading Books," of which this is one of the first. It will probably be found that even younger children will be able to read the text without much difficulty. The language is simple; there is plenty of action, and a good deal of quiet humour. The notes give very full grammatical details, which are clearly put, and English renderings, which are quite satisfactory. We miss notes on *y avait perdu son latin* (page 4, line 9), and on *roman carthaginois* (page 24, line 7). Had "Salammbô" been recently published when "Pif Paf" was written? We venture to make a few suggestions for future volumes of the series. Could not the lines be numbered by fives? At present they are numbered by tens, which gives trouble needlessly. Is there any point in printing every word in the vocabulary with a capital, and could not somewhat larger type be used in this part of the book? The vocabulary might be a little fuller. Compare, for instance, the rendering of *alphabet* with its use in page 4, line 6; *colère*, in page 4, line 13, which does not mean "anger"; and *de grands traits*, in page 4, line 25, which does not mean "great features."

Auswahl aus Luthers deutschen Schriften. Edited by W. H. Carruth, Ph.D. (Ginn & Co.)

Dr. Carruth, who is Professor of German in the University of Kansas, has done useful work in editing these extracts. As he says in his preface, there is no German writer whose work is so much praised, and so little read by foreigners, as Martin Luther. The longest extracts are the appeal to the Christian nobility of the German nation ("An dem Adel"); the letter to the Municipal Councils ("An die Radherrn"), urging the establishment of schools; and the diatribe against Prince Henry of Brunswick ("Wider Hans Worst"). There are also specimens of the translation of the Bible, several of Luther's hymns—of which "Ein feste Burg" is so familiar in England—and a few letters! and miscellaneous writings, including two extracts on music. Great pains have been taken to produce a text which should be readable, and which should, at the same time, retain for the student Luther's inflexions, syntax, and vocabulary, as nearly as they can be ascertained. The notes, without being too numerous, explain all real difficulties; and the literary life of Luther, which forms the introduction, is very full and carefully put together. Perhaps a rather less detailed narrative, accompanied by a chronological table, would have been better suited to the general reader, who is in danger of not seeing the wood for trees.

Leading Events of Modern Warfare. By A. Weiss, Ph.D. (Hachette.)

This German reading book, edited by the Professor of German at Woolwich, is intended for military students and Army candidates. It consists of the episodes of the wars of this century, taken from good writers, such as Von Treitschke, Raumer, &c., and extending from Trafalgar to the capture of Wei-hai-wei by the Japanese. The selections seem well made, including, as they do, among other battles, Leipsic, Waterloo, Gettysburg, Plevna, and Sedan. The editor's work is less satisfactory. He has supplied a full vocabulary, such as is given in elementary reading books, but quite unnecessary for students at the stage for which the selection is intended. What is really wanted is (1) a very brief introduction to each episode; (2) rough plans of the battlefields, such as one finds in many of the best school texts; (3) explanatory notes, especially on military matters. None of these are forthcoming; all might have been supplied, with less labour, and more interest to the editor, than the *Holzschneiderei* of index-making.

Praktisches Lehrbuch der Spanischen Sprache für Handelsschulen und zum Selbstunterricht. Von Dr. S. Gräfenberg. (Frankfurt: Carl Jügel.)

It is refreshing to receive a book constructed on such sound principles as Dr. Gräfenberg's "Practical Manual of Spanish for Commercial Schools and Private Students." In each lesson, after a succinct and clear statement of the most important points of grammar introduced, and illustrated by the sentences exhibited, a dialogue is given with a form of advertisement or an anecdote, which together form the basis of the exercise that follows, not without further help in grammar. The method resembles that very successfully applied by Koch to English and French for German readers. The ninth chapter (*Numerales*) may serve as an example. First, the cardinal numerals

are given, next notes on these, then a dialogue (*El Tiempo*, time) followed by notes; after these an *anecdota*, followed by the exercise for translation into Spanish, and that by *Nombres geográficos*, *Anuncio*, and *Carta* (offer of services by traveller, making use of some names of countries), which has some more notes in its wake, with another exercise to complete the lesson.

Hossfeld's German Grammar. By C. Brenkmann. Revised and Enlarged by L. A. Happé. (Hirschfeld.)

This book is not as much ahead of the times as the "1900" on the title-page might lead one to believe. Indeed, it is on the good old lines, and Mr. Happé has merely revised the spelling and added a chapter on German Construction; thirty short vocabularies, each containing twenty words in daily use (among which we notice the "horned beetle," the "tailor's goose," and the "non-com. officer"); a selection of poems culminating in Bürger's "Lenore" (!); and an English-German vocabulary.

Nelson's First German Reader. Edited by J. J. Trotter, M.A. (Nelson.)

Mr. Trotter has here given us a good selection of passages, of the most varied kind, but carefully graded. He has rightly refrained from annotating them, as he has added a very full vocabulary, as well as a list of the irregular verbs. It would have been well to "cook" the texts a little here and there; a purist might object to the use of *derselbe* for *er* (three times on as many pages). The book is carefully printed, in accordance with the "new orthography," except that *alles*, *niemand*, &c. are still spelled with capitals. It is a pity that the lines have not been numbered.

MISCELLANEOUS.

The Learners' Prayer Book. With Simple Notes. (Frowde.)

This handy little volume is intended for young people to use as a service-book at church and at home. It combines in an admirable manner the purposes of a prayer-book and a book of instruction. It does not include a history of the Book of Common Prayer, but is explanatory and exegetical in a simple sense. There are marginal references and definitions of terms, and the notes constitute a helpful commentary throughout. These aids to the understanding are in rather small print; but this was necessary in order to keep the volume to a convenient size.

"*I Believe.*" By the Most Rev. J. E. Cowell, Metropolitan Bishop of India. (Religious Tract Society.)

A book for the young, intended to set forth the nature and reasonableness of the Creed. It is a valuable first book of doctrine by an old schoolmaster, and will, doubtless, be found useful by such as still have boys and girls under their charge in whose hands they desire to place a book of this kind. Bishop Cowell is generally very clear and precise; but here is a curious little exception: "Any one of the beliefs so expressed may be, and is, stronger and weaker than some of the others."

Doubt and Faith. By E. J. Hardy, M.A. (Fisher Unwin.)

This volume is made up of the Donnellan Lectures delivered last year in Trinity College, Dublin, with a few supplemental chapters. It is dedicated "to young men generally, who are 'perplexed in faith but pure in deed.'" In his preface Mr. Hardy says: "These lectures were addressed, not to the Fellows, Professors, and other wise men of Trinity College, Dublin, but to the babes or undergraduates of that *alma mater*. Most of my predecessors seem to have reversed the process. They were so clever and learned that what they said was Greek to the younger portion of their hearers." The preface and book alike are very frank and ingenuous.

The First Epistle to the Thessalonians. By the Rev. G. W. Garrod, B.A. (Macmillan.)

Mr. Garrod's analyses and brief notes are very useful. The volume is thoroughly educational, and precisely what is needed for a close study of the Epistle. It is systematic and complete, without being too learned.

Nat the Naturalist. By G. Manville Fenn. (Blackie.)

This is another of "Blackie's Continuous Readers," two of which we noticed last month. If a book is to be read continuously in class, this is a fairly good one to choose for the purpose. The incidents and excitements of the story are well distributed, so that no single reading need be dull. A boy and his sea-faring uncle travel in the Eastern seas in search of rare birds, and meet with plenty of adventures among savages and wild beasts. The book has plenty of action, some humour, good moral lessons well in the background, and plenty of opportunity for picking up general information in geography and natural history; for, though the story is pure fancy, the birds, beasts, &c., mentioned are kept within the bounds of reality. The short notes at the end will prove useful to the teacher.

Lives of Great Italians. By Frank Horridge. (Fisher Unwin.)

It is not to be expected that much fresh light can be thrown by a single writer on the lives and work of men of such diverse times and genius as are here put together. Dante, Petrarch, Carmagnola, Machiavelli, Michel Angelo, Galileo, Goldoni, Alfieri, Cavour, and Victor Emanuel are all comprehensively dealt with in less than five hundred pages. The fact that they are Italians is a very slender thread to connect such

men; they belong to the world far more than to Italy, and we think that a group of Italian poets, painters, or statesmen would have proved more acceptable to the general reader. The author has not sought to show the development of character and the influence of the time and contemporaries on his various subjects, so much as to place before the reader as many facts as possible in a given space. For instance, in the account of Michel Angelo, the events of his life are stated clearly in chronological order, but little attempt is made at a critical survey of his work as a sculptor and painter. The book is distinctly marred for the purpose of reference by absence of an index or any subdivisions.

Commercial Geography of the British Isles. By A. J. Herbertson. (Chambers.)

Teachers will find this handy little volume of great use in two ways: first, in suggesting various courses of lessons to vary the usual routine of geography work; and, secondly, in the compact form in which the information is presented. The book is avowedly not intended to be put in the hands of pupils. It is illustrated by several very clear little maps.

The Pickwick Papers (Nelson), in the "New Century Library Edition," is a capital little volume. Although small in bulk, and easily held in the hand, the type is large and clear, and the pages fall well apart at any place. This edition will be a treat to the book-lover, who is never happy without one of his old friends in his pocket.

Rumpelstiltskin. By Mrs. Hugh Bell. (Longmans.)

A play adapted to young children, founded on the old folk-story "Tom-tit-tot," in which the distressed princess has the task of finding out the pixie's name. Full stage directions are given, with suggestions as to dress, and the action is enlivened by songs and dances, for which the music is added. There are eight chief characters, while any number of children can be introduced for the elf-dance.

Passages from Modern Authors for Class-Reading. Compiled by John Downie. (Blackie.)

This is a good school-reader, variety in subject and style being well provided. Literary merit in the extracts selected should, however, always come before mere information—a principle not always adhered to in this volume. The notes and derivations are short and well arranged, and the book, as a whole, is on the right lines.

Teachers, Don't! By George Crowther. (McDougall.)

There is no word more discomposing than "don't." It seems to rouse in both children and adults whatever of demon they may possess. This little book illustrates the point. It is apparently written in great seriousness, although these two rules are printed (very large) one after the other—"Don't encourage guessing. Don't allow it at all"; while the pamphlet is the oddest mixture of disconnected vetoes, some more reasonable than others.

The "Art Student" Series of Photographs, from Casts, for Freehold Drawing of Ornament in Outline. Sets I. and II. (Educational Supply Association.)

These sets of cards are an excellent illustration of the application of photography to educational purposes. So far as casts can be usefully represented by flat drawing, the task is here thoroughly well performed; and we can safely recommend these packets of copies for school use.

Pupil-Teachers' English Note-Book. By A. T. Flux. (Nelson & Sons.)

Plain English grammatical rules and lists, with many useful features, including lined blank leaves.

Book-keeping for Elementary Schools, in Three Stages. Stage I.

By J. Thornton. (Macmillan.)

A clear and well written introduction to the subject, with numerous progressive questions at the end of the lessons.

Macmillan's Book-keeping Exercise Books: Journal and Ledger.

(Macmillan.)

This is a very serviceable set, prepared expressly for beginners. The exercise books will greatly facilitate the work of the learner.

"Chambers's Commercial Handbooks."—*Commercial Correspondence and Office Routine. First Year's Course.* By G. R. Walker. (Chambers.)

Suited for the Evening Continuation Code. The book may also be used with advantage in the upper standards or classes of commercial day schools.

The Student's Phonographic Shorthand Exercises. By A. Fieldhouse, "F.I.P.S. Honours." (Huddersfield: Jubb & Sons.)

This is a handy little book, illustrating the principles and practice of the art of shorthand. Mr. Fieldhouse is a commercial lecturer at the Huddersfield Technical College.

We have received the following English texts:—*The Faerie Queene, Book IV.*, edited by Kate M. Warren (Constable), with a full literary introduction, analysis, and glossary, for elder pupils. *Paradise Lost, I. and II.*, edited by Thomas Page (Moffatt & Paige). The notes, analyses, &c., are too copious; but teachers will find the book useful. *Johnson's Life of Dryden and Johnson's Life of Pope*, by Peter Peterson (Macmillan), with full notes and summaries of the text. *Chaucer's The*

Squire's Tale, by A. W. Pollard (Macmillan), with special grammatical notes and references, in addition to the usual explanatory notes. *As You Like It*, by Stanley Wood (Heywood). This is another of the "Dinglewood" series of Shakespeare without the Shakespeare—only questions and notes for examination purposes. *The White Ship*, by D. G. Rossetti (Ellis & Elvey), is at the opposite extreme. We have the little poem pure and simple, innocent of notes, but full of poetry. *Macaulay's Lay of Virginia and Southey's Shorter Poems* (Blackie), the latter edited by C. J. Battersby. *Bacon's New Atlantis*, by A. T. Flux (Macmillan).

From Messrs. Pitman and Sons we have a number of the "Rapid Series," including a "Practical Spanish Grammar," with conversations and a copious vocabulary, by Don Baltasar Vitoria and W. G. Isbister, B.A. Lond.; "Spanish Business Interviews," "Spanish Business Letters," "Advanced Spanish Conversational Exercises," "Easy Spanish Conversational Sentences," "French Commercial Phrases and Abbreviations," and "German Commercial Phrases and Abbreviations." The series is very helpful; and we should say that it will be distinctly serviceable to self-teachers.

WE HAVE ALSO RECEIVED the following publications and new editions:—

The Calendar of the University College of North Wales, the University Correspondence College, and the Birkbeck Literary and Scientific Institution.

The Record of Technical and Secondary Education, October, 1899. (Macmillan.)

The English Language, its History and Structure, by W. H. Low, M.A. (Clive)—a fifth edition.

English Composition, and How to Teach it, by Robert S. Wood (McDougal)—also a fifth edition.

Moffatt's Science Readers. Book III. (Moffatt & Paige.)

Arabic Self-Taught, by C. A. Thimm, revised by G. Hagopian. (Marlborough & Co.)—a third edition.

The Student's Commercial Book-keeping, Part I., Elementary, by A. Fieldhouse (Bean)—a fourth edition.

Tennyson's "In Memoriam," and other Poems ("Masterpiece Library," *Review of Reviews* Office)—a marvellous bargain at one penny.

"Nelson's Supplementary Infant Readers." No. 1.—*Up to London, to see the Queen.* (Nelson & Sons)—simple English, good large type, and nice illustrations.

GIFT-BOOKS AND PRIZES.

I.

HISTORICAL STORIES.

One of Mr. Henty's best stories for the year is *Won by the Sword* (Blackie). It deals with the closing years of the Thirty Years' War, and is thus a sequel, in some sense, of the *Lion of the North*. The hero is a son of a Scottish officer in the French service, who puts Cardinal Mazarin under an obligation. Condé and the Queen Mother appear on the scene; and with such a background the author has known how to make a capital historical romance.

A combination of historical and other stories is brought together under the title of *Peril and Prowess* (Chambers). They are told by George Henty, George Manville Fenn, A. Conan Doyle, W. W. Jacobs, D. L. Johnstone, and several others. There are many exciting narratives amongst them, and they are all well illustrated.

Tom Graham, V.C., by William Johnston (Nelson), is a tale of Afghan warfare. The first half of the book shows us Tom Graham at an English grammar school, a promising high-spirited lad, rather disposed to insubordination, but governed in the main by duty and conscience. Of course he makes an excellent soldier in the ranks, and he earns distinction at Peiwar Khotal and Sherpur. He gets his V.C., and other ample rewards on his return home.

A Vanished Nation, by Herbert Hayens (Nelson), is a stirring tale of adventure in Paraguay, amongst hot-blooded Spaniards and half-castes, in the days of President Lopez's gallant struggle against rebels and Argentines and Brazilians and the "Banda Oriental." Mr. Hayens calls Lopez a South American Napoleon, and there is something pertinent in the comparison. He also calls him a monster, and apparently justifies the word. Anyhow, this is a brisk and spirited tale, which will impress an historical episode on the mind.

TALES OF ADVENTURE.

A Roving Commission, by George Henty (Blackie), is founded on the revolt of the slaves of Hayti against the French. The horrors of the French Revolution occurred about the same time, but, according to Mr. Henty, "paled before the fiendish outrages committed by their black imitators in Hayti." Boys (with perhaps a few exceptions) can read a great deal of the horrible without being particularly harmed by it, and they will heartily welcome this book, beautifully and copiously illustrated by William Rainey. The hero, by the way, is an officer of the British Navy.

Yuletide Yarns, edited by G. A. Henty (Longmans), will be welcome in a school or family of boys of considerable difference in age. Great variety is introduced in every direction. The ten stories are contributed each by a different writer, and again illustrated by a different draughtsman. Some are founded on historical legend, others are pure fiction; some are easy and simple reading, others more complicated in plot and style; while an enormous range of climate and period is selected from. The whole collection forms a handsome volume.

There is always a fascination about the heroes of La Vendée, and Mr. Henty has done wisely in weaving one of his romances around them. Most boys will appreciate *No Surrender* (Blackie), crammed as it is from start to finish with fighting, sieges, assaults, and escapes of fugitives. There are several illustrations of an exciting kind by Stanley Wood.

Another seasonable book (also well illustrated by Stanley Wood) is *With Shield and Assegai*, by Captain F. S. Brereton (Blackie). The son of a missionary in Zululand, a lad who has been used to the Zulus from babyhood, is sent to England to school, is wrongfully accused of theft, enlists, and eventually finds himself in the British force attacking the Zulus. The defence of Borke's Drift is the subject of a very good chapter, and all the descriptions are given in a straightforward, easy style, capable of interesting quite a young boy. There is plenty of useful information, historical and geographical, but it is made very palatable, and in no way interferes with the interest of the tale.

Sowing and Harvesting, by Mary Debenham (National Society), is a tale of the French Revolution. The horrors are touched very lightly, and but little excitement of any kind relieves the book. The illustrations by Gertrude Hammond are fair, but lacking in point and variety.

SCHOOLBOY STORIES.

A story of school life, best adapted for elder boys, is *Wynport College*, by Frederick Harrison (Blackie). The author evidently understands schoolboy tastes, the several chapters dealing with a multitude of interests—cricket, boat-races, a school fight, examination and scholarship excitements, evil-doers detected by snap-shot photography, a boy expelled for stealing a banknote and coming out innocent and triumphant at the close, with "scrapes" of a minor nature innumerable. Although a long book, there are no dull pages in it, and eight illustrations by Harold Copping add to its attractions.

Boys of the Priory School, by Florence Coombe (Blackie), is written in Miss Coombe's characteristically stirring and humorous style. The boys are real boys, and the book is free from exaggeration in any direction. At the same time, it is full of life and incident, and will delight children who are at the stage of demanding tales of school life. A few very fair illustrations add to its value as a gift-book.

The Fellow who Won, by Andrew Home (Nelson), is a schoolboy story with a supplement of life in the world outside. It is, on the whole, capitally told, with much play of character, plenty of excitement, and any amount of poetical justice, such as thrashings for the bad boys and a friendly baronet for the hero. We can recommend it; boys will like it, and it will do them no harm.

From the same publishers we have *Mobsley's Mohicans*, by Harold Avery, described as "a tale of two terms." It is amusing enough, and more trivial than Mr. Home's story, being intended for somewhat younger boys. For them, however, the latter part of the narrative is rather strong meat.

GIRLS' STORIES.

The King's Signet, by Eliza Pollard (Blackie), is a description of the sufferings and emigration of the Huguenots after the Revocation of the Edict of Nantes. The historical atmosphere is carefully represented, and the author's regard for truth naturally gives a somewhat melancholy tone to the tale, although it ends in peace and happiness. It is specially suitable for girls, as the central figure is the brave and self-denying heroine, who works wonders and saves many lives by means of her talisman.

A Good-hearted Girl, or a Present-day Heroine, by Emma Marshall (Chambers), is a tale of girl friendship and quiet family life, not without some interesting incidents. A director of a mining company has involved many in financial ruin, and the story centres round his daughter, who spends her life in redeeming her father's misdeeds. There is a natural, healthy tone in the book, and the heroine is not too brilliant or fortunate for imitation.

A Loyal Little Maid, by Sarah Tytler (Blackie), is a story founded on an incident in the Earl of Mar's rebellion. It describes the brave and clever attempts of a little girl to save her father's life. She goes through much tribulation, and is even imprisoned; but the story has a light and cheerful tone throughout, has a dash of romance, and ends happily in the marriage of the heroine with her former boy-playmate, whom she rescues from the Bastille. There are three or four good illustrations by Paul Hardy.

Some Great Thing, by Lady Dunboyne (National Society), is, as the title suggests, a story with the impatience and disappointment of Naamau for its moral. A young girl of to-day is always dreaming of

doing some great deed: the opportunity does not arise till the end of the book, when she saves a life by self-sacrifice. We think the moral would have been better if even that opportunity had not occurred, for "the finest life lies oft in doing finely a multitude of unromantic things." Some of the ideas on married life in the book, though quite harmless, are a little over the heads of the young girls for whom the book is evidently intended.

Letice Temple, by Maud Vevers (National Society).—This is a purely imaginative story with an historical setting. The romantic times of James II. afford material for descriptions of highwaymen, heroic bishops, and Judge Jeffries, while there is a fairly successful attempt to reproduce the style of language and manners of the period. The incidents move briskly, with no dull pages, and the book will tend to encourage a young girl's interest in history.

Admirers of Mrs. Oliphant will welcome the republication of *The Unjust Steward* (Chambers).—The story, it will be remembered, concerns an old Scotch minister who is in money difficulties, and extricates himself by following the method of the unjust steward, soothing his conscience with the reflection that the villain of the parable had been "commended." Needless to say, the minister suffers terribly for his falsehood, and matters are complicated by the fact that the man he has wronged is his daughter's suitor. The story is, perhaps, dragged out to an unwarrantable extent, and none of the characters are strong or fresh enough to compel prolonged interest. It may be added that the moral of the tale is hardly sufficiently materialized for young readers.

The Odds and the Evens, by L. T. Meade (Chambers), is a pleasant and fairly diverting story of a war got up between the neighbouring families of the Freres and the Carlingfords, called respectively the Evens and the Odds, from the number of children in each. There are all sorts of rivalries and reprisals, and, as the master-spirits are two girls, Nina Carlingford and Rosalie Frere, girl-readers are pretty sure to take a special interest in the story.

FOR CHILDREN AND OTHERS.

Mabel's Prince Wonderful; or, A Trip to Storyland, by W. E. Cule (Chambers), commends itself at once as a book for little children by its excellent type and paper. The illustrations are, for the most part, disappointing, the drawing poor, and the whole design often unsuited to a child's mind. The little stories are based on the old nursery tales and rhymes, and the connecting thread is the little heroine who wanders about and meets and talks to their various characters, Bluebeard, Prince Charming, the Fairy Godmother, and so forth. Unfortunately, it suggests the immortal "Alice."

Nancy's Fancies, by E. L. Haverfield, illustrated by Percy Tarrant (Chambers), is a simple story about two little children, whose father has been reported as lost at sea, and whose mother has a very hard struggle to support them. An infectious illness, a railway journey, with the children's various games and fancies, form the chief incidents. Of course, the father arrives safely to make a happy ending. The book is a suitable gift for young children, who could read it without difficulty by themselves.

The Harvest of a Quiet Eye, by the Rev. J. R. Vernon, M.A. (Religious Tract Society), is a welcome addition to the list of books suitable for Sunday readings to the young. Some passages are a little too advanced for children, but all the members of a family circle would gain some material for thought from the various chapters on Spring Days, the Beauty of Rain, Musings in the Twilight, &c. Good pieces of poetry are plentifully quoted, and the whole book, as the title suggests, breathes the spirit of Wordsworth.

We are glad to see a reprint of an old favourite by Mrs. Molesworth, *The Boys and I* (Chambers).—It is just the book for children of six to ten years, for it depicts the thoughts and words and small scrapes of three little people of that age. It is supposed to be actually written by the eldest of them, and is a clever imitation of a child's language. The present edition is copiously and pleasantly illustrated by Lewis Baumer.

The Herd Boy and His Hermit is by Miss Charlotte M. Yonge (National Society).—The period of the Wars of the Roses forms the background to the story of a boy who is hidden for safety with a Cumberland shepherd. The authoress's well known style of quiet narration of interesting events, together with a few alluring illustrations, makes the book a very suitable one for prize or gift.

Such a Tomboy, and other Stories, is written by Katherine E. Vernham, and published by the National Society.—These little sketches, chiefly from humble life, are just sufficiently realistic to arouse the sympathy and interest of young readers in a few sorts and conditions of men. There is a distinctly moral tone throughout the book, but it is not unduly forced, being presented more by deeds than by words.

A King's Thegn, by Geraldine Gay, is another story published by the National Society.—King Alfred and his struggle with the Danes is an endless source of material for children's tales. The present one is written in the first person by a thegn, and the defeat of the Danes at Ethandun is fully described.

Bugle Minor, by M. Bramston (National Society), relates the

adventures of a bugle boy in the Royal Marines. The story is brightly written, with plenty of geographical and general information. The scene is chiefly laid in Africa.

Guy's Duty, by Penelope Leslie (National Society), is intended for quite young readers, who will be able to follow the simple incidents of a voyage to India and mild adventures in that country with great ease. We doubt, however, whether any but children whose parents are in India, or who have some such close connexion with it, will be interested in the tale. Neither the characters depicted, nor their conversation, are attractive in themselves.

A Sunday in Summer, by A. E. Deane (National Society), describes the wrecking of a train by some idle boys, with the brave attempt of another boy to signal the driver to stop. The boys' various futures are depicted and morals drawn from them.

Founders of the Empire, by Philip Gibbs (Cassell), is an attractive little volume which children could read by themselves to amplify their history lessons. The language is straightforward and simple, the "Founders" are all well chosen, and there are numerous illustrations, four of them coloured.

Messrs. Ward, Lock, & Co. have issued new editions of *The Prince of the House of David* and *The Pilgrim Child*.—The former work has been completely revised by the Rev. J. H. Ingraham, and he has endeavoured to avail himself of all suggestions and criticisms that have appeared since the book was first issued in 1855.—*The Pilgrim Child*, by Theodora Elmslie, might be described briefly as "Bunyan for little people." Considering the early age at which children will enjoy the "Pilgrim's Progress," such a work as this seems hardly needed. Both books are illustrated carefully and tastefully, but representations of religious subjects always leave much to be desired.

The Courteous Knight, and Other Tales, by E. Edwardson (Nelson), is a mix-up of Arthurian and Spenserian legends, borrowed from Malory and Spenser. It is a rather bold experiment on Mr. Edwardson's part, and there is a danger lest it should confuse the mind of a young reader, and mislead his literary taste. The book is illustrated and decorated by Robert Hope—very well in the main, though with some inequalities.

ANNUALS.

We receive from the Religious Tract Society their four annual volumes of Magazines. *The Sunday at Home* is an able combination of serious and lighter matter with biographies, Bible-studies, tales, and poetry. The coloured designs will greatly please the younger readers.—Surely every boy's hobby is catered for in the *Boy's Own Annual*; it is an inexhaustible mine of adventure, information, and the slighter kind of illustration. Some of the large coloured plates are very attractive, especially the ever popular sheet of flags and funnels.—The companion volume, *The Girl's Own*, though quieter in tone, will doubtless please the girls with its articles on dressmaking, cookery, and girls' employments.—*The Leisure Hour* contains much good reading for the elder children. Besides fiction, general information and biographies are its strong points. There are a few good full-page reproductions of well known pictures.—*Chums* (Cassell) is as attractive as usual for the younger ones, and will provide them with amusement for many a day. It is very copiously illustrated, and has many stories, anecdotes, jests, and useful papers.

CORRESPONDENCE.

MEDICAL PRELIMINARIES.

To the Editor of the Educational Times.

SIR,—In his recent inaugural address delivered before the Medico-Chirurgical Society of Nottingham, Prof. Saundby, of Mason College, Birmingham, discussed the standard of preliminary education for medical students. He stated that it is now possible for a boy to become a medical student notwithstanding bad spelling and grammar and a most imperfect acquaintance "with other polite branches of learning." The conclusion he arrives at is that the standard should be that attained in public schools by boys of eighteen, and not of fourteen, as is at present the case. What this standard is should be determined by schoolmasters on the assumption that the education given will be of the ordinary classical or "literary" type, without any admixture of special subjects.

Prof. Saundby goes a good deal farther than this. Non-medical scientific knowledge, he says, is either a necessary part of a professional course of study or it should be dispensed with altogether. The latter alternative is boldly suggested in the case of students who only intend to become general practitioners. To obviate, apparently, the necessity of preliminary examinations, he advocates the systematic granting of Leaving Certificates by school authorities, and implies that such certificates would afford a satisfactory test of the previous education of a student, which is all that is required. He foretells the removal of mechanics, botany, geology, chemistry, and physics from

the medical curriculum as compulsory subjects, and, *a fortiori*, does not think them necessary as a part of a medical student's preliminary education. In short, he says: Extend the student's general culture, even at the expense of his general scientific training.

The flood of inaugural addresses given during October in our medical schools and their frequent reference to this question of medical education has attracted the attention of the *Spectator*. In a recent article on "Doctors and Culture," it maintains that there exists a latent cleavage between doctors and other educated men which is most injurious to both, and that a difference in their ways of thinking is produced by a difference in culture. The remedy proposed is a twofold education—professional training *plus* culture—which, according to the *Spectator*, can be supplied by "one more year of study." Shades of Plato and Matthew Arnold! and is it so simple? We have all these years dreamed of "culture" as such a refined and rare essence that classical scholars, artists, and even brilliant essayists might at times seem uncultured when in each other's society. Yet, one more year of the "humanities" is to make the G.P. a cultured man! There must be much virtue in that professional training after all, and we have even heard medical men put down the want of intellectual sympathy between doctors and other professional men to a lamentable ignorance of science among members of the other learned professions. We should lament the want of "culture" among medical men less if we paid greater court at the shrine of Hygeia. The *Spectator* looks forward to the time when doctors even in the slums will be as educated as barristers, and as self-sacrificing as the clergy. I am not sure that they are not so already; but, in any case, I think it is more to the purpose to urge all worshippers of culture to press forward the work of secondary education legislation. Improved secondary education will solve more problems than those involved in a medical student's preliminary examination.

Although I have no desire to condone a lack of acquaintance with "polite branches of learning" in our medical practitioners, at the same time I doubt the wisdom of insisting upon a higher standard of general education than obtains at present. Even without Cobbett's criticisms on the grammar of Wellington's despatches one can easily conceive the great Duke laying siege in vain to Woolwich and Sandhurst and having to outflank the enemy by a march through the Militia Competitive. A few weeks ago a London medical professor told me of one of his students—a woeful speller—who handed in some notes of brain dissections in which the words "fissures of the brain" appeared as "fishers of the brine." Of course, the fault was laid at the door of modern teaching; whereas the real remedy, if any, in such a case would probably be a surgical operation. No possible amount of "polite learning" can make some boys spell correctly.

The medical writings of the late Dr. Thomas, one of the most brilliant surgeons of Liverpool, were grammatical shambles, and I am afraid that Lord Grimthorpe's letters to the *Times* would not survive the ordeal of any preliminary examination in the kingdom. But it will never do to bar such men from professional careers by raising the standard of preliminary education to what schoolmasters think a boy ought to know at eighteen. A solid professional training is in itself a means of culture, and is certainly more essential than accuracy of grammatical expression. How Prof. Saundby hopes to impart a solid professional training without insisting on some elementary knowledge, at least, of mechanics, botany, chemistry, and physics is to me incomprehensible; and his suggestion of Leaving Certificates involving variable standards seems much less satisfactory than the present system, where the preliminary examinations are conducted by properly qualified examining bodies. A "G.P."

THE INTERNATIONAL CONGRESS ON ELEMENTARY EDUCATION.

To the Editor of the *Educational Times*.

MONSIEUR LE RÉDACTEUR,—Le succès des précédents Congrès internationaux de l'Enseignement primaire et l'utilité de leurs travaux, qui ont souvent inspiré de fécondes mesures législatives ou administratives, nous encouragent à faire un nouvel appel, à l'occasion de l'Exposition de 1900, à ceux qui, en France et chez les autres nations, coopèrent à cette œuvre d'un intérêt vraiment universel.

Vous connaissez déjà le profit de ces réunions où chacun gagne, au contact d'hommes consacrés à la même tâche que lui, des idées et des forces nouvelles; où chaque nation peut s'enrichir, dans la mesure qui convient à son régime et à son tempérament propres, de l'expérience des autres nations; où tous, par une mutuelle communication de leurs heureuses tentatives et par un examen commun des problèmes qui attendent encore une solution, peuvent propager le bien qu'ils ont déjà fait et créer quelque nouveau moyen de progrès.

Le Congrès international de 1900, auquel nous serions heureux de vous voir participer, s'ouvrira le jeudi 2 août, pour durer jusqu'au dimanche 5 inclusivement.

Il sera divisé en cinq sections, correspondant aux cinq questions suivantes, mises à l'étude:—

1. L'éducation ménagère.—Sa définition, ses limites, son adaptation à chacun des degrés de l'enseignement primaire. Quelles peuvent être, à chacun de ces degrés, les parts respectives de la théorie et de la

pratique? Programme pour chacun des degrés et plan d'ensemble.—Par qui sera donné le double enseignement? Par un personnel spécial, ou par les institutrices elles-mêmes, préparées, à cet effet?

2. De la fréquentation scolaire.—La non-fréquentation et la fréquentation irrégulière. Insuffisance de l'action de la loi de 1882 en France. Moyens à employer pour augmenter cette action; moyens d'ordre législatif, d'ordre administratif, d'ordre pédagogique.—Etat de la fréquentation scolaire chez les principales nations.

3. De l'éducation morale.—Son objet, ses principes, ses méthodes et ses procédés; parts respectives de la théorie et de la pratique. Sa place dans l'ensemble du programme, ses liens avec les autres parties.

4. De l'enseignement primaire supérieur.—Son objet; ses limites: moyens de l'adapter aux intérêts régionaux et locaux.

5. Des institutions post-scolaires: cours d'adultes, conférences et lectures publiques, patronages et associations amicales, sociétés scolaires de secours mutuels et de retraites.—Moyens d'en assurer l'existence et le développement, de les multiplier, de les grouper.

Les auteurs des mémoires sont invités à faire suivre leurs conclusions de projets de résolution. Les mémoires devront tous être adressés, avant le 1 mai 1900, à M. Trautner, directeur d'école communale à Paris, 20 rue Etienne-Marcel, secrétaire de la Commission d'organisation, qui les transmettra ensuite aux rapporteurs compétents. Pour que cette transmission soit possible, il est nécessaire que chaque mémoire ne vise qu'une seule question. Nous vous adressons, sous ce pli, avec un exemplaire du règlement, un bulletin d'adhésion que nous vous prions de vouloir bien, si vous devez assister au Congrès, remplir suivant les indications qu'il contient, et renvoyer à M. Marguery, trésorier, 36 boulevard Bonne-Nouvelle, Paris.

Veillez agréer, Monsieur, l'assurance de notre considération très distinguée.

GRÉARD, *le Président*.

EMILE COUTURIER, *le Secrétaire général de la Commission d'organisation*.

L.-R. TRAUTNER, *Secrétaire de la Commission*.

Paris, 1 octobre, 1899.

THE LONDON UNIVERSITY COMMISSION.

To the Editor of the *Educational Times*.

DEAR SIR,—We should be much obliged if you would kindly print this and the following letter and attached form in your November issue, in order to obtain for us as many signatures as possible to an appeal with which you must be cordially in sympathy.—Yours faithfully,

WILLIAM K. HILL.

36 Bickerton Road, N., October 19, 1899.

EDUCATION AND THE NEW UNIVERSITY OF LONDON.

October, 1899.

DEAR SIR OR MADAM,—We beg to draw your attention to the following facts, and ask your help in the proposed effort to rectify what we consider a grave omission. In Section 5 on page 8 of the Interim Report by the Special Committee of Convocation appointed to make representations to the London University Commission appear these words: "With regard to the position to be occupied by the art or profession of teaching, the Committee think that this subject should find its place as a branch of the Faculty of Arts."

At a meeting of Convocation, held at Burlington House on October 10, this section was challenged, and, upon a motion that the Report of the Committee be received, an amendment was moved by Mr. Frank W. G. Foat and seconded by Mr. William K. Hill: "That the Committee be requested to reconsider the wording of Section 5 on page 8 of their Report with a view to recommending to the Commission that a separate Faculty of and degree in Education should be established in the new University of London. This amendment was lost. There remains, therefore, one course—i.e., to avail ourselves of a clause in the University of London Act which requires the Statutory Commission to consider any recommendation made and signed by not less than fifty members of Convocation. If, therefore, you share with us the opinion that the omission to establish a Faculty of and degree in Education is a defect which should have serious consideration, will you kindly fill up the subjoined form, and cut out and send it at your earliest convenience, to either of the undersigned?—We are, yours faithfully,

FRANK W. G. FOAT, M.A.,

City of London School, Victoria Embankment, E.C.

WILLIAM K. HILL, B.A.,

36 Bickerton Road, Junction Road, N.

FORM.

I, the undersigned, being a present Member of Convocation of the University of London, hereby authorize Messrs. F. W. G. Foat and W. K. Hill to detach my signature inscribed below and affix it to a Memorial addressed to the University of London Statutory Commission in these terms:—

To the Members of the University of London Statutory Commission.

GENTLEMEN,—We, the undersigned Members of Convocation of the University of London, having learnt, from the Report of the Special

Committee of Convocation presented on October 10, that no provision has been, or is likely to be, made in the proposed Statutes for the establishment of a separate Faculty of and degree in Education in the new University of London, hereby earnestly pray you to reconsider the question and use your best endeavour to make such provision. And we are further of opinion that, if no other means be available for representing such Faculty of Education on the proposed Academic Board of Studies, one representative should be transferred, at your discretion, from some other Faculty or Faculties as at present proposed. If it should please you to require it, we will endeavour to send a deputation of members to explain our reasons for desiring a separate Faculty of and degree in Education and to suggest a possible method of giving effect to our desire.

COLLEGE OF PRECEPTORS.

LECTURES FOR TEACHERS.

By P. A. BARNETT, Esq., M.A., formerly Principal of the "Borough Road" Training College, Isleworth.

SYLLABUS.

LECTURE I.

Preparation for Teaching as a Profession.

The meaning and purpose of training; economy of effort; development of capacity. The possibilities of training; the cultivable margin of aptitude. The methods of training; practice in the art of instruction; personal observation and record-making; study of books. Training as it affects the teacher's aim, character, and temperament, appreciation of the scope and difficulties of education, and personal acceptability.

LECTURE II.

The Teacher and a Definition of Education.

The value of the definition of an art: to simplify and inspire purpose; to determine method; to suggest procedure. Education the direction of a force constant in society; the teacher's place as beneficent agent. The historical development of the ideal of education in political and religious societies; its social and psychological consequences as they affect teaching. The effect of prevalent theories of knowledge and conduct on conceptions of education. Misleading ideals. The authorities in education and teaching.

LECTURE III.

Education as a problem in Organization.

What is a liberal education, and who is to have it? The many-sidedness of human nature. Educational needs indicated by common fundamental endowments and destiny; hence interrogation of sociology and psychology. Free access to a liberal education as a test of social and political ideals. Current conceptions of a liberal education. The division of "subjects." The nature of specialization; its limits and social effects. The teacher and his syllabus and time table. Curriculum for boys and for girls.

LECTURE IV.

Education as a problem in Psychology.

The value and scope of psychology in the work of the class-room. Teaching and education. The suggestiveness of physio-psychology. The conflicting doctrines of psychologizers. The mind as a combination or *plexus* of "faculties." Professional pedantry and superstitions of the school-room. Empirical tricks and delusive short-cuts in teaching. The direct lessons of psychology. The teacher and "all-round" cultivation.

LECTURE V.

The Relation of Body and Mind.

Physiological health and psychological health involve each other. The basis of the Kindergarten organization and methods. The dangers of excessive regard for machinery. Youth a process. Stages of development, and necessary growth of curriculum and alteration of procedure. Signs of distress and defect. Training of manual dexterities. The limit of its usefulness: as to age; as to social conditions. Health in the school, school-house, and school-room. The meaning of Play.

LECTURE VI.

School Morals.

School a poor substitute for, but necessary complement to, the home. A definition of School necessary in order to economize and direct effort. Domestic and public virtues. The corporate life of school. Sentiment and conduct. The cultivation of aptitudes for an ideal community. Rewards and punishments. The cultivation of character by the teacher. The effect of surroundings on character. Surroundings and habit. *Nagging*. The organization and character of school games.

LECTURE VII.

Language as Literature and Rhetoric.

Literature and its definition. Literature in the cultivation of the imagination and emotions. Use of literature in school; as reading, as recitation, as a "study." Literature a compendious study. The order of interest. "Culture" and its relation to literature in school. The investigation of literary masterpieces; dangers of philological treatment. The relation of appreciation and expression. The order of rhetoric or "composition" teaching. The need for *copiousness* of reading.

LECTURE VIII.

Language as Speech.

The meaning of "Self-expression." The relations of intelligence and intelligibility. The cultivation of audible speech; a physical exercise. Procedure in teaching Speech, Reading, Elocution. The place of the Pattern. The rarity and importance of right Emphasis. Oral examination. Foreign speech: the mother method; the analytical method. The differences in the teaching of modern and ancient languages; as to aim; as to procedure. The limits of oral teaching. The application of tests in examination.

LECTURE IX.

Abstraction in Mathematics, Logic, and Grammar.

The capacity for abstraction. Its place in mental development. Mathematical certainty and the necessary qualifications of mathematical certitude; the delimitation of terms used *technically*, in special connexions. The value of cultivating the power to define. The uses and limitations of Arithmetic and formal Grammar; the skeleton of the art of reasoning. Grammar as an inductive science.

LECTURE X.

Training in the power of Discovery.

Science and its definition. False notions of science, and meaningless antithesis between science and other studies. Science as observation and experiment in the school curriculum. The perils of restricted observations and unanalysed experiments. The logical subdivisions of science. Philology as science. Imagination in science. Invention and Design. The place of Geography in the hierarchy of sciences; as a compendious and general study; as a special and applied study.

LECTURE XI.

History as a School Subject.

History as a concrete study, and as a method. The relation of history to literature and other subjects in the curriculum. History as an atmosphere; as a panorama; as the interpretation of the succession of events affecting political societies. The necessary material for basis. The order of teaching. The desirable completeness of each stage. The passage from general to particular and *vice versa*. The need for frequent concrete attachments in school teaching. Ancient and modern history. History as a core or centre of instruction. Suggested courses.

LECTURE XII.

Summaries and general conclusions.

The Fee for the Course of Twelve Lectures is Half-a-Guinea.

. The Lectures will be delivered on Friday Evenings at 7 o'clock, at the College, Bloomsbury Square, W.C.—Members of the College have free admission to the Course.

MATHEMATICS.

14175. (R. TUCKER, M.A.)—The normal at P, on a parabola, meets the directrix at Q. Show that QS meets (1) the tangent at P, (2) the diameter through P, in cubic curves.

Solution by K. G. PANCHAPAGESA AIYAR; Rev. T. MITCHESON, B.A.; and the PROPOSER.

Let the coordinates of P be $(am^2, -2am)$, so that the equation of the normal at P is $y = mx - 2am - am^3$ (i.)

The equation of the directrix is $x = -a$ (ii.)

Therefore, from (i.) and (ii.), Q is a point $[-a, -(3am + am^3)]$.

Again, the equation of QS is $\frac{x+a}{a+a} = \frac{y+(3am+am^3)}{3am+am^3}$;

i.e., $x(3m+m^3) - 2y - 3am - am^3 = 0$ (iii.)

And the equation of the tangent at P to the parabola is $am^2 + my + x = 0$ (iv.)

[The rest in Volume.]

14164. (Professor ELLIOTT, F.R.S.)—If a, b are positive moduli, and $\alpha - \beta$ lies between 0 and 2π , and if $f(z)$ is a function of the complex variable $z = re^{i\theta}$ which approaches definite limits $f(0)$ and $f(\infty)$ as z becomes infinitely small and infinitely great within the sector from $\theta = \beta$ to $\theta = \alpha$, and is holomorphic within and on the bounding lines of the sector except for simple poles at c_1, c_2, \dots, c_n within the sector, prove the FRULLANIAN formula

$$\int_0^\infty \frac{f(ae^{i\alpha}x) - f(be^{i\beta}x)}{x} dx = \{f(\infty) - f(0)\} \left\{ \log \frac{a}{b} + i(\alpha - \beta) \right\} - 2\pi i \sum_{r=1}^{r=n} \left[(z - c_r) \frac{f(z)}{z} \right]_{z=c_r}$$

the variable x being real.

Solutions (1) by G. H. HARDY, B.A.; (2) by H. W. CURJEL, M.A.

(1) Integrate $\int \frac{f(z)}{z} dz$ round the contour bounded by $\theta = \alpha$, $\theta = \beta$, $r = a\rho_0$, $r = aR$; where ρ_0 decreases, and R increases beyond limit.

$$\begin{aligned} & \{f(\infty) - f(0)\} \int_{\beta}^{\alpha} i d\theta + \int_{b\rho_0 e^{i\beta}}^{bR e^{i\beta}} \frac{f(z)}{z} dz - \int_{a\rho_0 e^{i\alpha}}^{aR e^{i\alpha}} \frac{f(z)}{z} dz \\ & - f(0) \int_{b\rho_0 e^{i\beta}}^{a\rho_0 e^{i\alpha}} \frac{dz}{z} + f(\infty) \int_{bR e^{i\beta}}^{aR e^{i\alpha}} \frac{dz}{z} \\ & = 2\pi i \sum_{r=1}^{r=n} \left[(z - c_r) \frac{f(z)}{z} \right]_{z=c_r}, \end{aligned}$$

which reduces to

$$\int_0^{\infty} \frac{f(ae^{i\alpha}x) - f(be^{i\beta}x)}{x} dx = \{f(\infty) - f(0)\} \{i(\alpha - \beta) + \log a/b\} - 2\pi i \sum_{r=1}^{r=n} \left[(z - c_r) \frac{f(z)}{z} \right]_{z=c_r},$$

x being real.

[The rest in Volume.]

14190. (C. E. HILLYER, M.A.)—If P be a point on the circumcircle of ABC , whose orthocentre is H , and a be the orthocentre of the triangle PBC , b of the triangle PCA , and c of the triangle PAB ; prove (1) that B, a, H, C are concyclic; (2) that the SIMSON-line of P with respect to the triangle ABC is also the SIMSON-line of a with respect to the triangle HBC , and of b with respect to HCA , and of c with respect to HAB ; (3) that this line bisects Aa, Bb, Cc , and PH .

Solution by R. TUCKER, M.A.; W. H. SALMON, B.A.; and K. G. PANCHAPAGASA AIYAR.

- (1) Because angles BaC, BHC are supplements of the equal angles P, A ; therefore, &c.
- (2) $\angle BKd = BPf - HBC = C - PBA = PCB = \angle Bad$; therefore B, a, K, d are concyclic, and $\angle BKa$ a right angle; therefore, &c.

(3) Pa, AH each $= 2$ (perpendicular from O on BC), and parallel to one another. Therefore $AH a P$ is a parallelogram, and Aa bisects HP , and so for the others; and, by a well-known property, the SIMSON-line dfe bisects HP .

(4) Again $aH = AP$ and parallel to it } therefore $\angle aHb = 180^\circ - C$.
 $bH = BP$ and parallel to it } therefore $abcH$ concyclic.

(5) The loci of a, b, c are evidently circles, as P moves round the circumference.

(6) $\angle aPb = \angle APB = \angle AHB$.

Therefore, by (3), $\triangle abc$ is congruent with $\triangle ABC$, and P is its orthocentre; its sides are also (because Ba is equal and parallel to Ab) parallel to the sides of ABC . Also, from (3), the mid-point of HP is the Centre of Perspective of the triangles.

[The rest in Vol.]

13977. (REV. T. MITCHESON, B.A.)—If $(x_1, y_1), (x_2, y_2)$, and (x_3, y_3) be the three tangential points on a parabola from which normals can be drawn to a given point, find the length of the ordinate of the co-normal point.

Solution by the PROPOSER; R. KNOWLES, B.A.; and G. W. PRESTON, B.A.

Let (β, γ) be the co-normal point, and the equation to the normal through that point is $2a\gamma - 2ay_1 = \beta y_1 + x_1 y_1$,

since $y_1^2 = 4ax_1$; hence, for finding y_1 , we have

$$y_1^2 + 4a(2a - \beta)y_1 - 8a^2\gamma = 0;$$

therefore $y_1 + y_2 + y_3 = 0, y_1 y_2 + y_1 y_3 + y_2 y_3 = 4a(2a - \beta)$,

and $y_1 y_2 y_3 = 8a^2\gamma$.

From these equations we get

$$4ax_1 + 4ax_2 + 4ax_3 = 8a(2a - \beta) \text{ and } 1/y_1 + 1/y_2 + 1/y_3 = (2a - \beta)/2a\gamma,$$

and therefore the ordinate required is

$$\frac{1}{2} (x_1 + x_2 + x_3) (y_1^{-1} + y_2^{-1} + y_3^{-1}).$$

[Mr. KNOWLES remarks:—"The ordinate required is γ , and in the solution it is shown that $\gamma = y_1 y_2 y_3 / 8a^2$."]

14083. (C. E. HILLYER, M.A.)—Show that the collinearity of the mid-points of the diagonals of a complete quadrilateral is an immediate deduction from MENELAUS' theorem, viz., that the ratio compounded of the ratios of the segments into which a straight line divides the sides of a triangle is -1 , and its converse.

Solution by the PROPOSER and Prof. N. BHATTACHARYYA.

Let a straight line meet BC in D, CA in E , and AB in F . Then, if D' is the mid-point of AD, B' of AC, C' of AB , we have C', B', D' in a straight line and parallel to BC , and

$$C'D' : D'B' = BD : DC.$$

Similarly, E' is a point in $C'A'$ such that

$$A'E' : E'C' = CE : EA;$$

and F' in $A'B'$ such that

$$B'F' : F'A' = AF : FB.$$

But $BD.CE.AF = DC.EA.FB = -1$.

Therefore $C'D'.A'E'.B'F' = D'B'.E'C'.F'A' = -1$.

Therefore D', E', F' are collinear; and these are the mid-points of the diagonals of the quadrilateral $ACDF$.

14135. (PROFESSOR THOMAS SAVAGE.)—For what positive integral value or values of n is $(n+1)^n - n^n$ divisible by $2mn+1$, where m is any positive integer?

Solution by Lt.-Col. ALLAN CUNNINGHAM, R.E.

$\{(n+1)^n - n^n\}$ is always divisible by some prime p of form $p = 2mn+1$, where m is some positive integer (not any integer as stated in the question). n may be any positive integer.

[This is believed to have been proved by EULER, for the more general case $(a^n - b^n)$ is always divisible by $p = 2mn+1 = \text{prime}$.

The PROPOSER observes: "Owing to an error—unfortunately not detected at first revision of manuscripts—in the working of a particular case of FERMAT'S theorem ($x^n + y^n \neq z^n$, for integers), I was led, by the result, to set the question as printed.]

14242. (C. JOSS, M.A.)—Tangents to a circle at the vertices of an inscribed triangle meet the opposite sides produced in collinear points.

Solution by Rev. J. CULLEN; and Prof. N. BHATTACHARYYA.

By applying PASCAL'S theorem to the hexagon inscribed in a TUCKER circle we see that the anti-parallel $FE', F'D$, and $D'E$ intersect the sides in collinear points. When the TUCKER circle becomes the circumcircle the PASCAL line becomes LEMOINE'S line. (See figure in Quest. 14159.)

[The PROPOSER observes: "This results from PASCAL'S theorem by diminishing the alternate sides of the hexagon until the secants become tangents. The quadrilateral and pentagon are likewise included in the general form:—If six lines cut one another in concyclic points, lines

1 and 4, 2 and 5, 3 and 6 meet in collinear points. See McDOWELL'S Exercises (1863), No. 224.)"

14257. (Professor COCHEZ.)—Etudier $x^4 + y^4 + 3x^2y + y^3 = 0$.

Solution by H. J. WOODALL, A.R.C.S.

By solving the equation, we find

$$x^2 = -\frac{3}{2}y \pm \frac{1}{2}y(5 - 4y^2)^{\frac{1}{2}}$$

whence y must be negative and not greater than $-\frac{1}{2}\sqrt{5}$, i.e., $-1.118...$

Also the curve is symmetrical with respect to the axis of y , $y = -1$ cuts the curve where $x^4 - 3x^2 + 2 = 0$; therefore the points $(\pm\sqrt{2}, -1)$ and $(\pm 1, -1)$ are on the curve. The curve is parallel to the x -axis where $du/dx = 0$, i.e., $4x^3 + 6xy = 0$; this gives the points $(0,0), (\pm 1.295..., -1.118...)$. Properly, the curve at the point $(0, 0)$ requires further examination, since here

$$du/dy = 0$$

also. The x -axis is, however, a double tangent at $(0, 0)$. The curve is parallel to the y -axis at $(\pm 1.414..., -1)$, and one-half of it is represented in the accompanying figure.

14291. (R. F. DAVIS, M.A.)—If ABCD be any quadrilateral circumscribed to a circle (centre O), then $AB \cdot AD/OA^2 = CB \cdot CD/OC^2$.

Solution by C. E. McVICKER.

$\alpha + \beta + \gamma + \delta = \pi$; therefore AOD can be divided into β and γ , also BOC can be divided into α and δ . By similar triangles,

$$OA^2 = AB \cdot AX;$$

therefore $OA^2/(AB \cdot AD) = AX/AD$;

similarly, $OC^2/(CB \cdot CD) = CY/CB$.

It is now required to show that XY divides the sides proportionally.

$$AX/XD = (AX/XO)(XO/XD)$$

$$= (\sin \beta / \sin \alpha)(\sin \delta / \sin \gamma),$$

$$CY/YB = (\sin \delta / \sin \gamma)(\sin \beta / \sin \alpha),$$

which is the same; whence the theorem follows at once.

14275. (R. J. DALLAS.)—Being given four points A, B, C, D, prove that the nine-point circles of the four triangles formed by leaving out one point in turn all pass through one point.

Solution by Rev. T. ROACH, M.A.; W. C. STANHAM, B.A.; and others.

The nine-point circle of any triangle is the locus of the centre of equilateral hyperbolas described about the triangle. Let one of the hyperbolas be described about ABC and pass through D. Then the centre of the equilateral hyperbola through ABCD lies on the nine-point circle of ABC. Similarly, it lies on the nine-point circles of BCD, CDA, DAB; therefore these four circles all pass through one point.

14088. (Rev. T. ROACH, M.A.)—OP and OQ are tangents to a parabola: prove $OP^2 : OQ^2 = SP : SQ$.

Solution by H. A. WEBB; the PROPOSER; and many others.

Draw pp', qq' parallel to OP, OQ respectively.

pp', qq' are the parameters of the diameters through P, Q, and are equal to $4SP, 4SQ$ respectively.

Also $Sp \cdot Sp' = Sg \cdot Sg'$ = half the semi-latus rectum.

Then, by BOSCOVICH'S theorem,

$$OP^2 : OQ^2 = Sp \cdot Sp' : Sg \cdot Sg' \\ = pp' : qq' \\ = SP : SQ.$$

14276. (R. KNOWLES, B.A.)—At a point R (eccentric angle θ) of the ellipse $a^2y^2 + b^2x^2 = a^2b^2$, chords RP, RQ are drawn at right angles; the normal at R meets PQ in M and the curve in N. Prove (1) that $RM : MN = a^4 \sin^2 \theta + b^4 \cos^2 \theta : a^2b^2$. (2) If $R(am^2, 2am)$ be on the parabola $y^2 = 4ax$, prove that $RM = m^2MN$.

Solution by G. W. PRESTON, B.A.

Draw the double ordinate RHQ, and draw MF, NG perpendicular to CA. Now M is the FRENCHER point of the point R; and therefore CMQ is a straight line and $CQ : CM = a^2 + b^2 : a^2 - b^2$. (Vide RUSSELL'S Geometry, p. 201, Ex. 6.)

But, by parallels, $CQ : CM = CH : CF$;

$$\therefore CH : CF = a^2 + b^2 : a^2 - b^2; \therefore CH : FH = a^2 + b^2 : 2b^2;$$

$$\therefore CF = \{(a^2 - b^2)/(a^2 + b^2)\} (a \cos \theta) \text{ and } FH = \{2b^2/(a^2 + b^2)\} (a \cos \theta).$$

It is clear, from the figure, that $RM : MN = FH : FG$.

Now

$$FG = CF - CG$$

$$= CF - (CG + CH) + CH.$$

Equation of normal at R is

$$a \sin \theta \cdot x - b \cos \theta \cdot y$$

$$= (a^2 - b^2) \sin \theta \cos \theta.$$

Substituting the value of y from this, in the equation of curve, we get

$$b^2x^2 + \frac{a^2 \{a \sin \theta \cdot x - (a^2 - b^2) \sin \theta \cos \theta\}^2}{b^2 \cos^2 \theta} = a^2b^2,$$

a quadratic in x , the sum of whose roots is

$$CG + CH = \frac{2a^3(a^2 - b^2) \sin^2 \theta \cos \theta}{a^4 \sin^2 \theta + b^4 \cos^2 \theta};$$

$$\therefore FG = \frac{a^2 - b^2}{a^2 + b^2} (a \cos \theta) - \frac{2a^3(a^2 - b^2) \sin^2 \theta \cos \theta}{A} + a \cos \theta$$

(where $A = a^4 \sin^2 \theta + \&c.$)

[The rest in Volume.]

14147. (Rev. W. ALLEN WHITWORTH, M.A.)—If three square numbers (not having a common factor) be in arithmetical progression, the middle one divided by 120 will leave a remainder 1 or 25 or 49, and each of the others divided by 240 will leave a remainder 1 or 49. For example: 49, 289, 529; 289, 625, 961; 961, 1681, 2401.

Solution by Lt.-Col. ALLAN CUNNINGHAM, R.E.; and R. W. D. CHRISTIE.

Let x^2, y^2, z^2 be the three squares, such that $x^2 + z^2 = 2y^2$ ($x < y < z$). The general solution of this has been shown in a recent number of this journal to be

$$x = (m \sim 2n)^2 - 2n^2, \quad y = (m \sim n)^2 + n^2, \quad z = m^2 \sim 2n^2.$$

Hence x, y, z will be all even if m is even (a case excluded since x, y, z are to have no common factor); and x, y, z will be all odd if m be odd. Thus x, y, z, m must be all odd. Now all odd squares are of form $(8\alpha + 1)$; and all squares are of one of the forms 3β or $(3\beta + 1)$, and also of one of the forms $(5\gamma - 1), 5\gamma, (5\gamma + 1)$. Now, since y is of form $(a^2 + b^2)$, all its factors must be of that form, so y cannot have the factor 3, and y^2 cannot be of form 3β . Similarly, x^2 and z^2 are both of form $(c^2 \sim 2f^2)$, x and z are each of one of the forms $(8\alpha \pm 1)$, and all their factors must be of form $(c^2 \sim 2f^2)$; hence x^2 and z^2 are both of form $(16\alpha + 1)$; and x and z cannot have the factors 3 or 5; so that x^2 and z^2 cannot be of form 3β or 5γ .

$$\text{Hence } y^2 = 8\alpha + 1 = 3\beta + 1 = 5\gamma - 1, \text{ or } 5\gamma, \text{ or } 5\gamma + 1;$$

$$x^2 \text{ and } z^2 = 16\alpha + 1 = 3\beta + 1 = 5\gamma - 1 \text{ or } 5\gamma + 1.$$

Compounding the three forms,

$$y^2 = 120\eta + 1, 25, \text{ or } 49; \quad x^2 \text{ and } z^2 = 240\xi + 1 \text{ or } 49.$$

14094. (ROBERT W. D. CHRISTIE.)—In my factorization table (vide Vol. LXIX., p. 99) prove the law $a = 10t + u, b = Mu + t$, where t signifies the tens digit, u the units, and M the multiplier.

E.g.—Under prime 79 we have

$$15 = 10 \times 1 + 5 \text{ and } 41 = 8 \times 5 + 1, \quad 12 = 8 \times 1 + 4, \quad 17 = 8 \times 2 + 1, \text{ \&c.,}$$

where $1501 = 41001 = 120001 = 1700001 = 79(M)$, &c., ad lib.

Solution by the PROPOSER.

Let P be any number $10M - 1$ prime to 10, where M signifies the multiplier, and let $a_1, a_2, a_3, \dots, a_n$ represent the digits in the vertical columns of the table whose general law is $a_n 10^n + 1 = 0 \pmod{P}$. We have to prove that $Mu + t = a_{n+1}$, where $a_n = 10t + u$.

By the general law of the table,

$$a_n 10^n + 1 = 0 \pmod{P} \text{ and } a_{n+1} 10^{n+1} + 1 = 0 \pmod{P};$$

$$\text{therefore } 10^n (10a_{n+1} - a_n) = 0 \pmod{P};$$

$$\text{i.e., } 10a_{n+1} - a_n = 0 \pmod{P} \dots\dots\dots (1),$$

since 10 is prime to P by hypothesis.

$$\text{Again, by (1), } 10(Mu + t) - (10t + u) = 0 \pmod{P};$$

$$\text{therefore } u(10M - 1) = 0 \pmod{P}, \quad \text{i.e., } 10M - 1 = 0 \pmod{P},$$

when M is the multiplier.

QUESTIONS FOR SOLUTION.

14360. (Professor G. B. MATHEWS, F.R.S.)—Let $A(x)$, $B(x)$ denote two given rational integral functions of x , of degrees m , n respectively ($m > n$): discuss the problem of establishing an identity

$$A(x) = Q(x) B(x) + ax^m + bx^{m-1} + \dots + lx^n,$$

where a, β, \dots, l form a set of n -assigned indices (all different) chosen at pleasure from the series $0, 1, 2, \dots, (m-1)$, m , and $Q(x)$ is a rational integral function of degree $(m-n)$. In particular, give a practical rule for finding $Q(x)$ and the coefficients a, β, \dots, l . [N.B.—This question is proposed mainly for the consideration of those who write on "Division" in Elementary Algebras.]

14361. (Professor E. LEMOINE.)—Dans un triangle ABC inscrire un triangle A'B'C' semblable à un triangle donné et tel que ABC et A'B'C' soient orthologiques. On sait que deux triangles ABC, A'B'C' sont dits orthologiques si les perpendiculaires abaissées des sommets de l'un sur les côtés de l'autre sont concourantes.

14364. (Professor SANJANA.)—Prove that the following problem (WOLSTENHOLME, 886) is inaccurate:—"The two straight lines

$$(x^2 + y^2) (\cos^2 \theta \sin^2 \alpha + \sin^2 \theta) = (x \tan \alpha - y \sin \theta^2)$$

include an angle α ." Find a value of α different from zero for which the question shall hold good.

14365. (Professor COCHEZ.)—Lieu des foyers des hyperboles tangentes à l'origine à l'axe des x , et ayant une asymptote perpendiculaire à l'axe des x .

14366. (Professor U. C. GHOSH.)—Two particles of masses m and m' are attached to the two ends of an inelastic string which passes through a small ring at the upper focus of a smooth ellipse held fixed in a vertical plane with its major axis vertical. The particle of mass m moves vertically up, and the other particle slides down, the curve. If, when motion commences, the distance of mass m' from the upper focus be a , prove that when it reaches this point (r, θ) , the upper focus being the origin, its velocity is

$$\sqrt{\left\{ \frac{2(r-a)(m'-em)(e^2 r^2 \sin^2 \theta + l^2)g}{[e^2 \sin^2 \theta (m+m') + m'l^2]e} \right\}}.$$

14367. (Professor N. BHATTACHARYYA.)—Show that the product of three numbers representing the sides of a right-angled triangle is divisible by 60.

14368. (D. BIDDLE.)—If the roots of the cubic equation $x^3 + qx + r = 0$ be x_1, x_2, x_3 and all real, prove that the sum of the products of $(x_1 - x_2)/x_3, (x_2 - x_3)/x_1, (x_3 - x_1)/x_2$, taken two at a time, is -9 .

14369. (R. TUCKER, M.A.)—P, Q, R are conormal points on a parabola, and $\gamma_1, \gamma_2, \gamma_3$ are the corresponding centres of curvature. Prove that the perpendiculars from γ_1, \dots , and from P, \dots , on QR, \dots , and $\gamma_2\gamma_3, \dots$, respectively pass through $\left\{ a \left[\frac{1}{2}(7S_2) + 2 \right], -\frac{1}{2}(7a\mu) \right\}$, and $\left\{ a \frac{1}{2}(7S_2), a(3\mu/S_2) \right\}$ respectively. Again, if k_1, k_2, k_3 are the points of intersection of the polars of $\gamma_1, \gamma_2, \gamma_3$ (k_2k_3 of γ_1, \dots) with respect to the curve, then k_2k_3, \dots meet gr, \dots in collinear points [the line being $\mu y - 2x = a(S_2 + 4)$], and $\Delta k_1k_2k_3 : \Delta PQR = 9 : S_2$, and the centroid of $k_1k_2k_3$ lies on the axis. [Refer to Quest. 13730.]

14370. (R. F. DAVIS, M.A.)—Employing a system of quadrilateral coordinates (analogous to trilinear coordinates) in which a point P is defined by its perpendicular distances ($\alpha, \beta, \gamma, \delta$) from the sides (AB, BC, CD, DA) of the quadrilateral of reference ABCD, prove the existence of the homogeneous linear relation between the coordinates of every point, $\alpha c \sin C \sin D - \beta d \sin D \sin A + \gamma a \sin A \sin B - \delta b \sin B \sin C \equiv 0$. Hence show that the equation of any line (or curve) is in a certain sense indeterminate. Prove that the equation to the locus of the centres of conics circumscribing the quadrilateral of reference may be written

$$\alpha\beta \sin D - \beta\gamma \sin A + \gamma\delta \sin B - \delta\alpha \sin C = 0.$$

14371. (J. A. THIRD, M.A.)—A conic, K, touches the sides BC, CA, AB of a triangle at X, Y, Z, and a tangent to it meets these sides in D, E, F respectively. Another conic, K', is circumscribed to ABC, and touches AD, BE, CF. Show (1) that P, the point of concurrence of AX, BY, CZ, lies on K'; (2) that if A'B'C' be a variable triangle in perspective with ABC with respect to P as centre and DEF as axis of perspective, A'B'C' and ABC are triply in perspective; (3) that the two variable centres of perspective, and therefore all three, lie on K'; and (4) that the two variable axes of perspective, and therefore all three, touch K. Consider the case when K' is the STEINER ellipse of ABC.

14372. (R. G. ARCHIBALD, M.A.)—The locus of the vertices of all parabolas in a plane having for focus a fixed point, and always passing through a fixed point, is a cardioid whose cusp is at the parabolic focus, and the diameter of whose fixed circle is the distance between the fixed points; further, the locus of the second point of intersection of the parabolas is a Cartesian oval.

14373. (C. E. McVICKER, M.A.)—The inscribed circles of two triangles are fixed. If the triangles have the same circumcircle, prove that its envelope is a pair of circles touching the direct common tangents of the fixed circles, and having for inverse points the centres of the latter. What is the statement when one of the fixed circles is infinitesimal?

14374. (G. H. HARDY, B.A.)—Prove

$$(1) \int_0^\infty \log \left(1 + \frac{\cos \alpha}{\cosh x} \right) \frac{dx}{a^2 + x^2} = \frac{\pi}{a} \log \left\{ \frac{\Gamma \left(\frac{a}{2\pi} + \frac{1}{4} \right) \Gamma \left(\frac{a}{2\pi} + \frac{3}{4} \right)}{\Gamma \left(\frac{a-\alpha}{2\pi} + \frac{1}{2} \right) \Gamma \left(\frac{a+\alpha}{2\pi} + \frac{1}{2} \right)} \right\};$$

$$(2) \int_0^\infty \log \left(1 + \frac{a^2}{x^2} \right) \frac{dx}{\cosh x + \cos \alpha} = \frac{2\pi}{\sin \alpha} \log \left\{ \frac{\Gamma \left(\frac{a+\alpha}{2\pi} + \frac{1}{2} \right) \Gamma \left(\frac{1}{2} - \frac{\alpha}{2\pi} \right)}{\Gamma \left(\frac{a-\alpha}{2\pi} + \frac{1}{2} \right) \Gamma \left(\frac{1}{2} + \frac{\alpha}{2\pi} \right)} \right\},$$

where $0 < \alpha < \pi$. [In Quest. 14317,

$$\text{for } \int_0^\infty \log \left(\frac{1-ax}{1-bx} \right) \frac{dx}{x} \text{ read } \int_0^\infty \log \left(\frac{1-pe^{-ax}}{1-pe^{-bx}} \right) \frac{dx}{x}, p > 1$$

(the former integral is meaningless); and for "between finite limits" read "between finite or infinite limits."]

14375. (H. MACCOLL, B.A.)—Three quantities are each taken at random between k and $-k$. Show that $3/8 =$ chance that their sum is positive, assuming that their product is positive = chance that their product is positive, assuming that their sum is positive. Show also that $-1/8 =$ dependence of the first event upon the second = dependence of the second event upon the first. (See solution of Quest. 14181 in the *Educational Times* for October.)

14376. (A. F. VAN DER HUYDEN, B.A.)—If I be the incentre, I_1, I_2, I_3 the excentres, and O the circumcentre of a triangle ABC, and if o, o_1, o_2, o_3 are the circumcentres of the triangles $I_1 I_2 I_3, I_1 I_2 I_3, I_1 I_3 I_1, I_1 I_2$ respectively, then o, I, O are respectively the orthocentre, circumcentre, and nine-point-centre of the triangle $o_1 o_2 o_3$, and the circle ABC touches the inscribed and escribed circles of this triangle.

14377. (E. W. REES, B.A.)—If on the sides of a triangle ABC squares $BB_1 C_1 C, CC_2 A_2 A, AA_3 B_3 B$ be described, and if $A_2 A_3, B_3 B_1, C_1 C_2$ intersect in the points C', A', B' , and if through A', B', C' perpendiculars be drawn respectively to BC, CA, and AB, prove that these perpendiculars intersect in a point O which is the centre of gravity of the triangle A'B'C', and that the symmedian point of this triangle is G, the centre of gravity of the triangle ABC.

14378. (F. H. PEACHELL, B.A.)—P is any point on $x^2/a^2 + y^2/b^2 = 1$; two points, D, E, are taken along the inward-drawn normal and tangent at P respectively, such that PD = half the ordinate, PE = half the abscissa. Prove that DE cuts the axis at $\tan^{-1} \left[(-2ab)/a^2 + b^2 \cdot \cot 2\phi \right]$, where ϕ is the eccentric angle of P.

14379. (J. J. BARNIVILLE, B.A.)—Having given $u_{n-1} + u_{n+1} = 4u_n$, prove that

$$\frac{1}{1^2+3} + \frac{1}{5^2+3} + \frac{1}{9^2+3} + \frac{1}{13^2+3} + \dots = \frac{1}{2\sqrt{3}},$$

$$\frac{1}{1^2+8} + \frac{1}{5^2+8} + \frac{1}{9^2+8} + \frac{1}{13^2+8} + \dots = \frac{1}{4\sqrt{3}},$$

$$\frac{1}{5^2-1} + \frac{1}{9^2-1} + \frac{1}{13^2-1} + \frac{1}{17^2-1} + \dots = \frac{1}{3} - \frac{1}{2\sqrt{3}},$$

$$\frac{1}{5^2-6} + \frac{1}{9^2-6} + \frac{1}{13^2-6} + \frac{1}{17^2-6} + \dots = \frac{1}{6} - \frac{1}{4\sqrt{3}}.$$

14380. (ROBERT W. D. CHRISTIE.)—Let p be an odd prime of form $8M + 3$. Solve (1) in integers, without using the method of continued fractions, the equation $X^2 - pY^2 = 1$; (2) generalize the method for all odd primes; (3) state the cases where the solution is instantaneous.

E.g. — (i.) Let $19y^2 - x^2 = 2$; then $T = 19t + 2, \therefore t = 1, T = 21, x = 13, y = 3, X = 170, Y = 39$. (ii.) $59y^2 - x^2 = 2, x = 23, y = 3, X = 530, Y = 69$.

14381. (R. KNOWLES.)—Tangents TP, TQ meet a rectangular hyperbola in P, Q; the circle TPQ cuts the curve again in C, D; the line joining the poles of PQ and CD, with respect to the hyperbola, meets the curve in M, N. Prove that the continued product of the lengths of the four perpendiculars from M, N on the asymptotes is constant.

14382. (I. ARNOLD.)—Given the three right lines joining the vertices of equilateral triangles described externally on the sides of any plane triangle, to construct the triangle.

14383. (Professor THOMAS SAVAGE.)—BOA is a sector of a circle; X is the point of bisection of arc AB. A tangent, XD, is drawn, equal in length to OX; OD is joined. It is required to draw through B (within angle OXD) a line KP meeting arc AB in K and OD in P, equal in length to the radius of the circle.

14384. (W. H. SALMON, B.A.)—If a chord of a circle S subtend a right angle at a fixed point O, show that its envelope is a conic S'; and that of the common tangents of S and S' two pairs intersect on the polar

of O, one pair at the centre of S, and the other on a fixed line. Show also that O has the same polar for S and S'.

14385. (H. W. CURJEL, M.A.)—Three equal circles of radius r are drawn each touching the other two and a given conic, they all lie entirely (1) inside, (2) outside, the given conic. Find the maximum and minimum values of r in both cases when the conic is an ellipse; the maximum values of r in both cases when the conic is an hyperbola [also the condition of possibility of (1)], and the minimum value of r in case (1) when the conic is a parabola.

14386. (Rev. J. CULLEN.)—Solve

$$\{\phi(x)D\}^m u_{x,y} = u_{x,y+m} \quad (D = d/dx),$$

and show that, if $\phi(x) = x^n$, then one solution is

$$u_{x,y} = \int_{r=0}^{r=y-1} \{(r+1)n-r\} x^{(y+1)n-y}.$$

Also, if $\phi(x) = e^x$, a solution is

$$u_{x,y} = e^{xy} \{\Gamma(D+y)/\Gamma(D)\} \psi(x),$$

where ψ is arbitrary.

14387. (Lt. Col. ALLAN CUNNINGHAM, R.E.)—Show how to find a sum of successive cubes equal to q times a square (where q is an integer containing no square factor). Give solutions when $q = 2, 3, 5, \&c.$

14388. (Rev. T. ROACH, M.A.)—A circle is inscribed in the sector of a clock face formed by the hands at 4 o'clock, and perpendiculars are drawn from the centre to both clock hands, forming a sector of the smaller circle. Find the ratio of the larger sector to the smaller.

14389. (Rev. A. M. WILCOX, M.A.)—If a straight line be drawn from the figure X to the figure XII on a clock, and another from the figure IX to the figure I, all the figures being supposed on the circumference, prove that the area of the dial between the straight lines is one-sixth of the whole area.

OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

6172. (J. J. WALKER, M.A.)—The sides of a triangle repelling with a force varying inversely as the cube of the distance (as in Quest. 6120), show that the attractions of the three sides on a particle situate at the centre of the inscribed circle are reducible to three forces perpendicular to the sides and proportional respectively to the angles which they subtend at that point. [With the solution to this Question, we shall be glad to receive a solution, partial or complete, of the connected Quest. 6120 (by the late Professor W. K. CLIFFORD, F.R.S.), which is as follows:—“The sides of a triangle repel with a force varying inversely as the cube of the distance: find (1) the position in which a particle will rest; also (2) supposing the faces of a tetrahedron to repel according to the same law, find where a particle will rest.”]

6222. (Professor CROFTON, F.R.S.)—A heavy particle rests on the summit of a smooth circle; if it be allowed to slide down the circle, show that the parabola which it describes on leaving the circle has double contact with the circle.

6228. (The late Dr. HOPKINSON, F.R.S.)—Let r_1, r_2 be the internal and external radii of a spherical shell; t_1, t_2 the constant temperatures at which the internal and external surfaces are constantly maintained: if $t_2 > t_1$, show that the tangential tension has a maximum positive value at the interior surface, and that, if γ be the coefficient of linear dilatation, this value is

$$\frac{(3\lambda + 2\mu)\mu\lambda(t_2 - t_1)r_2(r_2 - r_1)(2r_2 + r_1)}{(\lambda + 2\mu)(r_2^3 - r_1^3)}.$$

6255. (R. TUCKER, M.A.)—If

$$\frac{Q_1}{P_1} = \frac{1}{a} + \frac{1}{b} + \frac{1}{c} + \frac{1}{d}, \quad \frac{Q'_1}{P'_1} = \frac{1}{d} + \frac{1}{c} + \frac{1}{b} + \frac{1}{a},$$

show that

$$\Sigma \left(\frac{QQ'}{P} \right) + \Sigma \left(\frac{1}{P} \right) = 2\Sigma(ab) + 12.$$

Give the general form when the number of letters is n .

6261. (F. W. FOSTER.)—Given the radius, weight, velocity, and angle of inclination sideways from the vertical of a circular disc rolling freely on a level plane, find the radius of its track.

6265. (Professor W. H. H. HUDSON, M.A.)—A mass of liquid contained in a cylinder rotates about the axis of the cylinder in such a manner that the velocity at any point of the fluid varies inversely as its distance from the axis: find the form and position of the external surface.

NOTICE TO CORRESPONDENTS

It is requested that all Mathematical communications should be sent to

D. BIDDLE, Esq., Charlton Lodge, Kingston-on-Thames.

NOTICE.—Vol. LXXI. of the “*Mathematical Reprint*” is now ready, and may be had of the Publisher, FRANCIS HODGSON, 89 Farringdon Street, E.O. Price, to Subscribers, 5s.; to Non-Subscribers, 6s. 6d.

MR. EDWARD ARNOLD'S

NEW EDUCATIONAL BOOKS.

SELECTIONS FROM TENNYSON'S POEMS. Edited, with Notes and Introduction, by the Rev. E. C. EVERARD OWEN, M.A., Assistant-Master at Harrow School. Crown 8vo, cloth, 1s. 6d. [Now ready.]

TWO NEW HISTORIES.

ENGLAND IN THE NINETEENTH CENTURY.

By C. W. OMAN, Fellow of All Souls' College, Oxford; Author of “A History of England,” “The Art of War in the Middle Ages,” &c. One vol., crown 8vo, 3s. 6d.

This volume supplies a much felt need in providing a lucid history of the events of our own time within a moderate compass, and brought down to the last year of the Nineteenth Century.

ENGLISH HISTORY. For Juniors. By E. S. SYMES, Author of “The Story of London,” “The Story of Lancashire,” &c. With Illustrations and Maps. Crown 8vo, cloth, 2s. 6d.

AFRICA AS SEEN BY ITS EXPLORERS. Containing extracts from the writings of more than fifty explorers, from the time of Herodotus to the present day. Edited by E. J. WEBB, B.A. With Illustrations. Crown 8vo, cloth, 2s.

LES FRANCAIS EN MENAGE.

By JETTA S. WOLFF. With numerous Illustrations. Crown 8vo, cloth, 1s. 6d. An entirely original book, teaching the ordinary conversation of family life in France by a series of bright and entertaining scenes.

Athenæum.—“This lively little volume, with its clever illustrations, will form a capital reading-book, especially for girls. They will learn a good deal of French in a pleasant way. The volume is calculated to interest and amuse young people.”

HELPS FOR THE STUDY OF JULES VERNE'S VOYAGE AU CENTRE DE LA TERRE. Containing Supplementary Notes and a Vocabulary for the use of Teachers. By ROSA BASSETT. Price 9d.

SIMPLE FRENCH STORIES.

An entirely new Series of easy Texts, with Notes and Vocabulary, prepared under the General Editorship of Mr. L. VON GLEHN, Assistant-Master at Merchant Taylors' School. Price of each Volume, 9d.

UN DRAME DANS LES AIRS. By JULES VERNE.

PIF-PAF. By EDOUARD LABOULAYE.

LA PETITE SOURIS GRISE; and HISTOIRE DE ROSETTE. By MADAME DE SÉGUR.

UN ANNIVERSAIRE A LONDRES, and Two other Stories. By P. J. STAHL.

MONSIEUR LE VENT ET MADAME LA PLUIE. By ALFRED DE MUSSÉ.

LA FEE GRIGNOTTE; and LA CUISINE AU SALON. From “Le Théâtre de la Jeunesse.”

POUCINET, and two other Tales. By EDOUARD LABOULAYE.

MAGNETISM AND ELECTRICITY. By J. PALRY YORKE, of the Northern Polytechnic Institute, Holloway. Crown 8vo, cloth, 3s. 6d.

A TEXT-BOOK OF PHYSICAL CHEMISTRY. By Dr. R. A. LEHFELDT, Professor of Physics at the East London Technical College. Crown 8vo, cloth, 7s. 6d.

ELEMENTARY NATURAL PHILOSOPHY. By ALFRED EARL, M.A., Assistant-Master at Tonbridge School. With numerous Illustrations and Diagrams. Crown 8vo, cloth, 4s. 6d.

A MANUAL OF PHYSIOLOGY. By LEONARD HILL, M.B., Lecturer in Physiology at the London Hospital Medical College. With numerous Illustrations and Diagrams. 6s.

Journal of Education.—“Mr. Hill is one of the most brilliant of our younger physiologists, and has won a deservedly high place in the scientific world by his masterly work upon the circulatory system. We have found Mr. Hill's Manual the freshest and most fascinating book upon the subject since Huxley's classic Lessons; and we regard it as the best introduction to Modern Physiology in the English language.”

THE ELEMENTS OF EUCLID, BOOKS I.—VI. By R. LACHLAN, Sc.D., formerly Fellow of Trinity College, Cambridge. With Alternative Proofs, Notes, Exercises, all the Standard Theorems, and a large collection of Riders and Problems. Crown 8vo, cloth, 4s. 6d.

Also issued in the following Divisions:—

- Euclid, Book I. Cloth, 1s.
- Euclid, Books I. and II. Cloth, 1s. 6d.
- Euclid, Books I., II., and III. Cloth, 2s. 6d.
- Euclid, Books III. and IV. 2s.
- Euclid, Books I.—IV. 3s.

AN ELEMENTARY TREATISE ON PRACTICAL MATHEMATICS. By JOHN GRAHAM, B.A., Demonstrator of Mechanical Engineering and Applied Mathematics in the Technical College, Finsbury. Crown 8vo, cloth, 3s. 6d.

Mr. EDWARD ARNOLD'S COMPLETE EDUCATIONAL CATALOGUE will be forwarded, post free, on application.

LONDON: EDWARD ARNOLD, 37 BEDFORD-STREET, STRAND.

FOR LATIN AND GREEK UNSEEN.

- Eddenda Minora;** or, Easy Passages, Latin and Greek. Composed and Selected by C. S. JERRAM, M.A. Sixth Edition, Revised and Enlarged. 1s. 6d.
- Anglice Eddenda;** or, Latin and Greek Extracts. By C. S. JERRAM, M.A. First Series (for Junior School), 2s. 6d. Second Series (for Middle School), 3s. Third Series (for Upper School), 3s.
- Models and Exercises in Unseen Translation.** By H. F. FOX, M.A., and T. M. BROMLEY, M.A. Revised Edition. 5s. 6d.
- *.* A Key to Passages quoted in the above, price 6d.
- Latin Prose Versions.** Contributed by various Scholars. Edited by GEORGE G. RAMSAY, M.A., LL.D., Litt.D. 5s.
- Passages for Translation into Latin.** Selected by J. Y. SARGENT, M.A. Seventh Edition. 2s. 6d.
- *.* A Key to the above, price 5s. net.
- Latin Prose Composition.** By G. G. RAMSAY, M.A., LL.D. Vol. I. Syntax, Exercises, with Notes, &c. Fourth Edition. 4s. 6d. Or in Two Parts, 2s. 6d. each, viz. I.—Part I. The Simple Sentence. Part II. The Compound Sentence. *.* A Key to the above, price 5s. net.
- Vol. II. Passages of Graduated Difficulty for Translation into Latin, together with an Introduction on Continuous Prose. Fourth Edition. 4s. 6d.
- Musa Clauda.** Translations into Latin Elegiac Verse. By S. G. OWEN, M.A., and J. S. PHILLIMORE, M.A. Crown 8vo, paper boards, 3s. 6d.
- A Primer of Greek Prose Composition.** By J. Y. SARGENT, M.A. 3s. 6d. *.* A Key to the above, price 5s. net.

FOR UNSEEN TRANSLATION (continued).

- Passages for Translation into Greek Prose.** By J. Y. SARGENT, M.A. 3s.
- Exemplaria Graeca.** Being Greek Renderings of Selected "Passages for Translation into Greek Prose." By J. Y. SARGENT, M.A. 3s.
- Graeco Eddenda.** By C. S. JERRAM, M.A. 2s. 6d.
- The above Keys are supplied to Teachers only, on application to the Secretary, Clarendon Press.

SELECTION OF GRAMMARS AND READERS.

- ANGLO-SAXON.—An Anglo-Saxon Reader.** In Prose and Verse. With Grammatical Introduction, Notes, and Glossary. By HENRY SWEET, M.A. Seventh Edition, Revised and Enlarged. 9s. 6d.
- **A Second Anglo-Saxon Reader.** By HENRY SWEET, M.A. 4s. 6d.
- ARABIC.—A Practical Arabic Grammar.** Compiled by A. O. GREEN, Lieutenant-Colonel, R.E. Part I. Third Edition, Revised and Enlarged. 7s. 6d. Part II. Third Edition, Revised and Enlarged. 10s. 6d.
- BENGALI.—Grammar of the Bengali Language.** Literary and Colloquial. By JOHN BEAMES. Cloth, 7s. 6d.; cut flush, 6s.
- BOHEMIAN.—A Grammar of the Bohemian (or Czech) Language.** By W. R. MORFILL, M.A. Crown 8vo, 6s.
- BURMESE.—A Burmese Reader.** By R. F. ST. ANDREW ST. JOHN, Hon. M.A. 10s. 6d.
- DANO-NORWEGIAN.—Grammar of the Dano-Norwegian Language.** By J. Y. SARGENT, M.A. 7s. 6d.
- ENGLISH.—A New English Grammar.** Logical and Historical. By HENRY SWEET, M.A. Part I. Introduction, Phonology, and Accidence. 10s. 6d. Part II. Syntax. 8s. 6d.
- **A Short Historical English Grammar.** By HENRY SWEET, M.A. 4s. 6d.
- **An Elementary English Grammar and Exercise Book.** By O. W. TANCOCK, M.A. Third Edition. 1s. 6d.
- **An English Grammar and Reading Book,** for Lower Forms in Classical Schools. By O. W. TANCOCK, M.A. Fourth Edition. 3s. 6d.
- FINNISH.—A Finnish Grammar.** By C. N. E. ELIOT, M.A. 10s. 6d.
- FRENCH.—Historical Grammar of the French Language.** Translated by G. W. KITCHIN, D.D. Seventh Edition. 3s. 6d.
- **Historical Grammar of the French Language.** From the French of AUGUSTE BRACHET. Re-written and Enlarged by PAGET TOYNBEE, M.A. 7s. 6d.
- GERMAN.—A German Manual;** a German Grammar, Reading Book, and a Handbook of German Conversation. By HERMANN LANGE. Second Edition. 8vo, 7s. 6d.
- **Modern German Reader.** A Graduated Collection of Extracts from Modern German Authors. Edited by C. A. BUCHHEIM, Phil. Doc. Part I. Prose Extracts. With English Notes, a Grammatical Appendix, and a complete Vocabulary. Seventh Edition. 2s. 6d. Part II. Extracts in Prose and Poetry. With English Notes and an Index. Second Edition. 2s. 6d.
- GREEK.—An Elementary Greek Grammar.** By J. B. ALLEN, M.A. *Immediately.*
- HEBREW.—Gesenius' Hebrew Grammar,** as Edited and Enlarged by E. KAUTZSCH. Translated from the Twenty-fifth German Edition by the late Rev. G. W. COLLINS, M.A. The Translation revised and adjusted to the Twenty-sixth Edition by A. E. COWLEY, M.A. 21s.
- HINDUSTANI.—A Hindustani Grammar.** By A. O. GREEN, Lieutenant-Col., R.E. In Two Parts. Part I. 8s. 6d. Part II. 7s. 6d.
- LATIN.—An Elementary Latin Grammar.** By J. B. ALLEN, M.A. New and Enlarged Edition. 2s. 6d.
- **A Short Historical Latin Grammar.** By W. M. LINDSAY, M.A. 5s. 6d.
- **First Latin Reader.** By T. J. NUNNS, M.A. Third Edition. 2s.
- RUSSIAN.—A Grammar of the Russian Language.** By W. R. MORFILL, M.A. Crown 8vo, 6s.
- SANSKRIT.—Practical Grammar of the Sanskrit Language.** Arranged with reference to the Classical Languages of Europe, for the use of English Students. By Sir M. MONIER-WILLIAMS, D.C.L. Fourth Edition. 15s.
- TAMIL.—First Lessons in Tamil.** By G. U. POPE, D.D. Fifth Edition. 7s. 6d.
- **The First Catechism of Tamil Grammar.** By G. U. POPE, D.D., with an English Translation by D. S. HERRICK, B.A. 3s.

LONDON: HENRY FROWDE, CLARENDON PRESS WAREHOUSE, AMEN CORNER, E.C.

BLACKIE & SON'S NEW ILLUSTRATED BOOKS

FOR SCHOOL PRIZES, REWARDS, &c.

BY G. A. HENTY.

- Won by the Sword:** A Tale of the Thirty Years' War. With Twelve Page Illustrations by CHARLES M. SHELDON. 6s.
- A Roving Commission;** or, Through the Black Insurrection of Hayti. With Twelve Page Illustrations by WILLIAM RAINY, R.I. 6s.
- No Surrender!** A Tale of the Rising of La Vendée. With Eight Page Illustrations by STANLEY L. WOOD. 5s.

MR. HENTY'S PREVIOUS BOOKS.

Price 6s. each.

Under Wellington's Command.
Both Sides the Border.
With Frederick the Great.
With Moore at Corunna.
At Agincourt.
With Cochrane the Dauntless.
A Knight of the White Cross.
The Tiger of Mysore.
Wulf the Saxon.
St. Bartholomew's Eve.
Through the Sikh War.
Berio the Briton.
In Creek Waters.
The Dash for Khartoum.
Redskin and Cowboy.
By Right of Conquest.
By England's Aid.
With Lee in Virginia.
By Pike and Dyke.
The Lion of St. Mark.

Price 6s. each.

Captain Bayley's Heir.
Bonnie Prince Charlie.
For the Temple.
The Young Carthaginian.
With Wolfe in Canada.
When London Burned.
The Lion of the North.
With Clive in India.
In Freedom's Cause.
Through the Fray.
Under Drake's Flag.
True to the Old Flag.

Price 5s. each.

At Aboukir and Acre.
A March on London.
On the Irrawaddy.
Through Russian Snows.
In the Heart of the Rockies.

Price 5s. each.

A Jacobite Exile.
Condemned as a Nihilist.
Held Fast for England.
Maori and Settler.
One of the 28th.
In the Reign of Terror.
Orange and Green.
Bravest of the Brave.
A Final Reckoning.
The Cat of Bubastes.
For Name and Fame.
Dragon and the Raven.
St. George for England.
By Sheer Pluck.
Facing Death.

Price 3s. 6d. each.

The Young Colonists.
A Chapter of Adventures.

BY F. HARRISON.
Wynport College: A Story of School Life.
With Eight Illustrations by HAROLD COPPING. 5s.

BY G. MÖCKLER.
The Four Miss Whittingtons. With Eight Illustrations by CHAS. M. SHELDON. 5s.

BY GORDON STABLES.
Kidnapped by Cannibals: A Story of the Southern Seas. With Six Illustrations by J. FINNEMORE. 3s. 6d.

LECTURES FOR TEACHERS

IN THE SCIENCE, ART, AND HISTORY OF
EDUCATION.

THE TEACHER AND THE CLASS.

To be delivered by P. A. BARNETT, Esq., M.A., formerly Principal of the "Borough Road" Training College, Isleworth.

The Second Course of Lectures (Twenty-fifth Annual Series) began on Friday, 22nd September.

These Lectures are meant to be of direct service to intending and acting teachers by showing the bearing of questions of theory on the daily practice and the needs of the class-room. The syllabus does not state in detail all the points which will be treated, but indicates the heads under which the most important are likely to present themselves for consideration. References and suggestions for reading will be made from time to time during the progress of the course.

The Fee for the Course is Half-a-guinea.

The Lectures will be delivered on Friday Evenings at 7 o'clock, at the College, Bloomsbury Square, W.C.

Members of the College have Free Admission to this Course.

C. R. HODGSON, B.A., *Secretary*.

L.L.A. ST. ANDREWS UNIVER-

SITY.—Oral Classes for London students in all subjects of this examination are held at the Day Training College, White Street, Finsbury Street, and Ropemaker Street, Finsbury Pavement, E.C., and are conducted by Mr. S. BEDFORD COLLEGE, LONDON (FOR WOMEN),

YORK PLACE, BAKER STREET, W.

Principal—Miss ETHEL HURLBATT.

The Lent Term will begin on Thursday, January 18. The College prepares for the University of London Examinations in Arts and Science. Students may also enter for College Courses, the Training Department, the Hygiene Department, and the Art School. Six Laboratories are open to students for practical work. Students can reside in the College. A Course of Ten Lectures for Teachers on Elementary Physiology, followed by a class for practical work, will be given by J. S. Edkins, M.A., M.B., on Saturday mornings at 10 a.m., beginning on January 20.

Further information on application to the PRINCIPAL.

BEDFORD COLLEGE, LONDON (FOR WOMEN),

YORK PLACE, BAKER STREET, W.

DEPARTMENT FOR PROFESSIONAL TRAINING IN TEACHING.

Head of the Department—Miss HANNAH ROBERTSON, B.A.

The Session for 1900 opens on Thursday, January 18. The Course includes full preparation for the Examinations for the Teaching Diplomas granted by the Universities of London and Cambridge, held annually in December. Students can reside in the College.

THE CAMBRIDGE TRAINING COLLEGE FOR WOMEN TEACHERS.

Principal—Miss M. PUNNETT, B.A. (Lond.).

The object of this College is to give a professional training to educated women who intend to teach. In addition to the course of training, it offers the advantages of a College life and one year's residence in Cambridge.

The Students attend the Cambridge University Lectures on Teaching, in addition to those of the Resident and Visiting Lecturers, and are prepared for the Cambridge Teachers' Certificate (Theory and Practice). Ample opportunity is given for practice in teaching science, languages, mathematics, and the other usual school subjects in various schools in Cambridge.

Students are admitted in January and in September. Full particulars as to qualifications for admission, scholarships, and bursaries may be obtained on application to the PRINCIPAL, Wollaston Road, Cambridge.

THE

FROEBEL EDUCATIONAL INSTITUTE,

TALGARTH ROAD, WEST KENSINGTON, LONDON, W.

A High School for Girls, Transition Class, and Kindergarten are attached to the College for purposes of Demonstration and Practice.

ROYAL INDIAN ENGINEERING COLLEGE, COOPERS HILL, STAINES.

The Course of Study is arranged to fit an Engineer for employment in Europe, India, and the Colonies. About Forty Students will be admitted in September, 1900. The Secretary of State will offer them for competition, Twelve Appointments as Assistant Engineers in the Public Works Department, and Four Appointments as Assistant Superintendents in the Telegraphs Department, One in the Accounts Branch, Public Works Department, and One in the Traffic Department, Indian State Railways.

For Particulars apply to SECRETARY at College.

COUNTY SCHOOL, ST. DAVIDS (Pemb.).

Wanted, for next Term, a Trained MISTRESS to teach usual Form Subjects. Preference given to one who can earn S.K. Grant in Drawing, and take Botany, Domestic Economy, Singing, and Drill. Salary £80. Applications and testimonials to be sent to the HEADMASTER.

JOINT AGENCY FOR WOMEN TEACHERS.

(Under the management of a Committee appointed by the Teachers' Guild, College of Preceptors, Headmistresses' Association, Association of Assistant Mistresses, and Private Schools' Association.)

Address—74 GOWER STREET, LONDON, W.C.

Registrar—Miss AGNES G. COOPER.

This Agency has been established for the purpose of enabling Teachers to find work without unnecessary cost. All fees have therefore been calculated on the lowest basis to cover the working expenses.

Headmistresses of Public and Private Schools, and Parents requiring Teachers, or Teachers seeking appointments, are invited to apply to this Agency.

Many Graduates and Trained Teachers for Schools and Private Families; Visiting Teachers for Music, Art, and other special subjects; Foreign Teachers of various nationalities; Kindergarten and other Teachers are on the Register, and every endeavour is made to supply suitable candidates for any vacancy.

School Partnerships and Transfers are arranged. Office hours—9.30 a.m. to 6 p.m. Miss Cooper's hours for interviews are from 10.30 a.m. to 1.30 p.m., and 2.30 p.m. to 5 p.m.; Wednesdays to 1.30 p.m. only.

THE JOINT AGENCY FOR MEN TEACHERS.

23 SOUTHAMPTON STREET, BLOOMSBURY SQUARE, LONDON, W.C.

Registrar—Rev. F. TAYLOR, M.A. Cantab.

The Agencies for Assistant-Masters and Tutors hitherto conducted by the College of Preceptors, the Teachers' Guild, and the Assistant-Masters' Association, have been amalgamated and placed under the management of a Joint Committee composed of representatives of the following Bodies:—

Headmasters' Conference.

Incorporated Association of Headmasters.

College of Preceptors.

Teachers' Guild.

Welsh County Schools' Association.

Private Schools' Association.

Association of Headmasters of Preparatory Schools.

Association of Headmasters of Roman Catholic Schools.

Assistant-Masters' Association.

Association of Technical Institutions.

&c. &c.

The rates of Commission charged to Assistant-Masters are fixed as low as possible, and it is hoped that all branches of the profession will support an Agency managed by so widely representative a Committee.

Headmasters having vacancies on their staffs, and Assistant-Masters seeking appointments, are asked to communicate with the REGISTRAR.

THE SANITARY INSTITUTE.

Examination for School Teachers.

The next Examination in PRACTICAL HYGIENE FOR SCHOOL TEACHERS will be held in London on February 8th, 9th, 10th, 1900.

The Examination includes:—Part I. Personal Hygiene and Physiology.—Part II. Hygiene in Schools and Private Dwellings.—And Part III. Hygiene in Education.

Forms and particulars can be obtained at the Offices of the Institute, Margaret Street, London, W.

E. WHITE WALLIS, Secretary.

UNIVERSITY EXAMINATION POSTAL INSTITUTION.

Manager—MR. E. S. WEYMOUTH, M.A. LOND.
Offices—27 SOUTHAMPTON STREET, STRAND, LONDON, W.C.

The University Examination Postal Institution has special Courses to prepare through the post for the

A.C.P., L.C.P., AND F.C.P.;

also for the **TEACHERS' DIPLOMA** (Cambridge or London University); also for London University Medical Examinations, and the Oxford and Cambridge Locals.

RECENT SUCCESS.—274

Candidates prepared successfully through the post for the **CAMBRIDGE HIGHER LOCAL** Examination, during 1895-9 (five years), 54 gaining a mark of distinction. **Only three failures** during the last six years for all Teachers' Diploma Examinations; numerous successes.

The Institution is now publishing a series of books having special reference to the

CAMBRIDGE HIGHER LOCAL

Examination. Particulars on application. Write for the **GUIDE TO THE CAMBRIDGE HIGHER LOCAL EXAMINATION**, by the Tutors of the University Examination Postal Institution; containing particulars as to books recommended for 1899 and for 1900, and General Suggestions for a Method of Study and Statistical Tables. (New Edition, March, 1899.) 1s. net; or post free, 1s. 1d.

By the Headmaster of Loretto School.

CHRIST THE PROTESTANT: AND OTHER SERMONS.

By HELY HUTCHINSON ALMOND, M.A.
Oxon., Hon. LL.D. Glasgow, Headmaster of Loretto School.
Crown 8vo, 5s.

Extracts from Reviews of "Sermons by a Lay Headmaster."

"As school sermons—as far as we can judge from the written letter—these discourses are excellent."—*Spectator*.

"In fervour and earnestness of conviction and sympathy, they are such as not to be easily matched in homiletical literature."—*Pall Mall Gazette*.

"A book we should like to see in the hands of every boy, of every father and mother of every boy, in the United Kingdom."—*Manchester Examiner*.

"This delightful book of sermons to boys."—*Birmingham Daily Gazette*.

"The writing is often impassioned and eloquent, and the eloquence is more of meaning and conviction than of sound and excitement."—*Glasgow Herald*.

WILLIAM BLACKWOOD & SONS, Edinburgh & London.

THE ELEMENTS OF BOOK-KEEPING, by SINGLE and DOUBLE ENTRY; with Practical Explanations and Exercises on the most useful Forms for Business.

LONDON: LONGMANS & CO., PATERNOSTER ROW.

PHYSICS, EXPERIMENTAL AND THEORETICAL.

By R. H. JUDE, M.A. (Cantab.), B.Sc. (Lond),

Principal of the Physical Department, Rutherford College, Newcastle-on-Tyne.

And partly from the French of H. GOSSIN.

With numerous Illustrations, Examples, and Exercises. Vol. I. Demy 8vo.
Price 12s. 6d. net.

Containing:—Part I. INTRODUCTORY (MECHANICS, HYDROSTATICS, and PNEUMATICS).—Part II. HEAT.—Part III. ACOUSTICS. The Three Parts are also sold separately. Part I., 3s. 6d. net; Part II., 7s. 6d. net; Part III., 2s. 6d. net.

OPINIONS OF THE PRESS.

"The increasing study of science in schools has been the cause of a considerable crop of text-books in Elementary Physics, but there is still the want of a more advanced book on the subject. This want Dr. R. H. Jude has endeavoured to supply, and . . . has succeeded in giving us what promises to be a very useful work both to teachers and students."—*Nature*.

"A very comprehensive and complete treatise, advancing in each subject from carefully enunciated definitions of terms and expositions of principles to fairly advanced theorems and problems. . . . This new course of Physics deserves careful attention. . . . It combines many excellent features."—*Educational Times*.

"The original intention of merely translating Prof. Gossin's 'Cours de Physique' has been so far modified that Dr. Jude's additions form by far the greater part of the book. . . . Some of the theoretical sections which he has written are particularly well done, and his experience as a teacher has enabled him to do good service by adequately treating many points which are generally slurred over or misunderstood."—*Guardian*.

"It is plain from this book that Dr. Jude is a marvellously good teacher: his clear, vigorous explanation, his methods of approaching difficult points, his firm attack of those puzzles well known as causing haziness in the student's mind, are of unusual excellence; and even more so the exercises, with their continual reference to matters of daily life, giving the young science student a direct stimulus to keep his natural powers of observation and his acquired powers of analysis working constantly together. One does not often find a book so stimulating to thought in this particular direction."—*Saturday Review*.

"Dr. Jude has not been content merely to expound the common doctrine of Science, but in places has enriched the book by original researches. . . . Students of science have no lack of books to choose from, but treatises such as this, which combine the Englishman's practical knowledge with the Frenchman's gift of lucid exposition for the needs of learners, are rare."—*Scotsman*.

"Dr. Jude, of the Rutherford College, who, in addition to distinguished attainments, is one of the most experienced teachers of science in the country, has undoubtedly achieved a great success in a very difficult and ambitious undertaking. . . . His book guides the student step by step with singularly firm and lucid method through the successive intricacies of the subjects dealt with. . . . The remarkable thoroughness, especially upon the experimental side of the part on Heat, alone would suffice to bring the book into wide use. . . . The exercises are a valuable addition."—*Newcastle Chronicle*.

A SUITABLE PRESENT FOR YOUNG AND OLD.

Crown 8vo, cloth extra, price 6s.

OUR NAVY FOR A THOUSAND YEARS.

A concise account of all the principal operations in which the British Navy has been engaged from the time of King Alfred to the recapture of Khartoum.

By CAPTAIN S. EARDLEY-WILMOT, R.N., Author of "Life of Vice-Admiral Lord Lyons," "The Development of Navies," &c.

ILLUSTRATED.

THE BEST BOOK FOR A PRIZE.

"I am often asked what is the best book I can recommend for a present to a boy. I can think of none better than the cheap twelve-and-sixpenny (net) edition of Capt. Mahan's 'Life of Nelson,' just brought out by Messrs. Sampson Low, Marston & Co. It has the most accurate plans of Nelson's battles, and excellent illustrations of Nelson, Jervis, Troubridge, Hood, Sir Hyde Parker, Collingwood, Hardy, Lady Nelson, Lady Hamilton, and Horatia. It is at once the most readable and the most accurate life of Nelson, and, in spite of its completeness and its 750 pages, is a very handy volume."—*The Queen*.

Now ready. Complete in One Volume of over 750 pages, price 12s. 6d. net.

The New, Revised, and much Cheaper Edition of

CAPTAIN MAHAN'S LIFE OF NELSON.

PRICE 12s. 6d. NET.

With a New Preface by Captain MAHAN. The Illustrations and Battle Plans as in the 2 vol. 36s. Edition (which is still in print), and an Entirely New Chart, giving the General Lines of Nelson's Cruisings, 1777 to 1805, with Crossed Flags in Red, indicating his Chief Battles.

FOR THE OLD FLAG. A TALE OF THE MUTINY.

By CLIVE R. FENN. Crown 8vo, gilt edges. With numerous Illustrations. Price 5s.

"A vigorously written story, founded upon incidents in the great Indian Mutiny, and so well told that young people will read it with avidity and ardour. Every chapter reveals some new and exciting incident such as boys delight in, and some thirty capital illustrations add distinctly to the value of the book as a reward. It is in every way suitable for elder scholars, combining, as it does, the useful with the attractive."—*Teachers' Aid*.

Full Special List of Boys' Books, including Jules Verne's, post free on application.

LONDON: SAMPSON LOW, MARSTON & CO., LTD., ST. DUNSTAN'S HOUSE, FETTER LANE.

Blackie & Son's New Books.

Blackie's New Illustrated Latin Series.

Edited by Prof. R. Y. TYRRELL, Litt.D., D.C.L., Examiner to the Universities of London and Glasgow, &c.

Each Volume is furnished with interesting Introduction, Explanatory Notes, and full Vocabularies, and is illustrated with numerous Maps, Plans, and authentic Drawings from Coins, Gems, Statues, and other objects of ancient art. Crown 8vo, cloth. The following Volumes are now ready:—

CICERO.—THE FIRST CATILINE ORATION. Edited by C. HAINES KEENE, M.A. 1s. 6d.

CICERO.—THE CATILINE ORATIONS (Complete). Edited by C. HAINES KEENE, M.A. 2s. 6d.

HORACE.—THE ODES. Books I.—IV. Edited by STEPHEN GWYNN, B.A. 1s. 6d. each. [Book III. in preparation.]

TACITUS.—AGRICOLA. Edited by W. C. FLAMSTEAD WALTERS, M.A. 1s. 6d.

EUTROPIUS. Books I. and II. Edited by W. CECIL LAMING, M.A. [January, 1900.]

LIVY. Book V. Edited by W. CECIL LAMING, M.A., Assistant-Master in Edinburgh Academy. 2s. 6d. [Nearly ready.]

*. * Other Volumes in preparation.

ILLUSTRATED PROSPECTUS ON APPLICATION.

French.

MY FIRST FRENCH BOOK. By MARGUERITE NINET. Illustrated. Cloth, 1s.

A little book of easy anecdotes, stories, and sketches, in large type, for very young children, with pictures to each lesson, and complete vocabularies.

LES DEUX BOSSUS. Edited by EMILE B. LE FRANÇOIS. With a Frontispiece by ALICE B. WOODWARD. Small crown 8vo, cloth, 1s.

SONGS OF BÉRANGER. Edited, with Introduction, Notes, &c., by GEORGE H. ELY, B.A. Small crown 8vo, cloth, 1s.

GEORGE SAND'S LES AILES DE COURAGE. Adapted and Edited, with Notes and Vocabulary, by B. PROPER. 1s. 6d.

FRENCH UNSEENS FOR LOWER FORMS. By D. S. RENNARD, B.A. 3d.

FRENCH UNSEENS FOR MIDDLE FORMS. Selected by E. PELLISSIER, M.A. Fcap. 8vo, cloth, 1s.

FRENCH UNSEENS FOR UPPER FORMS. Selected by E. PELLISSIER, M.A. Fcap. 8vo, cloth, 1s. 6d.

PRIMER OF HISTORICAL FRENCH GRAMMAR. With a Chapter on Metre. By ERNEST WEKLEY, M.A. (Lond.), Professor of French at University College, Nottingham. 2s. 6d.

Notes and Queries says:—"An eminently satisfactory historical French grammar. It is a thoroughly workmanlike production, trustworthy in all respects."

Science.

PROGRESSIVE LESSONS IN SCIENCE. A Complete and Valuable Scheme of Experimental Lessons bearing on the Science of Daily Life. By A. ABBOTT, M.A., and ARTHUR KEY, M.A. With Introduction by T. G. ROOPER, H.M.I.S. 3s. 6d.

The Speaker says:—"We do not remember ever to have met a manual for beginners which shows so clearly as this volume how the principles of chemistry may be brought to bear in a practical manner on the affairs of daily life."

FIRST STEPS IN EARTH KNOWLEDGE. Being an Introduction to *Physiography*. By J. ANSTED HARRISON. Edited by W. JEROME HARRISON, F.G.S. 2s. 6d.

AN INTRODUCTION TO ANALYTICAL CHEMISTRY. By Prof. G. G. HENDERSON, D.Sc., M.A., F.I.C., and M. A. PARKER, B.Sc.

New English Classics.

MACAULAY.—ESSAY ON HORACE WALPOLE. Edited by JOHN DOWNIE, M.A.

POPE.—RAPE OF THE LOCK. Edited by FREDERICK RYLAND, M.A. Crown 8vo, cloth, 1s. 6d.

POPE.—ESSAY ON CRITICISM. Edited by FREDERICK RYLAND, M.A. [In December.]

TENNYSON.—SELECT POEMS. Edited, for Schools, by AGNES WILSON. In Three Booklets, paper covers, 2d. each; limp cloth, 3d. each.

1: **MORTE D'ARTHUR. THE LADY OF SHALOTT.**

2: **MARIANA. DORA. THE MAY QUEEN.**

3: **THE DAY DREAM. THE DEATH OF THE OLD YEAR. THE CHARGE OF THE LIGHT BRIGADE.**

MACAULAY.—ESSAY ON MILTON. Edited by JOHN DOWNIE, M.A. Crown 8vo, cloth, 2s.

MILTON.—SAMSON AGONISTES. Edited by E. K. CHAMBERS, B.A. Fcap. 8vo, cloth, 1s. 6d.

MILTON.—PARADISE LOST. Edited by F. GORSE, M.A. Fcap. 8vo, cloth. Books I., II., and III., 1s. each.

English.

ENGLISH SATIRES. From Langland to Calverley. Selected and Edited by OLIPHANT SMEATON, M.A. Figured or plain cloth, 3s. 6d. Warwick Library of English Literature.

SPECIMENS OF ENGLISH PROSE. From the Sixteenth Century downwards. Selected by BERTHA SKEAT, Ph.D., late Lecturer at Newnham College, Cambridge. 1s. 6d.

PASSAGES FROM MODERN AUTHORS. For Class Reading. Edited by JOHN DOWNIE, M.A. Crown 8vo, cloth, 1s.

"Modern Authors is highly excellent, the passages most interesting."—H.M. INSPECTOR OF SCHOOLS.

A BRIEF SURVEY OF BRITISH HISTORY. By G. TOWNSEND WARNER, M.A., sometime Fellow of Jesus College, Cambridge, Assistant-Master at Harrow, Author of "Landmarks in English Industrial History." With Tables, Summaries, Maps, Notes, &c. Crown 8vo, cloth, price 1s. 6d.

The Athenæum says:—"Mr. Warner's style, though simple, is clear, direct, and sufficiently varied. Moreover, his selection of facts is as a rule judicious, and his patriotic and reasonable tone, the fulness of the recent history . . . please us very much. The book is well printed, type and paper please the eye, and it is exceedingly cheap. The concluding synopsis is a practical and well-worked-out feature of the volume."

LANDMARKS IN ENGLISH INDUSTRIAL HISTORY. By G. TOWNSEND WARNER, M.A. Crown 8vo, cloth, 5s.

Cambridge Review says:—"This book is a godsend. . . . All students of History should at once procure it."

Art.

CLASSIC ORNAMENT.—Photographic Reproductions of South Kensington Casts. Specially prepared to meet the Requirements of the Science and Art Department in "Freehand Drawing and Ornament in Outline." In Four Books. Crown 4to, price 1s. 6d. each.

Prospectus showing Specimen Illustration on application.

CAMBRIDGE UNIVERSITY PRESS.

Educational Aims and Methods. Lectures and Addresses by Sir JOSHUA FITCH, M.A., LL.D., late Her Majesty's Inspector of Training Colleges, and Author of "Lectures on Teaching," "The Arnolds and their Influence on English Education." [In the press.]

The forthcoming volume consists of lectures and addresses given in Cambridge, or before the Teachers' Guild and other bodies of teachers in England and in America. Its general aim is to direct attention to various aspects of educational theory and of practical work; and it includes several monographs on the lives of distinguished and representative teachers.

The Teaching of Geography in Switzerland and North Italy. Being the Report presented to the Court of the University of Wales on a visit to Switzerland and North Italy in 1898, as Gilchrist Travelling Student. By JOAN BERENCE REYNOLDS, B.A., Assistant-Mistress in the Cardiff Intermediate School for Girls. 2s. 6d.

Practical Teacher.—"It is replete with valuable suggestions, and no teacher of geography can peruse its pages without being refreshed and immensely profited thereby."

Demonstrations in Greek Iambic Verse. By W. H. D. ROUSE, M.A., formerly Fellow of Christ's College, Cambridge; a Master at Rugby School. Crown 8vo, 6s.

Literature.—"In many ways an improvement on the work of predecessors in the same field. . . . The exercises are singularly exhaustive and lucid, and the book will be of great service to composition masters and their pupils."

Educational Times.—"We hope that this book will find its way into the hands of many teachers, to the certain benefit both of themselves and of their pupils."

CAMBRIDGE GEOGRAPHICAL SERIES.

General Editor—F. H. H. GUILLEMARD, M.D., late Lecturer in Geography at the University of Cambridge.

New Volume. Ready Immediately.

Outlines of Military Geography. By T. MILLER MAGUIRE, LL.D., of the Inner Temple; Barrister-at-Law; Lieutenant, Inns of Court Rifle Volunteers. Crown 8vo, with Maps and Illustrations.

PITT PRESS SERIES.—New Volumes.

A Primer of French Verse for Upper Forms. Edited by FREDERIC SPENCER, Professor of the French Language and Literature in the University College of North Wales; formerly Chief Master of the Modern Side in the Leys School, Cambridge. 3s.

The arrangement of most books which treat of French Prosody suggests that they are designed to teach the art of *writing* verse. The object of this Primer is less ambitious, being to associate with interesting extracts from the work of numerous French poets such hints as to the structure of French verse as may tend to secure correct and intelligent *reading* of these extracts themselves, and adequate appreciation of the distinctive qualities of French poetry as therein represented.

Aeschylus.—Prometheus Vincetus. Edited by H. RACKHAM, M.A., Fellow of Christ's College, Cambridge. 2s. 6d.

Cicero.—Pro Lege Manilia. Edited, with Introduction and Notes, by J. C. NICOL, M.A., Trinity Hall, Headmaster of Portsmouth Grammar School. [In the press.]

CAMBRIDGE BIBLE FOR SCHOOLS AND COLLEGES.—New Volumes.

General Editor for the Old Testament and the Apocrypha—A. F. KIRKPATRICK, D.D., Regius Professor of Hebrew.

Chronicles I. and II. Edited by the Rev. W. E. BARNES, D.D., Fellow of Peterhouse, Cambridge. 4s.

The Book of Proverbs. Edited by the Ven. T. T. PEBOWNE, B.D., Archdeacon of Norwich. 3s.

THE PITT PRESS SHAKESPEARE FOR SCHOOLS.

With Introductions, Notes, Glossaries, and Indexes, by A. W. VERITY, M.A., sometime Scholar of Trinity College, Cambridge.

Athenaeum.—"The Pitt Press Shakespeare can stand in competition with any of the numerous editions of the sort now showered upon reviewers."
School World.—"Every page shows careful scholarship and a ripe literary judgment. It would be difficult to praise this work (or this series) too highly."
Guardian.—"Mr. Verity is an almost ideal editor of school texts."

NEW VOLUME. READY IMMEDIATELY.

AS YOU LIKE IT. 1s. 6d.

King Richard II. Second Edition. 1s. 6d.

The Merchant of Venice. Third Edition. 1s. 6d.

King Lear. 1s. 6d.

The Tempest. Fourth Edition. With Additions and Corrections. 1s. 6d.

Julius Caesar. Fourth Edition. With Additions and Corrections. 1s. 6d.

Twelfth Night. Fourth Edition. 1s. 6d.

A Midsummer Night's Dream. Fourth Edition. With Additions and Corrections. 1s. 6d.

CAMBRIDGE SERIES FOR SCHOOLS AND TRAINING COLLEGES.

General Editor—W. H. WOODWARD, of Christ Church, Oxford, Principal of University (Day) Training College, Liverpool, and Lecturer on Education in Victoria University.

School Guardian.—"Exact and scholarly, and at the same time simple, text-books. The University Press are to be congratulated upon having secured as editors such eminent scholars; their names are a guarantee of their work. We are quite sure that the students preparing for the Queen's Scholarship and Certificate Examinations will not be the only students who will find these text-books of value; they will find their way into numberless preparatory schools and lower forms of public schools; they deal so thoroughly and clearly with the subject in each case that nothing better could be desired by master or pupil."

FOR QUEEN'S SCHOLARSHIP EXAMINATION, 1900.

A Short History of the Expansion of the British Empire. By W. H. WOODWARD. Crown 8vo. With Maps. Cloth, 4s. Cloth extra, gilt top, 6s.

Outlines of the History of the English Language. By T. N. TOLLER, late Fellow of Christ's College, Cambridge; Professor of English in the Owens College, Manchester. [Nearly ready.]

The Formation of Character: Some Educational Aspects of Ethics. By JOHN MCCUNY, Balliol College, Oxford; Professor of Philosophy in University College, Liverpool. [In the press.]

FOR CERTIFICATE EXAMINATION OF THE EDUCATION DEPARTMENT, 1900.

Macaulay's Essay on Milton. Edited by J. H. FLATHER, M.A. With special references to Dr. Johnson's "Life of Milton." 1s. 6d.

FOR OXFORD LOCAL EXAMINATION, 1900.

Cicero.—In Catilinam I. Edited, with Introduction, Notes, and Vocabulary, by J. H. FLATHER, M.A. 1s. 6d.

School Guardian.—"The simplicity and usefulness of this little volume are wonderful. It is meant for students who have had little experience in reading Latin, and who have not access to books of reference. In itself, therefore, it should be complete, and it is."

NOTE.—The following works are published in the PITT PRESS SERIES, and in the CAMBRIDGE SERIES FOR SCHOOLS AND TRAINING COLLEGES; the editions in the last named series have COMPLETE VOCABULARIES.

AUTHOR.	WORK.	EDITOR.	Pitt Press Series (without Vocabularies).	PRICES. Cambridge Series for Schools and Training Colleges (with complete Vocabularies).

The Educational Times.

Types and Distinctions.

THE expectant attitude is still maintained in regard to the future of secondary education, not only by the general public, but also by those whose concern in education is intimate and professional. There is no use in prophecy, and not much in anticipation. As for discussion, though it has been less constant since Parliament accepted the main principles of ministerial responsibility and organized administration, it has not been lacking. Ideas accumulate; the Government have ears and eyes, as well as a voice and a pen. Both in Downing Street and in Whitehall they doubtless profit, more or less consciously, by every wise contribution to the questions at issue. The story of the past four or five years has shown that the Education Office is ready to listen to outside opinion, and even takes care to be acquainted with it. The new work which has to be done in and after April next will run all the more smoothly because of the good understanding which has existed between the officials at Whitehall and the independent experts in education.

There is a preliminary question of special interest for secondary schoolmasters, and for all who have a share of any kind in secondary education. In the remodelling of the Department, when the Board of Education takes the place of "My Lords," there will be separate permanent officials in charge of Elementary and Secondary Departments, and something will depend on the personality of the permanent Secretary for Secondary Education. We understand that this position is likely to be held by Captain Abney, C.B., F.R.S., now Director for Science in the Science and Art Department. There are few men in the public service with higher scientific qualifications than Captain Abney, who has been President of the Astronomical and Physical Societies. We have no doubt that he would, if appointed, discharge very admirably the functions assigned to his department. But it is pertinent to say that his appointment would not, in itself, be any guarantee that the right distinction will be maintained between technical instruction and secondary education in its widest and most liberal sense. The distinction must be maintained, if only because it will assert itself from the beginning. For anything we know to the contrary, the organizers of the Board of Education will be particularly scrupulous on this point, and will be careful to co-ordinate all the different branches

of education, and see that they do not run counter to or oppose one another.

Great mischief would certainly arise, and there would be a great delay in the accomplishment of our hopes, if the re-organization of secondary education were attempted by the methods, and in the spirit, of the Science and Art Department. These methods have been admirable in their way, and for their purposes. South Kensington, like the School Boards, has developed beyond its original conception, and has done much even for non-technical secondary education; but it has not done nearly enough to qualify it as a Secondary Authority. There is no need in these columns to emphasize the distinctions between the secondary and the technical. An able contributor to the *Times*, writing a few weeks ago on "The True Function of the Science and Art Department," illustrated the difficulty of controlling these two forms of intermediate education by means of the same kind of inspectors and the same officials.

The two forms require two radically different forms of inspection. There is the audit of the faculties, and the audit of applied knowledge. . . . Much of the dissatisfaction that the management of South Kensington has caused is really due to the inherent incompatibility of the two functions it attempts to perform. The evil will only be aggravated if higher primary and much of secondary education are definitely allotted to it. For in this case it will also be called upon to exercise oversight over the literary side of schools, for which it does not possess the requisite experience.

But we cannot doubt that the Duke of Devonshire and the permanent officials are fully alive to the necessity of a tripartite division of education, in which the secondary and the technical, though coeval, and not mutually exclusive as to their curriculum of subjects, must be treated by different processes and different tests. Even when this has been duly provided for, it will be found that, within the strictly "secondary" subdivision, there will be much further need for discrimination, involving distinct processes and tests. We cannot organize by casting all our plastic material into three moulds, or even into a dozen moulds. No State Department could accomplish this if it tried, however elaborate might be the written constitution with which it attempted the task. The three points of the secondary charter—freedom, variety, and elasticity—must be maintained to the last; and, indeed, as we have said in regard to the distinction between the secondary and the technical, they will assert themselves by their very necessity.

We can do no more than draw the attention of our readers to the interesting lecture which we print this month, in which Mr. Bevan deals with the probable effects of the Board of Education Act on the position of private schoolmasters.

Commercial Examinations.

THE CHANCELLOR OF THE EXCHEQUER, pleading on behalf of commercial education at the Mansion House, the very throne of British commercial success, is a spectacle which ought to attract the attention even of the hurrying crowd outside. We fear, however, that London commercial life is too cosmopolitan, and too anxious about the events of the morrow, to busy itself without much and constant goading over the education of the English clerk, while the German article is ready to hand in the street. As Sir Michael Hicks-Beach bore witness, the work of the London Chamber of Commerce in organizing its commercial examinations is unquestionably valuable, and it shows an enlightened patriotism in a section, at least, of the great army of London merchants. Whatever may be our future arrangements for improving education from the bread-and-butter aspect, there will always be room for such bodies as the London Chamber of Commerce in any practical scheme with that end in view. The vastness of modern commerce seems to lead to increased variety and sensitiveness in trade, and the advice of representative men conversant with its faintest pulsations will always be the safest for teachers to follow. Although in theory commercial education is a branch of technical, most of the ground is covered by good modern secondary education, and we fully agree with Sir Michael in his view that commercial success is to be won by the perfecting of our system of secondary education. A Faculty of Commerce in the new University of London, which he also advocates, would, doubtless, please *doctrinaire* economists; but, unless our secondary education is soon organized on more systematic and practical lines, such a faculty will only be needed to produce a Gibbon to write the decline and fall of British trade.

In the address to which we have referred Sir Michael Hicks-Beach probed with some thoroughness a weak spot in the English character on its intellectual side. He seems to attribute the inferiority of the present generation of commercial men in England as much to a lack of dogged perseverance and ability to live plainly while learning the necessary drudgery of business as to the want of a proper commercial education. Owing either to some bias in his nature or to the absence of a real intellectual tone in our education, the English youth rarely grasps the fact that his education has only commenced when he leaves school or the University. His main thought is that it is something to be got over and then put behind him. How many of our doctors, schoolmasters, clergy, or Army officers make any mental effort to improve their professional education when they have once passed their qualifying examinations? Only the fraction of a fraction. Why is this? Sidney Smith said that in his time Yorkshire parsons were all either Nimrods, ramrods, or fishing-rods. No such charge can be brought against the clergy of to-day, but, at the same time, it may be doubted if the desire for intellectual improvement is much more general or genuine than it was in Sidney Smith's day. Mere knowledge is, of course, vastly more widespread; it is the princely bounty of men of genius thrust, for the most part, perforce into the thankless hands of the rising generation. Are the plodding effort and wise self-denial which are all that the average boy requires to command success unattainable through the instrumentality of the newest educational methods? In any case let us not omit to train the character and the faculty before everything else.

NOTES.

THE International Association of Academies, to which Sir Michael Foster made some reference at the Dover meeting of the British Association, is now well advanced on the way to organization, and it ought not to be long before we can welcome it as an accomplished fact. There has been for some years past, as our scientific readers will know, a German association, or Cartell, of the Academies of Sciences of Munich and Vienna and of the Royal Societies of Sciences at Göttingen and Leipzig, which has met yearly to discuss matters of common interest. Representatives of the Royal Society of London attended the meeting last year at Göttingen, as well as that which took place the previous year at Leipzig, chiefly with the object of discussing the project of an international catalogue of scientific literature which the Royal Society had been engaged in promoting. It is out of these circumstances that the new and wider organization has sprung. When the Royal Society of London had ascertained that the project was likely to find favour, it was agreed that the Royal Society and the Berlin Academy should together issue an invitation to the Academy of Science, Paris; the Imperial Academy of Sciences, St. Petersburg; the Reale Accademia dei Lincei, Rome; the National Academy, Washington, as well as to the bodies included in the Cartell, requesting them to send delegates to a conference at Wiesbaden. Draft statutes were framed, and these are now under the consideration of the various bodies concerned. We may confidently expect that the first meeting of the Association will be held at Paris next year.

THE proposal made by the Special Board of Mathematics at Cambridge to "abolish the Senior Wrangler" is one which will doubtless fill many minds with dismay and concern. It will dash to the ground the eager hopes of youthful aspirants to that proud position still at school, perhaps meditating great things in the future. It will certainly rob the academic world of one of its most fruitful topics of discussion, and take one away from its sum of "sensations." But the Special Board declares that its case is strong. The Senior Wrangler, it says, may be a very picturesque figure, but he is blocking the way to real progress and efficiency. He is more ornamental than useful: hence his days are numbered. Under the existing regulations, it is true that only a very small percentage of mathematical students go on to the second and most important part of the Mathematical Tripos, because their energy is used up in preparing for Part I. The Senior Wrangler is, of course, chosen on the result of work in Part I., and this, although very difficult, is not difficult in the best kind of way. The difficulties there encountered are not fruitful, and they do not lead to practical results. The new proposal is to divide the candidates into classes and divisions containing names in alphabetical order; to reduce the schedule of subjects and modify the examinations so as to bring the first part of the Tripos within the compass of the time and effort which intrinsic educational value justifies. Then, it is hoped, more men will compete for the Smith's Prizes in Part II., and more attention will be given to such subjects as physics.

THE report of a special committee of the London School Board that there are something like fifty-five thousand underfed

children attending the elementary schools of London is a matter deserving the most serious consideration. Experience in teaching is not necessary to enable us to appreciate how difficult it must be to obtain satisfactory educational results with children who are habitually either under- or ill-fed, while the physical effects are no less disastrous. Some remedy must be found for such a virtual massacre of innocents; but there is considerable doubt as to whether the provision of meals for such children is within the province of the educational authority. The overlapping of jurisdictions has in the past been the prime source of waste and confusion in municipal government, and "it is not reason" that the School Board should leave education "and serve tables." Besides, the duty of caring for and protecting neglected children is by law that of the Guardians, who have ample powers not only to protect children from direct physical ill-treatment at the hands of their parents, but also to compel parents to provide their children with sufficient food. It might, indeed, be well to make it the duty of the Guardians to ascertain from the principals of the elementary schools in their districts the names of children who were thought to be underfed, and to make proper inquiry into their home surroundings. In most cases, probably, no more would be necessary; but, where from poverty or neglect the children were found underfed, the means already at the Guardians' disposal—or such other means as benevolence may suggest—should be used to provide relief.

THIS will involve finding out what children, if any, do come to school underfed, and, possibly, the punishment of such parents as wilfully neglect their children in this regard. The objections are easy to suggest. Any scheme of this sort is open to the charge that it tends to pauperize the children and demoralize the parents; and, of course, that is its danger. But two things must be remembered—first, that already the work is being done *incompletely* by people other than the parents, and that every one recognizes the need to do it completely somehow. The second point to note is that an essential part of the scheme is that stringent measures would be taken to penalize unscrupulous parents who attempted to get their children fed on false pretences.

THREE committees have already been appointed by the School Board during the last ten years to inquire and report on this matter. Voluntary associations have done much to solve the problem, but there are still many children who go to school habitually in a starving or underfed condition. The mass of evidence sifted by the last committee has convinced its members that voluntary effort is not equal to the task, and that, if the 55,000 children now left unprovided for are to be properly cared for, the Board must make itself responsible, and lend its aid to the existing agencies in the matter of organization. The most hopeful plan is to supplement, not to supplant, existing efforts, and to take every possible care that none but needy cases shall receive help.

THE death of Miss Anna Swanwick has removed from our midst one of the gentlest and most unostentatious of the pioneers of women's education, at the ripe age of eighty-six. There is no need to dwell on Miss Swanwick's attainments in mathematics or her scholarly knowledge of Hebrew, Greek, and German. So far as the last two languages are concerned,

her place as a translator of Æschylus and Goethe is in the ranks of English literature. Her excellent abilities were recognized in her youth, and she was sent to Berlin to carry on her study of languages. At a later date, when Bedford College was opened in 1849, Miss Swanwick followed some of the classes, together with Madame Bodichon. For five years Miss Swanwick was a Visitor of the College, the highest honour it can confer on those interested in its work. Miss Swanwick was also a real friend to Queen's College, Harley Street. She was a member of the Council for about twenty years, and was elected Visitor in 1873. She gave a handsome donation to the building fund, and was always willing to help a struggling student. One of Miss Swanwick's last public acts in connexion with education was to read a paper on the Study of Poetry at the Queen's College Jubilee in May, 1898. As a result the students have formed a "Swanwick Society," which meets monthly to read and study poetry.

MISS SWANWICK was also an early member of the Committee of the Ladies' Department of King's College, holding this office at the time the classes and lectures were removed to Kensington Square. When she ceased to be a member of Committee she was elected to be Visitor. Quite lately she presented her books to the Library of King's College. Her advice and help—which was at times very substantial—were highly valued by the Committee. It is impossible to render any account of her money benefactions, for she always gave with the least possible ostentation, and a desire has been expressed that her wishes should not be disregarded in this matter of publicity. It is not without interest to mention that, when John Stuart Mill presented his famous petition to the House of Commons on behalf of women's suffrage, in 1865, Miss Swanwick was one of the signatories. Mr. Mill undertook to present the petition if there were but a hundred signatures; but, in a brief space of time, fifteen hundred were obtained.

IN the recently published report of the Committee of Council on Education—the last which that body will ever submit to Her Majesty, as the next report will emanate from the new Board of Education—the statement is made that the average prime cost per child for its seat in a new Board school is about £14. 6s. 3½d. The figure, of course, relates entirely to the *building*, and not to the maintenance of a child in school, which costs annually £2. 8s. in England and Wales, excluding London. The £4. 6s. 3½d. includes the cost of sites, often very considerable, as well as the cost of laboratories, workshops, laundries, cookery kitchens, School Board offices, &c. The National Education Association issues a leaflet traversing this statement, and showing how the price of land in London causes the figure to mount. It then compares the Board and the voluntary schools, showing that the average cost per seat in both schools tends to be about the same. Many voluntary schools are quoted at £10 per place, and some more, whilst the Oldham Board gives £11. 8s. 9d.; Leicester, £10. 9s.; Sunderland, £9. 14s. 4d.; Scarborough, £9. 5s.; Swansea, £8. 11s. 5d.; Walsall, £8. 2s. 2d., as the cost per seat per child. It is certainly instructive to learn that the average price of the school site in London, before a brick is laid on it, works out to £6. 16s. 1d. per child. The Government

Report is more than a little misleading when it gives the figure of £14. 6s. 3½d. as the amount spent for each child's place. The aim is apparently to alarm the small places that may be meditating a School Board, and to prove the comparative cheapness of voluntarism. All the same, the figures are instructive to secondary teachers, who must themselves find the "cost per seat" out of the fees they receive from parents.

Nor content with an exciting discussion on the measure of encouragement due to football, the Atherstone School Board has been moved to its depths on the question of whether the schools should be closed on the advent of circuses and menageries into the town. The chairman thinks any recognition of circuses humiliating, while the vicar considers a visit to a menagerie as good as a lesson in natural history. The late Prof. Blackie, in a book of practical advice to students written many years ago, strongly urged them to attend circuses in order to keep before their minds right ideals of physical development and of agility and grace. It may be that the chairman is so steeped in classical literature that his mind is full of visions of the horrors of the Roman circus. The vicar's proposition, we think, requires some qualification. It is only true if and when the boys are accompanied by their masters. Elephants and bears in a state of nature do not live on buns, nor do monkeys feast on chocolate creams; so that first impressions need correction. English schoolboys await with interest the outcome of this discussion. If the chairman of the Atherstone School Board is against them, both professors and mammals are on their side. Why not let the boys decide the matter? But, perhaps, they have done so already.

QUITE *à propos*, a correspondent writes: "Many years ago, when I went to school in the hilly West Country, the neighbouring farmers kept a subscription pack of foxhounds for their mutual protection. Foxes were too plentiful then, and the hounds always went out to kill. Every one followed on foot; for, if we hadn't, there would have been more horses killed than foxes in our part of the country; and, besides, horses, other than cart horses, were scarce. Now the hunt one morning came disturbingly near the school, and, the door being open, one boy was sent to shut it. He looked out and did not return. Another boy was sent to call him back at once, but his voice was lost in the full cry of the passing chase, and even he returned not. The master thereupon went to the fatal door—and soon the whole school had to go in search of their master; but they had, I must admit, the generosity to take their master's terrier with them. The fox was dug out of his earth a good two miles up the valley, although the schoolmaster's fox-terrier lost a piece of its under lip before that was done. We might easily have been back for school at two; but the terrier wanted a lot of attention." There were no School Boards in those days.

SUMMARY.

THE MONTH.

On November 10, Sir Michael Hicks-Beach presided at the distribution of certificates to candidates in the senior and junior examinations held under the commercial education scheme of the London Chamber of Commerce. In reply to a hint at Govern-

ment grants, the Chancellor of the Exchequer urged the necessity of looking to the wealthiest commercial community in the world for private munificence.

Sir Michael said that the schools might give a boy the best commercial education in the world, but, if he was surpassed by a young German in hard work, in ability to live plainly, and in devotion to his business, he was afraid that, in spite of his commercial knowledge, the English lad would go to the wall. If a young Englishman disdained the drudgery of the lower grades, could they expect that he would rise as high as a young German who possessed the common sense to begin his work from the bottom, and to study thoroughly the whole business that he had to perform? In his opinion, better discipline among children at home, greater belief among parents in the inestimable value of a good education for their children, and a thorough foundation in elementary and secondary education had done more to promote the commercial success of Germany than any system of commercial education that existed at present. They could not wisely begin a special training in commercial education at an early age. The child ought to be well grounded first in elementary subjects. He or she ought also to learn the real meaning of the mother tongue, so as to be able not merely to write, but to write well. People seemed to think nowadays that the three R's were a comparatively insignificant factor in their system of commercial education; whereas they were at the bottom of it all.

THE annual meeting of the Association of Headmasters of Higher-Grade Schools and Schools of Science took place on November 3, in the rooms of the Society of Arts, under the presidency of Mr. W. Dyche. A letter was read from Mr. Sidney Webb, who wrote: "We on the London County Council have always done our best to incite and help the School Board to develop their higher-grade schools, and I am glad to say they have made great progress during the last few years. Our little difference with the School Board has been exclusively as to overlapping in evening work, and that we have settled. Our Technical Education Board has always been in favour of the School Board developing its higher-grade schools, at any rate up to fifteen years of age." In the course of his inaugural address the President said that

Up to two years ago the Education Department not merely permitted, but encouraged, School Boards to build and equip higher-grade schools, and made no difficulties about granting building loans to them. The Science and Art Department had until lately put considerable pressure on School Boards to found these schools, and had also required School Boards to spend large sums in furnishing expensive equipment and staff. During the last year or two, however, there had been a curious change in the attitude of both Departments. The Education Department had made difficulties in several places about the sanctioning of loans for the building and equipment of those parts of higher-grade schools required for the work of a school of science; and the Science and Art Department, while prudently abstaining from any open attack on large and well established schools, had closed some existing higher-grade schools of science, as, for instance, at Burnley, in order to favour a grammar school which had subsequently become a science school itself, and had refused to allow several new higher-grade schools, as at Bristol and Tottenham, to open a school of science section, although, with the sanction of the Education Department, they had avowedly been built and equipped for the purpose. The Bristol school was actually opened by the Secretary of the Education Department himself. It was time to put these schools on a satisfactory footing. They were the inevitable outcome of the national system of elementary education.

THE Birmingham Church Council of Education, looking forward to the completion of the new educational machinery, and especially to the promised Bill for the creation of Local Authorities, has put forward a series of recommendations, which vary, in some important respects, from those which have been made by other educational bodies. We quote a few of the more noteworthy passages from the manifesto of the Council.

It is generally assumed that the area of the Local Authority should be a county or something smaller than a county. To such an area there are several objections. (1) In the first place, it is exceedingly difficult to draw the line outside of which cities or large towns within the county are to be allowed to be independent of the County Local Authority, and yet it is equally difficult to see how the cities and large towns can be reconciled to being governed by County Authorities. It was in fact on this point that the Bill of 1896 failed. (2) The county boundaries split up many large cities or their suburbs into several portions, all of which in educational interests should really be one with the city and not with the surrounding county districts. Notably this is the case with London and Birmingham. . . . (3) It would be exceedingly difficult for County Local Authorities to deal in a satisfactory manner with educational endowments, since the elected

members would always be in danger of placing the wishes of their constituents before the interests of education. Nothing is more desirable in the interests of education than to liberate it entirely from the influence of the party wire-puller. (4) It is most undesirable that the Local Authorities should have schools of their own; but the County Authorities have already such schools in the technical schools, and it would be exceedingly difficult to persuade them to give up those schools. (5) But the chief objection to County Local Authorities seems to be this: that very few counties contain within themselves anything like a complete system of education, and in most cases it is not desirable that they should do so; and yet without such a complete system it is difficult to conceive of decentralization producing the results which are expected from it.

THE Council desires to see the management of schools left, as far as possible, in the hands in which it now rests; but that "all the managing bodies should be subjected to a Local Authority which could command their respect."

For this purpose, we suggest that England should be divided into about ten areas, as follows:—(1) A Metropolitan area, including London, Middlesex, Kent, Surrey, Sussex, Essex, and Hertfordshire; (2) a Southern Counties area, including Hampshire, Dorsetshire, Wiltshire, Berkshire, Buckinghamshire, and Oxfordshire; (3) a Western Counties area, including Somersetshire, Gloucestershire, Devonshire, and Cornwall; (4) a Midland Counties (West) area, including Warwickshire, Worcestershire, Northamptonshire, Staffordshire, Shropshire, and Herefordshire; (5) a Midland Counties (East) area, including Nottinghamshire, Lincolnshire, Derbyshire, Leicestershire, and Rutland; (6) an Eastern Counties area, including Bedfordshire, Cambridgeshire, Huntingdonshire, Norfolk, and Suffolk; (7) an area consisting of Lancashire and Cheshire; (8) an area consisting of Yorkshire; (9) an area consisting of Westmoreland, Cumberland, Durham, and Northumberland; (10) Wales (including Monmouthshire). Each of these areas contains a University or a University college, and most of them contain non-local secondary schools. Each would therefore include in itself the nucleus of the whole elements of a system of education from primary schools to the University.

AFTER considering the functions of the bodies thus to be created, the Birmingham Church Council concludes its recommendations in the following terms:—

It is vital to the interests of education in England that the new Local Authorities should be so constituted that—(1) Each Authority should contain within its area a complete system of education from primary to secondary, and from secondary to technical and University education, and should see that all the grades and links are kept in good order. (2) Each Authority should be so constituted as to command the respect of the University, and of all classes of schools in its area. (3) Each Authority should be absolutely above all suspicion of religious or political partiality, and of all forms of wire-pulling. We earnestly invite all Churchmen to press these conditions upon members of Parliament in their neighbourhood.

We may add that the Council includes the Bishop of Worcester as President, the Bishop Suffragan of Coventry, Canon Strange, the Rev. F. W. Burbidge, the Rev. A. R. Vardy, with many others.

BATH COLLEGE, which was in some financial straits earlier in the year, has now been placed on a sound basis, and begins a new and promising career with a fresh Board of Directors and Council. This Council held its first meeting on November 16, and a statement was made by the directors as to the new position of the school. A substantial sum has been raised in the form of shares and debentures, mainly among the prominent citizens of Bath. The old company has been wound up, and, with the aid of the money thus subscribed, the buildings and plant have been taken over by the new company, which begins its career unencumbered by any outside debt. The transfer has taken place without any change in the name of the school or any break in its work.

The Committee of Council on Education have received an intimation, through the Foreign Office, from the Austro-Hungarian Government that the latter are desirous of obtaining specimens of the best pictures used for object-lessons in the education of children from six to twelve years of age in public elementary schools in this country, as well as of illustrated alphabets and reading-books for the same schools. The Hungarian Government would be glad if English publishers who desire to offer specimens would send direct to the Royal Hungarian Ministry of Public Worship and Education, at Buda-

Pesth, specimens of the picture-books and reading-books for object-lesson purposes which they have published.

At a meeting of the Birmingham Chamber of Commerce, on November 15, it was reported that negotiations had been proceeding with the authorities of Mason College and King Edward's Foundation relative to the provision of a remodelled system of commercial education in the city. It was expected that the charter of the new University for Birmingham would be granted early next year, and that there would be a Faculty of Commerce in connexion therewith. A question was raised as to how far educational schemes came within the purview of the Chamber, and it was explained that its active intervention would cease when the local system of education had been properly coordinated. Mr. Neville Chamberlain said they were on the eve of a new departure in the educational life of Birmingham. They were looking forward to the rise of a University which would take up new and special lines, including commercial education. That was a great experiment, and it seemed to him to be the duty of that Chamber, as representing the commercial life of Birmingham, to do what it could to ensure the success of the experiment. Other members concurred, and the report was approved.

THE Committee appointed at Hanley, last June, to inquire into the question of establishing a University College for North Staffordshire has presented its report. After considering various suggestions, the Committee conclude by saying that, if it were decided to erect a college to meet more fully the present requirements of the district, the minimum cost of the building would be about £20,000. "If," proceeds the report, "the more complete scheme should be adopted, an endowment or subscription list, or other source of income, equal to about £1,000 per annum, would be absolutely necessary unless the teaching were to be placed under the Science and Art Department for the express purpose of earning grants." The scheme which in the opinion of the Committee is the most strongly to be recommended could only be carried out if a considerable donation could be obtained from some source such as has been provided for the equipment of the Universities in Manchester, Liverpool, and Birmingham. "If some generous donor," the report goes on, "would provide, say, £10,000, on condition that another £10,000 were raised locally, this latter sum could no doubt be raised." The report also refers to the benefit which such an institution as the proposed college would confer upon teachers in the district.

(For "Universities," see page 507.)

GIFT-BOOKS AND PRIZES.

II.

HISTORICAL STORIES.

One of the best of this year's historical stories is *Havelok the Dane*, by Charles W. Whistler (Nelson). The author has had the wisdom to base his story on careful study of legends and remains, and, at the same time, to pack all his dry information into the preface. The story is written in excellent style, with an occasional gem of well expressed thought. The conversations are carried on in the very simplest modern English—a great improvement on the cheap, would-be archaic style so frequently adopted in books of this nature. The illustrations, by W. H. Margeson, are capital, while the very cover of the book puts one at once into the atmosphere of the times.

In *A Daughter of France*, by Eliza Pollard (Nelson), we have a good example of the author's power of drawing the character of a girl. At the opening of the book, Jacqueline, after experiencing the terrible days of La Rochelle, is called upon to aid the sick and sad women and children on their voyage from France to the new settlement in Nova Scotia. In the lovely Acadia, between the pine forest and the sea, the Huguenots live an ideal life; but troubles come thick upon them, and, throughout all, Jacqueline shows herself the brave heroine that the reader anticipates from the first. The volume is a substantial one, tastefully got up, and fairly illustrated.

Boys who have read "Ivanhoe," and had their appetite whetted for more about Robin Hood, will be delighted with *Wolf's Head*, by the Rev. E. Gilliat (Seeley), a book of fascinating descriptions of the great outlaw's methods. For instance, the story of how a pompous bishop danced a reel to save his skin is told to the life, and the humour of the situation is well brought out. Other incidents, such as the murder of Prince Arthur, give a sadder note to the book; but the whole will give a fund of enjoyment to any boys and girls who know, even slightly, about the days of John. The illustrations are interesting in subject, but a little weak in execution.

The Drummer's Coat, by the Hon. J. W. Fortescue (Macmillan), is a sketch of life in a Devonshire village in the early years of the century. Although young children will be interested in the description of the hero and his sister being lost on the moor, they will find most of the book above their comprehension, while the pathetic incident of the soldier's widow carrying her idiot son to the British ships in the retreat from Corunna will appeal to elder readers only. The local touches in language, superstition, and so on, are excellent.

Greek and Roman Heroes, by H. J. Spenser (Nelson), is a selection from Plutarch's "Lives." Twelve heroes are dealt with in a handy, clearly printed volume, with a few illustrations, quite simple introductions, and, fortunately, no notes. We heartily welcome the book to add to the still meagre list of really satisfactory school readers. We have in this both interesting matter and good literature, and are confident that with an intelligent teacher it will prove a great favourite as an advanced reading-book for either boys or girls. We may add that the marks for pronouncing the proper names add to the value of the book for non-classical readers.

In *Lion-land*, by M. Douglas (Nelson), is a somewhat misleading title for a book devoted to a solid account of Livingstone and Stanley. The author cunningly begins with a capital description of Livingstone's encounter with a lion, and leads his young readers on almost insensibly into geography and history, made interesting by good descriptions and several illustrations. Any book dealing with South Africa is welcome now, and this one will prove exceedingly useful if read aloud by an elder, and the places mentioned are traced on a map. The author has taken great care with names, dates, and facts generally.

A new edition of *The Great Campaigns of Nelson* (Blackie) will be welcome to teachers. Mr. William O'Connor Morris deals in turn with St. Vincent, the Nile, Copenhagen, and Trafalgar, giving the political situations and the facts of the battles in a clear, succinct, and interesting way. The plans, maps, and index all add to the value of the work for the teacher, who will find in the handbook excellent material for a short course of extra lessons to elder pupils. A boy with a passion for sea-life will thoroughly enjoy the book by himself.

We have a tale of the days of the early Tudors from the pen of Miss Everett-Green, *The Heir of Hascombe Hall* (Nelson). If the plot of the story is not new, it is none the less interesting for boys of ten or twelve, who will readily fall in with the idea that the foster brother is the real heir, until the *dénouement* undeceives them. The affection of the two boy heroes for one another is the best feature of the book. The historical element is hardly successful. Although good descriptions of manners and customs are given here and there, the atmosphere of the times does not pervade the book; while the escapades of the young Prince Henry, with his nickname "Madcap Hal," are apt to lead young readers to confuse him with the son of Henry IV. On the whole, the book is somewhat too large for the story, and would have been more satisfactory if more historical scenes and characters had been introduced.

The Girl Captives, by Bessie Marchant (Blackie), is a story of the Indian frontier, and purports to give a realistic picture of the cruelty of the natives and the sufferings of some girls who, separated from their parents, fall into their hands. From beginning to end it is a series of misfortunes from flood, fever, famine, and human stupidity, with frequent deaths, culminating in a chapter devoted to a description of the "court of the doomed," where the heroine nurses a fever-stricken baby, amid lizards, toads, and decaying human bones. Taken as a study of life in India, the book has, no doubt, a substratum of reality, but it is well to warn parents that it is not a wise present for a sensitive girl.

TALES OF ADVENTURE.

All Hands on Deck! by W. Charles Metcalfe (Blackie), is a capital sea story for the holidays, suited to boys who love thrilling adventures, dislike wordy explanations and information, and are young enough to be unperturbed by improbability, and not distressed by horrors. The presence of a girl throughout the book, whose life is frequently in danger, adds much piquancy to the tragic scenes, and the six illustrations by William Rainey are exactly suited to the tale, both in choice of subject and in treatment of it.

Of somewhat the same style is Dr. Gordon Stables's *Kidnapped by Cannibals* (Blackie). There is, however, more solid reading in this book, and we are carried on more quietly from incident to incident. Beginning with a brief and freshly told account of Scotch school life, we have the young hero running away to sea. The delights of a mutiny and the open boat episode follow, while the bulk of the book is devoted to adventures among cannibals—a field for endless excitements. This book is also capably illustrated by J. Finnemore.

Suited for younger boys still is a pretty little tale by Isabel Hornibrook, *Captain Curley's Boy* (Blackie). The character of the boy hero is developed fairly naturally, and in the main incident of the book, a tornado, or "wreck on land," his bravery in rescuing a little girl is well told, without being overdrawn. There is a pleasant ending to the book in the reunion of the hero with his father, who had been seeking him for years, and had given him up for lost.

A Captain of Irregulars, by Herbert Hayens (Nelson), consists of a series of adventures in Spanish South America during the early years

of this century. The book is entirely composed of conversation and short descriptive paragraphs, but, in spite of this, it is a little monotonous, and too long a book for the average boy of fifteen. However, the general get-up and the good illustrations by Sydney Paget make it a fairly attractive volume, and to those boys who know something of the country and people it will prove a great acquisition.

Mrs. Edwin Hohler's *The bravest of Them All* (Macmillan) is strongly and freshly written, and, though specially appropriate to little Scotch readers, it will be welcome to all. Four very real brothers and sisters go to stay in Scotland, and have a real fight with some neighbouring boys for the possession of a glen. The feud is kept up for a long time, till the little girl of the story strays on the moor and is found and entertained by the enemy. Peace is finally brought about in an almost tragic way, and gradually, but quite naturally, the young people find that the finest bravery and heroism are not invariably connected with fighting. The illustrations by Charles Brock are excellent, and the book is heartily to be recommended in every way.

GIRLS' STORIES.

One of the best girls' stories of the year is *The Little Browns*, by Mabel E. Wotton, illustrated by H. M. Brock (Blackie). Prof. Brown and his wife, who know more about many things than about the bringing up of children, have a family of delightful children, smart and trustworthy, who seem—as will often happen—to develop the qualities in which their parents are deficient. These little Browns, being left almost alone in the house, entertain a stranger in the belief that he is their expected uncle from Australia. Two of the girls discover (after many amusing passages) that the man is a burglar, in league with the new man-servant; and the rest of the story shows how cleverly they outwit him. Miss Wotton's tale may be warmly commended.

Priscilla, by E. Everett-Green and H. Louise Bedford (Nelson), will be particularly welcome, since it is suited for that difficult age when a girl has left school and is not quite a woman. The book opens with: "I wish I were an old maid, with grey corkscrew curls, with spectacles and a Mrs. Gamp umbrella," and throughout there is no attempt at anything deeper than amusing talk, a narrow escape from an Alpine avalanche, and a healthily told love affair. In spite of the somewhat feeble illustrations, the book is a success, and not by any means the least successful part is the daintily designed and coloured cover.

Intended for the same age, but written in a more sober key, is *Trefoil*, by M. P. Macdonald (Nelson). It is the story of the friendship of three girls, from their last days at school to marriage and death, with home difficulties and travel for the main incidents. The illustrations are somewhat commonplace, and, in their choice of subject, give a still sadder tone to a book that is naturally lacking in fun and brightness. However, as long as the book does not fall into the hands of a morbid or over-conscientious girl, it will do more good than harm.

The Four Miss Whittingtons, by Geraldine Mockler (Blackie), is an account of how four young girls, thrown upon their own resources, with very limited means, manage to carve out careers for themselves in London. There are amusing descriptions given of hunting for lodgings, of looking for situations, of attempts at millinery, of doing without servants, and so on, and some of the touches are very natural and good; but the book is in no sense realistic, and may be somewhat misleading to a girl who is similarly placed. But, taken as a piece of pleasant fiction, it is very satisfactory.

The best outcome of our modern education, the ambitious, unselfish, healthy-minded girl, is again the central figure of a story by Ellinor Davenport Adams. *A Queen among Girls* (Blackie) depicts a girl who has had a brilliant school career, and is looking forward to college life and future fame, giving up everything to befriend her younger brother. The fact that she was at first ashamed of her insignificant and sensitive little brother gives a touch of reality to her character, and the story will appeal strongly to girls of fourteen to sixteen.

Peacocks, by Percy Smith (Blackie), is the name of a farmhouse where three children spend a holiday, enjoying the plants and animals. The main point of the story is the pecuniary difficulty of a brother away at school. He writes, asking his sister to get together ten pounds for him to escape from a scrape. With much pains she writes a story and receives ten pounds for it from a publisher. The moral is a little questionable, but the sisterly feeling at the root of the act is pleasantly brought out.

Mignonette. By Jennie Chappell. (Blackie.)—A lady is asked to take care of a little girl in her father's absence. The little girl has an illness which deprives her of her memory; her guardian, who covets the full possession of her, reports that she is dead, and takes her for her own—in short, steals her. This hardly seems a probable or a healthy theme for a tale; but, such as it is, it is well told, and ends happily, though with still further improbabilities. Many of the smaller illustrations would be better omitted.

Blind Loyalty, by E. L. Haverfield (Nelson), is a sequel to the author's "Our Vow," but makes a complete story of itself. Girls who are interested in all the details of their school-life, the little misunderstandings, slight disgraces, intense friendships, marks, and examinations, that seem so slender to outsiders, will take great delight in this record of such incidents. Perhaps the smaller sentiments are dwelt on a little

over-much, but there is a healthy good-tempered brother who acts as a tonic in the holidays, by teasing his sister and her friends at large.

In *The Parson's Daughter* (Seeley) Mrs. Marshall has selected eight well known pictures by Romney and Gainsborough, and has woven a romance about the people who sat for these portraits. The supposed narrator of the tale is the lovely parson's daughter of Romney's, who, as an old woman, tells her inquisitive little granddaughter the main incidents of her life. Mrs. Siddons, needless to say, takes a prominent part in the tale, which is admirably rounded into a complete whole. An important feature of the book is the reproduction of the pictures referred to. Miss Beatrice Marshall has had the difficult task of writing the concluding chapters, owing to the death of the author in the midst of her work.

FOR CHILDREN AND OTHERS.

To his *Red Book of Animal Stories*, Mr. Andrew Lang has affixed a very useful preface, telling his readers the origin of his stories, which are true, which are untrue, and which are more or less true. For young readers we think the mixture a little unwise; for they never read a preface, and, even if they did, the mental confusion would only be increased. The book will be put to best use by being read aloud, with judicious skipplings and alterations of language by the reader. There is a peculiar gift needed for writing about animals for children, and this gift Mr. Lang has not; but there is an enormous fund of material in the book for supplying parents and teachers with anecdotes to tell insatiable youngsters. Mr. Ford's illustrations are numerous, and, for the most part, artistic and good; but some of them would be quite incomprehensible to children.

Messrs. Blackie & Son have published a series of simple story-books, arranged in three groups, adapted to varying ages. The first group is intended for children to read by themselves as soon as they are capable of reading at all, and includes *Sahib's Birthday*, by L. E. Tiddeman; *Tony's Pets*, by A. B. Romney; *The Secret in the Loft*, by Mabel Mackness; *Two Little Friends*, by Jennie Chappell; and *Andy's Trust*, by Edith King Hall. The second group is destined for children of seven to ten years, and the stories are longer and slightly more involved in plot. It includes *Put to the Proof*, by Mrs. Henry Clarke; *Teddy's Ship*, by A. B. Romney; *Imra's Zither*, by Edith King Hall; *Ruth Erford's April Days*, by Helen Cromie; and *The Island of Refuge*, by Mabel Mackness. For children from nine to twelve years, but still quite childlike in subject and method, is the third group, including *The Skipper*, by E. Cuthell; *What Mother Said*, by L. E. Tiddeman; *Little Miss Vanity*, by Mrs. Henry Clarke; *Two Girls and a Dog*, by Jennie Chappell; *The Choir School*, by Frederick Harrison; and *Miss Mary's Little Maid*, by Ellinor Davenport Adams. The coloured frontispieces throughout the series will be an attraction. The other illustrations are not so good, with the exception of those by Margaret Thompson in the last-named book.

Little Village Folk, by A. B. Romney (Blackie), is a collection of short stories and studies of Irish children. Although the language used and the general style is more fitted for elder folk who delight in child life, the little ones will be interested in some of the stories and illustrations. An acquaintance with Irish peasant talk is needed for a thorough appreciation of the book.

Some of the full-page coloured illustrations in *The Cat and the Mouse*, designed by Alice Woodward (Blackie), are both artistic and effective, especially the cat and the baker; some of the others, however, lack both clearness and beauty. The nursery rhyme is well set out and ornamented with black and white designs, again unequal in their merits.

Far more commonplace, but a certain delight for little ones of ages from five to eight, is *In Doors and Out* (Blackie). It is the usual collection of short stories, anecdotes of animals, and poetry. The printing is excellent, and the illustrations are numerous and varied, and, in some cases, considerably above the average.

The Story of the Seven Young Goslings, by Laurence Housman (Blackie), is a capital story poem for little children, in the jingling rhyme so dear to their ears. We wish we could praise the illustrations by Mabel Dearmer as unreservedly. They are out of the common; they are artistic in colouring; they are humorous and clever; but they are not, with one or two exceptions, adapted for children. It must be said, however, that the whole forms a charming little volume.

A Book of Birds, by Carton Moore Park (Blackie), is one of those puzzling books which are, to all appearances, intended for children, yet evidently have been designed to please the artist and those who sympathize with him. Judging by the corresponding "Book of Beasts" of last year, these illustrations, exquisite though they are, tend to frighten rather than please little children. But all lovers of both art and birds will enjoy the book.

The Elephant's Apology. By Alice T. Morris. (Blackie.)—A collection of slight, but prettily told, tales of children and animals, suited to quite young readers. Some of the illustrations by Alice Woodward are very good, and, on the whole, the paper, type, and general get-up of the book are too good for the little tales, which would read better in a humbler setting.

Tommy Smith's Animals, by Edmund Selous (Methuen), is a capital

little book for young boys. It has a clear purpose, well carried out. Tommy is a little boy who delights in teasing animals, hunting, wounding, and killing them. The animals consult how they may punish him, but the owl suggests they shall teach him instead. So one by one, frog, rat, squirrel, and all, as Tommy approaches with murderous intent, they open up a conversation with him, telling him of their life, till he gradually becomes too interested to wish to hurt them.

The Princess of Hearts. By Sheila E. Braine. (Blackie.)—The sister of the Knave of Hearts, hitherto neglected in all historical records, is the heroine of this fairy tale. What a powerful book "Alice" must have been to have produced such an army of imitators! Although we weary of them, it is no reason why children should not enjoy them. The present volume contains very little in the way of a tale, but is full of short incidents, copiously illustrated by Alice Woodward, and will probably prove delightful for children of ten and under.

A Land of Heroes, by W. Lorcan O'Byrne (Blackie), is a collection of some fifty stories from early Irish history. The main object of the book is to implant in quite young children an interest in Ireland. Very little has been done in this direction hitherto, beyond myths and folk-tales, and the present work is more of a serious attempt to reproduce, if not facts, at least historical atmosphere, gathered from Gaelic manuscripts. The style is good and quite simple, the proper names are anglicized (while a list in the original spelling is appended for those who wish it), and the six illustrations by John Bacon are clear and interesting.

Bobby's Surprises. By E. L. Haverfield. (Nelson.)—It is difficult to say whether the hero of this pretty little story is the boy or his cat. Bobby spends his pocket money on a kitten for his invalid sister; the kitten runs away and has many adventures to itself, finally appearing, of course, with a travelling showman as a full-grown cat, able to recognize its young master. Such improbabilities do not matter for young children; but there are a good many morbid touches about the lonely little boy that might be better omitted.

This and That (Macmillan) are the names given to one another by a little girl and boy, described in Mrs. Molesworth's well known pleasant style. The adventures of the little people are chiefly confined to their home, changing their character according to whether they happen in the drawing-room or the attic. We think the book will appeal more to grown-up child lovers than to the children themselves, who rarely appreciate realistic child talk and spelling. This volume is daintily got up, and illustrated by Hugh Thomson.

A Pair of Them, by Jane H. Spettigue (Blackie), belongs to a class of book that is always popular with young boys and girls. There is no attempt at a plot, but a series of somewhat isolated incidents are described. Two boys are living with their uncle (by the way, why is it always an uncle; is it that parental authority may not be endangered?) and are duly provided with a large rambling house, two ponies, a cross housekeeper, a boat, and a dangerous bit of sea-coast. Some of the escapades are well imagined, but might have been worked up a little more, as the endings occasionally fall a little flat.

We have a new and revised edition of Sir Robert Ball's *Starland* (Cassell), with numerous illustrations. The simple language in which the book is written, the homely comparisons with plum puddings, footballs, and other familiar objects, together with the large amount of information packed in so small a compass, render it a most suitable prize for a young boy with a budding interest in the heavenly bodies.

We hope that *Old-Fashioned Children's Books*, by Andrew Tuer (Simpkin, Marshall, & Co.), will fall into the hands of all illustrators of books for children. Very few pictures that we have nowadays come up, in directness of aim and strength of drawing, to these old cuts, collected for the most part from the favourite children's books of a hundred years ago. They have also a quaint, pointed humour about them which satisfies children in a way that the hazy subtlety of modern illustrations never does. This work, like its forerunner, "Forgotten Children's Books," will be highly prized by collectors and students of such literary by-paths—the numerous reproductions of old title-pages being for the collector's purpose extremely useful. Although we expect our young children would vote a good deal of the reading dull and mawkish, yet even as a present-day children's book we think it would succeed in elbowing out of favour many a more ambitious work expressly addressed to the young in this psychological age.

The Book of Penny Toys, written and illustrated by Mabel Dearmer (Macmillan), is a substantial picture-book with little rhymes accompanying each coloured plate, suited to the youngest people who have a book at all. The vivid, yet tasteful, colouring is certain to please. We are not sure that the subjects are so satisfactory, for, unless a child has actually met with the toy depicted, he will make very little of the page; "Pierrette" and "Cockyolly" are striking instances; while, on the other hand, the woolly lamb and the stuffed dog are quite familiar and delightful.

Amongst annual bound volumes of illustrated periodicals we have received *Cassell's Saturday Journal*, a big store-house of miscellaneous entertainment, domestic and useful in its character; and *The New Penny Magazine*—stories, pictures, anecdotes, essays, a harmless collection for young folk.

CORRESPONDENCE.

THE CHURCH SCHOOLS' BOARD OF EDUCATION.

To the Editor of the Educational Times.

DEAR SIR,—I beg to submit to you various suggestions with reference to Local Authorities and other points bearing upon the future of our voluntary schools, and the relation between primary and secondary education. These suggestions received the unanimous approval of our Council at its last meeting on November 9, and I venture to bespeak for them your attentive consideration. My plea must be that our Council has done during the four years of its existence substantial work for the improvement of voluntary schools in the district.

Sixty-four schools are under the care of the Council, and during the last five years it has been instrumental in raising nearly £52,000 for Church schools. Its last report, issued a few days ago, shows that the Church of England schools in the archdeaconry are raising nearly £10,000 per annum in voluntary contributions. These voluntary contributions are increasing yearly, and have not suffered in any way from the receipt of aid grant, but have been stimulated. The average attendance in the schools numbers 26,153, and this number is increasing at the rate of over 500 per annum.

It may fairly be claimed, then, that the Council represents the views of a large body of Churchmen who take an active and intelligent part in primary education.

The principle of our scheme is the formation of Local Authorities so constituted that (1) each Authority shall deal with an area homogeneous in character and fairly connected in its system of railway communication. (2) That each Authority shall have a wide educational outlook and contain in itself a well graded system of education from primary to University education. (3) That each Authority shall be so constituted as to command the respect of all educational bodies within the area, the non-local public schools, as well as the endowed grammar school, and shall be above suspicion of religious or political partiality.

We also desire to draw special attention to our objections to the county as the area of the new Local Authorities, and to our proposals for equalizing the resources of all primary schools and giving representatives of the public more voice in the management of them, while safeguarding the harmonious control of each separate denominational school and the character of its religious instruction.—Believe me to be, yours very faithfully,

E. A. COVENTRY, *Chairman.*

[We quote from the scheme referred to by the Bishop of Coventry in our Summary of the Month.—EDITOR.]

THE QUICK MEMORIAL.

To the Editor of the Educational Times.

SIR,—Before closing the Quick Memorial Fund, may we make a last appeal on its behalf? The Memorial is to take the form of a Quick Library at the Teachers' Guild, where, thanks largely to a generous gift of books by Mrs. Quick, a valuable pedagogic nucleus already exists. It was originally proposed to invest the money subscribed, and apply the interest only to the purchase of books; but, as the English subscriptions do not amount to much more than £120, the sum realized will hardly be worth investing unless we receive considerable additions from subscribers in America (the returns from which have not yet reached us) or from new subscribers at home.

Since the movement for the Memorial was set on foot, Quick's "Life and Remains" has been published by the Pitt Press, and it may be that the reading of this book may lead some who have not seen the original circular to welcome the opportunity of marking their appreciation of the significance of such a life-work in the cause of educational reform and progress.

We would especially appeal to those teachers who can only afford small subscriptions not to hesitate to send them in, for, anxious as the signatories are to increase the value of the Memorial in terms of money, they are more anxious still to increase it in terms of men and women.

Either of us will be glad to give further information or to receive subscriptions.—Yours faithfully,

JOHN RUSSELL, University College School, Gower Street, W.C.
FOSTER WATSON, University College of Wales, Aberystwyth.

[This letter reached us too late for insertion last month.—EDITOR.]

MR. ROUSE'S "GREEK VERSE DEMONSTRATIONS."

To the Editor of the Educational Times.

DEAR SIR,—Your reviewer has misunderstood the quotation on page 17 of my "Greek Verse Demonstrations." The line was quoted to illustrate the lengthening of δ before $\chi\phi$.

I regret that I did not emend the latter part of the line, which shall be done in any future edition. No one has any right to emend the first part, since this lengthening is attested in other instances.—Yours faithfully,
Rugby.

W. H. D. ROUSE.

SEELEY & CO.'S BOOKS.

GREEK TERRACOTTA STATUETTES. By C. A. HUTTON. With a Preface by A. S. MURRAY, LL.D., Keeper of Greek and Roman Antiquities, British Museum. With 17 Examples printed in Colour, and 36 printed in Monochrome. Cloth, gilt top, 7s. net.

"Miss Hutton deals in the most exhaustive fashion with these little terracotta figures that are amongst the most charming products of Greek art."—*Scotsman.*

An Introduction to Greek Prose Composition, for use in Preparatory Schools and the Lower Forms of Public Schools. By H. PITMAN, M.A., late Scholar of Oriel College. Globe 8vo, 2s. 6d.

School Board Chronicle.—"For Mr. Pitman's 'Greek Prose Composition' we have nothing but praise. It is admirable alike in arrangement and in execution. The examples are simple, easily remembered, and typical. The Greek type, as well as the accents, are fully and clearly presented to the eye."

MATHEMATICS AND SCIENCE.

BOOKS I-IV. NOW READY.

Euclid's Elements of Geometry. Edited for the use of Schools by CHARLES SMITH, M.A., and SOPHIE BRYANT, D.Sc. Globe 8vo. Books I-IV., 3s. Book I., 1s. Books I. and II., 1s. 6d. Books III. and IV., 2s.

School Guardian.—"A handy and well-arranged edition. . . . Useful collections of interesting and important problems and theorems are added at the end of the text proper of each book, together with sets of exercises of some difficulty, while easier exercises are appended to the various propositions themselves. The diagrams are clear, and the varieties of type carefully chosen; indeed, the whole appearance of the pages is a model of what a geometrical text-book should be."

Experimental Science (PHYSIOGRAPHY, Section I.). An Elementary Course of Physics and Chemistry adapted to the Syllabus of the Science and Art Department. By Professor R. A. GREGORY and A. T. SIMMONS, B.Sc. Lond. Globe 8vo, 2s. 6d.

Educational News.—"We have much pleasure in calling the attention of students to this excellent manual."

PART II. NOW READY.

Exercises in Practical Physics for Schools of Science. By Professor R. A. GREGORY and A. T. SIMMONS, B.Sc. Lond. In Two Parts. Globe 8vo, 2s. each.

Chemistry for Organized Schools of Science. By S. PARRISH, B.Sc., A.R.C.S. Lond. With Introduction by D. FORSYTH, M.A., D.Sc. Globe 8vo, 2s. 6d.

Educational News.—"Will be found of great service to students of elementary chemistry working the new Science and Art Syllabus. . . . As a laboratory guide, the volume will be found particularly useful. The experiments are varied and suggestive. The illustrations are well done. We cordially commend the work to students of the elementary stage and their teachers."

No. 12 NOW READY.

THE SCHOOL WORLD.

A MONTHLY MAGAZINE OF EDUCATIONAL WORK AND PROGRESS. PRICE 6d.

Annual Subscription, including postage, 8s. net.

CONTENTS.

SOME DANGERS OF BOARDING-SCHOOL LIFE. By ALFRED THOMPSON.—**THE POSITION AND TEACHING OF GERMAN.** III.: Elementary Instruction. By E. L. MILNER-BARRY, M.A.—**THE SALLEZ METHOD OF TEACHING HISTORY.** (Illustrated.) By ETHEL M. REILLY.—**THE TEACHING OF ANALYSIS.** II. By E. W. HURST, B.A.—**DRAWING IN SECONDARY SCHOOLS.** By A. W. FENTON LANGMAN, A.R.C.A.—**THE PRESENT POSITION OF SCIENCE IN SECONDARY EDUCATION.—ENGLISH HISTORY DOWN TO 1700.** 200 Noteworthy Topics arranged Alphabetically. By C. S. FRANKS, M.A.—**NOTES FOR LANTERN LECTURES: The Starry Heavens.** By Professor R. A. GREGORY, F.R.A.S.—**Boys' Interests.—State Aid for Modern Language Teaching.—Elementary Education in 1898.—GEOGRAPHY AS A MEANS OF EDUCATION.** By GEORGE G. CHISHOLM, M.A., B.Sc.—**Some New Physical Apparatus.** II. (Illustrated.)—**Current Geographical Topics.** The Political Geography of South Africa. By Dr. A. J. HERBERTSON, P.R.G.S.—**Items of Interest:** General; Scotch; Irish; Welsh; Current History.—**The School Pulpit:** all are Teachers and all Learners for Good or Bad. By the MASTER OF WELLINGTON COLLEGE.—**A New Translation of Apian.—An Indispensable Handbook of Geography.** (Illustrated.)

* Also ready, Volume I., containing Nos. 1-12, Jan.-Dec., 1899. 480 pp. Index. Price 7s. 6d. net. Cloth cases for binding Volume I., price 1s. net.

MACMILLAN & CO., LTD., ST. MARTIN'S STREET, LONDON, W.C.

COLLEGE OF PRECEPTORS' EXAMINATIONS, 1900.

SUITABLE BOOKS IN THE
University Tutorial and Preceptors' Series.

SPECIAL SUBJECTS.

- CAESAR.—GALLIC WAR, Book V.** By A. H. ALLCROFT, M.A., and W. F. MASOM, M.A. 1s. 6d. Vocabulary, 1s.
HORACE.—ODES, Book III. By A. H. ALLCROFT, M.A., and B. J. HAYES, M.A. Text and Notes. 1s. 6d. Vocabulary, 1s.
VERGIL.—ÆNEID, Book IX. By A. H. ALLCROFT, M.A. Oxon., and W. F. MASOM, M.A. Lond. 1s. 6d. Vocabulary, Books IX., X., 1s.
SHAKESPEARE.—AS YOU LIKE IT. By Prof. W. J. ROLFE, Litt.D. 2s.
(Other SPECIAL SUBJECTS will be announced in January next.)

GENERAL SUBJECTS.

- BOOK-KEEPING, PRACTICAL LESSONS IN.** By THOMAS CHALICE JACKSON, B.A., LL.B. Lond. 3s. 6d.
BOOK-KEEPING, THE PRECEPTORS'. By the same author. *[In preparation.]*
ENGLISH GRAMMAR, THE PRECEPTORS'. With numerous Exercises. By W. H. LOW, M.A. Lond., and ARNOLD WALL, M.A. Lond. *[In preparation.]*
THE ENGLISH LANGUAGE. Its History and Structure. By W. H. LOW, M.A. Lond. *Fifth Edition, Revised.* 3s. 6d.
FRENCH COURSE, THE PRECEPTORS'. By E. WEEKLEY, M.A. Lond. 2s. 6d.
FRENCH COURSE, BARLET'S PRECEPTORS' JUNIOR. By STÉPHANE BARLET, B. ON SC. 1s. 6d.
FRENCH READER, THE PRECEPTORS'. With Notes and Vocabulary. By ERNEST WEEKLEY, M.A. *Second Edition.* 1s. 6d.
LATIN COURSE, THE PRECEPTORS'. By B. J. HAYES, M.A. Lond. and Camb. 2s. 6d. *[In the press.]*
LATIN READER, THE PRECEPTORS'. *[In preparation.]*
MECHANICS, THE PRECEPTORS'. By F. ROSENBERG, M.A., B.Sc. 2s. 6d.
TRIGONOMETRY, THE PRECEPTORS'. By WILLIAM BRIGGS, M.A., LL.B., F.R.A.S., and G. H. BRYAN, Sc.D. 2s. 6d.

SCIENCE AND ART DEPARTMENT EXAMINATIONS.

SUITABLE BOOKS IN THE
Organized Science Series.

For the **ELEMENTARY STAGE.**
2s. each Volume.

- First Stage Mechanics (Solids).** By F. ROSENBERG, M.A., B.Sc. *Second Edition.*
First Stage Mechanics of Fluids. By G. H. BRYAN, Sc.D., F.R.S., and F. ROSENBERG, M.A., B.Sc. *Second Edition.*
First Stage Sound, Light, and Heat. By JOHN DON, M.A., B.Sc.
First Stage Magnetism and Electricity. By R. H. JUDR, M.A. Cantab., D.Sc. Lond. *Second Edition.*
First Stage Inorganic Chemistry (Theoretical). By G. H. BAILLY, D.Sc. Lond., Ph.D. Heidelberg. Edited by WILLIAM BRIGGS, M.A., F.C.S.
First Stage Physiography. By A. M. DAVIES, A.R.C.S., B.Sc., F.G.S.

- First Stage Inorganic Chemistry (Practical).** *Second Edit.*

For the **ADVANCED STAGE.**
3s. 6d. each Volume.

- Second Stage Mathematics** (being the additional Algebra and Euclid, with the Trigonometry requisite for the Second Stage). Edited by WILLIAM BRIGGS, M.A., F.C.S., F.R.A.S. *Second Edition.*
Advanced Mechanics. By WILLIAM BRIGGS, M.A., F.C.S., F.R.A.S., and G. H. BRYAN, Sc.D., M.A., F.R.S. **Vol. I., Dynamics.** *Second Edition.* **Vol. II., Statics.** *Second Edition.*
Advanced Heat. By R. W. STEWART, D.Sc. *Second Edition.*
Advanced Magnetism and Electricity. By R. W. STEWART, D.Sc.
Advanced Inorganic Chemistry (Theoretical). By G. H. BAILLY, D.Sc. Lond., Ph.D. Edited by WILLIAM BRIGGS, M.A., F.C.S.

- Practical Inorganic Chemistry.** By GEORGE GEORGE, F.C.S.

Complete Catalogue of the University Tutorial Series, and List of Books classified for COLLEGE OF PRECEPTORS', London University, Science and Art Department, and other Examinations, free on application.

FORECASTS AND COMMENTS.

December 1, 1899.

THE Christmas Certificate Examination of the Fixtures. College of Preceptors will begin at the various centres on Tuesday, December 5. The same date is fixed for the Junior Forms Examination. The next examination of teachers for the Diplomas of the College will begin on January 2, 1900.

* * *

THE Preliminary Examination for Scholarships under the London School Board will be held on December 4 and 5, 1899. This year there will be 63 scholarships and exhibitions—38 for boys and 25 for girls. This number includes 10 places for boys in the Christ's Hospital School, London (Blue Coat School), and 5 places in their girls' school, Hertford, and 19 places for boys and 16 for girls whose parents have resided for a year in certain London parishes.

* * *

MR. HUGH STANNUS will lecture on Roman Art at the South Kensington Museum on December 4 and 11. Ten lectures, after Christmas, will deal with Christian Art, the subjects being as follows:—Byzantine Art, January 22; Mahometan Art, January 29; Medieval Art, February 5, 12, and 19; Renaissance Art, February 26, March 5, 12, 19, and 26. Tickets of admission may be obtained from the Director of the Museum.

* * *

MR. CHARLES VERNON BOYS, F.R.S., is to deliver the annual course of Christmas lectures, specially adapted to young people, at the Royal Institution this year. He has chosen as his subject: "Fluids in Motion and at Rest." The lectures, which will be six in number, will commence on Thursday, December 28, at three o'clock. The remaining lectures will be delivered on December 30, and on January 2, 4, 6, and 9, 1900.

* * *

A DETAILED syllabus has been drawn up for the guidance of candidates in the new examination, founded by the Sanitary Institute, in practical hygiene for teachers in secondary and elementary schools. Part I. deals with personal hygiene, individual and social, including the necessary physiology; Part II. with the hygiene of schools and private dwellings; and Part III. with hygiene in education. A series of draft questions has been prepared indicating the lines upon which it is likely that the examination will proceed. The dates of the examination for London candidates will be February 8, 9, and 10, 1900. No certificate will be granted to any candidate who is under twenty years of age. Further particulars and application forms may be obtained from the Secretary of the Sanitary Institute, Margaret Street, Regent Street, W.

* * *

PROVISIONAL arrangements have been made for the University Extension Summer Meeting to be held at Cambridge in August of next year. The main subject of the meeting will be "Life and Thought in England in the Nineteenth Century," and the lectures will group themselves under the following heads:—National Development (including the Rise and Growth of the Democracy, the Growth of Commerce, Social Life, and the Expansion of the Empire); Scientific Progress (with special reference to the discoveries of the century in Chemistry, Mechanics, and Physics, and the Influence of the Theory of Evolution on Thought and Research); History (including Historical Method);

Literature, Music, and the Fine Arts; Biographical Studies of Statesmen, Poets, and other eminent Representatives; and Education in its various aspects.

As we announced last month, the English Education Exhibition, preliminary to the transfer of educational exhibits to Paris, has been fixed for the first fortnight of 1900. In connexion with this exhibition there is to be a series of conferences and lectures, in which the College has been invited, and has consented, to co-operate. Under these circumstances the Council has resolved to suspend its Winter Meeting for the year.

THE Sheffield University College has not succeeded in making arrangements for the occupation of the site of Wesley College, and it is now proposed to acquire a strip of land adjoining the Botanical Gardens on which to erect a new block of buildings.

AN appeal for funds is being made on behalf of Bishop Otter College, Chichester—a Church of England training college for schoolmistresses.

WE regret to note the sudden death of the Rev. R. Alliott, M.A., Headmaster of Bishop's Stortford Grammar School, and a member of the Council of the College of Preceptors, on whose retirement from active work we commented in October. Mr. Alliott died on October 28, at the age of sixty.

THE University Court of the Victoria University has just decided upon a step which will enable boys who are leaving the grammar schools to take an examination which shall also open the door to the University. That is to say, one examination will now suffice instead of two, and time and effort will be economized. There will therefore be in the future a Victoria University Leaving Examination on the lines of those already established by Oxford and Cambridge, and serving a similar purpose. The scheme has not been agreed upon without careful and prolonged consideration, as it has been debated, first, by the headmasters separately; second, by the University authorities; and, lastly, by a Joint Committee of the two.

MR. ORGAN, Chairman of the London Technical Education Board, made an important statement at a recent meeting of the London County Council. He said that the Board had been in correspondence with the Commissioners of London University suggesting the creation of a Faculty of Commerce and a Faculty of Engineering. The Commissioners had agreed to that, and in consequence the Board had passed resolutions allocating to each faculty £2,500 a year for its maintenance. Mr. Organ added that every opportunity would be given to those attending evening classes to become internal students of the University.

A BILL has been introduced in the Legislature of Queensland to create a University in that colony, and to endow it with an annual grant of £5,000. The educational facilities which Queensland offers are very thorough, and the establishment of a University will round off the system. Beyond the primary schools, there are grammar schools, technical and art schools, and an agricultural college, all under the State, which grants scholarships and bursaries.

ANOTHER University! The Bombay Government have issued a resolution on the subject of the teaching University to be established in Bombay on the model of the German *Seminarien*. Mr. Tata had offered 30 lakhs towards the scheme, but that sum is insufficient, and a committee will be appointed to collect funds. In accepting the scheme, the Government request the Bombay authorities to nominate officers to arrange for the transfer of the property and to endow the University.

THE common-school system (says the *Athenæum*) is coming more and more into vogue in British secondary day schools. The Charity Commissioners' scheme for the re-establishment of Leigh Grammar School provides for the education of "boys and girls as day scholars only."

THE Progressives on the London School Board object to being called unpatriotic because the Education Department, under a Conservative régime, in the words of a Conservative paper, "deliberately attempt to banish from the Board schools of London the history and geography of the British Empire." Mr. Graham Wallas, Chairman of the School Management Committee, writes to the paper which brought the formidable charge to say that the present Progressive majority has already succeeded in requiring these subjects to be taught in all the higher-grade schools, and will, he hopes, succeed in doing the like in the ordinary schools. "The restrictions of the Education Code and the apathy of the Education Department" are, however, serious obstacles.

LORD REAY must not be claimed as a Progressive, but Mr. Graham Wallas quotes a significant remark from his last annual address, to show that the present policy of the Board is not to be specially identified with the one-sided materialism of the Code:—

The subjects which no curriculum can ignore are: English language and composition, history, and geography. These subjects should be taught in all schools. They cannot be dispensed with, and they are the common inheritance of all classes of Her Majesty's subjects in Europe, in Asia, in America, in Africa, in Australia.

ONE of the soundest geologists of the last half-century has passed away in Sir J. W. Dawson, late Principal of McGill University, who was knighted in 1886 after presiding over the British Association at Montreal. He was a native of Nova Scotia, but received his scientific training at Edinburgh.

MR. C. CARUS-WILSON has been lecturing at the Horbury Rooms, W., during the past month to about four hundred scholars from secondary schools in the neighbourhood. The subjects dealt with comprised the following:—"The Wonders of Rain"; "Ice and Glaciers"; "The Mighty Ocean"; "Volcanoes and Geysers." The lectures were treated popularly, yet exhaustively, and were illustrated by effective lantern slides. The chair was taken by Mr. Scott Keltie and the Rev. J. O. Bevan. A further series is projected for February, to treat of coal, coral, and similar matters.

THE Committee of the London College of Music send us their revised syllabus of Local Examinations for the year 1900, in which several new features are being introduced, including a primary section in pianoforte playing, county prizes, and gold and silver medal awards in Diploma Sections.

MR. W. N. SHAW, F.R.S., Senior Tutor of Emmanuel College, Cambridge, has been appointed Director of the Meteorological Office, in succession to Mr. R. H. Scott, who will resign at the end of the year.

AT Trinity College, Dublin, Mr. W. Sinclair Baxter has been appointed Reid Professor of Penal Legislation, in succession to Professor Thompson. The appointment to the Reid Professorship, in accordance with the conditions under which the Chair was founded, is made by public examination, and the appointment is for five years.

DR. MAHAFFY has declared his intention of resigning his Professorship of Ancient History at Dublin next year.

THE Headmastership of the Nonconformist Grammar School,

Bishop's Stortford, vacant by the death of the Rev. R. Alliott, M.A., has been filled by the appointment of Mr. F. S. Young, M.A., formerly scholar of Queen's College, Oxford. Mr. Young is a former pupil of the school, and since taking his degree has been a master at Mill Hill School. He enters on his duties in January, 1900.

* * *

THE REV. F. A. HIBBERT, assistant-master and Secretary of Denstone College, has been appointed Headmaster of St. Cuthbert's College, Worksop.

* * *

THE REV. C. E. LUCETTE, Headmaster of Morgan's School, Bridgwater, has been selected as Headmaster of Chard Grammar School, in succession to the Rev. C. Wimberley.

* * *

At the Royal Holloway College, Miss Hayes-Robinson has been appointed Lecturer in Modern History; Miss Buchanan, B.Sc. Lond., Lecturer in Zoology; and Miss Rowell, Assistant Lecturer in Mathematics.

* * *

THE following notice has been issued with regard to the Professorship of Music at Oxford University:—

The salary of the Professor is £130 per annum, together with examination fees. According to a Statute approved by the Queen in Council, May 18, 1897: "The Professor of Music shall, once at least in each term, lecture on the theory and history of music in some place to be appointed by the Vice-Chancellor, and the lectures shall be illustrated, as need requires, by vocal or instrumental performances. It shall be the duty of the Choragus to prepare illustrations for the Professor's lectures, and to assist him generally in the discharge of the duties of his office. The Choragus, who shall be a Doctor of Music or an Honorary Doctor of Music of the University, shall be nominated, subject to the approval of Convocation, by the Professor, and shall hold office at the will of the Professor." The Professor is also an *ex-officio* examiner in the examinations for degrees in music.

* * *

Literary Gossip. PROFESSOR JEBB is always valiant for the literary *norma* of education. A few days ago he bearded the young lions (amongst them being Sir Philip Magnus and Dr. W. Garnett) in the Borough Polytechnic; and here is the pith of what he said:—

Those who had lived to middle life well knew that the lessons learned in that stern school could be interpreted by literature. The study of literature was of practical value in the immediate necessities of life. It was very important that a man should be able to understand people unlike himself, to be able to place himself at a point of view which was not his own, and to make equitable allowances for the shortcomings in others. He should be able to exercise that higher tact and that trust sagacity which sprang from intelligent good feeling. One of the frequent causes of failure in life was an inability to work with other people, and an intelligent study of literature tended to remedy these difficulties, and was of the greatest practical value in life.

* * *

ON the other hand, Sir John Lubbock thinks that our education, even now, is "much too bookish." He said the other day, at Nelson, in Lancashire, that children were educated as if they were all going to be schoolmasters and school-mistresses.

Neglect of Nature in schools ran through the whole system, from the elementary schools up to most of the Universities. We ought not to allow children to grow up ignorant of the history of their country, or of the beauties of Nature by which they were surrounded. They would be much more likely to stay in country districts, and not crowd so much into towns; they would be much more likely to continue their education; they would be much happier and much better citizens if they learnt something of the world in which it was their privilege to live. No one ought to be granted a University degree who was absolutely ignorant of science. He who knew nothing of Nature was but a half-educated man after all.

What we want is a blend of Sir John Lubbock and Professor Jebb.

* * *

THE British and Foreign School Society have made a good choice for the Principalship of the Borough Road Training

College, Isleworth, in Mr. Arthur Burrell, of Bradford Grammar School. Mr. Burrell is a former scholar of Wadham College, Oxford, and has been distinguished for marked success as a strong and enthusiastic teacher. He is a recognized authority on reading and speaking and voice cultivation, on which subject she has written a good deal, contributing the chapter on that subject to Mr. Barnett's "Teaching and Organization," and more recently writing a well known general treatise. He has contributed also to general literature, a translation of the "Imitatio" by him being now in its thirteenth edition.

* * *

MR. JOHN MURRAY has just published a very interesting book of travels, under the title of "A Glimpse of Guatemala," which deals with the ancient monuments of Central America. The writers are Mr. and Mrs. Alfred Percival Maudslay, the former of whom has made seven different visits to Central America. This volume is, in great part, the story of the most recent journey, told by Mrs. Maudslay. Since the year 1841, when Stevens and Catherwood astonished the English-speaking world with the story of their wanderings through Central America, and their description of the ancient ruins there, the country has been neglected by English travellers and writers. The new volume is all the more attractive on this account.

* * *

OXFORD'S contributions to the Paris Exhibition will include reproductions of interesting documents—Charters from Merton; a page of the Founder's first draft of his Statutes (with a drawing of the undesirable "extraneous" being ejected) from New College; Wesley's letter resigning his Fellowship at Lincoln. The same college supplies a facsimile of the Sub-Rector's scourge, perhaps the only surviving relic of the days when flogging was customary in Oxford colleges.

* * *

MR. NEWBOLT'S touching lines in the *Spectator* of November 18 may well have struck a chord of sympathy in every public secondary school:—

Our game was his but yesteryear;
We wished him back; we could not know
The self-same hour we missed him here
He led the line that broke the foe. . . .
"To-morrow well may bring," we said,
"As fair a fight, as clear a sun."
Dear lad, before the word was sped,
For evermore thy goal was won.

There is probably none of the great London day schools which has not paid its tribute, in this sense, within the past two months to the dragon of war.

* * *

MESSRS. MACMILLAN announce a musical volume under the title of "Choral Songs by various Writers and Composers in honour of Her Majesty Queen Victoria." It will include thirteen pieces by distinguished living composers, and will be edited by Sir Walter Barrett, with a preface by Mr. Arthur C. Benson. The same firm will shortly publish a volume of essays by Mr. Frederic Harrison, entitled "Tennyson, Ruskin, Mill, and other Literary Estimates." Some of these are reprinted from the *Nineteenth Century*, but the principal essay, that on Tennyson, will be published for the first time.

* * *

THE Clarendon Press and Dr. Hodgkin are alike to be congratulated on the completion of his great work, *Italy and Her Invaders*. It has already become a classic, and of its merits there is no need to speak here; but (we quote the *Oxford Magazine*) there is something pathetic in the author's remark that it has occupied the "leisure of twenty-five years." "If the leisure of a banker produces eight great volumes, what ought the working hours of a professor to produce? This problem may be commended to the students of the higher mathematics. Meantime the conclusion seems true, as of old, that the 'gleaning of the grapes of Ephraim is better than the vintage of Abiezer.'"

THE BOARD OF EDUCATION ACT AND ITS BEARING ON PRIVATE SCHOOLS.

MR. WILSON took the Chair at the Evening Meeting of Members on Wednesday, November 19, when the Rev. J. O. BEVAN read a Paper, of which the following are the salient passages:—

1. WHAT THE ACT IS.

I assume that you are familiar with its provisions, and I may, therefore, be spared a particular description. To a few persons the be-all and the end-all of the inquiry would be: How far will it affect me and my school? How far will it help me to squeeze my rival out of existence? Again, since many teachers are firmly impressed with the perfection of their premises and of their teaching—often on very imperfect evidence—they will immediately conclude that they are likely to be untouched or but slightly affected. They will, therefore, fall back and bid the world do its worst and go on without them. Now it is an undoubted fact that, unless heads of schools themselves put the Act in motion, they may, supposing their premises are sufficient and sanitary, escape its most stringent provisions; but let us for a moment look beneath the surface, and try to realize the condition of affairs which has rendered such an Act necessary and possible.

2. WHAT IT INDICATES.

This query gives rise to most serious reflections, and I would beg leave to ask private teachers earnestly to lay to heart the signs of the times which have brought us together this evening to debate the position in which the Act has placed us. Neither as educationists nor as citizens can we afford to shut our eyes to the march of events. The disposition to do so has been a source of weakness, as it will be a source of weakness in the future. No observant person can fail to see that within the past few years strong Imperial instincts have been evoked and new trade competitors brought into the field, inasmuch that new conceptions, new ideals of education have come into being, and that, as a consequence, new subjects have been suggested for our curriculum, and new fields of service opened out to the teacher; further, that the public conscience and the public necessity alike have laid upon those popularly elected bodies which have been lately constituted or have had their functions enlarged educational duties, in some cases, not originally appertaining to them. Consequently the relations of the private-school interest to the public generally have been somewhat rudely disturbed. As a partial result, dating from the introduction of the School Board system, hundreds of private schools have ceased to exist; and in Wales, too, during the last ten years, owing to the foundation of more than ninety public intermediate schools, the private-school interest and system have been crushed well nigh out of existence.

All this marks the presumption that public enterprise and public management are rising into greater prominence than heretofore; and, although it may be said that the educational boom has also affected private schools, and led—in England, at all events—to a like advance in numbers and efficiency, I think such a statement in respect of numbers, at least, would be difficult to prove.

Unless, therefore, a strong and united policy be adopted, and serious steps be taken in the direction of consolidation, private schools will be increasingly at a disadvantage.

Furthermore, it must be remembered that there are large numbers of private teachers—women especially—who may have cause for anxiety in face of the Act, and who deserve that their position should be taken into account, and that to them a helping hand should be extended. It may, too, be an additional reason for reflection on the part of teachers who are both independent and indifferent that a selfish policy on the part of those in a more secure position would lead to such a state of isolation and disorganization as would react injuriously on every private school throughout the kingdom.

I have remarked that there may be a number of teachers who are so assured of their own qualifications and of the sufficiency of their establishment as to suggest to them that they might leave the Act severely alone; but this would indeed be a suicidal policy, for the Act will sharpen the public expectancy, and lead it to construe an abstention from full inspection, examination, and registration as a confession of weakness, so that, in sheer self-defence, every teacher ultimately will have to place himself and his school under public registration and scrutiny.

The Local Authorities will be potent and may be aggressive. To them will be granted definite and far-reaching powers and responsibilities to enable them to deal with local, and perhaps non-local, schools, apart from influences they may bring to bear upon elementary education and on secondary schools of all descriptions—endowed, technical, and commercial. In the case of schools withholding information as to number of scholars, curriculum, &c., it will be competent for the Authority to refuse to include such schools in the list of agencies supplying secondary education to the locality. There would follow upon this the possibility of the establishment of a rival school on the part of such Authorities. This may seem an extreme case, but we have to take such cases into account, remembering, too, that an appeal to the Central Board would be both troublesome and expensive.

3. WHAT THE ACT PORTENDS AND WILL LEAD TO.

Not at once, naturally, but in the space of the next few years, when inspection has become general, it will come to pass that private schools will have been divided into three classes—good, indifferent, and bad.

Those in the first category we can pass over at once. Teachers attached to them are affected by the general considerations I have adduced; but, apart from these, they can prosecute their work in their own way.

Those in the third class must go—there is no help for it. Old buildings, inefficient teachers, and antiquated methods, are out of place in the present day, if, indeed, they should ever have been tolerated. We may pause for a moment to lament the necessity for their extinction and to drop a sympathetic tear over their grave, but we are irresistibly spurred on by the times. We owe it to the Fatherland of to-day—to the men and women of the future—as well as to the majority of efficient private teachers, that the profession should be purged, completely and at once, of a source of weakness to private schools and of danger to the children concerned. It is a mistaken policy to defend them, for, in that case, the public may confound the good with the bad. Cases of personal hardship will naturally occur, and it might be a good investment on the part of an association of private schools to provide retiring pensions for the incompetent. Their case is similar to others which may be quoted in the history of progress—in such cases a sacrifice must somewhere be found. . . .

WEAK SCHOOLS.

The chief object of my paper is to take account of those schools just on the margin, which form the second division; a number fairly large—not thoroughly bad, but yet not good enough to be classed as efficient—but which, again, would become efficient if a fostering care were exercised, *e.g.*, repairs executed, enlargements made, requisites of furniture and apparatus provided, improvements in staff and curriculum effected. Such reforms would cost money—initially, perhaps one, two, or even three hundred pounds. The requirements would be duly set forth by the inspector. His declaration would be well-nigh absolute; a warning would be given that these requirements must be met in the course of a few months, as an essential condition that a certificate of efficiency be granted and the school qualified to be placed on the official schedule.

DIFFERENT STANDARDS OF EFFICIENCY.

In speaking of efficiency, I must not be thought to refer only to one standard, and that the highest, in classics, mathematics, or science. Doubtless a school will be judged, not according to one consideration, but to many—such as size, local circumstances, the statements made in its prospectus, and the like. Discretion will require to be exercised by the inspector with regard to his final judgment as determined by these considerations; so that, when a school comes up to reasonable requirements, a certificate would naturally be granted, duly notifying the circumstances of the particular case and the degree of efficiency attained in respect of the standard aimed at.

DIFFICULTIES IN MEETING REQUIREMENTS OF THE ACT.

In the instance before us what, then, could be done? The money would have to be found or the alternative faced of the closing of the school. In a few cases the resources of the principal or his friends would enable him to tide over the difficulty and to place himself in line with schools in the first division; but in other cases, where these resources were lacking or unrealizable, what action could be taken? Should an application for a grant or loan be made to the Local Authority?

Now, it is not certain that this Authority, at first, would be

furnished with funds which would enable it to do more than the executive work laid upon it. Furthermore, it is inconceivable that such Authority should grant money to private teachers to remodel drainage or enlarge class-rooms. The reasons are obvious; but, for purposes of clearness, they may be stated here. They are such as these: a principal may close or transfer his school at will; he may become bankrupt; he may die. It is not public policy to grant sums under conditions so doubtful, where, also, the advantage would be reaped by a private individual in increased fees or an augmentation in the number of scholars.

STATEMENT OF PROBLEM—SUGGESTED TREND IN PUBLIC SCHOOL DIRECTION.

The problem, then, is to secure to efficient schools or schools aiming at efficiency (a) an assured place in public estimation; (b) a consolidated position in face of a public Authority; (c) a backing on the part of some association competent to furnish moral and material support.

I shall, doubtless, rouse opposition; but, in face of the tendencies of the day, I am led to entertain the conviction that the security and permanence of private schools will consist more and more in their taking to themselves, so far as their constitution and management will admit, certain of those elements which approximately constitute the essence and strength of public schools. I think this approximation may be effected without the loss of that special character and tradition which now appertain to them, and constitute, in fact, their *raison d'être*.

FORMATION OF SCHOOL COMMITTEES.

To this end, first, I suggest the formation of a committee, analogous in its more satisfactory features to the governing body of a public school. . . .

FOUNDATION OF SCHOLARSHIPS.

I advocate, too, the foundation of scholarships in connexion with the school—not only with the object of making it known, but also as an endeavour to secure clever children, and so to stimulate both teachers and pupils. . . .

AFFILIATION TO COLLEGE OF PRECEPTORS.

My next proposition deals with the elaboration of a scheme for affiliating a particular school to the University or to an institution similar to the College of Preceptors. Some years ago King's College, Strand, endeavoured to work out such a scheme, but subsequently abandoned the attempt; the present trend of affairs is, however, favourable to the renewal of efforts in this direction. Doubtless, the working of the Act will lead to an ever-increasing accession of inspectorial work by the Universities; and, in respect of the schools which year by year may be certified by them, a condition of things will grow up akin to affiliation. But our chief concern in this place is with the College of Preceptors. There is no doubt but that this College will be recognized by the Central Board as an inspecting and examining body under the Act, and in what immediately follows I am referring to public as well as to private schools, for the work of the College is carried on amongst both classes of schools, and, happily, the representatives of both classes are associated in its management. Provision is made in the Charter for the formation of a connexion between a school and the College; *vide* By-Laws, section X., paragraph 1: "Schools belonging to members, the pupils in which shall be examined by the College examiners at least once in two years, and such schools only, shall be entitled 'in union with the College of Preceptors.'" Formerly, in the Calendar, the names of the principals of such schools were distinguished by an asterisk.

I would suggest that the College should seize the inviting opportunity presented at this moment by enlarging the scope of its inspection and examination so as to include everything—even sanitary inspection—which might be anticipated to satisfy the general requirements of the Act; and I would further propose that, if any school were thus periodically granted a certificate of efficiency by the College, and that if, in addition, the Head and a certain proportion of the assistants qualified themselves as registered teachers, also under the Act, the College then should formally be empowered to affiliate the school.

What particular advantages this carried in its train would need settlement; but it goes without saying that such a union would not fail to be of immense strength to any school in respect both of the general public and also of any local body. I suggest that this course is possible under our Charter. The College enjoys the full confidence of the heads of schools, and, one would

think, would have but little difficulty in thus arranging for an extension of its work, which the chance of its inclusion within the new teaching University for London as one of the constituent colleges would do much to further. It may be possible to raise the question at the Council at an early opportunity.

FEDERATION.

Further, I advocate a federation of all private schools, non-local as well as local, within the area of each Local Authority. I lay great stress upon this recommendation in respect of the identity of area.

Doubtless there will be many a fight with this Local Authority. If schools elect to stand apart, they will be attacked in detail; there will be no common action, no cohesion—the worst results will follow. As in a classical instance, they must hang together, or they will hang separately. . . .

This federation would be a substantial body; it would be a legal unification, permanent and incorporated; it would be able to raise money for its own purposes and to stand before the Local Authority and the public on a recognized and commercial basis; it could promise proper usage and expenditure on the part of the school, and an indemnification of the Authority against loss. Through its officers it would be able to hand over to any of its members money derived from its own coffers or from the Local Authority; to arrange the terms of loan, of conditions of use, of repayment, and to accept such securities as the borrower could offer, *viz.*, a personal bond, or friendly guarantee, transfer of life assurance, lease of premises, and the like.

HELP THAT EVEN NOW MIGHT BE FURNISHED BY TECHNICAL BOARDS.

The simplest way in which Technical Boards or similar bodies could help a school where science is taught—and the number of such schools is, fortunately, rapidly increasing—would be by contributing a yearly sum towards the purchase of apparatus, the provision of chemicals or other materials for physical demonstration and research, or the salary of the science teacher. This boon might be called for at once, without reference to any federation. In this case there is not much risk of the money being misapplied. It might be paid terminally, and periodical inspection might be trusted to secure that a full return was given for the expenditure incurred. . . .

HOLDING OF SCHOLARSHIPS IN PRIVATE SCHOOLS.

In this place I may state the conviction that private teachers should not rest satisfied until it was declared permissible that scholarships payable out of public funds should be held at their schools on the same—or on similar—terms as at public schools. . . .

CENTRAL BODY.

Over and above the different federations I have shadowed forth, there would appear to be need for a central body, or association, or syndicate—call it what you will—acting in the metropolis, which is the natural centre for operations intended to co-ordinate forces acting in different localities, as well as to influence Parliament, the Press, and public opinion. This syndicate should be composed of leading members of the profession and sympathizers with private effort—men of wide and statesmanlike views, of energy, of public spirit and business capacity, and, above all, of means, who would be prepared, probably through the medium of a limited liability company, to raise a fund for furthering the cause generally, and for making an effort, by the erection of new schools, to fill up *lacunæ* which may have been proved to exist.

The time is at hand when the community will be able to take stock of its wants and of the sources and extent of the supply. All existing schools will have been catalogued and inspected; those which are weighed in the balances and found wanting will have been closed, and an educational chart of the whole country prepared.

MANNER IN WHICH ADDITIONAL ACCOMMODATION WILL BE SUPPLIED.

Here and there indications will be apparent of a lack of accommodation. What may be done? Shall public effort or private initiative be relied upon to supply that which is lacking? That considerable additions to our sources of supply will be called for may be regarded as certain; partly by reason of the present deficiency, partly because of the normal growth of the population and of the increased proportion of the children we hope to bring within the sphere of secondary education. The example of Wales—before

quoted—would appear to be conclusive under this head. In that Principality—where the conditions are not universally favourable to the spread of secondary education—during the last ten years, ninety-three schools have been built or taken over and equipped for purposes of intermediate and secondary instruction, whilst more than thirteen hundred children have been drawn from private schools to fill their class-rooms.

If private teachers have the courage of their convictions, if they really mean what they have been saying for years past, if they are persuaded that the system in which they are engaged possesses distinct advantages which are evident to the parents of this country, and that, on general grounds, private effort, enterprise, skill, and efficiency should be recognized and should be encouraged to fill the gap in the first instance, they will then have the opportunity presented. . . .

PRIVATE DAY AND BOARDING SCHOOLS COMPANY.

Here, again, what an individual would hesitate to do a syndicate could, in many cases, certainly accomplish. I contemplate the possibility of this body watching the development of events, being made aware of a deficiency in this district or in that; sending its inspector to institute inquiries, and, in specified cases, making up its mind that a school would have a good chance of success; as a consequence, erecting its buildings for a day or boarding school, and then letting them to a private teacher (of whose worth and competence they were assured), who would assume the responsibility of carrying on the school in that locality in accordance with the best traditions of private enterprise.

In this particular, I believe that private teachers, in their corporate capacity, have been backward. If persons interested in a semi-public form of education—I refer to those connected with such bodies as the Public Day Schools Companies or the Woodard Trust—can form associations for the establishment of high schools, through their conviction of the need that existed, why should not sympathizers with private effort have adopted the same course? Indeed, in my judgment, such an attempt should have been made long since, so that the ground might be occupied, and the presumption in favour of public effort checked.

GRANT IN AID EQUIVALENT IN AMOUNT TO COST OF SCHOLARS IN ELEMENTARY SCHOOLS.

Here a case may be touched upon which is likely to occur frequently—viz., one where, in a certain neighbourhood, parents may be unable, or, worse still, unwilling, to pay the fees requisite to defray the cost of a sound secondary education, ranging, according to circumstances, from £6 to £20 a year. It may be assumed that in such a locality a private school could find no place. But I would suggest that a strong body, such as I have shadowed forth, would be able to negotiate with the local Education Board, and say: "We are willing to erect and set going a good school if you are prepared to pay a capitation fee for each child in attendance." The capitation fee might well be fixed at £3 or £4 annually—this sum being mentioned as it is about the cost of a child in an elementary school—measuring a definite proportion of the cost thus saved to the ratepayers if a secondary school took up the necessary work.

I may say, *en passant*, that this reference opens out a wide subject—viz., the financial assistance which the middle class, in the near future, may elect to claim towards the education of its own children. There is no body in the community, especially the professional portion of it, which makes greater sacrifices for the sake of obtaining a good education for those dependent upon it than that I have mentioned, besides paying heavy taxes for the gratuitous education of the children of the working man. The time is, perhaps, coming, under the new régime, when this great middle class, the backbone of the community, will arise and press forward its claim; and the opportunity may, perchance, be found under the circumstances above referred to. . . .

VARIOUS DEPARTMENTS OF ACTIVITY SUGGESTED.

I may incidentally remark that the operations of this syndicate might also profitably be extended to include cognate subjects appertaining to the general interests of private schools—such, e.g., as (a) sanitary inspection; (b) the various kinds of insurances; (c) sick and benefit funds and the like; (d) publishing and provision of books, furniture, apparatus, and household necessities; (e) agency for schools and teachers; (f) legal advice; (g) bureaux of information; (h) foreign exchange agency.

In all such cases a marked saving could be effected by collective action and trading.

ELECTION AND REPRESENTATION ON EDUCATIONAL AUTHORITIES.

Over and above the associations I have shadowed forth, it will be a matter of importance for the private teacher to be represented on the various Committees and Authorities to be constituted under the Act. Public and private teachers alike should combine to this end, and, in face of the common danger, to safeguard common interests and strengthen a common bond. In time past these two divisions of our great army did not feel drawn together—rather the reverse. The tendency to unity of action was fitfully apparent three or four years ago. Unfortunately the flickering has died down of late.

It will be much to the disadvantage of the private teacher if he do not now seek a *rapprochement*; so that, on the Consultative Committee and on the various Local Committees, in any wise and anywhere dealing with educational affairs, a satisfactory representation may be secured. If private schools be not formally represented on the Committee created by the Act or on Local Committees, their position will be shaken, and it will need to be more clearly defined by the Administration in respect both of a Court of First Instance and of a Court of Appeal.

Over and above this, it would appear to be politic that, for the purpose of safeguarding the educational interest, private teachers should deny themselves so far as to be induced in larger numbers to stand for election, in the regular way, on Town Councils, County Councils, and School Boards, as well as on those new bodies whose advent we are anticipating. It will be the teacher's own fault if, in this capacity, his advocacy of the special interest he is called upon to defend fail in its effect. How he would be able to reconcile his duty to his constituents with his duty to his scholars it is impossible to decide. This is the stock objection to the proposed course, and it will have to be faced, but instances may be quoted where it is faced successfully.

Mr. G. BROWN said he did not take so pessimistic a view of the position of private schools as that taken by the lecturer; nor did he think that the means he proposed for their protection would be effective. The Local Authorities would want to have schools of their own, and the case of the Swansea School of the Girls' Public Day School Company was an object-lesson as to the treatment which existing schools might expect to receive at the hands of such bodies. He did not see how syndicates could save the good private schools, for the schools supported by the syndicates would themselves be competing with the other schools of the district. The private schools must work out their own salvation, and justify by the results of their teaching the confidence reposed in them by parents. What their teachers should aim at was to secure for them the advantages in the way of aid from public funds which were now, or might subsequently be, enjoyed by public schools. Their claims to such aid were just, and would, if properly presented, be recognized as just, without appeals to sympathy. There was, in regard to primary as well as secondary education, a good deal of false admiration for superb buildings and appliances, as if these were the main factors in education; but by those who would look into the matter with an unprejudiced eye it would be admitted that it was not the building that made the school, but the personal qualities and influence of the head. Secondary education ought to be self-supporting, and the Chancellor of the Exchequer had not obscurely indicated that it must not be expected that Imperial funds would be called upon to supply it under cost price.

Mr. MILLAR INGLIS quite agreed with the lecturer in his main propositions, though he might differ from him in certain details. It should be noted that it was in limited areas that the proposals he had outlined were intended to be applied. Individual teachers would be powerless to resist the encroachments of public bodies; but, if all the teachers in a district would combine, they would be able to command attention for their just claims. The problem was largely a financial one, and could only be effectively dealt with by co-operation.

Mr. ORCHARD remarked that for some time past educational legislation, though not indeed hostile, had not been favourable to private schools. Their place in public estimation was not as high as it should be, and for this those schoolmasters were partly to blame who put the supposed interest of the school before that of the scholar. The present Act was fragmentary and tentative, but there was no indication that a future measure, whether entirely new or merely the completion of the present one, would display greater solicitude for private schools. The disappearance of the private school would be calamitous for national education. The private school and the public school were collaborators. A boy or a girl who was not strong, both physically and mentally, was, as a rule, better at a private school than at a public one. All private schools should be inspected, and, in the public interest, inspection should be made compulsory. In testing efficiency much of course would depend on the character of the inspector. Something

might be done on the lines laid down by the lecturer, care being taken to allow a reasonable elasticity. Expectation of financial help from the public purse was hardly to be looked for. A voluntary federation or association in connexion with the College of Preceptors would be a step, at any rate, towards a solution of present difficulties.

The CHAIRMAN observed that the question they were most concerned with was the way in which the Act was to be administered. In view of the influences that might be brought to bear from different sides on members of Parliament by the various interests that might appear to be threatened, the framers of the Act were afraid to say what was precisely meant by its provisions. Now, therefore, was the time for private schoolmasters to combine, and devise a plan for co-operation for the preservation of the important interests they had at stake. It should be shown that it was for the public interest that the continued existence of efficient private schools should be made possible, that scope should still be afforded for teachers of originality and special aptitude for the work, and that the danger of the imposition of an inelastic system should be obviated. Above all, it was necessary that the functions of inspection of secondary schools should not be entrusted to men who had not had large experience of school organization and the details of school work. The reports of such inspectors should be reasonably full, and give the particulars which would enable those concerned to judge of their fairness. In view of the possibilities that lay in the working of an Act of this nature, it seemed only natural that attention should be turned to the College of Preceptors as a body specially fitted by its history and organization to take part in bringing about the co-operation which the lecturer regarded as so important for the welfare of private schools.

Mr. BEVAN having replied to the remarks of the various speakers, a vote of thanks to the lecturer concluded the proceedings.

UNIVERSITIES.

(From our Correspondents.)

LET the first item of the month be an expression of Oxford. regret for the serious illness of the veteran Prof. Max Müller, of whose condition very grave reports have been made. His many friends will continue to hope for his recovery; but it is to be feared that it will be long before he is able to resume his literary activity.

The political exigencies of Europe—shall we say of France in particular?—have disappointed our expectation of seeing the German Emperor in Oxford this term. The Kaiser had accepted an invitation, for himself, the Kaiserin, and the two young princes, to lunch with the Dean of Christchurch on Wednesday. It was said that a visit would be paid to Cambridge also, and there is no doubt that these arrangements had been, at any rate, contemplated in Berlin. Then came the mysterious "something" which knocked them on the head. What was the finishing touch that made the Emperor cancel all his private engagements or semi-engagements? Was it the sulking of France, or the jealous grumblings of Berlin—or London's threat of an outburst of enthusiasm? In any case we are disappointed.

We seem to have been doing more play than work this term, or, at any rate, the play has made more noise than the work. If one were to judge from the Oxford letters which appear in some of your daily contemporaries, and which bear internal evidence of a light and happy undergraduate inspiration, one would certainly say that an Oxford November was devoted mainly to coxswainless IV's, Rugger and Soccer teams star companies at the Theatre, concerts at the Town Hall, and brisk debates at the Union. These debates, it may be admitted, have been brisk and diverting beyond their wont. It is hard to say whether it is a good sign or not that the Oxford undergraduate has been less characteristically Jingo over the Transvaal War than it is his wont to be. The House even declined on one occasion to saddle the Liberal party with the responsibility for the war, and it refused, though by a small majority, to say that the war "might and ought to have been avoided."

The Cambridge "Appointments Committee" is looked upon here as another instance of subtle flattery by imitation. We have had such an organization for many years, and it has worked admirably. Sir William Markby's letter to the *Speaker* on the Universities and the Civil Service attracted some attention, and no wonder, considering what a lion's share of appointments we have recently become accustomed to expect. At the Cambridge meeting Lord Rothschild said that "for service in future life there was no such had test as a competitive examination, and no such good test as, although old-fashioned, English training at school or at the University." Sir William wants to know whether Lord Rothschild, when he said this, knew that, in the competitive examination for Civil Service appointments held this

year, out of 132 successful candidates there was only one who had not been to a University, and only one who had been privately educated. "Considering that the higher grades of the Civil Service in all parts of the Empire have for years been recruited by open competition; considering also that those services are, in the opinion of competent judges, in a very high state of efficiency, I wonder what other system of selection Lord Rothschild was thinking of when he made this remark." Oxford men have no particular reason to be out of love with competition.

The scholarship awards do not seem to vary the positions of the public schools in their annual race for the "record." The London day schools are still well to the front. It is much the same with our own Colleges in respect of the University prizes and "ribbons." The All Souls' fellowships have fallen to P. Baker, of Balliol (for Law), and Malcolm, of New College (for History). A. H. G. Steel, of Balliol, takes the Eldon Law Scholarship.

MORE tinkering with examinations! Such is Cambridge. an exclamation generally heard in the land, and a no less august institution than the Mathematical Tripos is the victim this time. The Special Board for Mathematics have given us a new scheme, and it may be as well to summarize the intended changes, and to give the reasons brought forward by the authors of the project.

The defects of the present system, as stated by the Board, are as follows:—(1) The range of subjects in Part I. is excessive, and the result is that many are able to prepare only a portion of the subjects contained in the schedule. (2) The papers are made difficult so as to provide full opportunities for discriminating between the best candidates; they consequently tend to become unsuitable as a real test for many of the others. (3) The better students spend three years in acquiring an analytical facility in solving complicated and artificial questions in a great variety of comparatively elementary subjects—in fact, in mathematical gymnastics. (4) The candidates are not brought into contact with the ideas and methods characteristic of modern advances in mathematics.

The remedy suggested is to lighten the first part of the Tripos so as to make it suitable for men at the end of their second year, while as a subsidiary change it is suggested that the order of merit should be abolished as being a delusive test of the capacity of men at so early a period as their second year of residence; the second part, which it is intended should be taken at the end of the fourth year, is to undergo structural alterations with a view to attract more candidates. If the scheme is adopted, it is just possible that the result will be evil, and the old first part will retain the prestige it has ever possessed in the eyes of the public and the University. The good old title of Senior Wrangler is the one thing that the outside world associates with Cambridge mathematics, and the order of merit is at any rate a rough test of ability; to lump the candidates together in divisions may be convenient for the examiners, but it can hardly be as satisfactory as the present arrangement. It is an acknowledged fact that the first three Wranglers may differ enormously in merit, and any system which reduces the first half-dozen or dozen candidates to a dead level of equality requires much justification before adoption. The report is signed by fifteen leading mathematicians, but there are many equally eminent persons in the University with equal or superior knowledge of mathematics, as well as of the requirements of candidates, who have not yet declared themselves.

Building operations have at last begun on the Downing College site; the Woodwardian Museum is shortly to be commenced, and in another ten years what once was an outlying suburb of the University will be covered with University buildings, filled with assiduous and aggressive scientists.

A certain amount of feeling has been evoked in Cambridge by various exhibitions of rowdiness at the theatre, culminating in a scene at the conclusion of the musical comedy, when one of the directors had to give a plain and forcible hint to the rowdy members of the audience that, "If they didn't shut up, the theatre would." The disturbances, as a matter of fact, have come from a small, unimportant, and irresponsible clique, and a well timed threat on the part of one of the University papers to publish the names of the offenders has had a salutary effect. The Union had a debate on the subject, and public opinion showed itself so strongly that no difficulty is feared for the future.

A large and influentially attended meeting was held at the Union about the middle of the month to raise funds for the wives, widows, and children of our soldiers. The Master of Trinity, as usual, made a stirring and effective speech. A committee has

been formed, and the leading men of our athletic world go round on the dull duty of canvassing with arduous success. The military spirit at the old Universities is strong, but the authorities, by their absurd and out-of-date regulations, completely check the supply of fit candidates from the best class of our English youth. Surely the War Office might say to the Universities: "We want men, and can trust you to send us your best." Such a request would meet with a ready response, but, instead of that, all is left to one of the most incompetent of our public Departments, the Civil Service Commission, and the result is that crammers flourish, while the ordinary and typical University man finds himself at twenty-three with a degree, and the one profession for which he has a taste absolutely closed against him.

The scheme for forming a Cambridge Appointments Committee has been duly formulated and adopted: at Oxford a similar body exists, but in Cambridge some of the ground is already covered by the scholastic agency worked by Prof. Lewis. It is very doubtful whether any practical good will ever come from this new departure; schoolmasters, clergymen, and lawyers constitute the bulk of our educational output, and it is hardly overstating the case to say that University training is not quite an ideal one for the future man of business. Undoubtedly, we have a large surplus population, men possessed of a degree, and of no special or technical knowledge: any institution which can utilize this large body of men will deserve our thanks.

Our athletic prospects are fairly bright as regards impending contests in the football field against Oxford. The Association team is rapidly improving under their able and genial captain, T. S. Gosling, while the Rugby team has so far not suffered a single defeat, though it has met some of the strongest teams in the country.

Rumours are afloat that it is intended to substitute a new special examination on military subjects, to enable men who have passed the Army Literary Examination to take their degree by doing the same work as that required for the military examination of Militia candidates.

MEETING OF THE COUNCIL OF THE COLLEGE OF PRECEPTORS.

A MEETING of the Council was held at the College, Bloomsbury Square, on November 15. Present: Dr. Wormell, Vice-President, in the chair; Rev. J. O. Bovan, Mr. Brown, Mr. Charles, Mr. Eve, Rev. Dr. Hiron, Rev. R. Lee, Mr. Milne, Mr. Montgomery, Mr. Pinches, Rev. Dr. Robson, Dr. R. P. Scott, Rev. J. Stewart, and Rev. J. Twentymayn.

The minutes of the last meeting were read and confirmed.

The Secretary reported that the number of candidates entered for the Christmas Examination for Certificates was about the same as the number entered for the corresponding examination in 1898, while there was an increase in the number of entries for the Junior Forms Examination.

The diploma of Licentiate was granted to Mr. A. Anstey, who had passed the required examination.

Saturday, January 20, was fixed as the date of the next General Meeting of the members of the College.

The following were elected members of the College:—

- Mr. A. W. D. Boughey, St. John's Collegiate School, Jersey.
- Mr. L. R. M. Feltham, A.C.P., 7 Hova Villas, Hove, Brighton.
- Rev. W. Ireland, M.A. Camb., Lucton School, Herefordshire.
- Mr. F. W. Jordan, L.C.P., 10 Ardconnel Terrace, Inverness.
- Mr. R. W. Pearson, A.C.P., 1 Belle Vue Lawn, Cheltenham.

The following books had been presented to the Library since the last meeting of the Council:—

- By Mr. J. F. MOON.—Moore's Life of Byron (2 vols.).
- By E. ARSOLD.—Lactian's Elements of Euclid, I.-VI.; Oman's England in the Nineteenth Century; Owen's Selections from Tennyson's Poems; Symes' English History; Webb's Africa as seen by its Explorers; York's Magnetism and Electricity.
- By G. BELL & SONS.—Bottling's Horace, Odes, Book I.
- By BLACKIE & SONS.—Classic Ornament (Series I., II., III., and IV.); "Newton" Object-Lesson Handbook, No. 2; Practical Problems in Arithmetic for Course B (Standards V., VI., and VII.); Supplementary Arithmetics (Higher Rules); Frew's Object Lessons in Geography, Part I.; Lyster's Mathematical Facts and Formulae; Ryland's Pope's Rape of the Lock.
- By C. J. CLAY & SONS.—Cambridge Greek Testament (The Pastoral Epistles); Cambridge Bible for Schools (The Proverbs and the Books of Chronicles); Plather's Macaulay's Milton; Rackham's Æschylus' Prometheus Vinctus; Roise's Greek Lambic Verse; Shuckburgh's Caesar's Gallic War, Book VI.; Sidgwick's Vergil's Æneid, Books II. and VI.; Spencer's Primer of French Verse.
- By MACMILLAN & CO.—Barb's Verne's Le Tour du Monde; Edser's Heat for Advanced Students; Gregory and Simmons' Experimental Science, Physiography (Section I.); Harrison and Baxandall's Practical Plane and Solid Geometry for Advanced Students; Parrish and Forsyth's Chemistry for Organized Schools of Science; Peacock and Bell's Passages for Greek Translation for Lower Forms; Riley's Building Construction for Beginners; Skeel's Coppee's Cones Chorus.
- Calendars of University College, Liverpool; City of London College; Royal College of Surgeons of England; St. Thomas's Hospital Medical School.

REVIEWS.

A PLEA FOR RATIONAL EDUCATION.

Over-Pressure. By S. De Brath and F. Beatty, of Grande Rocque School, Guernsey. (Philip & Son.)

The authors might have conveyed a clearer indication of their intentions by extending their title by the addition of the explanatory phrase: "A further Plea for Rational Education." The overstrain which they desire to prevent is due to careless or irrational treatment, and is, therefore, entirely preventable.

The word "overpressure" recalls to mind the controversy of ten years ago, and we may well take the verdict of the Royal Commission which investigated the complaints of that time, as a settlement of many of the old contentions and as a preparation for the more reasonable and well founded cautions of the work before us. The Commission had before it the question as it concerned elementary schools only. It heard the inspectors, and found them unanimous in thinking there was but little overpressure; but both inspectors and teachers agreed that many children attending school were not fit for study—some because they were insufficiently fed, and others because they were sickly. Teachers and managers, however, allege that the system of "payment by results" tended to produce overpressure, and the Commission reported their opinion that "so long as money value is attached to each success in the individual examination of the children attending any elementary school, and so long as the teachers are dependent on the grant for part of their income, there is great risk that teachers, in considering their own reputation and emoluments, may endanger the health and welfare of the children." As was to be expected, this report hastened the abolition of the mischievous and dangerous system. In the elementary schools, "payment by results," "cramming," and "overpressure" seem to have gone overboard together; but the authors of the work before us demonstrate the existence of overstrain in secondary schools, chiefly from two causes—first, the neglect of the years from eight to fourteen, followed by a period devoted to cramming, competing, and generally overworking to make up the lost ground; second, the adoption of irrational curricula, which exhaust the nervous energy faster than it can be recuperated. The authors, therefore, plead that each stage of growth shall have its appropriate treatment, and, in particular, that teaching specially adapted to the age from eight to twelve shall be available for all. "The fact that these years are not utilized accounts for many failures and many breakdowns in later efforts made under the spur of severe competition to redeem lost time." What is the result? The medical officer at Woolwich stated, a year or two back, that a considerable number of the cadets were not of good physique, were intellectually overworked, and were anæmic in appearance. Similar consequences of overstrain are found in all professional lines amongst those preparing for competitions. "Pale, undersized boys and girls abound, wrinkled foreheads, headaches, tonsillar growths, nervous twitches, unsymmetrical development, and breakdowns are so frequent that they have lost their importance to the many who notice only the abnormal." There is so much truth in this statement that it behoves all teachers to listen attentively to any suggestions for alleviating the evils. At the same time it is easy to exaggerate in such a matter, and probably there is some exaggeration by our authors when they base on these facts charges of degeneracy. They picture our grandfathers as living "to a good old age, continuing hale and hearty till late in life, although they permitted themselves a freedom which we are unable to bear." There is, say our authors, a diminished vigour and a distinct diminution in massiveness. What proof do they give of this? They point to the jaded condition of professional men; but this condition may arise from the fact that in these days of quick travelling and accelerated speed of communication they accomplish much more in the same time than did our forefathers. They say, further:

When, a short time ago, the bones of some of those who fell at Waterloo were moved to a new resting place, it was noted that nearly all were skeletons of men six feet high. The superiority of British to Continental physique has now practically disappeared. . . . The general smallness of men and women in our towns is patent to any observer who remembers that a healthy Englishman should stand 5 ft. 10 in., weigh 12 st., and measure 40 in. round the chest.

The logical defects here are two—first, exceptional men, like the Guards, are taken for a general standard; and, secondly, an average is instituted, and then those below the average are con-

demned as if they had not been taken into account in forming the average. In any average that is struck amongst things not uniform, it is necessary that some should be below the average. It is also a vexed question as to whether there has been a deterioration in massiveness. The Hon. Grantley Berkeley once took half a dozen officers over England to try on the old suits of armour accumulated in museums and ancestral halls, and found none large enough. His conclusions, however, like our authors', could not be generally accepted because his standards were arbitrarily selected. Yet this comparison between men of our day and those of former times does not affect our authors' plea; for, granted the defects described by medical authorities, it is but wisdom and common sense to labour to alleviate or remove them, whatever may have been the conditions of the times that have passed away.

The earlier chapters of the work describe the nervous system and the laws of the expenditure, transformation, restoration, and maintenance of nervous energy. "The amount of energy daily supplied to a child in regular health and nutrition is a fairly constant quantity, and, being normally used up between growth, exercise, and head-work, an overdraft on it must necessarily be manifest somewhere." That is to say, an overdraft under one head must lead to a deficiency under another. This is really the whole theory of overstrain.

The later chapters deal with curricula and "mental economics," thirty pages being devoted to science, thirty to history teaching, and forty to other essentials of a modern syllabus. The final chapter treats of "the great examination question." We have no further space in which to criticize these chapters, although we cannot agree with all their contentions with regard to either history or science. We are, however, quite in agreement with the authors on the necessity for such a correlation of studies as will give to each age suitable exercise and discipline, and also we agree that the adoption of their suggestions would do much to remedy overstrain and to realize three demands which at present are antagonistic or conflicting—the demand of parents and headmasters for a lighter curriculum, the demand of the public for more scientific knowledge, and the demand of professional bodies for a higher general standard and sounder training.

THE DIDACTIC AND THE SATIRIC.

(1) "Periods of European Literature." Edited by Prof. Saintsbury.—*The Augustan Ages*. By Oliver Elton. (Blackwood & Sons.) (2) "The Warwick Library of English Literature." Edited by Prof. Herford, Litt.D.—*English Satires*. With an Introduction by Oliphant Smeaton. (Blackie & Son.)

(1) The revival of learning, the Renaissance of art and letters, the renewal of the critical spirit, and the re-creation of what we may agree to speak of as Augustan ages, are four great phenomena in the development of civilization which may be regarded as chronological in their order, logically evolved, and very largely simultaneous in different countries. The new Augustan ages began, roughly speaking, in the third quarter of the seventeenth century. Chronology, as Mr. Elton reminds us, may be misleading by itself, and it would be difficult to fix the limits when literature in any country of Western Europe ceased to be Augustan. We can time it approximately in France with the death of Louis XIV.; in England with the passing of Swift and Pope. But schools and fashions prolong the domination of principles. As there were brave men before Agamemnon, so there were brave poets and prose writers of classical mould after Pope and Swift. Indeed, it is only in a somewhat narrow sense that we can give the name of Augustan to the prose of Addison and deny it to several greater prose writers of the nineteenth century.

Three-fourths of Mr. Elton's volume are naturally given to French and English literature. The remaining chapters deal with German, Dutch, and Scandinavian writers, with Italy, Spain, and Portugal. The surveys are in all cases particularly interesting, and Mr. Elton has devoted special care to prose styles as vehicles of philosophic and ethical thought. Here is a fine passage on French and English pulpit oratory early in the eighteenth century:—

Massillon began as a professor of rhetoric; he has no deep instruction in divinity, he is too intent on the pleasure that he receives from his own antitheses and balanced clauses, and the decadence of classicism is also sharply felt in the poverty of his co-ordinating powers and of his intellectual basis. But he has too much sincerity and too much passionate sensibility to be, as he is often called, a declaimer, and he keeps alive the tradition of magnificence. The history of pulpit

oratory in France and England will show many affinities during this period. In both lands the best preachers addressed the Court and society, and took from, or shared with, their audience the liking for ethical rather than doctrinal discoursing. In both there is the constant use of worldly experience for spiritual illustration, the dislike of false wit and effusive excess, the taste for structure and clearness, and all the other tastes that follow from the tacit appeal that is made on every hand to reason and intelligence. But the English pulpit had a deeper original fund of fantasy and poetry—a fund, therefore, not so soon exhausted.

(2) Mr. Elton makes no room for specimens. Mr. Smeaton, on the other hand, gives us a collection of seventy-one satires, mostly complete pieces, and all complete in themselves, with an introduction of forty pages on satire as a literary genre, in Greek, Latin, and English. This is an attractive essay, which whets the appetite for the examples that follow. Chaucer and Langland are represented in these examples as satirists before the rise of English satire.

They typify at the outset the two classes into which Dryden divided English satirists—the followers of Horace's way and the followers of Juvenal's—the men of the world, who assail the enemies of common sense with the weapons of humour and sarcasm; and the prophets, who assail vice and crime with passionate indignation and invective scorn. Since Dryden's time neither line has died out [both modes are inherent in human thought], and it is still possible, with all reserves, to recognize the two strains of thought through the whole course of English literature: the one represented in Chaucer, Donne, Marvell, Addison, Arbuthnot, Swift, Young, Goldsmith, Canning, Thackeray, and Tennyson; the others in Langland, Skelton, Lyndsay, Nash, Marston, Dryden, Pope, Churchill, Johnson, Junius, Burns, and Browning.

We do not stop to criticize the classification, which does not satisfy us at all points.

The selection of pieces leaves little to be desired. Mr. Smeaton has given us an admirable anthology—unless we ought to call it a kentology—of satire, from which we miss few of the finest English samples. The book opens at Dryden's famous satire on the Dutch, printed in 1662, a few lines of which we repunctuate and reproduce:—

The dotage of some Englishmen is such
To fawn on those who ruin them, the Dutch.
They shall have all, rather than make a war
With those who of the same religion are—
The Straits, the Guinea-trade, the herrings, too;
Nay, to keep friendship, they shall pickle you.
What injuries soe'er upon us fall,
Yet still the same religion answers all.
Religion wheedled us to civil war,
Drew English blood, and Dutchmen's now would spare.
Be gull'd no longer, for you'll find it true,
They have no more religion, faith! than you.
Interest's the god they worship in their State.

There is every variety of form and style in the satires here printed—or, at any rate, there are all the forms and styles which are worth illustrating for the general reader. The book is very well calculated to give the literary student a clear *conspectus* of English satire.

THE TRADITIONAL HAMLET.

The Tragedy of Hamlet. Edited by Edward Dowden. (Methuen.)

An announcement was made in some paper the other day that we were shortly to see on the stage a representation of "Hamlet" in its entirety. To render this possible it was proposed that the play should commence at 3.30 p.m., if we remember rightly. It is a curious fact that "Hamlet," a play which has exercised so great a fascination over so many of the best actors in dramatic history (and, it may be added, over many great, and, we venture to think, misguided, actresses), is, as a whole work, barely capable of presentation on the stage. Why is this so? In his new edition of this tragedy Prof. Dowden says:

Critics, I think, have sometimes erred in not keeping vividly before their imagination the nature of Shakespeare's task. They often speak as if the poet started with some central idea of which Hamlet was to be the exponent. . . . I prefer to think of Shakespeare as setting to work with the intention of rehandling the subject of an old play, so as to give it fresh interest on the stage; as following the subject given to him, and as following the instinctive leadings of his genius. The traditional Hamlet was distinguished by intellectual subtlety, by riddling speech, by a power of ingeniously baffling his pursuers, and, at the same time, by a love of truth. . . . Shakespeare was attracted by the intellectual subtlety of Hamlet, and was inevitably led by his genius to refine this subtlety, and to diversify its manifestations. He was caught in the

web of his own imaginings, and became so absorbed in his work that he forgot to keep it within the limits suitable for theatrical representation; the tragedy has, perhaps, never been presented in its entirety on the English stage in consequence of its inordinate length. The swift and subtle wit that had its play at the Mermaid Tavern was now incarnated in one of the creatures of Shakespeare's imagination.

"Hamlet" stands somewhere between the Greek tragedy and the psychological novel of to-day. That it is more (unconsciously) Greek than any other Shakespearian play will not, we imagine, be denied; though it would be difficult to give any detailed reasons for the statement. To the "psychological" novel this play has more important resemblances than that of mere length. A new Hamlet would find his environment suitable—or rather unsuitable, for it is in adverse surroundings that such a character becomes manifest—in the works of more than one Russian writer of the dying century. Of all Shakespeare's characters Hamlet is the one which presents the most difficulties. We have seen the philosophical Hamlet, the comic Hamlet, the mad, the mock-mad Hamlet, the Hamlet fat or thin, argued even to the crossing of swords and a very palpable hit. Even the episode of Hamlet's love for Ophelia admits of many interpretations. Here is Prof. Dowden's:—

Hamlet's love for Ophelia is the wonder and delight in a celestial vision; she is hardly a creature of earth, and he has poured into her ear all the holy vows of heaven. The ruin of an ideal leaves him cruelly unjust to the creature of flesh and blood. Never throughout the play is there one simple and sincere word uttered by lover to lover. The only true meeting of Hamlet and Ophelia is the speechless interview in which he reads her soul, despairs, and takes a silent and final farewell.

But, after all, the editor's idea in presenting this new edition of "The Tragedy of Hamlet" is not so much to throw fresh light on Shakespeare's intention in writing, or rather rewriting, the play as to furnish a trustworthy text, giving the important variants of the quartos and folios, and explaining the *crucis* in footnotes. Of the many suggestions on difficult passages we do not intend to speak here. Prof. Dowden must always command respect, if he does not always carry conviction. He appears sometimes too fanciful in his conjectures; but he says, with reason, that, "if ingenuities are anywhere reasonable, it is in conjecturing the meaning of Hamlet's riddling speeches." The ingenious commentator deserves gratitude, if nothing more; there are always plenty to restrain his excessive daring from enduring too long in history. Prof. Dowden's brief account of the "legendary Hamlet" is ample and useful, and his conclusions as to the "Hamlet" of 1603 appear to us sound. It may be noted here that he is not in favour of the attribution to Kyd of that version of the tragedy, mainly on account of the style, which seems to him later than Kyd's. The speech beginning

The rugged Pyrrhus—he whose sable arms

stands out from the rest of the play even in this form "by virtue of its reproduction of a style which was out of date at the opening of the seventeenth century."

We gather that Messrs. Methuen intend to publish the rest of Shakespeare's plays in an edition uniform with this volume. The series could not have commenced more excellently, and we are glad to see that a "library" rather than another "pocket" edition has been projected. The feat of publishing a whole play, with introduction and notes, in the small format is a difficult one, and we do not see that much is gained by its performance. *Méya βιβλίον μέγα κακόν* is a pretty saying, but the approach to perfection does not necessarily lead to Pickering size. Moreover, the present volume is not a large one.

HYMNS ANCIENT AND ESSAYS MODERN.

Homeric Hymns: a new Prose Translation; and Essays, Literary and Mythological. By Andrew Lang. (Geo. Allen.)

Whether—like "Butcher and Lang," *par nobile fratrum*, or "Lambert and Butler," *Arcades ambo*—Mr. Lang's "Hymns" are destined to become a household necessity may fairly be doubted. The "Homeric Hymns" are little read, and less understood. The text of them, despite the labours of many critics—among whom Alfred Goodwin is not mentioned by Mr. Lang—is full of corruption past healing. No work on the subject, however fairly fashioned, and however richly appurled, can appeal to a "reading public." The motley collection contains an interest, no doubt—it includes, indeed, some gems, such, for instance, as are the "hymns" to Dionysus and to Aphrodite—but it cannot as a whole be said to concern even the ordinary classical student. To

comparative mythologists, on the contrary—"a chosen few"—the poems afford a fine field for the exercise of their frolicsome fancy; and we are not in the least surprised to read that Mr. Lang has long had a desire to translate them. To their interpretation he has applied the anthropological method, and in the suggestive essays that he has prefixed to the translation Demeter and Zeus are found hobnobbing with Papang and Mama.

Of the translation itself we need say no more than that it is in the well known manner, the Wardour Street style, that won so many readers for the versions of the "Odyssey" and "Iliad" in which Mr. Lang bore a part. There are some queer words here—flowers from an unfamiliar land, such as Mr. Lang delights in; "Aumbries" and "pled" we do not greatly care for; but "Etin" and "shieling" cry aloud for Mr. Samuel Butler, of whose style Mr. Lang has an amusing parody in his introduction.

In the preliminary essays only the longer hymns are dealt with in detail. Mr. Lang occupies himself with some highly interesting speculations on the purpose of the poems, and the origin or beginnings of the gods therein celebrated. As for the gods and their cult, "I have tried," says the author, "to elucidate them as results of evolution from the remote prehistoric past of Greece, which, as it seems, must in many points have been identical with the historic present of the lowest contemporary races." So Mr. Lang falls to comparing the legends of peoples much more backward than the Greeks. Thus the gods have their counterparts in savage myth; and the oldest of them sprang—so Mr. Lang seems to think—from the soil of universal primitive feeling; grew "of themselves"; and even the accretions that gathered round the primitive legends have their explanation in the universal tendency of man to unite gay with grave, to indulge in buffoonery and burlesque, to "sport with his noblest intuitions." Whatever be the date and whatever the origin of the hymns, it is clear that, for the most part, they belong to a time when discordant elements, some savage, some barbaric in origin, had become inextricably mingled together in the mythology of the greater gods. It is this blending of the grotesque, the Aristophanic, with the serious and mystical that is so bewildering in Greek religion, unless some such theory as that which Mr. Lang here puts forward be accepted. Has the reader ever reflected how it came that no man attempted to defend the mutilation of the "Hermæ" on the ground that Hermes was a thief and a rogue? Yet thief and rogue he is in the great hymn. Or why is it that the devotees returning from the Great Mysteries at harvest time, fresh from "the shuddering, the horror, and the marvellous light," indulged in noisy badinage as they crossed the bridge?

It only remains to add that this volume is attractively illustrated from works of art selected by Mr. Cecil Smith, of the British Museum. At least to those whom it immediately concerns the book will prove a source of real pleasure and instruction.

HOMELY CHEMISTRY.

Progressive Lessons in Science. By A. Abbott, M.A., and A. Key, M.A. (Blackie.)

The title of this book is vague, and would not lead one to suspect that it was specially intended for students of domestic and agricultural economy; nor, granted the knowledge of this, that the only science dealt with was chemistry. Such, however, is the case. The volume is in two parts. The first, by Mr. Abbott, is a guide to the practical study of elementary chemistry, well planned, but not differing in any essential feature from a number of similar works recently published. The first three chapters, for example, deal respectively with manipulation and apparatus, solution, &c., and the air and oxidation; the last three with the atomic theory, equivalents, and Avogadro's law. In between comes, as usual, the study of common compounds and elements, and generalizations on the phenomena they exhibit.

Mr. Key's part is more original, and constitutes nearly two-thirds of the book. His purpose is to teach the distribution of important elements in animal, vegetable, and mineral substances, and we may illustrate his method by his first case—iron. Instructions are given for a series of simple experiments which show that, if nitric acid alone be added to certain solutions, no colour is produced, but that when an iron nail has been partly dissolved in the acid its addition to these solutions does produce certain colours, which are therefore tests for the presence of iron. By means of these tests iron is proved to be present in blood, grass, tobacco, good soil, and wine, successively. Thus, by reiterated experiment, the fact is impressed on the student that iron is essential to animal and vegetable life. The same thing is

done with phosphorus (in this case the element is traced from the soil back to its source in the rock), nitrogen, sodium, potassium, chlorine, calcium, carbon, sulphur, and hydrogen. Each of these is proved to be present in a number of substances like those mentioned above. The repetition of the same test time after time may fail in its object by becoming tedious, and we would suggest that the teacher should add a few experiments to show that some things do not contain the particular element under study. After all this has been done, we get a repetition of much of it under the head of "Typical Food-stuffs"—milk, eggs, &c., being shown to contain all the essential elements. Now, although it is well to have this reiteration in the practical laboratory work, we do not see that it is of advantage in the printed book. By avoiding much of this repetition, space might have been found for experiments that would illustrate the differences between the important classes of organic compounds—carbohydrates, fats, and proteids—instead of stopping short at the elements. Still, while we regret that the author has not given us more, we fully appreciate the value of what he has given us, and recommend his course of practical work to those whose need of a knowledge of chemistry lies in its application to the study of animal and vegetable products.

GENERAL NOTICES.

CLASSICS.

New Testament Greek, by G. Rodwell (Methuen), is an elementary book intended for those who are anxious to improve their knowledge of the Word of God, but have not studied Greek before. The book, therefore, does not claim to be exhaustive, and it does not concern the exact scholar. We may, however, say that Mr. Rodwell, who has taught the subject and gives the results of experience, has in our judgment supplied a manual that will enable any fairly intelligent person to read the Greek Testament in the original in about a year. The scheme adopted is such that the learner is able not only to teach himself, but also—and this is a great thing—to realize his own progress. The exercises given are interesting to do, and nothing is set down that is not absolutely essential. Mr. Rodwell has used Winer and Blass, but does not seem to be acquainted with Simcox. The little book can be heartily recommended to those whom it concerns. Detailed criticism in such a case seems to be uncalled for. It is enough to say that the method employed appears to us to be sound.

Horace, Odes I., by C. G. Botting (Bell), is the latest volume of the new "Illustrated Classics." The best compliment that we can pay Mr. Botting is to say that, even after Mr. Page, his little edition is not superfluous. The examination candidate will find his task much lightened by the list of proper names and grammatical appendices; but for the more serious student there could scarcely be a more taking edition, whether as regards the matter or the appearance of the volume. The illustrations, we are glad to notice, are all from genuine sources; the paper and type are excellent; and the notes give everything that can be required. Mr. Botting's verse rendering of Ode xi. has sufficient merit to make it worth quoting, as a sample of the editor's quality:

"Ask not, we may not know, Leuconoe,
the end decreed by God for me, for thee:
and question not Chaldaea's ancient seers;
far better to endure with coming years
what shall be, whether many winters more
or this the last that Heaven has in store,
beneath whose tempests on the rocks in vain
beats the wild force of the Etruscan main.
Our life is short: be wise: strain clear the wine,
no more for these far distant hopes repine.
While yet we speak, lo! envious time slips past:
snatch the day's pleasure: this may be the last."

In disputed passages the editor is content to give a reasonable view without entering into the regions of controversy. It should be added, however, that he has a useful appendix on the interpretation of the notorious twenty-eighth ode.

Vergil, Aeneid VI., by A. Sidgwick (Cambridge University Press), is a continuation of the reissue of the editor's well known Vergil as part of the "Series for Schools and Training Colleges." The present writer has presumably had under his notice only that part of this series that is intended for schools; for he is still unable to discover any of the distinctive features that may be supposed to fit these books specially to the needs of training colleges. If training colleges exist, as doubtless they do exist, for the improvement in the science of teaching, we can only say that the Cambridge Press is apparently convinced that, as far as the teaching of Latin is concerned, no change

was called for in our methods. Would Germany, would America, endorse that opinion? However, call Mr. Sidgwick's book what you will, it is a good one.

Passages for Greek Translation for Lower Forms, by G. H. Peacock and E. W. Bell (Macmillan), is a series of snippets that begins with sentences, and ends with brief selections. Some of the words are translated, and the idea of the editors is that the book shall serve partly as a *delectus*, partly as an "unseen" book. For both purposes the passages are, in general, too brief, and the selection is not particularly happy. On the whole, we cannot recommend the volume in preference to others with which we are acquainted.

Latin Course, First Year, by W. Wallace Dunlop (W. & R. Chambers), is described as a "new and enlarged edition." The book was not worth reissuing. It requires a thorough revision at the hands of a teacher who understands modern methods. This is the old style of thing that is gradually becoming obsolete even in England, and in German schools has vanished, never to return.

Latin Tests, Higher-Grade and Honours, by J. McEwen (Nelson), consists of reprints of some of the papers set for the Scottish Leaving Certificate, and in the examinations of the Scottish Universities Joint Board, with original examination papers constructed on the same lines. Each paper contains a piece of Latin verse, one or more "unseens," and grammatical and other questions. Both the passages and the questions appear to be well selected. It seems a pity that all these items should be crowded into a single three-hour paper; the prose, especially, is likely to suffer. But that is the fault of the examining authorities, not of the editor.

Companion Exercises to Forty-two Latin Prose Rules, by A. P. S. Newman (Whittaker), is hardly up to the standard of scholarship and pure Latinity which characterize the best elementary Latin exercise books, nor does it show signs of that unity of system which, by constant repetition, makes it almost impossible for boys to forget some of the most important idioms. In some cases the sentences are positively misleading. Take, for instance, "Scipio enjoyed a great victory, and gained possession of the city." This makes nonsense. To enjoy (*frui*) the victory was just the way not to gain possession of the city. A Latin writer has "Hannibal, cum victoria posset uti, *frui* maluit." Again, "I fear death for Cicero" is a very questionable example of the dative of the remoter object. The vocabulary requires revision. In the exercises we have, for instance, "a Greekified pedant" (a doubtful piece of English, for which Smith and Hall are responsible) and "If he is in the service, he is colonel of cavalry." Not one of the four words, "Greekified," "pedant," "service," "colonel," is to be found in the vocabulary.

Cæsar and Pompey in Greece, edited by E. H. Atherton (Ginn), contains selections from the Third Book of Cæsar's "Civil War," with notes and vocabulary. It has also maps and plans and a good many illustrations of Roman arms, &c. The notes are sensible and useful; perhaps for the schoolboys for whom it is intended a few more grammatical explanations would be desirable. The printing and general get-up of the book are particularly attractive.

MATHEMATICS.

Elementary Illustrations of the Differential and Integral Calculus. By Augustus de Morgan. (Kegan Paul.)

No work on the calculus ever succeeded in placing the magic of this powerful instrument in the hands of more non-University students than did De Morgan's "Treatise," first published in the "Library of Useful Knowledge." This work has become rare, while the demand for De Morgan's methods has increased with the expansion of science. The "Illustrations" formed a distinct and complete section, and they are here reproduced substantially as in the original form, but with such paraphrasing, sub-headings, and index as careful editing can supply.

Newton's Laws of Motion. By P. G. Tait, M.A., Sec. R.S.E. (Black.)

Prof. Tait is one of the trio who completely transformed the subject of theoretical dynamics half an age ago, the others being Sir William Thomson (Lord Kelvin) and Prof. Clerk Maxwell, and yet Prof. Tait's lectures on this subject are as fresh and as suggestive for the students of his classes as they ever were. The little book before us really treats of the whole subject of kinematics and dynamics. It is about the size of Clerk Maxwell's "Matter and Motion." Although it is as concentrated as Liebig's extract of meat, it is smooth and easy reading. It will save students the necessity of taking notes, and this, perhaps, is the author's main purpose, for he says: "There is, perhaps, no more striking example of the development of misdirected zeal into pernicious habit than that which is lavishly furnished by the practice of taking notes. Of course I do not refer to mere jottings. I refer to the attempt made, often by the most eager and diligent students, to record *part*—usually a small part—of a chain of reasoning, while necessarily depriving themselves of what may be their only chance of listening to a connected exposition of the whole. . . . I have, therefore, prepared a short and pointed summary of the more important features of what I have called the basis of the subject."

Billiards Mathematically Treated. By G. W. Hemming, Q.C.
(Macmillan.)

The problems of the motions and impacts of billiard-balls, involving as they do so many conditions of direction, friction, elasticity, tension, and structure, are, on the whole, so complicated that few have attempted to solve them but by limiting the investigation to a few definite points. Mr. Hemming here makes a useful contribution to the theory of the billiard-table. The result of his investigation is thus very fairly and aptly described:—"No one of the conclusions to which science has led us, and perhaps no one to which science could lead us, has not been arrived at by rule-of-thumb by players who have not professed any scientific knowledge at all. It is interesting, however, to note that the conclusions from our scientific inquiry are absolutely in harmony with the established rules of practice. For comparatively untrained players they have, moreover, some practical value. A rule-of-thumb is as good as a scientific law to a man who has played often and well enough to regard the rule-of-thumb as a necessary law of Nature. Amateurs of less experience than this may find it much easier to obey a law the reason of which they have grasped than to follow a rule merely because a highly developed billiard-marker has told them to do so." There are two points to which attention may be drawn: first, the experiments necessary to determine the constants of the formulæ and the fundamental laws; and, second, the mathematical conclusions then deducible from the formulæ. The experiments are often ingenious and useful apart from the theory. For instance, the experimental proof that there is friction between the balls in impact is easily made, and is very instructive. A ball *B* is placed on the balk-line, and the other ball, *A*, is played so as to drive *B* along the balk-line. It does not return along the balk-line because the friction between *A* and *B* puts "side" on to *B*. The effects of "drag" upon a ball are also well traced out experimentally, and the series of trials of the effect of "side" on a ball running up a cushion are equally well devised. Of the conclusions derived from formulæ a good illustration is afforded by the examination as to when it is better to play "through" than "fine" in order to follow at a small angle. The amateur who is mathematical will receive the teaching on such points with far more confidence than he would receive the mere *ipse dixit* of the best player going.

Practical Plane and Solid Geometry for Advanced Students. By Joseph Harrison and G. A. Baxandall, both of the Royal College of Science. (Macmillan.)

To the advanced science student practical geometry and descriptive geometry are more than exercises or disciplines—they are powerful instruments of calculation, and when treated as they are in this textbook they become instruments of investigation. The artificial restrictions of Euclid are all laid aside, and the use of all mechanical devices which are effective and economical is both permitted and taught. The treatment of conics and special curves is particularly interesting, and, in the part on solids, the same may be said of shadows.

Elementary Practical Mathematics. By Frank Castle, M.I.M.E., Royal College of Science, South Kensington. (Macmillan.)

The development of the polytechnics for the continuation and extension of elementary education has produced the need of a substitute for a mathematical training on the orthodox lines, and this is a work intended to satisfy that need. The conclusions of arithmetic, algebra, mensuration, trigonometry, dynamics, and much lying in the interstices of this network are here brought out by practical measurements, plotting, the use of instruments, and graphic methods. The Department of Science and Art has recognized the want, and has issued a syllabus of practical mathematics which is catered for by this textbook. The extent of the ground covered can only be gauged by those who have attempted to follow the course.

Arithmetic, Theoretical and Practical. By John Sturgeon Mackay, M.A., LL.D., Head Mathematical Master in the Edinburgh Academy. (W. & R. Chambers.)

This is a very complete text-book in arithmetic extending to 450 pages. It presents some novelties of method specially intended to reveal clearly to the learner the principles and reasons of his operations. This is particularly the case with subtraction, multiplication, division, proportion, and involution.

"Prof. Meiklejohn's Series."—*A Short Arithmetic* By G. A. Christian, B.A., and A. H. Baker, B.A. With Answers and without Answers. (Holden.)

A book of well graduated examples, and just as much theory as will explain the methods of their solution. There are few novelties of method introduced, but the work is very clearly and accurately printed.

Arithmetic. By A. Veitch Lohian, M.A., B.Sc., Mathematical Lecturer, Training College, Glasgow. (Blackwood.)

This is a good arithmetic of the old sort, and, except in avoiding the theory of proportion, there is nothing particularly advanced or modern in the treatment. The examples and examination papers are carefully selected.

Handbook of Optics for Students of Ophthalmology. By William Norwood Suter, B.A., M.D. (The Macmillan Co.)

The portion of the science of optics here presented covers all the

phenomena of refraction and reflection which have practical utility in connexion with the human eye, its defects, and their remedies. The chief merit of the work lies in the selection of just so much of the theory of optics as is required in ophthalmology.

SCIENCE.

Chemistry for Organized Schools of Science. By S. Parrish, B.Sc., A.R.C.S. With Introduction by D. Forsyth, M.A., D.Sc. (Macmillan.)

The course of practical work set out in this book is well designed, the instructions are clear and sufficient, and the explanations of chemical phenomena and terms as good as could be wished. It represents the work of a two years' course. The student is trained in the use of the balance from the beginning, and in the first year investigates for himself, in order, the effects of heating on metals; solutions; the composition of water; acids, bases, and salts; and the simpler compounds of carbon. The atomic theory is (wisely, we think) left to the second year, along with the study of the properties of gases, the commoner elements and their compounds, and simple volumetric analysis.

A Course of Experimental Chemistry (Elementary). By T. A. W. Hill, B.Sc. (C. Arthur Pearson.)

This book sets forth a course of practical instruction in accordance with the new methods of teaching chemistry that have made their way so strikingly during the last five years. The balance is introduced at the very beginning, and after the elements of manipulation of apparatus have been taught him the student is set to work on solution and distillation. The calcining of metals follows, and he is led on to examine the reactions of all the common non-metallic elements. The treatment is thoroughly practical throughout.

A Handbook of Physics and Chemistry. By H. E. Corbin, B.Sc., and A. M. Stewart, B.Sc. (Churchill.)

This work is designed for candidates for the First Examination of the Conjoint Board of the Colleges of Physicians and Surgeons, as well as the examinations of the Pharmaceutical Society and Veterinary College. The student is told that he must supplement his reading by practical work in the laboratory, and the plan of the work does indeed treat practical work as supplementary to reading, not as the basis on which general knowledge should be built up. The fault lies with the early education of medical students, not with the authors, who have done their best, and produced an accurate but dull volume.

Botany for Beginners. By E. Evans. (Macmillan.)

When we began to read the opening paragraph of this book, we were afraid we should quarrel with it, for one of the statements was that "all living things are built up of the same kind of material, viz., protoplasm," a statement that would naturally lead a beginner to suppose that a man's hair and nails or a tree's wood and bark were protoplasm, which they are not. But the opening paragraph is not typical of the book, which well maintains the standard of its predecessors in the same series. Like them, it combines instructions and suggestions for practical work with a systematic account of the generalizations of the subject. Flowering plants only are dealt with, and morphology and physiology both receive due treatment. Microscopical structure occupies a subordinate place. Chapters at the end are devoted to the natural orders and the methods of describing plants. The book is abundantly illustrated.

A Practical Introduction to the Study of Botany: Flowering Plants. By J. Bretland Farmer, M.A. (Longmans.)

Only a few years ago laboratory work in botany usually meant the cutting and examination of microscopic sections, and little else; and we believe there are many students who have taken courses and passed examinations in "Practical Botany" whose knowledge of the arrangement of leaves on stems or of the processes of assimilation and transpiration are confined to text-book statements and diagrams. This state of things is, fortunately, changing; and, in the present work, which is planned evidently for laboratory use, we find the naked-eye examination of structure and experimental physiology given their fair share of space. We can cordially recommend this book to teachers of botany, who, even if they do not follow its course systematically, will find plenty of suggestions for observational and experimental work. It is divided into four parts—(1) General Morphology, (2) Internal Anatomy and Minute Structure, (3) Physiology, and (4) Natural Orders. The illustrations are clear, and include some good photographs of micro-sections.

Experimental Science: Physiography. Section I. By R. A. Gregory and A. T. Simmons, B.Sc. (Macmillan.)

These well known authors have given us another of their excellent elementary books, in which ingenuity in the designing of experiments with the simplest apparatus is one of the best features. The present volume covers the ground of the first section of elementary physiography, and explains the main principles of physics and chemistry with a clearness and a wealth of experimental illustration that would

be difficult to improve upon. As a trifling criticism, we must object to their inculcating such complete belief in the usefulness of the lactometer, since the diminution of density in milk caused by addition of water can be easily made up for by the previous abstraction of cream.

The Elements of Physics. By H. Crew, Ph.D. (Macmillan.)

This introduction to physics is intended for use in American high schools. It deals with the elements of mechanics, wave motion, sound, heat, magnetism, electricity, and light. The treatment is largely mathematical, few instructions for actual experiments being given. Presumably it would, in use, be supplemented by a laboratory manual. The good American plan is followed of interspersing among the statements made questions addressed to the reader to stimulate his thought. The book is extremely well printed, and the diagrams, though simple, are very clear.

Manual of Experimental Physics. By F. R. Nichols, C. H. Smith, and C. M. Turton. (Boston: Ginn & Co.)

The authors are instructors of physics in the Chicago high schools. The course of practical work here set out covers the elements of all branches of physics. It does not differ in any essential degree from the courses now adopted in most English "schools of science"; but the characteristic American system of "question rather than statement" is followed far more thoroughly than in any similar English work.

MODERN LANGUAGES.

A Primer of French Verse. Edited by Frederic Spencer, M.A. (Cambridge University Press.)

The subject of French prosody is often entirely neglected in our schools, and indeed it differs so much from English "metric" that it requires a considerable effort to appreciate its niceties and its subtleties. The subject is not often treated in school-books; and the treatment is, as a rule, dry, if not actually repulsive from the number of snippets of verse torn out of their context. Prof. Spencer has evidently realized this defect, for in the book before us the various rules are exemplified by entire poems, or, at any rate, by extracts sufficiently long to be of interest. The poems are all the more welcome, because most of them are not to be found in the *morceaux choisis* type of book. The rules are well expressed, and it may confidently be said that a pupil who has read this book with care will acquire an insight into French prosody such as no other "primer" would give him, and will feel that this is a book to which he can always turn again with pleasure.

F. Coppée, Contes choisis. Edited by Margaret F. Skeat. (Macmillan.)

Miss Skeat is to be congratulated on what we believe is her second venture in educational literature. She has chosen her stories well, and given infinite pains to rendering the notes complete, and the vocabulary helpful. In a short introduction the essential facts about Coppée's life and works are clearly given. The texts themselves, it need hardly be remarked, are only suitable for advanced classes, owing to the colloquial flavour of the language; but for these they will be found very valuable, especially as the pupils will incidentally acquire some knowledge of French life and ways, and of the topography of Paris (there is a serviceable map of the part of Paris referred to in several of the tales). There is little in the notes that calls for comment. With regard to the statement in the note on page 8, line 18, it would be interesting to know whether Coppée is a careful proof-reader; the printer might be responsible for the disregard of the rule. "Semi-aspération" is not a happy expression—what does it really imply? It might have been mentioned in the note on page 17, line 18, that the English for *puits d'air* (or *d'aérage*) is "air-shaft," and that both are originally mining terms. The note on *poil à gratter* should be given earlier; it occurs first on page 38, line 12. The vocabulary is an excellent piece of work. It is not quite clear on what principle words have been excluded from it: for instance, it does not contain *blanc* (page 56, line 24), *les pectoraux* (page 42, line 11), *trique* (page 44, line 17). The last appendix treats of the formation of verbs. A "word and phrase book" and a key have also been published.

Jules Verne, Le Tour du Monde. Edited by L. A. Barbé. (Macmillan.)

This is a volume in the same series, and also deserves praise. The tale is well known, and will be eagerly read, for there is enough action to satisfy the most high-spirited boy. He will be grateful that the editor has written brief notes and supplied a vocabulary, from which he can get all the help he is likely to require.

Rémi en Angleterre, by Hector Malot, edited by E. L. Naftel (Hachette), is an episode from "*Sans Famille*," other parts of which have become popular as school-books. It has notes and a vocabulary. It can scarcely be cited as an example of judicious editing. The vocabulary is quite unnecessary, as boys and girls capable of reading such a book are certain to possess at least a small French dictionary. The notes show but little sense of proportion: nearly a page of the twenty-five is taken up with an abridgment of guide-book notices of

Lyon and Rouen. In those which deal with words and construction there is not much to stimulate thought.

German Daily Life, by R. Kron, Ph.D. (Dent), is a distinctly useful book; though the somewhat extravagant claims advanced on its behalf in the English introduction scarcely prepossess one in its favour. It is constructed on similar lines to "*Le Petit Parisien*" of the same author. The object is at once to supply a tolerably complete vocabulary for German conversation, and to give some insight into German institutions, manners, and customs. Instead of being thrown into the form of conversations, the plan adopted, for example, in the series of "*Echos der neueren Sprachen*," the book consists of chapters on the ordinary topics of interest, as meals, dress, shopping, education, amusements, &c., which are, it is only just to say, as readable as is consistent with bringing in a tolerably exhaustive vocabulary. It is well up to date: taximeters, automobiles, the Röntgen rays, and even the "Oceanic" find a place in its pages. The chapter on education gives a clear account of the German school system, but only from the bureaucratic point of view. English schoolboys would welcome some notice of the inner life of schools, especially as several pages are given to the customs of German students. A very useful chapter is that on simple arithmetical operations. Among amusements the bicycle is fully described, and there are adequate directions for playing *skat*; but chess is parodied by the remarkable statement that checkmate is secured by taking all your adversary's pieces. The book is not, of course, intended for beginners, but is meant to be used in the higher classes, partly as a reading-book (not, we hope, to the exclusion of literature), and partly to furnish material for conversation lessons. It will also be useful to the many young people who spend a few months in Germany after leaving school. There is a supplementary chapter containing a vocabulary of familiar expressions bordering on slang. Such a list should be used with great care, and rather to interpret what one hears than to enrich one's own vocabulary.

MISCELLANEOUS.

Classic Ornament: Photographic Reproductions of South Kensington Casts. Series I.-IV. (Blackie & Son.)

Here is a capital instance of the manner in which the Science and Art Department continues to direct the artistic culture of the great majority of British art students by means of its printed codes of requirements—aided, of course, by the treasures of the national museums. One of the requirements of the Department is "freehand drawing and ornament in outline from photographs of casts." The four books of photographic plates to which we draw attention are designed to aid the teacher and student on the lines indicated above. They make an admirable collection of copies on sheets of good paper 10½ by 7¼ in., and the price is very moderate. We need not remind our readers of the exceptional value of the South Kensington casts, which are moulded on some of the finest examples of Italian and other carvings in wood and stone.

The United States and their Industries. By the Rev. W. P. Greswell. (Philip & Son.)

This is the second of a series of little volumes initiated with "*The British Colonies and their Industries*." Mr. Greswell is a good writer, and he has done much to encourage the recent "patriotic" treatment of British industry and institutions. The present volume is a concise and skilful account of the economic and commercial development of the United States.

The Structure of the Brain: How to Understand and Cultivate Intellectual Power. By Albert Wilson, M.D. (Elliot Stock.)

Dr. Wilson here compresses what he said in a less popular form in his volume on "*The Brain Machine*." The result is a handbook on mental characteristics and diseases which may be serviceable to judicious parents or schoolmasters. Physiology is an easy wand to charm with, and some physiological facts (as to temperament and heredity, for instance) may be so stated as to become needlessly alarming. Dr. Wilson deals, in the main, with accepted facts.

English History. By E. S. Symes. (Edward Arnold.)

Miss Symes has given us a good little story of England in less than three hundred pages—a simple, straightforward narrative for young readers, varied with numerous extracts from old writers sufficiently modernized. The text is pleasantly written, and there is a selection from Lodge's portraits, and a number of clear little maps.

Africa as seen by its Explorers. Edited by E. J. Webb, B.A. (Edward Arnold.)

We are gradually ceasing to talk about the exploration of Africa. We have fought over it, and pieced it out, and mapped it until it is becoming quite familiar. Mr. Webb has had the happy idea of making a reading-book out of the tales of the explorers, old and new; and, having received permission to borrow from many copyright works, he has been able to put together a most interesting volume.

The Teaching of Geography in Switzerland and North Italy. By Joan Berenice Reynolds, B.A. (Cambridge University Press.)

Miss Reynolds reprints the report presented by her, as Gilchrist Travelling Student, to the Court of the University of Wales. Her little book deals chiefly with the systematic teaching of geography in Switzerland, and it gives evidence of much studious and accurate observation.

(1) *A Standard Dictionary of the English Language: Students' Edition.* Edited by J. C. Fernald and F. A. March, LL.D. (2) *The Standard Intermediate School Dictionary.* Edited by J. C. Fernald. (Funk & Wagnalls.)

These are two useful abridgements of the big encyclopædic dictionary which goes by the name of Funk and Wagnall's. The smaller of them contains a vast mass of information, which must frequently be useful for reference in a school library. The "Students' Edition" includes 60,000 words, of which it gives the pronunciation, significance, etymology, synonyms, and so forth, with 1,225 pictorial illustrations.

Biblical Introduction.—Old Testament. By Prof. W. H. Bennett, M.A. *New Testament.* By Prof. Walter F. Adeney, M.A. (Methuen.)

This helpful volume is intended for students of the Bible who cannot make much out of the original languages or the technicalities of criticism. The critical position is that associated with Cheyne, Driver, and Ryle. The authors, who are both professors at New College, London, whilst giving us, without hesitation, the result of recent criticism, trust that their book will confirm its readers "in the evangelical recognition of the supreme authority of the Bible as interpreted and applied by the Holy Spirit for the spiritual life."

"The Cambridge Bible for Schools and Colleges." Edited by A. F. Kirkpatrick, D.D.—*The Proverbs.* By the Ven. T. T. Perowne, B.D. *The Books of Chronicles.* By W. E. Barnes, D.D. (Cambridge University Press.)

These are two capital volumes of a very good series. Archdeacon Perowne is particularly interesting on the literary character, authorship, and significance of the "Proverbs."

"The Cambridge Greek Testament for Schools and Colleges." Edited by Canon J. A. Robinson.—*The Pastoral Epistles.* By J. H. Bernard, D.D. (Cambridge University Press.)

Dr. Bernard's introductions and textual notes to the two Epistles to Timothy and the Epistle to Titus leave nothing to be desired. They are learned, literary in tone, and very helpful to the young student.

English Poetry for Schools. Book I., Primary. Selected by G. Cookson, B.A. (Macmillan.)

This little book is intended for use in the Khedivieh School at Cairo, and it has a preface from the Principal of that school. It will serve its purpose, which is to introduce Egyptian students of English to some of our simpler poetry. The selection is well varied—a fact which is mainly due, as Mr. Cookson admits, to the large draft which he has made on the labours of Mr. E. V. Lucas.

Of texts with notes we have to acknowledge three good volumes. *Selections from the Poems of Alfred Lord Tennyson, from 1832 to 1855,* is carefully edited by the Rev. E. C. Everard Owen, M.A. (Edward Arnold). Mr. Owen shows discrimination both in his choice and in his notes. The advent of Tennyson in the schools is matter for un-mixed satisfaction.—*Pope's Rape of the Lock* (Blackie) is very well introduced and annotated by Mr. Frederick Ryland, M.A.—Mr. J. H. Flather, M.A., performs the same task very competently for *John Milton: An Essay by Lord Macaulay* (Cambridge University Press).

Amongst technical handbooks we have *Building Construction for Beginners*, by J. W. Riley (Macmillan), with 623 illustrations—a plain and practical guide of remarkable clearness. *Smiths' Work*, edited by Paul N. Hasluck (Cassell & Co.), is also illustrated by many clear diagrams, and is calculated to be very serviceable. Uniform with the last are little volumes by the same editor and publisher on *Mounting and Framing Pictures*, which will give many hints to practical young framers; and *Building Model Boats*.

Mr. Murché's *Teachers' Manual of Object-Lessons in Elementary Science and Geography Combined* (Macmillan) reaches the third standard. The value of object-lessons as applied to elementary geographical teaching is very well illustrated in this volume. Part II. of *The Newton Object-Lesson Handbook* (Blackie & Son) deals with thirty subjects of natural history. It is a companion to the second standard of the "Newton Science Reader," and is conveniently interleaved with ruled writing paper. Mr. David Frew supplies the first part of a new series of *Object-Lessons in Geography* (Blackie), which is well graduated, with simple plans, models, experiments, and summaries.

Of new maps and charts, we have received from Messrs. Gill & Son three excellent "cartographic" roller maps of Scotland, Ireland, and India. They are remarkably clear, partly owing to the omission of the

names of smaller towns, &c., but mainly by the admirable management of type and colour. For general use, especially in the junior forms, these maps could not well be beaten.—From Messrs. Nelson and Sons we have the *Royal Wall Atlas*, an introductory series for Standards I. and II. There are nine sheets on one roller—general, domestic, and geographical diagrams and pictures, with "plans" and "terms," a physical relief map of England, and a scheme of the "form and size of the earth." From the same publishers we have a set of *Elementary French and German Object-Lesson Wall Sheets*, very serviceable as a supplement to the usual language lessons.—Messrs. Philip send us a series of *Map Building Sheets*, Set I., *The British Isles*, with four maps, in red outline on blackboard paper, with coloured chalks for practical handwork.—Messrs. W. & A. K. Johnston produce another large school wall map of South Africa (50 x 42 in.), very timely at this moment. It is just the thing for school and library, or for present use at home. We have seen no better map for the illustration of the Transvaal War.—From Messrs. Bacon we have two more of their *Familiar Folks*—the boot-black and the chimney-sweep—mounted, coloured, and glazed.

WE HAVE ALSO RECEIVED the following publications and new editions:—

Stories on the Apostles' Creed, the Lord's Prayer, and the Duty Towards My Neighbour, by the Rev. E. J. Sturdee (Sunday School Institute).

Old Tales from Greece, by Alice Zimmern (T. Fisher Unwin)—a second edition of Miss Zimmern's excellent little collection of stories.

English Grammar Alternative Course. Standards IV.-VII. (Macmillan).

Hints on Tone and Pronunciation for the Use of Children's Singing Classes and Church Choirs, by Arthur H. Peppin, B.A. (James Nisbet & Co.).

A Key to the Use of Stave Modulator for both Tonic-Sol-Fa and Staff Teachers, by John Taylor (Philip & Son).

Longmans' Complete Arithmetic, Mental and Practical, Course B, Book 3, with Answers (Longmans).

"The Marlborough Series of Foreign Commercial Correspondence": *French and English, Spanish and English*, edited and revised by C. A. Thimm (Marlborough)—revised editions of two practical volumes.

MATHEMATICS.

14 264. (R. TUCKER, M.A.)—P is a point on a parabola, focus S and vertex A. With P as centre and radius PS, a circle is described. The tangent to the parabola cuts this circle in L, M, and AL, AM cut the parabola in Q, R. Find the equations to AL, AM, and to the chord QR.

Solution by H. A. WEBB and G. W. PRESTON, B.A.

The parabola is $y^2 = 4ax$, and P is $(a/m^2, 2a/m)$.

$$LM \text{ is } y = mx + a/m \dots\dots\dots (1),$$

and the circle LMS is

$$(x - a/m^2)^2 + (y - 2a/m)^2 = (a + a/m^2)^2$$

$$\text{or } x^2 + y^2 - 2a(x/m^2 + 2y/m) + a^2(2/m^2 - 1) = 0 \dots\dots\dots (2).$$

The lines joining the origin to the common points of (1) and (2) are found by making (2) homogenous by means of (1). The result is

$$x^2 + y^2 - 2(x/m^2 + 2y/m)(my - m^2x) + (2/m^2 - 1)(y - mx)^2 m^2 = 0,$$

which reduces to

$$x^2(m^2 - 3) - 2xy(m - 1/m) + y^2 = 0 \dots\dots\dots (3).$$

This is the equation of AL, AM.

(3) may be written in the form

$$y^2 = 4ax(1/4a)\{2y(m - 1/m) - x(m^2 - 3)\},$$

which is the equation of the lines joining the origin to the common

$$\text{points of } y^2 = 4ax \text{ and } x(m^2 - 3) - 2y(m - 1/m) + 4a = 0 \dots\dots\dots (4).$$

(4) is therefore the equation of QR.

14332. (Professor M. W. CROFTON, F.R.S.)—(1) If $4n - 1$ is a prime, $12 \cdot 2^2 \cdot 3^2 \dots (2n - 1)^2 - 1$ is a multiple of $4n - 1$. (2) If $4n + 1$ is a prime, $12 \cdot 2^2 \cdot 3^2 \dots (2n)^2 + 1$ is a multiple of $4n + 1$. It hence follows that $4n + 1$ is the sum of two squares.

Solution by G. H. HARDY, B.A.; and Lt.-Col. ALLAN CUNNINGHAM, R.E.

If $2p-1$ be prime, then, by WILSON'S theorem,
 $2p-2!+1 \equiv 0 \pmod{2p-1}$.
 Now $2p-2-s \equiv -(s+1)$, ($s = 0, 1, \dots, p-2$),
 therefore $p.p+1 \dots 2p-2 \equiv (-)^{p-1} p-1!$, $2p-2! \equiv (-)^{p-1} (p-1)!$.
 So, if $p = 2n$, $(2n-1)!^2 - 1 \equiv 0 \pmod{4n-1}$;
 if $p = 2n+1$, $(2n!)^2 + 1 \equiv 0 \pmod{4n+1}$.

Thus a prime of the form $4n+1$ is a divisor of a number which is the sum of two squares, and is therefore, by a known theorem, itself the sum of two squares.

14354. (H. W. CURJEL, M.A.)—If the ordinate of a point P on an ellipse cuts the auxiliary circle in Q, the distance of the focus S from the tangent at Q = SP.

Solution by G. BIRTWISTLE, B.A., B.Sc.; F. H. PRACHELL, B.A.; and others.

Let QT, PT be tangents to circle and ellipse at Q and P respectively. Let H be the other focus, and SZ the perpendicular from S on QT.

$$\frac{ST}{CT} = \frac{SZ}{CQ} = \frac{SZ}{AC}$$

Since PT bisects the exterior angle at P of the triangle SPH,

$$\frac{SP}{HP} = \frac{ST}{HT}; \quad \therefore \text{componendo, } \frac{SP}{AC} = \frac{ST}{CT}; \quad \therefore SZ = SP.$$

14341. (J. A. THIRD, M.A.)—K is a conic circumscribed to the triangle of reference and passing through the centroid; K' is another conic passing through the mid-points of the sides and touching K at the centroid; P is the centre of a conic which touches the sides at points which connect with the opposite vertices through a point on K; Q is the point of concurrence of lines drawn from the vertices to meet the opposite sides at points where these sides are touched by a conic whose centre lies on K'. Show that PQ touches K and K' at the centroid.

Solution by Rev. J. CULLEN.

We have $K \equiv \Sigma l\beta\gamma = 0$ where $\Sigma al = 0$, $K' \equiv \Sigma l'(S-aa)^{-1} = 0$ where $2S = \Sigma aa$ and $\Sigma l' = 0$; also the tangent to K at the centroid is $\Sigma a^2 la = 0$. Hence K' is also of the form $K - \Sigma a^2 la \Sigma pa = 0$, since they touch. Determining p, &c. by the condition that K' passes through the mid-points of the sides, and comparing with the previous form, we find $l' = al$, &c. Now let $a/a' = \dots$ be the point on K of concurrence of the connectors; then the equation of the in-conic is $\Sigma (a/a')^2 = 0$ with $\Sigma l\beta'\gamma' = 0$. Hence P is the point $a/a' (\gamma'\gamma' + b\beta') = \dots$, so that $a(S-aa) = k\beta'\gamma'$, &c.; hence, substituting in $\Sigma l\beta'\gamma' = 0$, we see that P lies on the tangent to K at the centroid. Similarly, from $K' \equiv \Sigma al(S-aa)^{-1} = 0$, we see that Q also lies on this tangent. Therefore &c.

14324. (W. S. COONEY.)—P, Q, R are the centres of the insquares of the triangle ABC, to the sides a, b, c respectively. (1) AQ and AR are isogonal lines to b and c, &c. (2) If triangle be right-angled, given P, Q, and centre of inscribed circle, construct triangle. (3) In (2), if P and Q alone be given, area of minimum right-angled triangle equals $36(PQ)^2$.

Solution by the PROPOSER.

(1) If ABC be any triangle, and P and Q the centres of the insquares to BC and AB, then

$$\cot PBC = \frac{BA'}{PA'} = \frac{BF+FA'}{PA'} = \frac{S \cot B + \frac{1}{2}S}{\frac{1}{2}S}$$

$$(S = \text{side of square HF}) \\ = 1 + 2 \cot B = \cot QBA.$$

Therefore &c.

(2) If ABC be right-angled at A, then P and Q lie on AE, the bisector of $\angle A$, Q being the middle point of AE. If O be the incentre, then, from (1), BO bisects $\angle PBQ$ and $\angle ABC$; and if D be taken so that $QO : OP = QD : DP$, and A and E be taken so that $QA^2 = QE^2 = QO \cdot QD$, then A and E, Q and P are harmonic conjugates of O and D, and the circle on OD as diameter is locus of the points B and C subtending equal angles at AQ and EP; therefore, if this circle be drawn and AB be drawn making $\angle BAE = 45^\circ$, triangle can be

constructed. Q and P then are centres of insquares, since $AQ = \frac{1}{2}AE$ and $\angle ABQ = \angle EBP$.

(3) For any given value of AE the triangle is a minimum when isosceles, but, when ABC is isosceles, $AE = 6PQ$; for, from (1), $\cot PBE$ then $= 1 + 2 \cot 45^\circ = 3$; therefore $PE = \frac{3}{2}BE = \frac{3}{2}AE$; therefore area of minimum right-angled triangle equals $36(PQ)^2$.

14306. (Professor G. B. MATHEWS, F.R.S.)—Prove that, if p, q be odd primes such that p lies between q and 3q, and if p/q' be the penultimate convergent in the expansion of p/q as an ordinary continued fraction, then there is a multiple of pq between (p+q)pq' and (p+q)p'q. Show, also, that p+q is the least even number 2n, such that a multiple of pq lies between 2npq' and 2np'q.

Show, further, that, if 2n be an assigned even integer, and if odd primes p, q can be found such that $p > \frac{1}{2}n$, $q > \frac{1}{2}n$, and a multiple of pq lie between 2npq' and 2np'q when $pq' - p'q = \pm 1$, then $2n = p+q$.

Solution by H. W. CURJEL, M.A.

$$p'q - pq' = \pm 1 = e \text{ (say);}$$

therefore $\{(p+q)pq'\}/pq = pq'/q + q' = p' + q' - e/q$
 and $\{(p+q)p'q\}/pq = p'q/p + p' = p' + q' + e/p$.

Hence a multiple of pq, namely, $pq(p'+q')$, lies between $(p+q)pq'$ and $(p+q)p'q$. Let a multiple of pq lie between $2npq'$ and $2np'q$, where 2n is not a multiple of (p+q).

$$\text{Then } 2npq/pq = \{2n(p'+q')\}/(p+q) + 2ne/\{pq(p+q)\}$$

$$\text{and } 2npq'/pq = \{2n(p'+q')\}/(p+q) - 2ne/\{pq(p+q)\}.$$

$$\text{Hence } 2npq'/pq \text{ and } 2npq/pq = x + (ypq \pm 2n)/(p+q)pq,$$

where x is an integer and $y < p+q$; therefore $ypq < 2n$ or $2n + ypq > (p+q)pq$, i.e., $2n > pq > 2(p+q)$ (except in the case $q = 3$, $p = 5$), for $(p-2)(q-2) > 4$; therefore $p+q$ is the least even number satisfying the given conditions, and the next is $2(p+q)$.

Hence also the last part of the question follows immediately, since $2(p+q) > 2n$.

The case $q = 3$, $p = 5$ can easily be verified independently.

14241. (Rev. T. ROACH, M.A. (Suggested by Quest. 13173).)—Six circles are described, each passing through the same excentre of a triangle, and touching one side of the triangle at one of its extremities. (1) Show that the centres of the six circles lie on the radii I_aD , ... on three circles concentric with the excircle. (2) Show that the product of the radii of three alternate circles = $2R^2r_a$.

Solution by the PROPOSER and LIONEL E. REAY, B.A.

Let K be the centre; then, as in 14208, K lies on I_aD , if circle touches AB in B,

$$I_aK = \frac{I_aB}{2 \cos \frac{1}{2}B} = \frac{r_a}{2 \cos^2 \frac{1}{2}B}.$$

If the circle touches BC in B, it has centre on I_aF and

$$\text{radius} = \frac{r_a}{2 \cos^2 \frac{1}{2}B}.$$

If it touches AC or BC in C, centre lies on I_aD or I_aF

$$\text{and radius} = \frac{r_a}{2 \cos^2 \frac{1}{2}C}.$$

Again, for a circle touching AB in A, if Q be the centre, $AQI_a = A$.

$$\text{Therefore } AI_aQ = 90 - \frac{1}{2}A = AI_aE.$$

Therefore centre lies on I_aE and

$$I_aQ = \frac{AI_a}{2 \sin \frac{1}{2}A} = \frac{r_a}{2 \sin^2 \frac{1}{2}A}.$$

For circle touching AC in A, centre lies on I_aF and

$$\text{radius} = \frac{r_a}{2 \sin^2 \frac{1}{2}A}.$$

Therefore product of alternate three radii

$$= \frac{r_a^3}{8 \sin^2 \frac{1}{2}A \cos^2 \frac{1}{2}B \cos^2 \frac{1}{2}C} = 2R^2r_a.$$

Similarly for circles through I_b and I_c .

14113. (D. BIDDLE.)—From one angle of a parallelogram draw a straight line to each of the opposite sides, such that, with the join of their distal extremities, three equal triangles may be cut off; and prove

that the area of the remaining (central) triangle is to one of the former as $\sqrt{5} : 1$.

Solution by V. R. THYAGARAGAIYAR and Lt.-Col. ALLAN CUNNINGHAM, R.E.

(1) The problem is easily solved for a square, thus:—

Let AE, AF be the straight lines required, and let $BE/EC = 1/\lambda$.

Then the conditions give $\lambda^2 = \lambda + 1$.

Therefore $\lambda = \frac{1}{2}(1 + \sqrt{5})$, the negative sign being inadmissible. The area of the remaining triangle: the area of one of the equal triangles = $\frac{(\lambda + 1)^2 - \frac{3}{2}(\lambda + 1)}{\lambda^2/2} = \sqrt{5} : 1$.

(2) Project the square orthogonally on any plane not parallel to the plane of the square, and the results for a parallelogram are obtained.

[By way of generalizing, it may be observed that, if lines be drawn from an angle of a parallelogram as above, cutting off two equal triangles, and the join of their distal extremities cut off a triangle m times as great, the relative area of the central triangle is $(m^2 + 4m)^{\frac{1}{2}}$.]

14330. (R. CHARTRES.)—BC is the fixed base of the triangle ABC, G the centroid, and K the symmedian point. Show that the maximum value of the triangle AGK : its mean value :: $\pi : 2$ if A describe a semicircle.

Solution by Rev. J. CULLEN.

$AG = (2K - 3a^2)^{\frac{1}{2}}$, $AK = \{bc(2K - 3a^2)^{\frac{1}{2}}\}/K$, where $K = a^2 + b^2 + c^2$. Also $\sin GAK = 2\Delta(c^2 - b^2)/bc(2K - 3a^2)$.

Therefore the area of the triangle AGK = $\Delta(c^2 - b^2)/3K$, if $\angle ABC = \theta$. Then $b = a \cos \theta$, $c = a \sin \theta$.

Therefore area of AGK varies as $\sin 4\theta$, the maximum value of which is 1.

$$\text{Mean value} = - \int_{\frac{\pi}{4}}^{\frac{3\pi}{4}} \sin 4\theta d\theta / \int_{\frac{\pi}{4}}^{\frac{3\pi}{4}} d\theta = 2/\pi.$$

Therefore, &c.

[The PROPOSER solves the Question thus:—“Here the symmedian is the altitude, and K is its mid-point; thus area of AGK = $\frac{1}{3}$ of $\frac{1}{2}$ of ADE, whose maximum value evidently is $\frac{1}{8}a^2$, and mean value $a^2/24\pi$.”]

14319. (Rev. T. MITCHESON, B.A.)—Solve $x^2 + \frac{1}{2}x^2(a^{-1}\beta\gamma + a\beta^{-1}\gamma + a\beta\gamma^{-1}) = \frac{1}{2}a\beta\gamma$.

Solution by CONSTANCE I. MARKS, B.A.

Let ξ_1, ξ_2, ξ_3 be the roots. Then

$$\xi_1 + \xi_2 + \xi_3 = -\frac{1}{2}a\beta\gamma(1/a^2 + 1/\beta^2 + 1/\gamma^2) \dots\dots\dots (i.),$$

$$\xi_1\xi_2 + \xi_1\xi_3 + \xi_2\xi_3 = 0, \quad (\xi_1\xi_2\xi_3) = \frac{1}{2}a\beta\gamma \dots\dots\dots (ii., iii.).$$

From (ii.) $\xi_2 + \xi_3 = -\xi_2\xi_3/\xi_1 = -a\beta\gamma/2\xi_1^2$.

Hence (i.) may be written

$$\xi_1 - a\beta\gamma/2\xi_1^2 + \frac{1}{2}a\beta\gamma(1/a^2 + 1/\beta^2 + 1/\gamma^2) = 0,$$

$$2/a\beta\gamma + (1/a^2 + 1/\beta^2 + 1/\gamma^2) 1/\xi_1 - 1/\xi_1^3 = 0,$$

$$1/\xi_1^3 - (1/a^2 + 1/\beta^2 + 1/\gamma^2) 1/\xi_1 - 2/a\beta\gamma = 0.$$

Put $1/\xi_1 = \eta + \zeta$ and solve by CARDAN'S method. This gives $1/\xi_1$, and therefore ξ_1 any root of the given equation.

QUESTIONS FOR SOLUTION.

14390. (Professor G. B. MATHEWS, F.R.S.)—It is given that

$$j = \frac{(4\xi^3\eta^4 + 1)^3}{\xi^3\eta^4}, \quad j' = \frac{(4\xi^3 + \eta^4)^3}{\xi^3\eta^3},$$

where ξ, η are functions of a parameter t such that

$$\xi + \frac{1}{\xi} = -\frac{t^3 + 17t^2 + 63t - 17}{32}, \quad \eta + \frac{1}{\eta} = \frac{t^2 - 9}{4};$$

it is required to prove that, if we put $x = j + j', y = j/j'$, then as t varies the point (x, y) describes a unicursal curve of order 18; and it is especially desired to find a parameter θ such that x, y can be expressed as rational functions of θ .

14391. (Professor E. LEMOINE.)—Si ABC est le triangle de référence, l la distance du point A' au côté BC, m la distance du point B' au côté CA, n la distance du point C' au côté AB, et que $A_1y = A'_1z, B_1z = B'_1x, C_1x = C'_1y$ soient, en coordonnées normales, les équations de AA', BB', CC', ABC et A'B'C' seront triplement homologues par permutation circulaire (c'est-à-dire que AA', BB', CC'; AB', BC', CA'; AC', BA', CB' concourront en L, en M et en N). Si l'on a $A_1B_1C_1 = A'_1B'_1C'_1$, et $abc A_1B_1C_1(l - h_a)(m - h_b)(n - h_c) + lmn(\delta A'_1 + \epsilon A_1)(\epsilon B'_1 + aB_1)(aC'_1 + bC_1) = 0$,

a, b, c sont les trois côtés et h_a, h_b, h_c les trois hauteurs de ABC. On suppose $0 \geq l \geq a, 0 \geq m \geq b, 0 \geq n \geq c$.

14392. (Professor S. SIRCOM, M.A.)—Obtain the current function for liquid flowing past the cylinder whose right section is $\frac{1}{2}(n-1)^2\{(x^2+y^2)^2 - 2a^2(x^2-y^2) + a^4\}$

along OX in an infinite liquid under no forces, n being greater than 1. [The curve is of the limaçon form with a double point at $y = 0, (n-1)x = (n+3)a$.]

14393. (Professor NEUBERG.)—A un tétraèdre ABCD on circonscrit une sphère, puis on mène en A, B, C, D les plans tangents qui forment un nouveau tétraèdre A'B'C'D'. Les droites AA', BB', CC', DD' sont quatre génératrices d'un même mode d'un hyperboloïde dont on demande l'équation.

14394. (Professor THOMAS SAVAGE.)—Discuss, n being integral and positive, $(1 + 1/x)^n < 2$, but $(1 + 1/x)^{n+1} > 2$.

14395. (Professor COCHEZ.)—Courbe $\tan \omega = \rho + 1/\rho$.

14396. (Professor SANJANA.)—The line (lmn) cuts BC, CA, AB, the sides of the triangle of reference, in A', B', C' respectively; A'Y'Z, B'Z'X, C'X'Y are drawn antiparallel to these sides respectively and meeting the other sides. If the six points X, X', Y, Y', Z, Z' be concyclic, then $la(b^2 - c^2) + mb(c^2 - a^2) + nc(a^2 - b^2) = 0$. With this condition prove that the line moves parallel to itself; and that, if $\theta_1, \theta_2, \theta_3$ be the angles which it makes with the sides respectively,

$$(b^2 - c^2) \cot \theta_1 + (c^2 - a^2) \cot \theta_2 + (a^2 - b^2) \cot \theta_3 = 2\Delta(\cot^2 \omega - 3).$$

[The line is, in fact, parallel to the LEMOINE line of the triangle, and coincident with $a\alpha_1/a + \beta\beta_1/b + \gamma\gamma_1/c = 0$, or $a/a + \beta/\beta + \gamma/\gamma = \lambda$, of Quest. 14338.]

14397. (Professor U. C. GHOSH.)—A ball, projected from any point on the rim of a circular ring resting on a smooth horizontal table, comes back to the point of projection after n impacts with the ring. Determine the inclination of the line along which the ball is projected to the radius of the ring through the point of projection, and show that, if $n = 3$, this angle is $\tan^{-1}(e^{\frac{1}{2}})$, e being the coefficient of restitution.

14398. (D. BIDDLE.)—The sides AB, AC of a plane triangle ABC having been produced, a point P is taken between them, and a straight line is drawn through P and the mid-point of BC, cutting off one of the corners of the triangle. (1) Trace the boundary within which P must be placed so that a second line through it may cut off an equal triangular portion from ABC, at the other end of BC; (2) prove that, if P be restricted to the space between BC and a parallel intercept n times as long, the chance of satisfying the conditions is $2/(n+1)$; and (3) give a geometrical construction for the second line through P in the favourable cases.

14399. (R. TUCKER, M.A.)— a, b, c are the centres of the squares described (externally) on the sides BC, CA, AB of the triangle ABC. Aa, Bb, Cc meet in P; prove that P is the orthocentre of the triangle abc. α, β, γ are the mid-points of bc, ca, ab; prove that Aa, Bb, Cc meet in a point. With the usual notation, prove that

$$2bc^2 + BC^2 = k + 4\Delta = 4\Delta(1 + \cot \omega) \dots\dots\dots (i),$$

$$2\Delta abc = \Delta ABC(2 + \cot \omega) \dots\dots\dots (ii),$$

$$\cot \omega' = (3 + 2 \cot \omega)/(2 + \cot \omega) \dots\dots\dots (iii).$$

[Cf. Quest. 13852, Reprint LXX, p. 105, and MILNE, Quest. 54, p. 178.]

14400. (R. F. DAVIS, M.A.)—Find positive integral values for N, x, y which will render $N^2 - 3x^2, N^2 - 3y^2, N^2 - 3(x+y)^2, N^2 - 3(x-y)^2$ perfect squares. [A special Christmas puzzle.]

14401. (Rev. W. ALLEN WHITWORTH, M.A.)—If a number be taken at random, the chance that it is of the form $\square + \square$ or $\square + \square$ is very nearly $\frac{1}{2}$, the chance that it is of the form $\square + \square + \square$ very slightly exceeds $\frac{1}{3}$, and the chance that it is of the form $\square + \square + \square + \square$ is exactly $\frac{1}{4}$.

14402. (R. C. ARCHIBALD, M.A.)—Show that (1) the locus of the fourth harmonic point to P, S, P', when PSP' is a focal chord of the cardioid $r = 2a(1 - \cos \theta)$, is the cissoid of DIOCLES $r = 2a \sin \theta \tan \theta$; (2) if r and r' are the radii vectors respectively of the cardioid and cissoid for a given θ , $r : r' = \tan \frac{1}{2}\theta : \tan \theta$; (3) referred to $(a, 0)$ as origin, the equation of the cissoid becomes $r/a = (1 + \tan^2 \frac{1}{2}\theta)/(1 - \tan^2 \frac{1}{2}\theta)$. [In Quest. 14372, for "fixed circle" read "axial circle", and add: "The locus of the points where any line whatever (drawn through the focus of the parabolas, and always making a constant angle with their axes) meets the parabolas is a cardioid."]

14403. (R. P. PARANJPE, B.A.)—Investigate the form of the function f defined by the relation $f(z + \omega) = \{Af(z) + B\}/\{Cf(z) + D\}$ where A, B, C, D are any complex quantities whatever. Find how many "periods" like ω there are, and what, if any, are the relations among them. Give at least one example of such a function when A, B, C, D are unrestricted. [N.B.—The above is an attempt to generalize many commonly occurring functions, e.g., (1) $f(z) = z, C = 0, D = 1 - A, B = \omega$.

(2) $f(z)$ = an ordinary elliptic function $C = 0$, $B = 0$, and $A = D$.
 (3) $f(z)$ = an elliptic function of the second kind, or "fonction à multiplicateurs constants," $C = 0$, $B = 0$. (4) not only the elliptic functions, but also some of the functions when the "period" is what is usually the semi-period: thus, $\wp(u + \omega) - e_1 = \{e_1 - e_2\}(e_1 - e_3) / (\wp u - e_1)$, where 2ω and $2\omega'$ are the periods of $\wp(u)$; again, $\text{sn}(u + ik') = 1/k \text{sn} u$. (5) $f(z) = e^z$; here $C = 0$, $B = 0$, $A = De^z$, and so on.

14404. (G. H. HARDY, B.A.)—Evaluate

$$\int_0^\infty \sin px \Theta(x) dx,$$

where Θ is any one of the four functions

$$\frac{x - 2n\pi}{x^2 + \theta^2}, \quad \frac{x - (2n+1)\pi}{x^2 + \theta^2}, \quad \frac{x - 2n\pi}{x^2 - \theta^2}, \quad \frac{x - (2n+1)\pi}{x^2 - \theta^2};$$

the positive integer n being chosen in each case so that the numerator always lies between $\pm\pi$. Thus, *e.g.*,

$$\int_0^\infty \sin px \frac{x - (2n+1)\pi}{x^2 + \theta^2} dx = \frac{\pi}{\theta} \sin h p\theta \log(1 + e^{-\theta}).$$

When the denominator is $x^2 - \theta^2$, the principal value is to be taken.

14405. (H. MACCOLL, B.A.)—To make sense of the implication, "If it is x that A and B are y , it is y that A and B are x ," one of the three words, *true, certain, probable*, is taken at random and substituted for x ; then one of the same three words is taken at random and substituted for y . What is the chance that the implication, thus rendered intelligible, will be a *formal certainty*? (I find *two-thirds*; but my reasoning involves one or two controvertible points, and I should be glad to see other solutions.)

14406. (H. J. WOODALL, A.R.C.S.)—A FERRANTI fly-wheel alternator is coupled to a WILLANS engine (of 670 H.P.), the combination having a high speed (*i.e.*, about 270 revolutions). These engines have three cranks 120° apart. The engines have each a fly-wheel on the main shaft, and the power is transmitted through a coupling to the alternator, which is built up on the rim of a fly-wheel. There were thus at first two

fly-wheels on the engine. When the set was in motion, it was found that there was a great deal of end play on the shaft, that is, the shaft moved longitudinally on the bearings both to and fro when the engine was running. A man on the staff suggested the addition of another fly-wheel of a certain weight, and declared that then it would be all right; and so it proved. Explain the sequence of events. [WILLANS & ROBINSON say that the crank shaft may be regarded as a coiled spring.]

14407. (Rev. T. MITCHESON, B.A.)—If a, β, γ be the distances of the incentre from the angular points of a triangle, the diameter of the incircle

$$= a\beta\gamma \frac{(a^{-1} \cos \frac{1}{2}A + \beta^{-1} \cos \frac{1}{2}B + \gamma^{-1} \cos \frac{1}{2}C)}{a \cos \frac{1}{2}A + \beta \cos \frac{1}{2}B + \gamma \cos \frac{1}{2}C}.$$

14408. (E. W. REES, B.A.)—If the feet of the perpendiculars from K, G , the symmedian point and centre of gravity of the triangle ABC , on the sides BC, CA, AB respectively be $\bar{X}\bar{X}', \bar{Y}\bar{Y}', \bar{Z}\bar{Z}'$, prove that the radius of the circle circumscribing the hexagon $\bar{X}\bar{X}'\bar{Y}\bar{Y}'\bar{Z}\bar{Z}'$ is $\frac{2}{3} \{ (m_1 m_2 m_3) / (a^2 + b^2 + c^2) \}$, where m_1, m_2, m_3 are the medians of the triangle ABC .

14409. (F. H. PEACHELL, B.A.)—In a newspaper competition, in which a prize of £ x is offered, every correct coupon obtains an equal share of the prize, and a competitor may send in as many coupons as he likes. A person enters for this competition, and it is found that there are y correct coupons besides his own. What number of coupons (all correct) should he have sent in in order that his net profit may be the greatest possible, supposing each coupon to cost him z pence? Find also the amount of this profit.

14410. (Rev. T. WIGGINS, B.A.)—Inscribe in a given triangle the triangle of least perimeter.

14411. ("ALPHA.")—If U be any function of x , and n be a positive integer, and $D = (d/dx)$, prove that

$$\frac{1}{D} x^n U = x^n \frac{1}{D} U - nx^{n-1} \frac{1}{D^2} U + n(n-1)x^{n-2} \frac{1}{D^3} U - \dots + (-1)^n n! \frac{1}{D^{n+1}} U,$$

provided that the operations on the right-hand side are performed so that for any positive integral values of r and s

$$D^r \left(\frac{1}{D^{r+s}} U \right) = \frac{1}{D^s} U.$$

14412. (H. A. WEBB.)—Three equilateral triangles are described outwards on the sides of any triangle as bases. Prove geometrically that the centres of these three equilateral triangles form the vertices of a fourth equilateral triangle.

14413. (ROBERT W. D. CHRISTIE.)—Find integral values of n to satisfy the equation $T_x = nT_y$, and give general values for x and y . (T a triangular.)

14414. (I. ARNOLD.)—Find the centre of gravity of a loop of the lemniscate of JAMES BERNOULLI whose polar equation is $r^2 = a^2 \cos 2\theta$.

14415. (R. KNOWLES.)— $ABCD$ is a quadrilateral inscribed in a conic so that one of its diagonals AC passes through the pole of the other. Prove that the point of intersection of AD and the tangent at B , that of AB and the tangent at D , and the pole of AC are collinear.

14416. (Professor IGNACIO BEYENS, M.A., Lt.-Col. du Génie.)—Si dans un triangle ABC on mène une droite AD et l'on prolonge $AD_1 = AD$, considérant les droites AB, AC, AD , comme les magnitudes et directions de trois forces, leur résultante est la droite AD' isotomique de AD dans le triangle proposé.

14417. (J. A. THIRD, D.Sc.)—The locus of the centre of a variable inconic K of a triangle is a conic having (imaginary) double contact with the maximum inscribed ellipse on the line Σ as $A = 0$, if the locus of the point of concurrence of the lines joining the points of contact of K with the sides to the opposite vertices is the envelope of a system of similar circumconics.

14418. (C. E. BICKMORE, M.A.)—Prove that, if $2m+1$ be >3 and prime to 3,

$$(x^{2m+3} - y^{2m+3})(x-y) = P^2 - xyQ^2,$$

where

$$P = (x+y)Q + x^m y^m,$$

and

$$Q = (x-y) \times \frac{(x^m - y^m)(x^{m+1} - y^{m+1})}{x^3 - y^3}.$$

14419. (Lt.-Col. ALLAN CUNNINGHAM, R.E.)—Find three sums of successive cubes which shall be in arithmetical progression.

OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

6316. (W. J. C. MILLER, B.A.)—Within a circle of unit radius two points are taken at random; find, by a general solution, (1) the average rectangle of the distances of these points from a given tangent; (2) the probability that such a random rectangle will be less than the square on the radius.

6322. (J. E. A. STEGGALL, M.A.)—Solve $x - y = a$, $xx + y = b$ in positive integers, a and b being integers prime to each other, and one odd, the other even.

6329. (Rev. W. A. WHITWORTH, M.A.)— A and B have each a coin. They toss simultaneously, scoring 1 for a head and -1 for a tail. Find the chance that throughout the play (which extends to n tosses of each coin)—(1) A 's score is always positive, (2) A 's score is never less than B 's, (3) the two scores are equal at the n th throw and not before (except initially).

6330. (H. MACCOLL, B.A.)—The chances of two causes X and Y are respectively $\cdot 1$ and $\cdot 2$. The chance that, if the cause X present itself, an event Z will accompany it, whether as a consequence of the cause or not, is $\cdot 6$; and the chance that, if the cause Y present itself, the event Z will accompany it, whether as a consequence or not, is $\cdot 7$. Moreover, the event Z cannot appear in the absence of both the causes X and Y . On the assumption that X and Y are independent, and that Z is more probable when X and Y both occur than when only one of them occurs, show that the chance of the event Z lies between $\cdot 18$ and $\cdot 186$. [This result does not agree with BOOLE'S (*Laws of Thought*, p. 321, especially the foot-note), whose formula would give $\cdot 190697\dots$ for the exact chance.]

6332. (Professor E. B. ELLIOTT, F.R.S.)—A ray of light, polarized at right angles to the principal plane in a uniaxial crystal, is incident internally on a face of the crystal in such a manner that the reflected ray returns along the line of incidence; the plane of incidence is a principal one, α is the angle between the axis and the normal to the face, β that between the axis and the line of incidence, and a and c are the principal elasticities; prove that $a^2 \tan \beta = c^2 \tan \alpha$.

6333. (C. LEUDESDORF, M.A.)—A pair of tangents TP, TQ is drawn from a point T to a conic $S = 0$; if the centre of gravity of the triangle TPQ lie on the conic, prove that the locus of T is the conic $CS + 3\Delta = 0$.

[Quest. 6137 (Dr. HART), re-proposed in the *Educational Times* for October, is identical with Quest. 4881 (Dr. HART), which was solved by Professor SANJANA in the *Reprint*, Vol. LXX., p. 54.]

THE LONDON MATHEMATICAL SOCIETY.

Thursday, November 9, 1899.—Lord Kelvin, G.C.V.O., President, in the Chair. Eighteen members present.

The Treasurer (Dr. J. Larmor) read his report. Its reception, having been moved by Mr. Kempe, and seconded by Prof. W. Burnside, was carried unanimously.

The Secretaries' report was also read, from which it appeared that the present number of members is 247. There had been three losses by the deaths, in the previous session, of Prof. Sophus Lie, Prof. Bartholomew Price, and Mr. S. O. Roberts.

On the motion of Mr. Kempe, a vote of thanks was unanimously carried to Mr. F. W. Russell, who had recently resigned the office of Hon. Librarian. Mr. A. E. Western was appointed his successor.

Lord Kelvin stated that the Council, as announced at the June meeting, had awarded the De Morgan Medal to Prof. Burnside, and requested Major MacMahon to state the grounds of the award. Lord Kelvin having presented the Medal to Prof. Burnside, that gentleman warmly thanked the Council for the honour they had conferred upon him.

The ballot was then taken, and the Scrutators, Messrs. A. E. Western and E. W. Barnes, declared that the following gentlemen, nominated by the Council, had been elected to serve on the Council for the ensuing Session:—President, Lord Kelvin; Vice-Presidents, Prof. Elliott, Lt.-Col. Cunningham, R.E., and Prof. H. Lamb; Treasurer, Dr. J. Larmor; Hon. Secs., Mr. R. Tucker and Prof. Love; other members, Prof. W. Burnside, Dr. Glaisher, Prof. M. J. M. Hill, Dr. Hobson, Mr. Kempe, Dr. Macaulay, Mr. Macdonald, Major MacMahon, R.A., and Mr. Whittaker.

Prof. Burnside communicated a short note by Dr. L. E. Dickson, on "The Abstract Group Isomorphic with the Symmetric Group on K Letters." Major MacMahon spoke on "The Fundamental Solutions of the Indeterminate Relation $\lambda x \mu \geq y$."

The following papers were read in abstract:—

"Certain Correspondences between Spaces of n Dimensions," Dr. E. O. Lovett.

(i.) "On the form of Lines of Force near a Point of Equilibrium"; (ii.) "The Reduction of Conics and Quadrics to their Principal Axes by the Weierstrassian Method of reducing Quadratic Forms"; and (iii.) "On the Reduction of a Linear Substitution to a Canonical Form, with some applications to Linear Differential Equations and Quadratic Forms," Mr. T. J. I'A. Bromwich.

(i.) "On Ampère's Equation $Rr + 2Ss + Tt + U(rt - s^2) = V$ "; and (ii.) "The Theory of Automorphic Functions," Prof. A. C. Dixon.

"Note on Clebsch's Second Method for the Integration of a Pfaffian Equation," Mr. J. Brill.

What is "keep a man happily reading"? A reviewer in THE SCOTSMAN declares that it is Mr. H. G. Wells's new volume—

TALES OF SPACE AND TIME

That opinion is shared by many other reviewers, and the reasons are not far to seek. "Mr. Wells never for a moment fails to maintain his grip on the reader. That is why his stories are so deservedly popular."—MANCHESTER GUARDIAN. "One is fascinated, and it is only a question whether Mr. Wells's pictures of the actual or the imaginative are the more enthralling. Moreover, he has a pleasant humour, and is never dull."—LADY'S PICTORIAL. "The ingenuity with which the abiding principle of romance is adapted to the imaginary conditions of the mechanical millennium is nothing short of masterly."—

SPECTATOR.

TALES OF SPACE AND TIME. By H. G.

WELLS, Author of "When the Sleeper Wakes," &c. Cloth, 6s.

LONDON: HARPER & BROTHERS, 45 ALBEMARLE STREET, W.

DENT'S MODERN LANGUAGE SERIES.

Edited by WALTER RIPPMAUN, M.A.

In fcap. 8vo, cloth, 1s. 6d. net.

* **DENT'S FIRST FRENCH BOOK.** Based on the Hölzel Pictures of the Seasons. By S. ALGE and WALTER RIPPMAUN.

In fcap. 8vo, cloth, 1s. 6d. net.

HINTS ON TEACHING FRENCH. With a running Commentary to Dent's First and Second French Books.

Prof. FREDERIC SPENCER writes:—"Dent's First French Book appears most opportunely, supplying as it does, on the lines of the 'reform' method, a course which is both rational and eminently practical. . . . This little book, with Mr. Rippmann's running commentary, deserves the careful attention of every teacher of French."

In fcap. 8vo, 1s. 6d. net.

* **DENT'S SECOND FRENCH BOOK.** By S. ALGE and WALTER RIPPMAUN. Consists mainly of a charming story by JEANE MAIRET, "La Tâche du Petit Pierre."

The Second French Book can be taken with a class, even without previously working through the First Book. It will be found an excellent reading book.

"We can heartily commend this reader as an exposition of the new method."—*Journal of Education*, Dec., 1898.

In fcap. 8vo, cloth, 2s. 6d. net.

FRENCH DAILY LIFE: Common Words and Common Things. Adapted by WALTER RIPPMAUN from DR. KRON'S "Le Petit Parisien."

"For class use it is far better than anything we have previously seen. It is not, of course, intended for beginners. Students who, without much conversational facility, intend to join a French holiday course next midsummer might here find valuable assistance. The Englishman travelling in France will find here all the phrases essential to his comfort—not in formal lists, but strung together in a chatty and interesting narrative, which also contains information as to how and where the phrases are to be used."—*Education*.

* SPECIMEN COPIES OF THESE MAY BE HAD BY TEACHERS ON APPLICATION.

THE PRACTICAL STUDY OF LANGUAGES. By H. SWEET, M.A., Ph.D., LL.D. Large crown 8vo, 6s. net.

The object of this volume is to state the general principles on which a rational plan of learning foreign languages should be based, and to criticize the various methods which have been proposed.

A Prospectus of the whole Series will be sent to any address on receipt of a postcard.

J. M. DENT & CO., 29 AND 30 BEDFORD STREET, STRAND, W.C.

Now ready. Third Edition. In crown 8vo, 2s. net.

* **DENT'S FIRST GERMAN BOOK.** The New Edition of ALGE'S "Leitfaden." By S. ALGE, S. HAMBURGER, and W. RIPPMAUN.

Like the First French Book, this introduction to German is based on the Hölzel Pictures of the Seasons.

M. PAUL PASSY says:—"Le meilleur livre pour l'enseignement de l'Allemand est probablement le Leitfaden" (Dent's First German Book).

"We have no doubt that in the hands of a good teacher excellent results would be obtained from the use of this book."—*University Correspondent*, March 25, 1899.

Just published. Extra fcap. 8vo, 2s. 6d.

GERMAN DAILY LIFE. By Dr. KRON.

The Author of "Le Petit Parisien," who has also written a "Little Londoner," has prepared a volume dealing with the daily life of his own countrymen, which he describes in a number of brightly written chapters, the general arrangement being the same as that in "French Daily Life," the lucidity of which has done so much to recommend it.

In fcap. 8vo, 1s. 6d. net.

HINTS ON TEACHING GERMAN. With a running Commentary to Dent's First German Book.

In fcap. 8vo, cloth, 2s. 6d. net.

ELEMENTS OF PHONETICS: English, French, and German. Translated and Adapted by WALTER RIPPMAUN from Prof. VIETOR'S "Kleine Phonetik." With numerous Diagrams.

"Mr. Rippmann has done well to add this little volume to his excellent series of modern language text-books. It is a good deal more than a mere translation, for no pains have been spared to bring together the substance of all that has been recently written by scholars on this attractive but difficult subject."—*Educational Times*.

In fcap. 8vo, cloth, 1s. 6d. net.

* **THREE SHORT PLAYS BY SOUVESTRE.** Edited by MARGUERITE NINET.

An easy reading book, suitable for both girls and boys, furnished with explanatory notes (in the French language) of any difficulties which the text may present.
